It had now been proved that the majority of warbles were produced by a fly known as the American heel fly (or *Hypoderma lineata*), which deposited its eggs on the backs of the legs just above the hoof. These, on hatching, passed into the mouth, when the animal licked itself, then passed through the wall of the gullet, and finally took up their position just under the hide along the back. This view was confirmed by the authorities who had recently inquired into the matter both here and in America. Mr. Theobald, the well-known authority on agricultural entomology, informed him while discussing the matter with him the other day that he had discovered the larvæ in the act of passing through the œsophagus in the carcases of two bullocks he had examined.

To further satisfy himself on the point he visited the Museum of Natural History at South Kensington, and was kindly allowed to see their collection of warble flies. Out of the twenty-one specimens in the collection there were only three specimens of *Hypoderma bovis*, the rest being the American heel fly. The same applied to other collections in this country; so there was no doubt that the majority of warbles in our cattle were produced by the latter fly, which much resembled a bee in appearance. It was very hairy, and the abdomen was banded with black and grey, being yellow or orange at the extremity. The fly appeared in Great Britain during the summer from the middle of May until the beginning of September.

The injury which the insect did was originated by the female laying her eggs upon the hair on the various parts of the bodies of cattle, particularly the legs just above the hoofs. The eggs were of a peculiar shape, about one-twelfth of an inch long, and they were attached to the hairs by what were called claspers. The animal licked the place where the eggs were deposited, and the larvae were carried by the tongue into the mouth, and so to the gullet, through the walls of which they passed. Then after moulting they wandered about in the connective tissues of the beast, until they finally took up their position along the back, when they moulted again.

About this time a good deal of irritation was set up locally, and swellings began to appear, which soon developed small holes at their summits. It was through these holes by means of air tubes that the maggots as they grew were able to breathe. When mature, about June, the maggots worked their way out by means of openings and fell to the ground, where they pupated. Within three to six weeks the fly emerged from the pupa case, and after pairing the females commenced laying their eggs on the cattle, thus ensuring a crop of maggots for the following year.

There was practically no evidence to show that the life history of the other warble fly injurious to cattle, viz., *Hypoderma bovis*, as described in the past as laying its eggs in the back of cattle, was correct, and there was now little doubt that the life cycle was performed in the same way as that of the American heel fly. It did not matter to the farmer, however, whether the warble gained access to the backs of his cattle by the fly piercing the hide or by the maggots passing through the gullet, providing he could find out some remedy which would save him loss on his beasts.

After describing the enormous losses caused by the ravages of the insect or fly to the hide merchant, the tanner, the farmer, and the butcher, Mr. Drysdale Turner went on to deal with the subject of

Remedial Measures.

When devising some means to combat an enemy, he said, the more they knew of his habits and his method of living the better were they able to devise some means for his destruction. A point therefore to be noticed in the habits of the members of the warble family (*œstridae*) was that they were found on the wing in bright and sunshiny weather only, and that they had a strong aversion to shady and cool places, refusing to fly into shade or over water. Much relief might for these reasons be given to cattle when worried by the fly in hot weather by allowing them plenty of shade, either natural or artificial.

One of the great points in warding off the attacks of the ox warble fly was to prevent the egg-laying on the cattle by the female. For this purpose some strong smelling mixture objectionable to the fly should be applied to the hides of cattle in those regions where eggs were likely to be deposited. A good mixture for this purpose was: Train oil 1 gallon, spirits of tar 1 pint, and flower of sulphur 1 pint.

In the past it had been customary to advocate smearing the back, loins, and ribs of cattle for the purpose, but where this had been carried out systematically for a number of years it had been found not to appreciably decrease the attack. The reason for this was apparent now that the habits of the fly causing the bulk of the warbles in this country were more perfectly known. The remedy, therefore, resolved itself into smearing the shoulders and front legs of the cattle with some strong smelling substance to prevent the flies laying their eggs.

If the fly succeeded in depositing its eggs, and the maggots once got an entry into the body, the only remedy was to destroy the warbles when they appeared, and this, he said, might be done by plugging up the small holes through which the warbles breathed with some sort of grease or sheep dip. This treatment would destroy the maggot and the sore would heal up. One of the best ways of dealing with this pest was the old-fashioned method of pressing the warbles out when nearly ripe and crushing them under foot.

Where are the Eggs Laid?

In the course of a short discussion Mr. Priday said for many years Miss Ormerod's idea that the warble fly laid its eggs into the back of the cattle direct held good. Now Mr. Drysdale Turner told them they were laid on the hoof and front legs. He was not at all sure about this now. If the maggots were taken into the system it was strange that they made their appearance nowhere but on the back, and it was strange also that the tail of the warble was always at the surface of the hide. In the opinion of many farmers also it was not the warble fly that made the cattle run so much as the gad fly. In that case they had to wage against two flies instead of one. This year there had been less warbles than any time in his experience, and that might be due to the wet, dull weather. He once raised this matter at the county

The Guernsey Bull Royal Governor of the Gron, winner of First Prize at the Bath and West and Royal Counties Shows this year. It was exhibited by Mr. F. Hargreaves, Merton Grange, Gamlingay, Cambs, but was bred by Mr. T. Bourgaize, Gron, St. Saviour's, Guernsey, its sire being Royal Governor of L'Etiennerie, and its dam Butter Bowl 3rd.

council, and they voted £50 for experiments, which were carried out in his district. To a certain extent these experimental means prevented the cattle running about, but it by no means prevented it altogether.

The Value of Smearing the Back.

Mr. St. John Ackers said as one who could speak from personal experience he must most emphatically refute the assertion that smearing the backs of cattle was not effective. Whereas he was very much troubled with warbles at one time, after following the practice systematically and carefully for some seasons, he would have given anyone £1,000 who could have found a warble in the back of one of his Shorthorns. And as to the cause of the cattle tearing about the fields, not once did his warble-free animals do so even in the hottest weather. He did not care a straw whether the fly laid its eggs on the hoof or on the back, if by smearing the back they could prevent the injury.

Mr. Scott said he had smeared the backs of his cattle, and since then there had been no warbles in the hide at all. The cost was less than 1s. per hide, and the beasts made from 20s. to 30s. more.

Mr. Drysdale Turner, replying to the discussion, suggested that where the smearing had proved effective it had not been confined to the back of the animal, but had run down the shoulders to the legs, where the eggs were laid. As to the warbles' appearance on the back only—where Mr. Cozens had remarked the swish of the tail could not reach the ovidepositor—this was no doubt due to some natural instinct which taught the maggot to move in a direction where it would be least liable to attack. He explained the fact that the tail end of the maggot was always at the surface of the hide by observing that its breathing organs were at that extremity, while the mouth was in the head, the latter being therefore kept buried in the tissues of the animal's back. He knew of cases where smearing along the back had been practised, and the results were not satisfactory. It resolved itself into a question of where to apply the smearing. Certainly, he said, follow the smearing, but he repeated it was simply a point of where they should apply their smearing. There was a difference of opinion on the subject, and it would be a good thing if some further observations could be carried out.

Alford Bull Fair.

The annual show and fair of Lincoln Red Shorthorn bulls at Alford was held on Thursday, when 120 animals were sold at an average of 21¼ guineas, which price has only once been beaten—viz., last year, when it was 24 guineas.

The top price of the fair was 150 guineas, given by Mr. J. Evens for Croft Son of Violet, 4791, sent by Mr. J. Searby, of Croft, whilst the nearest approach to this was 61 guineas, given by Mr. J. Mason for one of Mr. W. Chatterton's calves. The awards and prizes were as follows :—

Best red bull, not exceeding fifteen months old on fair day.—1, Mr. H C. Raithby, Mablethorpe, sold for 52 guineas to Mr. Locking, New Clee ; 2, Messrs. S. and J. H. Briggs, Saleby ; 3, Messrs. Robinson and Son. Anderby, 32 guineas, sold to Mr. F. Needham, Norfolk.

Best red bull, exceeding fifteen months old on fair day.—1, Mr. J. Searby, Croft, sold for 150 guineas to Mr. John Evens, Burton, Lincoln : 2, Mr J. Searby, Croft, sold for 44 guineas to Mr. J. F. Rawnsley.

Best red calf bull, not exceeding nine months old on fair day.—1, Mr. W. Chatterton, Hallington, sold for 40 guineas to Mr J. E. Davy, Tathwell ; 2, Mr. C. W. Tindall, Wainfleet.

Best group of not less than four red bulls, not exceeding two years old on the fair day, the property of one exhibitor.—1, Mr. W. Chatterton, Hallington, Louth.

Open to the United Kingdom.—Best red Shorthorn bull, not exceeding four years old on the fair day.—1, Mr. J. Searlby's winner, which, as stated above, was sold for 150 guineas.

Sale of Sussex Farm Stock.

Mr. D. J. Neame, who is giving up the tenancy of Madams, Scotland, and Upper and Lower Park Farms, near Midhurst, Sussex, instructed Messrs. Stride and Son, auctioneers, of Chichester, to dispose of his farming stock, and the sale took place at Madams Farm on Friday. The stock included the Southdown flock (Registered No. 337)—a very fine lot of sheep. The flock was established last year by selected ewes purchased from the Duke of Richmond and Gordon, the Earl of Egmont, and Mr. F. H. Jennings. This year additions were made by the purchase of ewes from the Duke of Devonshire, the Earl of Chichester, Mr. Elmer Speed, and Mr. E. S. Reddaway. Good rams had been used. Some powerful horses, promising cattle, Berkshire and other pigs, poultry, and over 400 lots of dead stock were also sold. There was a capital attendance, and the prices were satisfactory. Shearling ewes made up to 61s ; four-tooth ewes, 55s. ; six-tooth ewes, 58s. ; full-mouthed ewes, 56s. ; ewe lambs, 41s. ; wether lambs, 47s. 6d. ; two-tooth wethers, 66s ; tegs, 62s ; and rams and ram lambs to 70s. 6d. The Shorthorn heifers realised from £8 2s. 6d. to £10, steers from £18 10s. to £21, and the dairy stock from 53s. for a calf to £13 15s. for a cow ; whilst the horses sold at prices varying from 15½ guineas to 54 guineas.

Transactions in Store Stock.

Bandon Fair, co. Cork, held on November 6. Average supply of cattle, for which there was a fair demand. Calves, 1st class, £4 10s. to £5 2s. 6d. ; 2nd class, £4 to £4 5s. ; 3rd class, £3 to £3 10s. ; yearlings, 1st class, £7 15s. to £9 ; 2nd class, £6 5s. to £7 10s. ; 3rd class, £5 to £5 12s. 6d. ; two-year-olds, 1st class, £10 15s. to £11 10s. ; 2nd class, £8 12s. 6d. to £10 ; 3rd class, £7 to £8 ; three-year-olds, 2nd class, £13 5s. ; springers, 1st class, £15 to £16 10s. ; 2nd class, £12 10s. to £13 10s. ; 3rd class, £10 to £10 7s. 6d.

DAIRY.

British Dairy Farmers' Association.

A meeting of the council of the British Dairy Farmers' Association was held at 12, Hanover Square, London, W., on Wednesday, November 8, Mr. Geo. F. Roumieu, J.P. (vice-president), in the chair. The General Purposes Committee presented figures showing that in the nine weeks ended November 2nd, 62 cwt. of fresh milk were imported into the United Kingdom, compared with 511 cwt. in the corresponding weeks of last year. In the same period the imports of cream totalled 544 against 786 cwt. ; of preserved milk 514 cwt. were received from abroad, against 2,462 cwt ; while of condensed milk the imports amounted to 156,432 compared with 183,302 cwt.

The Show Committtee submitted a detailed report upon the various items of expenditure incurred in relation to the Dairy Show, together with a report of the takings at the turnstiles, &c. Compared with all other years than the record one of 1906, the receipts at the turnstiles showed an improvement surpassing 1905 by £180 10s., and 1904 by £147, the latter having been the best year previously since 1898. The total number of visitors to the show who passed through the turnstiles was 46,290.

Correspondence was read from exhibitors who had been called upon to explain discrepancies between the description of their animals on the entry form and the animals actually exhibited. In one case it was resolved that the exhibitor be informed that his explanation is not satisfactory, and that he be warned to be more careful in future. In another instance, relating to cow No. 217 in Class 18, as the explanation was still more unsatisfactory, it was resolved that the prize awarded be withheld.

The next meeting of the council was fixed to be held on Tuesday, December 10.

Cheese Show and Fair at Market Market Drayton.

The first annual dairy show promoted by the Market Drayton Cheese Fair Association took place on Wednesday, and for an initial event was strikingly successful. Close upon 1,000 fine cheese were sent in for exhibition, the aggregate weight being about 50 tons, while one of the large rooms adjoining had to be utilised for the staging of the butter, dressed poultry, eggs, &c , sent in for competition. Mr. W. H. Hobson, Blakenhall, Nantwich, was awarded the champion prize for the best lot of cheese in the show with a splendid lot, in fact, quality all round was excellent.

At the fair on Thursday the quantity pitched was far larger than on any previous occasion. Close upon 80 tons were offered, including many prize cheeses exhibited at the previous day's Dairy Show. In the cheese fair proper the best qualities brought from 68s. to 72s., second qualities from 65s. to 68s , and other grades to 65s. per cwt. Several prize-winning cheeses fetched over 80s., while some of the champion show cheese was sold at 1s. per lb.

Chester Cheese Fair.

Chester Cheese Fair was held on Wednesday, when farmers brought in fifty-five tons of excellent cheese, and with an average attendance of buyers trade was good, a clearance being made at the following quotations :—Fine Cheshire 66s. to 71s., medium 60s. to 65s., and common 55s. per cwt. and upwards.

At Kirkby Stephen hirings on Monday the attendance of young farm hands in search of places was larger than usual, while older men of experience were not nearly so plentiful. Hiring proceeded slowly, and, as a general rule, wages about corresponded with those paid for the past summer term. The ensuing half-year is an exceptionally long one, owing to Whitsuntide falling late. Shepherds were able to command from £18 to £20 ; first-rate farm hands, £15 to £16 ; second-rate men, £11 to £13 ; strong youths, £8 to £9 ; and lads, £6. Very few women servants offered themselves, and late high wages obtained, the figures ranging from £9 to £11 for young girls, and £12 to £18 for experienced women.

AUCTION SALES.

Auctioneers will favour us by sending in their advertisements as early in the week as possible.

Charges for announcements under this heading Six Shillings an inch.

By Messrs. IRELAND.

Norwich, Norfolk.—Ireland's Norwich Hill Auction Mart (established 50 years). Every Saturday. Fat Bullocks and Sheep, Store Sheep. Special Spring and Autumn Store Cattle Sales.

MESSRS. IRELAND solicit consignments for these important weekly sales ; best market value assured.

Cattle consigned to Ireland's, Norwich, will be properly fed and carefully attended to.

All cattle weighed upon entry to the sale ring if desired. Full particulars to be sent to—

IRELAND'S, Auctioneers.
Norwich, Norfolk.

By Mr. E. G. HOTHERSALL, F.A.I.

IMPORTANT AND UNRESERVED SALE OF PEDIGREE LARGE WHITE YORKSHIRE PIGS.

Mr. John Blundell, of Lower Burrow Farm, Scotforth, near Lancaster, in conjunction with C. J. Tong, Esq., of Hambleton, near Poulton-le-Fylde, have instructed

MR. E. G. HOTHERSALL, F.A.I., to SELL by AUCTION on
WEDNESDAY, NOVEMBER 20,
at Lower Burrow Farm, Scotforth, near Lancaster, the entire Herds of PRIZE-WINNING PEDIGREE PIGS,
numbering 95 Head,
principally choice Young Sows due to farrow in early spring, and a quantity of Boars, including the Prize Boar, Shard Roger 8725, a winner of numerous First Prizes, and the grand Stock Boar, Jester of Nottingham 9923.

Luncheon at 11.30. Sale at 1.

Catalogues from the Owners, or E. G. HOTHERSALL, Auctioneer and Valuer, Auction Mart, Preston.

By Messrs. BOND & BURROWS.

HOME FARM, WADDESDON, BUCKS.

HIGHLY IMPORTANT ANNUAL SALE OF PRIME FAT STOCK.

MESSRS. BOND & BURROWS are favoured with instructions from Miss ALICE DE ROTHSCHILD, to SELL by AUCTION, on the premises, on THURSDAY, NOVEMBER 21st, 1907, at ONE o'clock precisely,

92 GRAND FAT POLLED ANGUS, SHORTHORN and JERSEY BULLOCKS and HEIFERS, very ripe, of exceptional quality and nice weights ;

5 VALUABLE YOUNG PEDIGREE BULLS, descended from the best milking strains and of good colour ;

97 DOWN EWES and TEGS, of choice quality .

Luncheon from 12 o'clock.

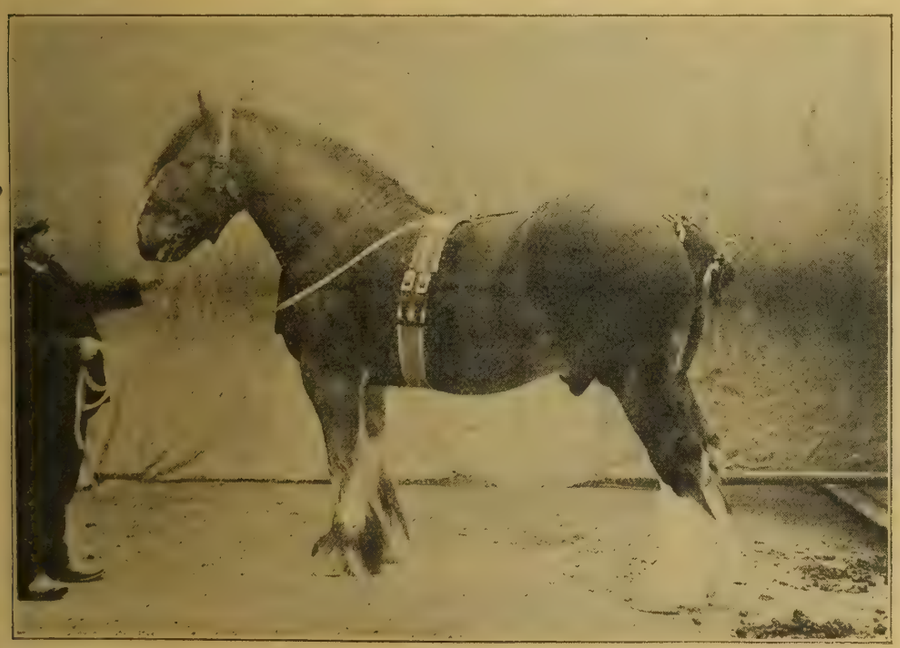
Catalogues with Train Service may be obtained of G. A. SIMS, Esq , Winchendon ; the George and Crown Hotels, Aylesbury ; the Spread Eagle Hotel, Thame ; or of the AUCTIONEERS, Thame, Oxon.

By Mr. W. BAINBRIDGE.

WALTON HALL, WARRINGTON.

THURSDAY, NOVEMBER 14, 1907.

OWING to alteration and re-organisation of the Walton Herd of Pigs, owned by Sir Gilbert Greenall, Bart., a Second Important Sale for this season, consisting of upwards of
100 HIGH-CLASS LARGE AND MIDDLE WHITE PEDIGREE BOARS, SOWS, GILTS, and YOUNG PIGS, including many winners and descendants of winners from this celebrated herd, will take place on Thursday, November 14, 1907.



Further particulars and Catalogues of W. BAINBRIDGE, Land Agent, Walton House, Warrington.

HORSES.

Shire Sales—A Brisk Foreign Trade—The Old Draught Horse—A Qualification—Inferences—What Caused the Improvement?—A Lack of Good Order of Breeding—Chance Horses.

Shire Sales.

IT is seldom that we have Shire sales so late in the year as November. Generally the Shire sale season is supposed to begin in January, and there are few sales held after August. Indeed, the first six months of the year are generally the busiest for sales, and perhaps the best dates of all are those before the Shire Horse Show. At any rate, those are the dates which experienced breeders seem the most anxious to secure. The extension of the sale season to so late into the autumn shows that the trade in Shire horses is in a very healthy condition, and Mr. Salomons, whose sale has been the latest to take place, has certainly no reason to find fault with the prices his stud realised. The top price was made by Norbury Juno, a very handsome and weighty filly that did well in the show ring last season, and that was none too dear at the 400 guineas which Mr. Whitley paid for her. She was ninth in a remarkably good class of two-year-old fillies at the Shire Horse Show last spring, was a winner at Reigate, Tunbridge Wells, and the Royal Counties, and reserve at the Royal and at Peterborough, all performances of great merit, on which it is far from unlikely that she will improve next season. Mr. Whitley also bought a promising yearling that must be looked out for next season in Norbury Bloom, for which he gave 185 guineas. The forty-five lots offered realised 3,848 guineas, or the very useful average of £89 15s. 8d. each. This compares very favourably with the averages of 1906. In that year Mr. Simpson Jay's ten averaged £116 8s. each. Then came Mr. R. W. Hudson's average of £86 7s. each for forty, and Sir A. Henderson's average of £80 8s. for thirty-five. So that for a large stud, for it is not fair to compare Mr. Simpson Jay's ten with Mr. Salomons' forty-five, the latter gentleman has exceeded the best average last year. The sale at the show at Islington, of course, does not come in for consideration, as it consisted of the pick of many studs, and the champion mare was included.

The Shire Stallion Holker Menestrel II., who was foaled in 1903, sire Birdsall Menestrel, dam Royal Rose, is the property of, and was bred by, Mr. Victor Cavendish, M.P., Holker Hall, Cark-in-Cartmel, Lancashire. At this year's show of the Shire Horse Society Holker Menestrel II. won the First Prize in the class for Four-year-old Stallions.

A Brisk Foreign Trade.

AMONG those who were present at the Norbury Park Sale were Mr. Martinez de Hoz and Mr. E. N. Casares, both of whom were bidding briskly for the Argentine breeders, and both of whom bought a few horses. Hitherto we have been accustomed to see the foreign trade begin to open in the latter part of February at the earliest, and buyers from the American continent, at any rate, had not been much in evidence till considerably later in the year. Now it would appear, indeed, as if they were taking time by the forelock, and the presence of the gentlemen mentioned and the good prices realised at Norbury Park on Wednesday would lead one to hope that there will be an excellent trade in Shire horses next year. Let us hope that this trade will spread to other breeds and that our light horse breeders may have a return of the "sunshine" which they enjoyed a few years ago. If that happy chance be theirs, it is to be hoped that they will profit from past experiences, and above all things, that nothing will tempt them to sell their good mares.

The Old Draught Horse.

IT is very interesting to read what old writers of books on Horse-breeding and Horses have to say about the various breeds of horses, and those who are inclined to laugh at them merely because they advise such curious compounds as horse medicines fail to recognise what anyone who has read their books carefully must acknowledge, and that is that our ancestors, with all their ignorance of medicine and their superstitions about the phases of the moon, &c., were thoroughly practical horsemen, who knew how to breed, rear, and break their horses. If they had not, indeed, it is impossible to see how the business of the country would have been carried on. Blundeville's advice to the breeder of draught horses, written in the middle of the sixteenth century, nearly 350 years ago, is not uninstructive even at the present time "But now to content the countrieman, his desire which seeketh to brede horses for draught or burthen," says he "where should I wish him to provide himself of mares and stallions, better than here in England, whereas he maie easilie find a number of strong jades, more meete for that purpose than for the saddle, and all for lack of good order of breeding, which if it might be once observed in this realme, I believe there would be so good and so faire horses bred here as in anie place in Christendome. But as for the cart horse, so that he be great of stature, deep ribbed, side bellied, and have strong legs, and good hoofes: and therewith will stoope to his worke and laie sure hold on the grounde with his feete, and stoutlie pull at a pinch, it maketh no matter how fowle or evill favoured he be." From this it would seem that there was a good supply of powerful horses in the country in Elizabethan times—horses which would do good work, in the opinion of an expert like Blundeville, who certainly does not at first speak with much respect for the "countrieman's" horse.

A Qualification.

IT is one thing to say that good looks are not necessary in a Cart Horse—though, by the way, a horse would have to be pretty truly made to come up to Blundeville's description of the Cart Horse already given—and another to say that good looks were not there, and Blundeville has something to say for the Cart Horse breeders and users of his time. For he continues, "Notwithstanding, I have knowne some carriers that goe with cartes to be so exquisite in their choice of horses, as unlesse they had been as comelie to the eie as good in their worke they would not buie them, insomuch I have seene sometime drawing in their cartes better proportioned horses than I have knowne to be finelie kept in stables, as jewels for the saddle."

Inferences.

FROM the above quotations two inferences will, I think, be readily drawn. The first is that horse breeding had made a vast improvement between the early years of King Henry VII., when very drastic laws were made to protect the breed from the carelessness and indifference of owners, and the date when this book was written, a period of some sixty-three years. For the legislation of Henry VII., and also of his son goes to prove that there was great danger of our horses getting undersized, and of no use for "service," as the old writers term war. The other inference is that whereas the cart horses of the time were strong, they were also especially active, well shaped—that is, the best of them—and adapted for breeding good saddle horses of the Hunter type. And it may be also inferred, by the way, that Blundeville was in favour of more Government interference with horse breeding, though certainly he does not say so explicitly.

What Caused the Improvement?

WHAT caused the improvement is a question worth a moment's consideration. On the face of it, it would seem that the somewhat severe legislation on the subject had had its effect. Such, however, is scarcely my opinion. All these acts were repealed sixty-five years after the commencement of Elizabeth's reign, and 128 years after the first of them was passed. There were several of these Acts of Parliament to regulate horse-breeding, but the probability is that they fell into disuse long before they were repealed, and for the best of all possible reasons—viz., that the country gentlemen—and Blundeville's plain "countriemen," the small owners and squires, at whom it is the fashion to sneer in these days, had, as soon as the country got fairly settled after the Wars of the Roses, seen the importance that horse-breeding was to the country and also to themselves, and set about horse-breeding in such a systematic manner as to distance the Government schemes.

A Lack of Good Order of Breeding.

IT will be noticed that our Elizabethan author speaks of "a lack of good order of breeding," and that lack of good order of breeding exists to the present day, possibly in no greater or lesser degree than it did in the sixteenth century. It is absurd to expect that every man who has a brood mare should be a scientific breeder. If he were a good many mares that are breeding foals now would soon be put from the stud. There are some men who have curious theories about breeding, and who, if they have the means, will follow these theories out in practice. There are others, and these are a very numerous body, who say to themselves "I have a mare, I will take a foal from her, it will be worth something some day." And straightway they proceed to what they dignify by the name of the choice of a stallion. There are hundreds of small breeders who I am sure could not give the reason why they have mated their mares with a certain horse. And sometimes these breeders drop on to a happy accident, and we all learn something. But "a good order of breeding" can never be brought about by legislation. The best way to ensure that much to be desired end is to persuade men to keep their best mares and not to be persuaded to breed from their bad ones let the temptation be never so great.

Chance Horses.

THAT there are in the country a lot of chance horses is undoubted, and very good horses many of them are. One sees in show catalogues not one, but many entries like the following, "Bred by Mr. A. Pedigree unknown," which is absurd. How can it be possible for the breeder of a three or four year, or even an older horse, not to know something about his pedigree? But it passes by, because no one chooses to make inquiries. Now and again we come across a thoroughbred that is a chance horse, and perhaps the most remarkable instance of a chance thoroughbred is the famous Fandango. His dam Castanette, was moderate, so moderate that she was not worth keeping in training and she was not sent to the stud farm at Aske, but was sent down for Lord Zetland's shepherd to ride. She came down with him on the road, and cut her knees so badly that she had to be laid by. Whereupon the shepherd on his own responsibility had her covered by Barn-

ton, an own brother to Voltigeur, who was travelling the Richmond—Leyburn district in the fifties and who made a high reputation as a Hunter sire. Fandango was the best horse his dam ever bred or that Barnton ever sired, and he is a remarkable instance of a chance horse. THE LOOKER ON.

Mr. L. Salomons' Shires.

The sale of a draft of Shire horses from the well-known stud of Mr. Leopold Salomons drew a large and representative gathering of breeders to Norbury Park, near Dorking, for with youngsters by Hendre Champion included in the catalogue the importance of the sale was fully recognised. From the beginning the bidding was keen, and the aggregate of 3,848 guineas for forty-five lots—an average of £89 15s. 9d. each—must be considered very satisfactory, proving that there is still a good demand for heavy horses of the right sort.

His Majesty the King secured the brood mare Buscot Chloris at 220 guineas, while the highest price of the sale was 400 guineas, paid by Mr. Whitley, of Paignton, for the two-year-old filly Norbury Juno. The same breeder secured the yearling filly Norbury Bloom at 185 guineas and the mare Hendre Merry Lass at 220 guineas. The well-known mare Wern Blossom is destined for export to the Argentine, having been purchased at 200 guineas by Mr. E. N. Casares, Mr. Conchar paid 115 guineas for Norbury Pearl, Sir Berkeley Sheffield 130 guineas for Norbury Corona, Lord Northbourne 150 guineas for Norbury Desdemona, Mr. Smith Carington 175 guineas for Norbury Surprise, and Lord Rothschild 155 guineas for Norbury Flash. A sale list is appended :—

Ten foals		419

Royal Commission on Horse-Breeding.

A meeting of the Royal Commission on Horse-Breeding was held at 16, Bedford Square, W.C., on Monday, when there were present the Earl of Granard (Master of the Horse) in the chair, the Earl of Coventry, Lord Middleton, Sir John Gilmour, Bart., Mr. J. Bowen Jones, and Mr. J. Herbert Taylor, secretary.

The Duke of Portland, K.G., Lord Ribblesdale, and Sir Walter Gilbey, Bart., wrote expressing regret at being unable to attend the meeting.

The numbers of mares served during the past season were laid before the commissioners, and in cases where stallions had failed to get the required number the premiums were reduced in accordance with the rules and regulations. The percentage of foals for the 1906 season was presented, and the average considered very good.

Sir John Gilmour had a resolution on the agenda affecting the management of the 1908 show, but, owing to the meeting not being considered fully representative, the further discussion was adjourned until a meeting of the commission, to be held on Monday of Smithfield week.

The premium list for the 1908 show was considered, and ordered to be printed and presented to his Majesty and the treasury for approval.

Shire Horse Society.

At the meeting of the council of the Shire Horse Society held on Tuesday no fewer than fifty new members were elected, whilst Mr. A. C. Duncombe, chairman of the Editing Committee, reported that the committee had that morning considered and approved applications for sixty-nine prefixes and three affixes :—

The Editing Committee also reported that they had dealt with several incomplete and other entries for Vol. XXIX. They had arranged to meet on Wednesday, November 20, at 11 a.m., to revise the Stud Book proofs, while they recommended that the conditions of entry for Vol. XXXI. should remain the same as in force for Vols. XXIX. and XXX. This report was adopted.

Awards of Medals.

Sir P. Albert Muntz, Bart., M.P., vice-chairman of the Horse Show Committee, reported that thirty-seven gold medals had during the past season been awarded at thirty-two shows, with £140 allotted to breeders, while at 224 shows the society had awarded 235 silver medals, with £166 given to the breeders. The results of the society's offer at horse parades indicated that in London thirty-two silver medals and twelve premiums of £1 had been awarded, while at provincial parades fifty-three silver medals and twenty-one premiums of £1 had been allotted.

For 1908 the committee recommended no alteration in the conditions, but decided to add to the list of foreign shows that at Palermo, to the executive of which they proposed to offer two gold medals for the best Shire stallion and best Shire mare. Several awards of the past season, in abeyance, had been presented for their decision, and in two cases they had decided that the medals should be withheld, allotting one medal in the third case for the best Shire mare exhibited in the show.

A proposal from one of the county societies to amend the wording of the rules relating to the residential qualification of an exhibitor competing for the gold medal was not entertained, and it was resolved to offer to the Royal Ulster Agricultural Society the sum of £10 in prizes for Shire horses at their 1908 spring exhibition.

The revised conditions of sale submitted by Messrs. Sexton, Grimwade, and Beck had been carefully considered, and their proposals adopted, especially that relating to the return of a shiverer within a definite date of the auction.

The 1908 Show.

The schedule of prizes for the London Spring Show had been carefully considered, and the seven classes for stallions, seven classes for mares and fillies, and three classes for geldings would remain as in previous shows.

The committee recommended the addition of an eighth class for mares—viz. : For barren mares, five years old and upwards, any height; first prize £15, second prize £10, third prize £5.

No mare competing in this class should be eligible to compete again until she had produced a living foal.

The result of this addition would bring the prizes to be offered at the 1908 show to £2,210.

This report having been presented, it was resolved, upon the initiative of Mr. John Rowell, to consider the desirability of the society providing the requisite canvas covering the stallion boxes at the next show, while after a short discussion it was decided that the prices of admission to the show on the first three days should be co-ordinated —viz., 2s. each day, with 1s. for the Friday. This report was adopted.

Royal Show at Newcastle-on-Tyne.

On the proposal of Mr. John Rowell, seconded by Mr. C. W. Tindall, it was unanimously resolved to again offer to the Royal Agricultural Society of England the sum of £70 as class prizes in the Shire section of the 1908 exhibition at Newcastle, with two gold medals and breeders' prizes for the best Shire stallion and for the best Shire mare or filly exhibited.

The council then adjourned until their meeting on December 10.

Sale of Mr. H. Oakley's Shires.

On the day after the Norbory Park Sale there was a sale of Shires at Dewston, Chepstow, the animals belonging to Mr. H. Oakley, who has bred a goodly number or prize-winners, and now sold all the stud with the exception of a few aged brood mares and two stud horses, which he had decided to retain. The young stock were particularly admired by the large company present, no fewer than six of them being by Dunsmore Jameson, and three by Lockinge Forest King, whilst the mares were by Harold, Alston Hero II., Valcan, First Lord, Hendre Baronet, Markeaton Royal Harold, &c., and in foal to Dunsmore Jameson, Ravenspur, Montford Jupiter, &c. Bidding at the sale was brisk and prices ruled satisfactory, though they were not so high as on the previous day. The top figure was 165 guineas, this sum being given by Mr. Wheatley for the two-year-old stallion Dewstow Jameson, who was bought for California. The same amount was given by Mr. Everard for the yearling colt, Dewstow Forest King, by Lockinge Forest King, whilst Mr. F. G. Muntz gave 140 guineas and 145 guineas for two foals, as will be seen from the list of the chief sales given below. Other three figure prizes were recorded, and the result was an average per head of £66 10s. for thirty-nine animals.

Sale of Shires at Peterborough.

A sale of Shire mares, fillies, foals, stallions, and geldings was held at Peterborough on the 1st inst., in the presence of a large company, and some good prices were realised. A yearling bay filly sired by Lockinge Forest King, and belonging to Mr. J. L. Cross, Catthorpe Towers, Rugby, reached the top price, 105 guineas. This animal is own sister to Lord Egerton's famous Catthorpe Damion. One hundred guineas was paid for Lawford Lassie, a yearling bay filly belonging to Mr. E. Ashby, Long Buckby, whose sire was Lockinge Forest King, whilst another yearling filly, Danesfield Pearl sired by Hendre Hydrometer, and belonging to Sir P. A. Muntz, M.P., went for 100 guineas. Prizes were offered for the best Shire mare, four years old and upwards, realising not less than 40 guineas, Sir Berkeley Sheffield's Medbourne Sundial being first, and Mr. J. Brandon's Buscot Minerva second.

Earl Carrington, President of the Board of Agriculture, presided at a meeting held in the Guildhall, High Wycombe, on Wednesday, convened by the Home Counties Liberal Federation for the purpose of discusssing the Small Holdings and Allotments Act, 1907, and in the course of a speech, expressed the belief that the measure, without doing harm to any section of the community, would be of great benefit to agricultural workers in the acquisition of allotments. He repudiated the suggestion that there was no demand for small holdings. His experience with Crown lands showed that such an argument would not hold water. The Government were not hunting for popularity in bringing in this legislation, but had intended to act fearlessly, courageously, and honestly in the interests of the people.

ATKINSON, T., & SON, North Kelsey, Lincoln. Old-established flock of pure Lincoln Longwools. Rams, Ewes, and Lambs for sale. Noted for great size and long lustrous wool. Have given great satisfaction at home and abroad. Inspection invited

BROCKLEBANK, JOHN, Bassingham, Lincoln (Flock 24). Pure-bred Lincoln Longwool Rams and Ewes. This old flock has been carefully bred for 100 years. Telegrams: Bassingham.

BROOKS, W. J., Stowe Lodge, Weedon, Northants (Registered Flock 165), has for sale Rams and Ewes of best blood.

DRAKES, Wm., Tealby, Market Rasen. Flock No. 72 of Lincoln Longwool Sheep. Rams, Ewes, and Lambs of best blood for sale. Lincoln Red Shorthorns. Prices moderate.

DUDDING, MR. HY., Raby Grove, Great Grimsby, Lincolnshire, has always for inspection and sale the largest flock of pure Lincoln Longwool Sheep in the county, and many prize-winners. They are famous for great size, fine wool, and 150 years' good breeding, and at the home Sales have made the highest prices on record. In July, 1906, 51 shearling rams sold to average £151 each, the record price being made for a single ram, namely, 1,450 gs., and on two other occasions have rams made 1,000 gs. The wonderful success of the Raby sheep at the Royal Show, Lincoln, 1907, and at the Home Sale in July when 48 rams averaged £94 each, proves that the Riby blood leads the way. Champion and premier prizes have been secured in all the leading exhibitions throughout the world. Telegrams: "Dudding, Keelby."

MONEY, FRED. Silk Willoughby, Sleaford. Flock 323; established over a century. Four Rams from this flock fetched over £1,300 in the Argentine, February, 1903, one making £700, the record for a single ram in Buenos Ayres. Rams for sale. Inspection invited.

SMITH, HENRY, jun., Cropwell Butler, Nottingham. Lincoln Longwool Flock No. 7, winner of £2,361 in prizes. Champion pen Lincolns, Smithfield Show, 1896; Association Championship, Leicester 1897 Association Championship for pen of 3 Shearling Rams Yorkshire, 1900; Championship, Rutland, 1902, 1903, 1904, 1905, and 1906. Rams, Ewes, and Lambs for sale. Station: Bingham, G.N.R.

LEICESTER.

SIMPSON BROS., Pilmoor House, Hunmanby, Yorkshire, Breeders of Leicesters (Flock No. 2 in Leicester Book), have always for inspection or sale Rams and Ewes. These Sheep are of great size with heavy fleeces, and include Royal Winners.

(Continued on page 592.)

SHEEP—*continued.*

Suffolk and the Swine Fever Regulations.

A small deputation of Suffolk gentlemen, all of whom are members of the East Suffolk County Council, waited upon the president of the Board of Agriculture on Thursday, with a view to securing a modification in the severe regulations that are put in force when there is an outbreak of swine fever.

The deputation was introduced by Mr. R. Lacey Everett, M.P., who referred to a resolution that had been passed by the executive committee appointed under the Contagious Diseases (Animals) Act, in which it was contended that the policy adopted by the Board of Agriculture in its endeavour to stamp out swine fever was inconvenient and costly, and ought to be discontinued. He said that the general opinion was that more losses were occasioned to farmers through the swine fever restrictions than the disease itself. If the restrictions had been successful in their effects, then farmers would have willingly put up with them. Personally, he believed it would be better to go back to the times of their forefathers; they had to contend with swine fever, but they were never subject to restrictions from the Board of Agriculture, and each farmer dealt with the disease in the best way he could. He would have people punished who had diseased animals and moved them about. It would, Mr. Everett added, be a great advantage to the agricultural industry if the restrictions could be removed entirely or modified.

The other members of the deputation having spoken, Earl Carrington said he thought the Board of Agriculture could claim to have done something towards stamping out the disease. Every single member of the Board was anxious to co-operate with the farmers in every way, and they realised it was a very distasteful thing to have to enforce the swine fever regulations, which were passed simply and solely in the interests of agriculturists. Swine fever was, no doubt, a hard nut to crack. All he could say was that their object was to do what was right and fair for all connected with agriculture, but they could not take one particular county, and make an exception in the case of Suffolk. There must be continuity, and a uniform policy all over the country. He assured the deputation that he was anxious to do the best he could for agriculturists, and regretted there should be these complaints about the swine fever regulations. At that point he would rather say no more than that. He mentioned the fact that in two years eight Acts of Parliament had been passed on matters solely dealing with agriculture, and it seemed swine fever was about the only thing troubling farmers now.

The Berkshire Sow shown above is Elvetham Fancy, winner of First Prize and Reserve Champion Berkshire Sow at the Royal Agricultural Society's Show at Lincoln, where she was exhibited by Lord Calthorpe, Elvetham Park, Winchfield. Elvetham Fancy was born January 8, 1906, sire Supreme's Boy, dam Compton Fancy, and was bred by Mr. R. B. Vincent, Compton Valence, Dorchester, Dorset.

At Newark November Fair there were over 2,000 beasts and 3,000 sheep on offer. Bulls met with a ready sale at prices up to 17½ guineas, whilst sheep averaged 35s. to 49s. each.

SHEEP.

Notes and Jottings.

AMONGST the items that will come up for discussion at the meeting of the National Sheep-breeders' Association in December, is a notice of motion to call attention to the Sheep Dipping Order, and to move a resolution. This will afford the representative breeders on the council of this association full opportunity to discuss, if they think fit, the effect of the Sheep Dipping Order that has been enforced during the past year. That the Order has done great good no one who is acquainted with the sheep industry will for one moment gainsay.

SHEEP dipping has probably been more generally carried out in this country during the past twelve months than ever before. Not one, but many, in fact scores of breeders have said to the writer that they hardly ever remember (for they are careful not to say they never remember) a year in which the store sheep being sold at the autumn fairs have been found so free from lice and from ticks. That this is the case is a matter of great benefit to those who are feeding sheep, because it needs no great stretch of imagination, neither a lengthy statement, to prove how much more likely these sheep, which have got rid of that host of parasites that one finds upon undipped sheep, are to develop and thrive than if it were otherwise.

IT has never yet been possible to ascertain the amount of nourishment that the parasites that one finds in dirty and undipped sheep require, but be this as it may, it is quite certain that the whole of their nourishment is obtained from the sheep upon which they exist. Consequently, the whole of their nourishment, which is of no benefit whatever to the sheep, has to be provided by the owner of the sheep, and it follows, therefore, that if such parasites are absent the owner of the sheep does not have to keep them by means of feeding the sheep; but, instead, the sheep is able to utilise, to its own well-doing, the whole of the food it consumes.

A MATTER which emphasises the need of this country being freed from sheep scab came vividly to the fore at the autumn meeting of the National Sheep Breeders' Association. At this meeting the replies to a request made by the association that the Australasian Colonies and New Zealand should reduce their period of quarantine were produced. The replies received from each of the States of the Commonwealth, and from the Dominion of New Zealand, were in agreement that it was impossible to reduce the period of quarantine enforced on British sheep, but the reply received from the Government of Victoria contained also a report of the chief veterinary inspector of that colony, and this report sets out clearly the reason that he could not advise his Government to reduce the period of quarantine—*i.e.*, that sheep scab existed in Great Britain, and that so long as it did it was impossible to reduce the period of quarantine.

HERE we have before us a clear statement that the continued existence of sheep scab in this country prevents our stud sheep breeders from securing a very much larger demand for their sheep from Australia and New Zealand.

IT may be said that the report does not state this. Quite so; but those who are engaged in the export trade of this country know perfectly well that if it were not for the very heavy expenses of the thirty days' quarantine, coupled with the three official dippings and the various other fees that have to be paid by the importers on arrival in the respective colonies, a very much larger number of sheep would be taken there.

A WELL-KNOWN fell monger told the writer the other day that he was confident, from his experience of dealing with sheep skins from New Zealand and Australian sheep, that they were wanting a large infusion of fresh blood. This may be the case or not, but the opinion of my informant was that there was a great tendency being shown, in the New Zealand skins particularly, for the pelt to become thinner, to lose substance, and this he put down to the want of a renewal of fresh blood from the fountain head.

THOSE who are acquainted with New Zealand know very well that the tendency out there is for the British sheep to lose bone, to lose coarseness of wool, and, in fact, generally to become finer sheep, and if the wool tends to become finer, and the bone tends to become less, it is quite as reasonable to assume that the thickness of the pelt will also diminish.

MANY other reasons might be given to support the assumption that if it were not for the heavy expenses mentioned above in connection with quarantine, that the demand for British stud sheep for Australia and New Zealand would be very much larger than it is at the present time.

DURING the past season quite a number of sheep have been taken to New Zealand and to Australia, and those who have been over here from those countries all agree that more are wanted, and they also all agree that the reason more are not taken is that the expenses attached to their going are so heavy.

THE combination represented by the National Sheep Breeders' Association is one that has proved itself to be of great value to the sheep breeding industry of this country upon more than one occasion, and amongst the more recent successes that the combination represented by this association has secured, has been the reduction of the fees charged by the official veterinary surgeons for the inspection of sheep going to Australasia and New Zealand.

A LETTER from the Agent-General for New South Wales was read at the last meeting of the National Sheep Breeders' Association, stating that the reduced fees agreed to at the conference held between the representatives of the National Sheep Breeders' Association and the Colonial Veterinary Surgeons during October, 1906, had been accepted by his Government, and that they would be charged in future.

THIS is a concession of considerable importance to those who are importing sheep to those Colonies, and it is also of importance to those at home who are breeding sheep of the class that is required for those Colonies, because any reduction in the expenses tends to make those who desire to purchase keener buyers.

FOR eight years past it has been the practice of the National Sheep Breeders' Association to hold an International Conference of Sheep Breeders on the day preceding the opening of the Royal Agricultural Society's Show, and it is with great satisfaction we note that the subject chosen for discussion at the Ninth International Conference of Sheep-Breeders, which will be held at Newcastle on Monday, June 29 next, is "The General Management of Sheep."

THIS is a subject that will afford ample room for discussion, and, we trust, secure the expression of many valuable opinions.

IN asking Mr. A. Mansell, of Shrewsbury, to prepare and read this paper, the council of the National Sheep-Breeders' Association, have unquestionably made an excellent choice, for Mr. Mansell is well known as a very high authority

IMPORTANT TO FARMERS and POULTRY KEEPERS.

How is it your Hens are not laying as they ought?
They require a little
"GARSTANG TONIC"

In the morning's soft food, which will keep them free from Colds, Roup, &c., and in a short time the Egg Production will be wonderfully improved.

All Poultry Keepers ought to know its value.
Ask those who have tried it!

Beech Mount, Garstang.
Mr. J. Thomas, Dear Sir,—My Turkeys for last Xmas kept dying off one by one until I was afraid I was going to lose them all; my man, Walter Cross, had heard something of your Powder, so he suggested to me one day that we should try the "Garstang Tonic." We did so, and I can assure you that we lost very few more, and what were left fed up and were as good a lot of Turkeys as ever I had for Xmas. I also gave it to some Irish pullets, and it had exactly the same effect on them, smartening them up, and making them ready in very little time. I can confidently recommend the "Garstang Tonic" as the best preparation ever I have used, and I have tried a good many in my time.—Yours respectfully,
(Signed) ROBERT MARSDEN.

To be had from all Grocers and Chemists. Be sure you ask for Thomas's "Garstang Tonic," and don't be put off with any other. If you have any difficulty in obtaining the Powder write direct, and you shall have a tin per return.
Sold in tins 10d., 1/6 & 2/6. Post free 1/1, 1/9 & 2/9.

PREPARED BY
JOSEPH THOMAS, Chemist, GARSTANG.

LEARNER'S PATENT FOOT-ROT CURE
Guaranteed to cure and leave the hoof soft and pliable.
TINS 3/- & 1/6 EACH.
POST FREE.
ALFRED J. LEARNER,
REDHILL, SURREY.

YOU WANT
a Boot in which you can do the work about the Farm, feel easiness in walking and yet keep out the damp?

NOW we are making such a Boot on a specially Sprung last, enabling the wearer to plough or go about the byre with absolute comfort. They will not tire the feet, are made from home tanned Leather, Tackets to heels and guaranteed watertight.

10/6 will bring a pair of these comfortable FARMER'S BOOTS to your door.
Better quality in same Boot, whole Kip Leather - - - **14/9**
Tell us your size and send a P.O. for the amount. We do the rest.

E. BROWN & SON,
The Pioneers in Farm Foot Wear,

upon all matters in connection with the sheep industry of this country, and he has also at the same time had a very large and varied experience in connection with the industry practically all over the country.

The Champion Suffolk Flock of Breeding Ewes.

The Suffolk Sheep Society's Champion Challenge Cup for the best flock of Suffolk breeding ewes has this year been secured by Mr. D. Abbott Green, of Fingringhoe Hall, Essex, and in accordance with custom the flock was on Thursday inspected by members of the society. The flock was shown on a grass field at the back of the Hall buildings, and they excited the admiration of the large company of breeders present because of their uniformity, being very matchy and of great scale. They numbered 201, with five rams, three purchased of Mr. Herbert Smith, one lamb from Mr. Clement Smith, and the shearling which has been the round of the shows, a Royal prize winner as well as at the Suffolk and Essex Shows, Fingringhoe Hero. The others were Persimmon 9th, the three-shear sheep, which has done excellent service in the flock for the last three seasons, and the others lambs, one being the highest prize sheep of the season.

The flock had not been in competition since 1904. It was duly entered in the division, and competed for the Bristol Champion Prize, Mr. Herbert Smith being the winner, and Mr. Green's flock won reserve. Previous to that it had not competed since the first year the Bristol Champion Cup was offered. On that occasion the entries were numerous, Mr. Smith's amongst them. Mr. S. R. Sherwood was the winner, and the Fingringhoe Hall flock reserve. It had previously to that won the Division or District Cup, as it was called by the late Marquis of Bristol, before the Gold Cup competition.

According to the rules, a competitor has to show two lambs to the score, and as there were 207 ewes last year, it was necessary to show twenty-one lambs, the object being to get fair specimens of what the flock has produced. It is needless to say that these also came in for close scrutiny, as did also the sires.

After the competition those present were entertained to luncheon, at which the president of the Suffolk Sheep Society, Mr. E. S. Pretyman, occupied the chair.

Exports of Leicester Sheep.

We are informed that Mr. G. Harrison, of Gainford Hall, Darlington, has sold to Mr. P. Harrison, of Hobart, Tasmania, two of his pure-bred Leicester shearling rams which were in a pen of three that received first prize at the Yorkshire Show held at Barnsley this year. The Melbourne (Australia) *Leader* of September 14 reports an important sale of imported English Leicester sheep on behalf of Mr. George Simonds, of Tasmania. The consignment comprised twelve ewes with their imported lambs, and in-lamb again to the imported ram, at prices ranging to 50 guineas per head; and one imported ram at 100 guineas. These sheep were bred by Mr. Harrison, whose flock is No. 42 in the flock book of the L.S.B.A.

Mr. John Sinclair, Secretary for Scotland, in opening a special school of study for young farmers at Ardenconnel Holiday Home, Dumbartonshire, referred to the work carried on in the agricultural colleges at Glasgow, Edinburgh, and Aberdeen, and said he thought it would now be possible to give better grants for agricultural education. The colleges had been invited to lay before the department definite proposals for the extension of their work, so that the funds reasonably required might be placed at their service.

Prize Root Competition. — The annual show of roots (mangels and swedes) was held at the Tattenhall Road Bone Works, near Chester, when the proprietors, Messrs. W. R. Smith and Son, offered the sum of £60 in cash prizes. The pen competitions were for the five heaviest mangels and the five heaviest swedes grown by the aid of the Messrs. Smiths' manures, and some really very fine bulbs of both were staged, especially those from Gloucester, Cheshire, and Denbighshire. The first prize amounting to £30 for the mangels went to Mr. Ernest F. Bellamy, of Newent, Gloucestershire, and the first prize of £30 for swedes was awarded to Mr. Leonard J. Smith, of the Scarr, Newent. The weight of the five prize mangels scaled 209 lb., and that of the swedes 137 lb., both of which represented field crops of over 100 tons per acre. The respective bulbs were Garton's improved breed of large yellow globe mangel, and Garton's improved model swede. Next in order of merit came Mr. William Shepherd of Burton, Denbighshire, and Mr. Arnold Sherwin, of Waverton, Cheshire. During the past year Messrs. Smith have largely extended their works, and at the close of the competition the visitors were shown over the works by Mr. Gordon Smith, the junior partner, and Mr. H. A. Longrigg.

THE YORKSHIRE UNION.

Agriculture and the State.

Chief interest at the meeting of the Yorkshire Union of the Agricultural Clubs and Chambers of Agriculture, held on Thursday, centred in the address given by Captain Mark Sykes on "Agriculture and the State." It was a most attractive paper, and was listened to from beginning to end with keen interest by the goodly company present.

Captain Mark Sykes said that the attitude of the State to agriculture, the economic and national position of agriculture in England, would soon become one of the leading questions of the day. If they looked through history, they would find that in the building up of many empires agriculture has in the first instance been the cause of their rise, and its decline has run parallel with their fall. In the early history of the Roman Empire they found that the pristine vigour of the Republic was derived almost entirely from the services of the stalwart yeoman farmer who dwelt within the neighbourhood of the city; they provided the invincible powers of the early legions they infused the public with that rugged spirit of perseverance and national probity, and to them was due that stern independence which would brook neither the tyranny of a monarch at home, nor that of an invader from without.

The speaker examined the social conditions of Rome preceding her downfall in detail—the better income for the industrious in the city than on the land, and the daily pension of bread for the idle; and remarked that the yeoman farmer of Rome could not be revived for the very good reason that he was not wanted. He became extinct as the result of certain economic laws, which neither statesmen nor prophets could alter. This kind of thing, he proceeded, was very sad and regrettable, but he warned them not to try to avoid studying it because the inferences they might draw from it might prove unpleasant to their peace of mind. Other world empires rose from other causes, and our English Empire owed its rise and expansion to not one, but to nearly all, the recognised first causes of greatness.

Captain Sykes traced the gradual social and economic evolution of the English race from Saxon times to the Napoleonic era, at which period British agriculture, with prices high and wages low, became a highly artificial industry with all the faults of one that is fostered or subsidised at the expense of others.

The Decline in Agricultural Population.

As a result of the repeal of the Corn Laws and the gigantic impetus given to town industries, agricultural industry, relieved of its own function of providing city folk with food, took its place as an industry run on purely economic lines, with as little labour, as much machinery, and as much science as could be put into it. Under these circumstances the agricultural population had declined, it was declining, and, if he might venture an unpopular prophecy, he thought it would continue to decline. We were marching along a road upon which we could never retrace our steps.

Now directly this decline in the agricultural population was realised, many people from many different classes were filled with alarm. The soldier says: "Where are my sturdy ploughboys who fought at Waterloo, my yeomen of Agincourt, my thanes of Senlac?" The capitalist: "Where are my reserves of labour, men who can work and will work?" The Socialist: "Where are the people to whom the land belongs by right?" The Imperialist: "Where are the fathers and mothers of our Imperial race?" Commissions investigate, census returns are flourished in our faces, and it suddenly appears that in ancient times, and even now, agriculture appears to have had a function which neither Cobden nor his fellow-economists took into consideration—the production of a healthy-minded, healthy-bodied population. We thought of the future in dismay—soldier, Socialist, Imperialist, and commercialist alike—and we said to ourselves, "Is this the end of all our triumphs?"

A Variety of Cures

were suggested to remedy the growing evil. Some philosophers would have them return to that original system of giving English agriculture a solitary monopoly of our food supply, but the fates are against the re-introduction of such a device. What was intolerable in 1840 is impossible in 1907. Others affirmed that the only solution lies in the creation of small holdings. He believed, however, that rural depopulation had little to do with politics; that it was a natural consequence of modern social development, and that under either a collectivist or individualist *régime* the case would be the same. As it was, under a capitalist Government they saw machinery driving labour off the land, and a capitalist Government endeavouring to drive away machinery with small holdings. They could imagine a Socialist Government trying to do the same thing in a different way; an agricultural Government trying to raise the price and worth of labour by heavy protective tariffs, but none of these shields against the improvement of mechanical inventions could possibly get over the difficulty. They must accept it as a basic fact that the primary object of agriculture was to produce foodstuffs and not to provide labour, and that when it is profitable to employ machinery, machinery must and would be employed under any circumstances.

Two Practical Causes of the Decline.

Setting aside the question of what is called "land hunger," as one of the causes of decline in the rural population, Captain Sykes said there were two other causes which had a practical and not a sentimental origin, and were far more serious—the falling off in the demand for agricultural labourers and the increasing demand for the services of country men in the towns.

A stout intelligent country lad if he went to a large town found employment, no matter how many unemployed there happened to be in the city, because there was always a demand for men who were above the average in health and physique.

"I cannot help believing," Captain Sykes proceeded, "as a fact that if we are to depend on the agricultural industry alone to provide us with healthy men, women, and children, and take it for granted that the towns will devour them at the same rate as in the past, and that our cities must depend upon agriculture for inhabitants just as they formerly depended on it for food, that we have reached the limit of time assigned to us in history as one of the great people of the earth. The demand is in excess of the supply. If we would avoid the catastrophe which overtook Rome we must admit that up to the present the production of a healthy population has been one of the 'accidentals' attending upon the agricultural industry."

Examining the distribution of employment in mediæval rural England, with a view to discovering

Why the agricultural labourer is superior

in physique to the urban labourer, the speaker said that it was not the agricultural labourer only, but all the survivors of rural industry to this day, who were fully as magnificent physical specimens as the ploughman. He thought the gradual disappearance of the rural artisan and trader indicated that we could never re-establish a rural population until we have supplied some sister industries to agriculture, and that with the departure of village industries you have another necessary cause of rural depopulation.

What, he asked, was to be

The Future of the Countryside?

He believed that decentralisation was to be achieved neither by protecting nor by altering the normal and economic coures of agricultural industry. It was to be accomplished by transit and building. "The garden city, although it contains grotesque and unsightly houses, and although many of its inhabitants strive wildly to break conventions bred in their marrow, is full of fair promise for the future. If we make use of the implements science and invention had put into our hands, there is no earthly reason why by legislation and the intelligent investment of capital we should not in forty years have dislocated our towns to such an extent that by night they will be as empty as are the business regions of the City of London at present, their slums transformed into wholesome rural colonies, whose inhabitants will be conveyed forty and fifty miles to and from their daily toil.

"As for agriculture, let us hope that it will be permitted to fulfil its true function—the cultivation of the unoccupied soil in the best and most efficient way. My expectation is that in the future the urban worker will live in the country, that the farmer will be a man of science, and the agricultural labourer a highly-skilled and highly-paid mechanic."

An Economic Question.

Major Dent, in moving a vote of thanks to Captain Sykes for his interesting paper, said he had felt for many years that rural depopulation was a purely economic question, and no amount of legislation or artificial fostering could bring that population back to the land. The only way to get the town population on to the land was to "diffuse" it over the country by affording quick and easy transit so that they might live and sleep in the country. If only capital and science were put into it agriculture was still a paying industry, and if only given a fair chance in regard to the burdens it had to bear, might pay very well.

Captain Key (Fulford), who seconded the vote, remarked that the whole difficulty in regard to labour on the land lay in the fact that the towns provided so many amusements for the young, and he thought the fiscal policy had had the effect of reducing prices and starving the landowner and the farmer.

Mr. D. W. Dickinson observed that they wanted engineering achievement and chemical analysis of the land if they were to obtain prosperity in the future.

Others also spoke to the resolution, which was cordially adopted.

LIST OF
FARMING, LIVE STOCK REARING, POULTRY & GARDENING BOOKS

Obtainable by post only from 3, Wellington Street, Strand, London.

Postage on Books where not stated, 3d. to 5d., balance returned.

NOTE.—All Orders must be accompanied by Remittance sufficient to cover Carriage or Postage. For easy Reference, please quote the Number of Book when Ordering.

UTILITY BOOKS.

Price 6d. each net; post free 7d.

Each book of the series is written by a practical man. In almost every case the writer makes the whole or a material part of his living from the subject of which he treats. Therefore the directions are plain and are based on accurate knowledge.

No. 1.—Out-Door Carpentry. By S. Walter Newcomb.—Deals with useful, as well as decorative structures—with plans, sketches, and details for doors, gates, stiles, fences, seats, summer-houses, dog-kennels, chicken coops, window-boxes, greenhouses, &c. Designs of some fifty subjects. D.

No. 2.—Gardens and Grounds: How to Lay Out and Arrange. By T. W. Sanders, F.L.S., F.R.H.S., &c.—Suggestions for laying out, planting, and improving the small plot, or the country grounds of several acres. The best aspects and positions, considering appearance with economy of space, labour and expense. With plans and sketches.

No. 3.—Heating and Ventilation of Houses. By C. F. Townsend, F.C.S.—Intended to enable anyone, in any house, to secure full supply of fresh air without chilling draughts. Economy and existing conditions are first considerations.

No. 4.—Utility Fowl Houses and Appliances. By H. Francklin.—With about forty measured drawings and plans, and with concise instructions, not only for home construction, but for guidance in purchasing for the fowl-yard. Treats of ventilation, site, aspect, &c., of houses; the laying out of large and small runs, construction of nest boxes, coops, &c.

No. 5.—Utility Fowl Feeding and Management. By H. Francklin.—The requirements of fowls from birth to maturity, feeding stuffs, and how to use them for feeding of chickens, hens for summer and winter laying, and for the fattening of surplus stock, The management o fowls in large or small numbers, the selection of breeding stock, the management of the sitting hen, the keeping of accounts, and many other factors in successful poultry farming.

No. 6.—Utility Fowls: Their Selection, Improvement and Diseases. By H. Francklin.—The breeds most suitable for confinement or a free range; crossing, and the improvement of mongrel stock. Turkeys, guinea fowl and water fowl are spoken of.

No. 7.—Incubating and Rearing Utility Fowls. By H. Francklin.—Water-tank and non-moisture incubators; brooders and brooder-houses, with hints, instructions, and precautions for the hatching and rearing of fowls for profit.

Utility Fowls. Nos. 4, 5, 6, and 7 together, bound in handsome cloth, price 2s. 6d. net; postage 3d. The best guide for the poultry keeper; and an excellent present for a beginner.

No. 8.—Propagating Plants: By Seeds, Cuttings, Layers, Grafts, Buds, &c. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Propagation of all classes of plants, by many methods, with lists of those suitable for the various treatments, hints on the preparation of seed beds, &c. Many illustrations.

No. 9.—Hardy Perennials. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh. Illustrations and plans from the Author's Sketches. All information necessary for selecting hardy perennials and for arranging borders, wild gardens, water gardens, &c.

No. 11.—Cold Greenhouses and Frames. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—How to secure foliage and bloom through the whole year. Lists of most useful plants, with brief description and cultural directions.

No. 12.—Carnations, Pinks and Picotees. By E. Hasler Potter, F.R.H.S.—Simple and sufficient directions for raising pinks, selfs, bizarres, flakes, fancies, picotees, winter flokering, malmaison, and marguerite carnations from seeds, cuttings, or layers, and for their culture for exhibition flowers, cut blooms, &c.

No. 13.—Spring Gardening. By H. Francklin.—Deals with the aspects of out-door Spring gardening; wild woodland, border walks, edgings, bulbs in grass and under trees, flowers in orchards, bog gardens, rockeries, walls, arches, bedding, house decoration, &c.

No 14.—Hardy Fruits. By E. Hasler Potter, F.R.H.S.—Full instructions for growing all British fruits. Propagation, culture, manuring, watering, training, pruning, gathering the fruit, and storing. With diagrams of garden arrangements, forms of trees, &c.; also recipes for cure for pests and diseases.

No. 15.—Keeping a Dog. By A. Nicol Simpson, F.Z.S.—Written clearly and concisely, for the keeper of one or two dogs as pets, companions, or guardians of the yard.

No. 16.—Rose-Growing. By D. Grant McIver, A.R.H.S.—The whole elementary art and practice of rose-growing, for garden glory, for cut blooms, or for perfect exhibition specimens. Preparation of ground, site and aspect, when and how to plant, propagation, roses in the greenhouse, roses for exhibition, lists of varieties, and a complete, concise rosarian's calendar.

No. 17.—Chrysanthemums. By E. Hasler Potter, F.R.H.S.—Directions for treating the principal varieties of chrysanthemums, annual or perennial, indoors or out-of-doors, for pleasure, profit, or show. With special suggestions for the town man who can only give attention at night and morning.

No. 18.—Bulb Culture. By D. Grant McIver, A.R.H.S.—Directions for growing all kinds of bulbs under glass and out-of-doors. Also for many tuberous (&c.) rooted plants which are familiarly called "bulbs." Lists and illustrations.

No. 19.—The Vegetable Garden Calendar. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Gives, in twelve openings, graphic charts of the vegetable garden for each month. Each chart shows at a glance what crops should be in the ground, what should be yielding produce, what proportion of space should be occupied by each, and what operations should be in hand. Many illustrations.

No. 20.—Goats for Profit. By a practical Goat and Rabbit Farmer. Selection and purchase, housing (with working plans), breeding and the treatment of young kids, feeding, grooming, milking, uses of the milk, making of butter and cheese, killing and dressing kids, training goats to harness, treatment of their diseases, etc.

No. 21.—Garden Operations. By Wm. F. Rowles.—Digging, trenching, preparing for seed, sowing, thinning, planting, ridging, earthing, hoeing, weed-killing, staking, protecting, harvesting, tools and make-shifts, water-supply, watering, lawn-making, mowing, rolling, making paths and beds, and many other operations. The how, the when, and the why clearly explained.

No. 22.—Pruning, Training and Trimming Trees and Shrubs. By D. Grant McIver, A.R.H.S.—Explains and illustrates the whole art of using knife and shears in a garden. D.

Price 6d. each net; post free, 7d.

Nos. 16 to 21 also in cloth, price 1s. each, net: post free, 1/2

No. 23.—To Manure at a Profit. Every Farmer his own Experimenter. By H. B. M. Buchanan, B.A. (Cantab), Author of the "Country Readers," and joint Author of "Lessons on Country Life," and J. J. Willis, Superintendent of the Rothamsted Field Experiments. L.

No. 24.—Profitable Hobbies. By H. Snowden Ward. Gives advice on the cultivation of hobbies, and how to turn them to profitable account. The book is illustrated throughout, and deals with such subjects as wood-carving, photography, collecting, grangerising, drawing and designing, marquetrie staining, metal working, glass blowing, art enamelling, stone-cutting and polishing, the keeping of pets, etc., etc.

THE FARM.

No. 44.—The Agricultural Annual and "Mark Lane Express" Almanac. The Farmers' Red Book. Brimful of Facts and Figures relating to the Farm and Markets. Compiled by well-known Writers on Agricultural Subjects. Profusely illustrated. 272 pp., 8vo. Price 1s., by post 1s. 4d. Published early in December each year. L.

LIVE STOCK.

No. 47.—Rational Pig-Keeping. To Ensure Profit. Revised Edition. By W. J. Malden, late Principal Colonial College, Hollesley Bay, Suffolk; Superintendent Royal Agricultural Society's Experimental Farms, Woburn; Professor of Agriculture, Downton College; Agricultural Superintendent, Royal Dublin Society, etc., etc. Illustrated. Dealing with Principa Breeds, Selection of Stock, Housing, Foods, Breeding, Management, etc. In paper, price 1s., by post 1s. 3d.; in cloth, price 2s., by post 2s. 3d. L.

No. 48.—Goat-Keeping for Amateurs. A practical Manual on the Management of Milch Goats. By H. S. Holmes Pegler. Illustrated with four full-page plates, and other engravings. In paper, price 1s.; by post, 1s. 2d.

No. 49.—Horse Buying and Management. A Practical Handbook for the Guidance of Amateurs in Buying a Horse, with Illustrations as to its After-management. By Henry E. Fawcus. Illustrated. In paper, price 1s.; by post, 1s. 2d. G.

No. 51.—Diseases of Horses. Their Causes, Symptoms, and Treatment. For the Use of Amateurs. By Hugh Dalziel. In paper, price 1s.; by post, 1s. 2d. Cloth gilt, price 2s.; by post, 2s. 2d. G.

No. 52.—Book of the Pig. The Selection, Breeding, Feeding, and Management of the Pig; the Treatment of its Diseases; the Curing and Preserving of Hams, Bacon, and other Pork Foods; and other information appertaining to Pork Farming. By Professor James Long. Fully illustrated with Portraits of Prize Pigs, Plans of Model Piggeries, &c. New and Revised Edition. In cloth gilt, price 6s. 6d.; by post, 6s. 10d. G.

No. 52d.—Live Stock Handbooks. Illustrated. Cloth gilt, lettered, 3s. 6d. each, post free 3s. 10d.; or the Set of 5 vols., 17s. 6d., carriage free. V.

1.—Sheep: Breeds and Management. By John Wrightson, M.R.A.C., F.C.S., &c.
2.—Light Horses: Breeds and Management. By W. C. A. Blew, M.A., and others.
3.—Heavy Horses: Breeds and Management. By Dr. George Fleming, C.B., F.R.C.V.S., and others.
4.—Cattle: Breeds and Management. By William Housman.
5.—Pigs: Breeds and Management. By Sanders Spencer.

V.

GARDENING.

No. 65.—Multum-in-Parvo Gardening. Or, How to Make One Acre of Land produce £620 a year, by the Cultivation of Fruits and Vegetables; also, How to Grow Flowers in Three Glass Houses, so as to realise £176 per annum clear Profit. By Samuel Wood, Author of "Good Gardening," &c. Sixth Edition. Crown 8vo, sewed. 1s. C. L.

VEGETABLES AND FRUIT.

No. 70.—Tomato-culture for Amateurs. A Practical and very Complete Manual on the Subject. By B. C. Ravenscroft. New Edition. Illustrated. In paper, price 1s., by post, 1s. 2d. G.

POULTRY.

No. 76.—Paying Poultry. A Handbook for all Interested in Poultry keeping. Illustrated. 164pp. 8vo. In paper, price 1s., by post 1s. 2½d.; in cloth, price 2s. 6d., by post 2s. 9d. L.

No. 77.—Popular Poultry-Keeping. A Practical and Complete Guide to Breeding and Keeping Poultry for Eggs or for the Table. By F. A. Mackenzie. Second Edition, with Additional Matter and Illustrations. In paper, price 1s., by post 1s. 2d. G.

No. 79.—Profitable Poultry Farming. Describing in detail the Methods that give the Best Results and pointing out the Mistakes to be avoided. By J. H. Sutcliffe. Illustrated. In paper, price 1s.; by post, 1s. 2d. G.

BEES.

No. 81.—Book of Bee-Keeping. A very Practical and complete Manual on the Proper Management of Bees, especially written for Beginners and Amateurs who have but a few Hives. By W. B. Webster, First-class Expert, B.B.K.A. Fully Illustrated. In paper. Price 1s., by post 1s. 2d.; in cloth, price 1s. 6d.; by post 1s. 8d. G.

FERTILISERS AND FEEDING STUFFS.

No. 84.—Artificial Manures. How to Make, Buy, Value, and Use. A Hand-Book for Agriculturists, Chemical Manure Manufacturers, Gardeners, and others concerned in similar pursuits. By Alfred Sibson, F.C.S., Consulting and Analytical Chemist, Author of "Agricultural Chemistry," "Every-day Chemistry," "Food, Feeding, and Manure," "A Lecture on Superphosphate," &c. Late (for eight years) Assistant Professor of Chemistry in the Royal Agricultural College, Cirencester, and First Assistant in Dr. Voelcker's Private Laboratory. Formerly Student of the Royal College of Chemistry and the Birkbeck Laboratory of University College. Revised and Rewritten by the Author and A. E. Sibson, F.C.S. Third Edition. 143 pp. 8vo. In cloth. Price 1s., by post 1s. 2½d. L.

FODDER.

No. 87.—Fodder Crops. Uses. By C. G. Freer Thonger, M.R.A.C., F.C.S. 58 pp. 8vo. In paper. Price 1s., by post 1s. 1½d. L

ACCOUNT BOOKS.

No. 106.—Utility Poultry-keepers' Account Book. A very Useful Book for Amateur Poultry-keepers, showing at a glance the Daily, Weekly, Monthly, and Yearly Statement of Profit or Loss Account. By A. Hunt. Second Edition. In stout boards, price 2s., by post 2s. 3d. L.

No. 107.—Jee's Milk Book. An Account Book for Farmers, Dairymen, and Consumers, showing Profit or Loss at the end of each Week; can be used for a period of three years. Price 2s., by post 2s. 3d.

LAW.

No. 108.—Law for the Householder. By a Barrister-at-Law. A book written for the layman and not for the lawyer, its object being to supply ready information to the householder, on matters of direct personal interest to himself. In paper, price 1s., by post, 1s. 2d.

The Agricultural Education Committee.

The operations of the Agricultural Education Committee, which was formed in the year 1899 to secure systematic and efficient instruction, both theoretical and practical, in agricultural subjects suitable to every class engaged in agriculture, and to diffuse among the agricultural classes a more thorough appreciation of the advantages of instruction bearing directly or indirectly on their industry.

At the time there was a widespread belief that agricultural education in this country was far from satisfactory, especially when compared with the conditions existing in foreign countries and in the colonies. This backward condition was attributed to two main causes, namely, the lack of appreciation of the advantages of education among large sections of agriculturists, and the defective organisation of the Government departments and the local bodies concerned with the subject.

It was felt that such hindrances (particularly the latter) might be largely diminished by the united action of a representative committee of persons interested in both agricultural and educational progress, and that a meeting should be called to consider and to determine what could be done to promote this movement.

A final report has now been issued which deals largely with what has been accomplished by the committee. Sir William Hart-Dyke, in an accompanying letter, writes that the conclusion has forced upon himself, as well as upon other members, that the committee's operations should now be regarded as at an end.

OBITUARY.

Mr. R. D. Prosser.

We regret to announce the death at Brynderwen, Llangunnor, near Carmarthen, in his eighty-sixth year, of Mr. David Prosser, at one time one of the leading agriculturists in West Wales. Any measure that had for its object the improvement of agriculture found in him a staunch supporter, and even up to the time of his death he contributed valuable articles dealing with agricultural topics to the MARK LANE EXPRESS, *Times*, &c. For forty years he acted as secretary of the old Carmarthenshire Agricultural Society, and upon his retirement, in 1892, he was presented by the members with an illuminated address, silver plate and salver, &c. He also proved one of the most useful members of the Carmarthenshire Chamber of Agriculture, being one of its original members and a secretary. We may add that Mr. Prosser was a brother of Mr. W. W. Prosser, Capel Dewi, who has acted as secretary of the Carmarthenshire Chamber of Agriculture for about a quarter of a century.

The half-yearly hiring at Morpeth for single servants was held on Wednesday, when there was a downward tendency in wages, and as has been the case for some years, men were easier to hire than women. Girls going out for the first time got from £3 3s. upwards; and those with some experience £6 to £7. Women got from £8 to £10 10s., and in some cases more. Lads got from £6 to £9, and men from £10, £12, £13, and £14, according to fitness.

A meeting of the Perthshire and Forfarshire farmers was held at Perth on the 1st inst. to consider the best means by which cattle could be insured against anthrax. The Hon. A. D. Murray, Scones, presided, and, in addressing the meeting, said they were all agreed that something must be done. A good many of them had waited for years expecting to get compensation from the Government, but he ventured to say that the youngest person present would be a tottering, feeble old man before he got compensation from any Government. The question of forming an association was discussed, but ultimately it was agreed to advise farmers to insure with the company they considered best.

SEEDS, PLANTS, POTATOES, ETC.

SELECTED SEED POTATOES. 31st Season. List free.—T. KIME, Mareham-le-Fen, Boston, Lincs.

RAILWAY ANNOUNCEMENTS.

LONDON & NORTH WESTERN RAILWAY. — Grand International Poultry and Pigeon Show, to be held at the Crystal Palace, November 12 to 14, 1907. The London and North Western Railway Company will make arrangements for Through Vans for the conveyance of Poultry, &c., to be run to the Crystal Palace on Monday, November 11. Consignments from the Branch Lines, and from Nottingham, Peterboro', Oxford, Cambridge, &c., will be placed in these Vans at the various Junctions. Conveyance rates can be obtained at the various Stations on the Line. Arrangements will also be made for the return of the Traffic in Through Vans at the close of the Show, and Exhibitors are requested to order their Consignments "Per London and North Western Railway." Exhibitors must write their names and addresses distinctly on the backs of the direction labels issued by the Show Committee. The Company's representatives will be at the Show to answer inquiries with regard to the arrangements for the return journey. All information can be obtained of the Superintendent of the Line, Euston Station, London; the Company's District Superintendent, Euston Station, London; or Mr. I. T. Williams, Broad Street Station, London, E.C.—FREDERICK HARRISON, Gen. Manager.—Euston Station, London, October, 1907.

GREAT NORTHERN RAILWAY. —Great National Poultry and Pigeon Show, Crystal Palace, November 12, 13 and 14, 1907. The Great Northern Railway Company make every arrangement for the careful and expeditious transit of exhibits to and from the Crystal Palace. Through vans will be run to the Crystal Palace on Monday, November 11, from Leeds, Wakefield, Doncaster, Manchester, Sheffield, Newark, Nottingham, Lincoln, Grantham and Peterboro'. Consignments from branch lines and intermediate stations will be placed in the through vans at the various junctions. Conveyance rates can be obtained at the various stations on the line. Arrangements will be made for the return of the traffic at the close of the show in through vans. A Great Northern representative will attend the Show to give information to exhibitors. All information may be had on application to the Chief Passenger Agent, Great Northern Railway, King's Cross, London, N.—OLIVER BURY, General Manager.

LEGAL NOTICE.

In the High Court of Justice,
Chancery Division,
Mr. Justice PICTON.
In the matter of
THE AVONVALE BREAD COMPANY, LIMITED, EVESHAM.

THE Receiver and Manager, appointed by the Chancery Court, is desirous of disposing of the business carried on by the above Company, as a going concern.

The Freehold property is situate in the centre of the Vale of Evesham, and close to the Midland and Great Western Railways, and on the banks of the river, which is navigable to Gloucester, and contains in the whole an area of about 3a. 1r. 2p., comprising Mill Buildings, large Four-Storey Building known as "The Factory," connected with the Mill by covered girder bridge, and a substantial Dwelling House known as the "Mill House," with good garden, which is let at a nominal rental of £30. Also Foreman's Cottage and Offices, and a productive Orchard known as "The Island."

The Machinery consists of a 5 (Bag) Plant (4 bus.) on Simon's System, with Wheat Cleaning Machinery, Wheat Washer, &c., driven by two Turbines ("Simon's Action"), Provender Plant, consisting of two Pairs Stones with necessary adjuncts driven by a large undershot Wheel, one high and low pressure Condensing Steam Engine (18in. Cylinder), Electric Lighting Plant, &c.

Being situated in the centre of a Feeding District there is a large local demand at full prices for offals, horse corn and provender, &c., which is of considerable benefit to the Company.

Fishing rights connected with the River (Avon) of about one mile in extent, are let at a nominal rent of £6 10s. per annum.

There is ample accommodation for a considerable increase of Plant.

The Stock in Trade can be purchased at a valuation.

Goodwill includes all books and papers, together with valuable connection acquired by the Company.

Further particulars and cards to view can be obtained from Messrs. GEOFFREY NEW & ODGERS, Solicitors, Evesham; or the Receiver and Manager, Mr. H. J. PEART; of Messrs. SHARP, PARSONS & Co., Chartered Accountants, 120, Colmore Row, Birmingham.

Agents, Situations Wanted.

WANTED, AGENTS for the SALE of NATURAL Ammoniacal and Phosphatic GUANOS and high-class Chemical Manures. All analyses and dry condition guaranteed.—Apply to DANIEL DE PASS & CO., 1, Fenchurch Buildings, Fenchurch Street, London, E.C.

HIS MAJESTY'S SERVICE
THEREFORE THE WORLD'S
NORTHAMPTON NORTHAMPTON

SMITHFIELD CLUB SHOW. Stand No. 291. MINOR HALL.

J. RANDS & JECKELL'S
ROTPROOF AND . . .
WATERPROOF COVERS
For Wagons, Engines and Machines.

The Best for Estate and Farm Purposes.

All sizes complete with Brass Eyelets and Best Quality Cords.

THESE COVERS ARE PREFERRED TO ALL OTHERS.
Our Clients testify that they are:—
"After six years' use preferred to-day to a new one of the old black description."
"Much better than the old black or yellow tarpaulin."
"The best and cheapest in the long run."
"Far superior to any other cover."
"The most durable covers."
"Certainly the best in the market."

Illustrated Price Lists and Samples Free direct from the Manufacturers:
J. RANDS & JECKELL, IPSWICH.
Manufacturers by Special Royal Warrant to His Majesty the King

A GOOD SHILLINGSWORTH.

THE BEST OF ALL YEAR-BOOKS FOR FARMERS AND LIVE STOCK OWNERS IS

THE

AGRICULTURAL ANNUAL

AND

Mark Lane Express

ALMANAC

GENERALLY KNOWN AS "THE FARMERS' RED BOOK."

It is full of information—just the matter which a farmer requires—useful for reference at all times of the year.

The 1908 Edition, now being prepared, will consist of about 320 pages, with nearly 100 portraits and illustrations.

To make sure of securing a copy, give your order to Messrs. W. H. SMITH & SON, at their nearest Bookstall, or any Bookseller or Newsagent.

The Annual comes out the first week in December, but to ensure prompt delivery, send One Shilling and Fourpence, and a copy shall be forwarded post free from

THE PUBLISHER,

3, WELLINGTON STREET, STRAND, LONDON.

Mark Lane Express Agricultural Journal and Live Stock Record.

ESTABLISHED 1832.

PRICE 3d. PER SINGLE COPY.

LONDON, MONDAY, NOVEMBER 18, 1907.

Market Supplement .. i. to viii.

Seasonable Topics.

Farmers' Protection. NO, we are not referring here to Protection as the term is generally understood—namely, the charging of duty on commodities brought into this country, for that is part of another story, and our reference is rather to the combination of farmers to protect their mutual interests. It has been said that all the world might combine, but farmers, true to their conservative traditions, would remain as units, each one fighting his own battle independent of his neighbour. Events contradict this opinion, and in different parts of the country powerful bodies of agriculturists with their backs to the wall are being formed into societies for the protection and support of their mutual interests. It is our privilege and pleasure to assist such bodies, and as the official organ of the Darlington Farmers' Protection Society we have taken up a new *rôle*—Mutual protection! Surely it is time that farmers realised more generally the necessity of this and looked after their own interest, instead of depending on the promises of vote seekers at election times. Nothing could be more encouraging than the progress made by the different associations that have been established for the above purpose, and we shall be surprised if they do not increase in number in the near future.

A DORSETSHIRE VILLAGE.

The Potato Trade. MANY people are asking just now what the price of potatoes will be in the spring, and though it will be risky to venture an opinion in figures, there are good reasons to think that the man in the street will have to pay dearly for the homely tuber. From his point of view this is not encouraging, particularly in consideration of the increased price of bread, but naturally potato growers look at the matter with different eyes. It is not usual to be able to record potatoes at £4 to £5 a ton in November, and these figures naturally suggest a shortage in the crop. Indeed they were considerably lower in price last year at this time with not the same prospect of increase. In our experience crops left in the ground till late were much more diseased than those lifted earlier, and we hear of stocks being reduced in weight by the spread of the trouble. A grower of our acquaintance was cogitating the other day as to whether he should accept an offer of £4 a ton or hold his tubers in the expectation of getting another pound. The fear haunted him—they may go bad, so he accepted the offer, and perhaps acted wisely. But, any way, potatoes will pay all right at the above figure, even with a moderate crop.

The Harvest in the North. WHILST we in the lower half of Great Britain have good reasons for congratulating ourselves in securing an abundant harvest in good condition, our friends north of the Tweed are much less fortunate, and reports come to hand telling of much corn still out in the fields, with little or no prospect of it being harvested. What a difference weather makes, to be sure, and while we sympathise with Scottish farmers in their loss and trouble, we realise that the agricultural records of the southern part of the island would have read very differently but for those few weeks of fine weather in September, which just came in time to save the situation. But for this break what is freely admitted to be a good year must necessarily have been a bad one, as it will assuredly prove to be in the north, where the farmers have not been so favoured at harvest time. Authorities are giving estimates in figures of the loss that will be sustained through the unfavourable harvest time, and even if these are merely approximate, we fear that many farmers in the north will have painful reason to remember the season of 1907.

Larks. THE student of Nature usually associates the lark with the pleasant days of the early spring, when the little brown bird rises from the ground and soars heavenward, singing as he goes until he becomes a mere speck in the sky or becomes lost to view, and the sound of his voice is the only indication left of his presence up above. But we have the lark in another *rôle* where he does not appeal to the poetic side of agricultural human nature. This is when he appears, not in units but battalions, just when the October-sown wheat is coming through, and then he gives painful evidence of the extent of his appetite. Corn sowing being late this year on account of the bad weather, we shall doubtless hear a good deal about bird troubles, and larks are amongst the worst of feathered pests. They come in large flocks, feed voraciously on the springing corn, and when scared merely drop on the other side of the nearest hedge till the coast is clear. Scaring is not an easy matter, because the lads that the farmer used to employ for this purpose are either in school, or, if the weather be fine, taking a walk in the country in company with the teacher—studying Nature.

Funds for Research Work. IT is a matter of common knowledge that a good deal of public money has been and is wasted on so-called education, and yet very useful work is retarded and checked for the want of funds to carry it on. Particularly is this so in the direction of research, and it is quite time that the authorities who hold the purse strings should realise that the scientist in the laboratory can find out things of importance and be of great help to practical workers who have neither the means, the time, nor the knowledge to devote to this side of the business. It is generally admitted in the Midlands that the Department of Economic Zoology of the Birmingham University, through its enthusiastic head, Mr. Walter E. Collinge, has done a good deal of useful work in the interests of farmers and fruit growers, and we regret to learn that Professor Collinge is about to retire, just when the value of his services is beginning to be felt. Lack of financial support to the department in which he is interested is given as the cause, and if this is an actual fact, surely the voice of those people in the Midlands who are interested in agriculture, fruit growing, and market gardening should be heard. When we think of what is done in Canada and the United States to put scientific knowledge in the hands of the agricultural fraternity, our disjointed efforts appear very puny indeed, and it is a pity that any enthusiast who is a scientific expert should be discouraged to the point of resignation through the lack of financial support.

Foreign Fruit.

WE attended a local fruit and grain show the other day at which, in addition to home-grown produce, there was an exhibit of apples from Canada. Apart from the colour, the British fruit struck us as being the finest, but of course we had to remember that the other had come across the Atlantic, and yet appeared on the table as fresh as paint. This is the point to which we would draw attention. The best English apples are unequalled by any in the world, but the unfortunate thing is that we do not produce enough of the best, though there is no real reason why we should not grow much more. Further, it is only re-telling an old story to say that trans-Atlantic growers pay careful attention to grading and packing their fruit in boxes and barrels of standard size, and these, by the way, figure conspicuously in the shops even in the very heart of our apple-growing localities. To sum up the whole situation, growers abroad treat fruit culture very seriously. They regard it as a business, and have set out on systematic lines to supply the wholesale markets of the world. As to whether they have succeeded there can be no two opinions.

Is the Labourer's Half Holiday Possible?

THIS point has been argued more than once in our columns, and generally when the practicability of one short day a week for farm labourers is discussed it is scouted as being impossible, and opposed to the traditions of farm labour. We realise all the difficulties on the farmer's side, but still the matter does not drop, and in a recent issue our Nottinghamshire correspondent gave an instance of two labourers who had left a farm because their employer could not see his way to let them have Saturday afternoons to themselves. Farmers in purely agricultural districts do not have difficulties of this kind to contend with, but they are getting very real in localities where there are coal mines and other industries that are just now booming. There can be no doubt that it is the prospect of six full days a week, possibly with Sunday labour as well, that prevents many men from sticking to the farm, and as time goes on there is every probability of the agitation for a half holiday for labourers becoming more general. It may not come yet, but there are certainly indications which point in that direction.

Agricultural Politics.

BY A LOBBYIST.

A Question for Mr. Chaplin.

I see that Mr. Chaplin professes himself to be satisfied with Mr. Balfour's latest pronouncement. I presume that he is satisfied with Mr. Balfour as his political leader and with his general acceptance of the policy of broadening the basis of taxation. But I want now to ask Mr. Chaplin, the Farmers' Friend—as distinguished from Mr. Chaplin, the Party-Politician—a general question. Does he believe the new policy is going to advantage the British farmer? Wherein is the protection for the British farmer indicated in the following declaration of the Conservative leader at Birmingham?:—

> Take (said Mr. Balfour) corn again. The whole theory of British economics on corn was based on the fact of what economists called the law of diminishing return, that, as a community increases in numbers, pressure upon the means of subsistence increased also, and various consequences I need not go into would ensue. That is no longer the law governing wheat. Wheat is now not subject to the law of diminishing cost, and the *enormous strides which the growth of wheat has shown in Canada, Argentina, and elsewhere, the enormous improvements in transport*, however unfortunate for the farming class to which I belong—(laughter)—absolutely destroy the whole basis of economic argument familiar to our forefathers.

Understand that Mr. Balfour had only just immediately before been discussing what he described as "the colonial aspect" of the tariff question. He was then emphasising the fact that the economic position had entirely changed since the days of Sir Robert Peel. "When," said the statesman, "the colonies, with our vaunted system of taxation, were not merely in their infancy, but in their cradle, it never occurred to anybody that they were great nations of the future, that it was with them that it was our interest as well as our duty to make commercial arrangements." We are to make a commercial arrangement with the great wheat-bearing colony of Canada —"where the growth of wheat has made enormous strides"—and, in doing this, to take advantage of "the enormous improvements in transport!" This anticipation opens out a vision of a competition unparalleled in the experience of the British farmer. The new policy has a two-fold basis—the protection of British industries in alliance with a closer commercial and family understanding with our colonies. I am not arguing, in the general sense, that this is wrong. I am, however, asking where—in the assurance of the Balfourian design—do we find protection of the agricultural interest? We have no right to let partisan sympathies run athwart our own weal. Now, Mr. Chaplin, the Farmers' Friend, will you answer this question?

Mr. Balfour's Remarks Examined.

I pray that there will be no hurling of epithets because of the re-propounding of this problem. The farmers as a class are Conservative; and the farmers ought not to be the one victimised interest; the one sacrificial offering made to secure a possibly-quickened trade for the urban industries. Understand, that in all the discussions we have had on Colonial preference, no other interest but the rural interest has been threatened with a swamping rivalry. In Mr. Balfour's speech, as in the oceans of oratory which have preceded it, the only effective competition from the British colonies which was or had been suggested is an agrarian competition, and the only class suggested to be penalised is the farming class! "However unfortunate," said Mr. Balfour, in anticipating the effect and advantages of the new policy, "*for the farming class to which I belong.*" This is not, I repeat, so much a question of the general wisdom of the suggested fiscal and economic departure. Let that be accepted, if you will. The real question is—How will the British farmer advantage from this stimulated, encouraged, and invoked competition in the very products whose growth means his living? Wherein will he advantage if the foreign competition in wheat is exchanged for a colonial competition—a competition which will probably be infinitely greater in volume? How can he hope to fight competitors thus invoked and encouraged who practically pay no rent, know nothing of local taxation, and for whom the cost of transit to the British market is sometimes even less than it is to the British farmer?

Let us be Practical.

Do not, I beseech, in replying to this, beat the drum-patriotic. Let us confess that the spectacle of a closer union with our colonies does surcharge our materfamilian bosom with a joyous emotion—we should be less than human if it were not so. But, withal, let us be practical. This new policy is inspired by the anxiety to protect British industries. Wherein is the protection for the British farmer, who, by the way, may possibly have to bear a protection tax on implements and products necessary in his industry, and to pay, too, slightly higher wages. Laugh not at this last assertion. More assured employment and higher wages compose one of the baits offered to the workers. If British industries are to be protected let that protection be an all-round protection. To the farmer there is no difference in a colonial competition—apart from the very proper patriotic sentiment—and a foreign competition. Label that competition as you may it will still be competitive and still be rivalry. Why should the old traditional industry of the nation, agriculture, be the Cinderella of the family, without the prospect of Cinderella's evolution into fortune and graceful eminence?

A Septet of Interrogations.

Let us assume—in order to give a significance to the interrogations I will submit—that Tariff Reform is not merely the accepted faith of the great Conservative party, but is the accepted faith of farmers as a class. And, frankly, I believe that if a plebiscite of that class were possible there would be a larger majority in favour of the adoption of some form of Protection. Should, however, it be this form of Protection? "I am," said Mr. Balfour, "in favour of safeguarding the great Protective industries from unfair competition." Would the farmers of England be protected under this system? Would not that competition be rather accentuated? Now for my questions:—

(*a*) Would not a preferenced and encouraged Colonial trade mean that the wheat and produce markets would be flooded with Colonial produce?

(*b*) Is it not the fact that Canadian statecraft anticipates this, and has already its agents in several of our great centres ready to discover and take advantage of new opportunities for the sale of Canadian produce?

(*c*) Does not the Canadian farmer enjoy advantages of rent, rates, cost of transit and fertility of soil which must seriously handicap the British farmer in any competition of the British markets?

(*d*) Would the foreign wheat-competition be really put a stop to? Remember that Mr. Balfour laid it down explicitly in his Birmingham speech that one of the four principles animating this policy must be that—I quote his very words—"*your duties must be small.*' Would that small duty altogether keep out the out the foreigner? Would not the foreign trade — though it might be of somewhat lessened bulk—accentuate the penalty resulting from the volume of encouraged, preferenced colonial competition?

(*e*) Could, under the conditions imposed by Mr. Balfour, any serious import-tax be placed on wheat? A second of the four principles he laid down—and again I quote his words—was "*the duties should not touch raw material.*" Cereals are in a large degree a raw material? Apart from this, if he object to an import-tax on raw material would he, think you, agree to a serious import-tax on the people's foodstuffs?

(*f*) Does not the very declaration of Mr. Balfour that he would not support any import-tax if it "*augmented the proportion paid by the working man*" emphasise the belief that he does not intend a tax on imported food-products? Bread is much more the staple food of the working man than it is of any other section of the community.

(*g*) Does it not look rather that, whilst the illimitable and fertile areas of the great North-west—and, mind you, Canadian statecraft anticipates the early day when those areas will quadruple their yield—are to flood our markets with their harvest, the foreign rival of the British farmer is not to be seriously rebuked?

Is the New Policy Protection or Penalty?

I have framed these interrogations in no casuistical or pedantic or querulous spirit. I have deliberately framed them for the purpose of securing elucidation. I have deliberately framed them in the hope that they may induce Mr. Chaplin—to whom the farming class has a right to look for guidance, if only because of the manifold obligations under which the right honourable gentleman has placed that interest—to a clear and explicit exposition of the economic situation so far as it affects the food-producing cultivators of England, Scotland, and Wales? Mr. Chaplin has avowed himself "intensely satisfied" with Mr. Balfour's speech. Let me again ask him definitely—and this request really epitomises and crystallises the seven questions I have propounded—how far the new policy of Protection means the protection of the British farmer? Does it, in a word, mean protection or penalty? Will the encouragement of a colonial invasion of our produce-markets—plus no very serious discouragement of the foreign competitor—mean a greater demand and a higher price for British products? I implore Mr. Chaplin to give this phase of the subject his thought. We have, I repeat, a right to appeal to him—he is not merely a chieftain in the sphere of agricultural politics, he is one of the chief propagandists of the new economic evangel. If he remove the doubts inspired by Mr. Balfour's exposition of the new faith and the lessons many have deduced from that speech, he will have become the master of strengthened legions.

The dates of the two principal foreign horse shows in which English exhibitors are interested have now been fixed. The Paris Concours Hippique will be held as usual in the Grand Palais from March 22 to April 12, 1908, and the Hague Show will commence on July 6 and finish on July 12. The latter date has been fixed for the convenience of English exhibitors who will be engaged at the Royal Show at Newcastle.

FARM.

Gloucestershire Root, Fruit, and Grain Show.

The annual show of the Gloucestershire Root, Fruit, and Grain Society is an event of considerable interest in the county, and that it was as popular as ever was proved by the success of the forty-fourth show held in the Shire Hall, Gloucester, on the 9th inst. Roots of immense size were exhibited on stages round the corridors, and the assembly room was filled with flowers and fruit and vegetables, all of grand quality. The show was formally opened by the newly-elected Mayor (Mr. F. H. Bretherton), who attended in state, accompanied by members of the corporation, who afterwards were present at the annual dinner. The Hon. Michael Hugh Hicks-Beach, M.P., in proposing "The Mayor, City High Sheriff and Corporation," said they appreciated the presence of the Mayor and corporation, and felt sure that during the Mayor's year of office he would do his best for the city of Gloucester, for the Root, Fruit, and Grain Society, and also for agriculture in general. Mr. Bretherton's predecessor had also done a great thing in setting on foot a movement for holding the Royal Show in Gloucester in 1909, and in collecting such a large sum for that object. He hoped before the present mayor's term of office had expired he would have the pleasure of announcing that he had received the promise of the sum that remained to be raised to ensure the visit of the Royal Society. It was not for him to dilate upon the advantages that show would bring to the agriculturists of Gloucestershire, but he said it would also bring enormous advantages to the city of Gloucester.

The mayor, after thanking the company for their reception of the toast, announced that the promises for the Royal Show visit now amounted to £3,924. That was very far from the sum needed, viz., £6,000. The subscriptions up to date had been on a large and liberal scale—very liberal, from gentlemen in the county whose names were an honour to the county. And he wanted to throw out a hint, which was that if every farmer in the county would subscribe according to his ability, they would have the amount required subscribed within the next six months.

Mr. Thomas McRow, secretary to the Royal Agricultural Society, was down to respond to the toast of "Success to Agriculture and the Gloucestershire Root, Fruit, and Grain Society," but having to leave early was called on by the chairman to make a few remarks without any formal proposal of the toast. He remarked that the agricultural industry in this country was second to none, and the interest maintained in the Royal Agricultural Society, the society he had the honour to represent, was far beyond what some people might think. When he was invited to attend their dinner, his council expressed their high appreciation, and he was exceedingly glad he could arrange to be present. He hoped to be in very close touch with Gloucester for some time to come. Personally, he had already had some very enjoyable times in their city with their late mayor, and with Mr. Sheffield Blakeway, and was looking forward to equally good times with the present mayor and other gentlemen associated with him.

As those who attended the Royal Show were aware, it was not alone for the week of the show, but for a considerable time before there was a large influx of people into the district. There were something between 800 and 900 stock exhibitors and anything from 1,300 to 1,500 implement exhibitors, and when they remembered that the implements section had to be in the yard a week before the show, and that the various representatives of the firms were coming in and out of their city, they could form a better idea of what was involved. The yard was in course of erection from about February up to the time of the show, which brought an influx of people and made work, and altogether he thought that the Gloucester people would find that the show would be beneficial.

They might have observed from the statement made at the last meeting of the Royal Agricultural Society's Council by the chairman of the Finance Committee, the fact that the balance over their expenditure at Lincoln was £5,056; the profit of the show having been that amount. This was very gratifying to the society, and also to the Lincoln people themselves, and he had received a very generous letter from the Lincoln Agricultural Society, saying what help the show had been to that particular society. In past years the visit of the Royal had not been looked upon as helping local societies, on the other hand it was said to have done more harm than good, but the arrangements now made tended very much to the benefit of the local society, and when they came to Gloucester he thought their local society would feel the advantage.

Personally it was a matter of great pleasure to him to know that the Royal Agricultural Society was coming to Gloucester. He happened to be connected with the adjoining county of Herefordshire, and he sincerely hoped that the show in Gloucestershire would be as satisfactory and successful as appearances would lead one to suppose that it would be. With regard to the necessary funds, he assured Gloucester that the society sympathised with local efforts, and he trusted that during the mayoralty of the present Mayor the money would be obtained, and that Gloucester would really have a difficulty after the visit in knowing what to do with the balance.

A REMARKABLE WHEAT STACK.

The Wheat Stack shown above has been standing in its present position for close upon thirty years. It belongs to Mr. Philip Selby, and is to be seen in his stackyard at Aisby, a few miles from Grantham. The stack can undoubtedly claim the distinction of being the oldest of its kind in the world. It is said that the reason it has never been thrashed is because the owner once made a vow that he would not sell the grain under a certain price, which it never attained. It is black with age, but the grain is in good condition. It is said that there is not a rat in the stack; the holes seen in the picture have been made by birds.

Martinmas Hiring Fairs.

Monday last being the Scottish Quarter-Day of Martinmas, several Martinmas Hiring Fairs were held in the north on that day and also on the preceding Saturday. The principal was that at Carlisle on the Saturday when, unfortunately, the weather was most unfavourable, and the attendance of both masters and servants was not so large as usual. The term of hiring was for the half-year, ending Whitsuntide next, and the length of the term, together with the fact that there was still a good deal of harvesting to be done, made the demand for servants a good one, and they naturally were inclined to stand out for bigger wages, so that the fixing up of agreements was somewhat slow.

The best class of men obtained about £17 for the half-year, more being given only in exceptional cases. Second-class men were engaged at from £12 to £14; strong lads, £8 to £11; and boys from £5 to £6. Women and girls were scarce, and difficult to hire. Experienced women were engaged at up to £13; younger women, £8 to £10; and girls from about £5 upwards. These terms include board and lodgings in the farmhouses during the half-year.

At the first of the three annual statute hiring fairs at Malton, held on the Saturday, very little attention was given to hiring, and where engagements were made the wages of last year seemed to rule. Female domestics were in big demand, and obtained £15 to £18 for strong servants, £9 to £12 girls, and from £7 young nurses. Farm lads asked £10 to £12, strong youths £15 to £17, and wagoners and experienced hands, of which there were only a few present, obtained from £18 to £21.

The Appleby hirings, which were held on the same day as Carlisle, were fairly well attended, particularly by masters, but there was a scarcity of female labour, and those that were present asked for higher wages, which in many cases were obtained. Experienced men obtained £16 to £17, secondary men £13 to £14, young men £10 to £12, and lads £5 to £8 the half-year, with board and lodging.

The Hexham Martinmas hirings, which are for single servants, took place on Monday, and were well attended, but transactions were somewhat slow, and there was little or no change in wages. For men the general run of wages was from £12 to £16 for the half year, but in exceptional instances £18 was given for experienced men. Women got from £9 to £13, and in a few cases £14 was given; girls from £5 to £8; and young lads from £5 10s. to £9, according to age and ability.

Monday also witnessed the holding of the first and principal of the Martinmas hirings at Thirsk, and here, as at Carlisle, the backwardness of harvesting and ploughing induced the servants to ask for higher wages, which farmers were not inclined to pay, and where agreements were entered into, the wages ruled practically the same as last year. Hinds with wife to attend poultry, with cottage, garden, and the usual allowances, were fairly good to get, and made from 18s. to 21s. per week. Capable farm foremen obtained from £26 to £30; head lads and horsemen, £17 10s. to £18 10s.; farm boys, £6 to £8 10s.; and plough lads, of which there was an excellent attendance, from £9 to £10 10s. Girls for farmhouse places were as usual scarce, in fact the demand for female labour far exceeded the supply. Farmhouse head girls secured from £19 to £21; second hands, £15 10s. to £16: and young girls, £8 to £10 10s.

On Tuesday the Martinmas Hiring Fair at Wigton, Cumberland, was held, and was largely attended by both farmers and servants. As at other fairs, the latter, knowing the backward state of work, held out for higher wages, and the hiring was accordingly slow. Experienced men obtained from £15 to £17 for the ensuing half-year ending Whitsuntide; second class, £12 to £14; youths, £8 to £11; and lads, £5 to £7. Female servants were scarce, and were outnumbered by employers. Experienced women got as much as £13; second class women, £8 10s. to £10; and girls, £5 upwards. The wages in each case include board and lodging at the farms.

At Stockton, on Wednesday, men capable of doing all classes of farm work, and women for general farm work, were very scarce, and hardly any engagements were made with women. Ploughmen commanded £15 a half-year, boys £6 and £7 whilst girls received £7 to £9.

Winter Fruit Spraying.

In view of the general interest which this subject is arousing throughout the Kingdom, and indeed in many other parts of the world, by the important researches of Mr. Walter Collinge, of the Birmingham University, and other investigators, we have pleasure in giving, with this number, a Coloured Supplement illustrating the actual results achieved by Mr. W. Edmonds, of Rede Court, Strood, one of the most progressive of Kentish fruit growers. In this illustration representative samples of Apples from Sprayed and Unsprayed Fruit Trees in the same Orchard are given side by side. The results speak for themselves.

We ought to add that these illustrations are from actual untouched photos of the Fruit itself.

West Country Notes.

HOW many expressions of thankfulness I have heard during the past week at the relaxation of the regulations requiring licenses for all movements of swine. It is practically only in the places bordering on the county of Somerset that difficulties continue, so far as that county is concerned.

THE Somerset, Wilts, and Dorset Farmers' Association continues to make satisfactory progress, and the second annual meeting of the Weston-super-Mare branch, just held, reported a growing interest in its action in that district. The member for the division, Mr. T. B. Silcock, as usual with men of his stamp, advocated combination of farmers to effect their objects, and to influence the Government.

A DAY or two before I was listening to speeches of a very different sort. A couple of the representatives of Colonial Governments met a big practical group of Somerset farmers, and some from adjacent counties, to discuss business with them. Both Mr. Mackinnon, the Bristol trade representative of the Canadian Government, and Major A. E. M. Norton, D.S.O., the commercial agent of the South Australian Government, gave a graphic account of the manner in which their respective Governments looked after the interests of agriculture.

NOT merely from the point of fostering the interests of their own colonists were these efforts directed, but also, as the surest way of doing so, securing uniformity of production, and purity and cleanliness in the products sent out, by which the consumer has the advantage. "Supply what your customers ask for" was apparently the advice of both Governments to their producers.

TO the residents within these islands Major Norton made it abundantly clear that the people "down under" were intensely loyal. To the man whose father had never seen these shores, nor had he himself, England was still "home," he told me. The South Australian would be quite content with his share of the trade of this country if only our buyers would be as loyal to British productions as Colonials were to "home" products.

NOW this would seem somewhat straight ideas to be laid before home producers, were it not quite evident that rivalry commercially was less serious than would appear on the face of it. For instance, Australia is now a very good customer for our West of England breeds of cattle, and the way in which the Dorset Horn sheep are being received beyond the seas shows a good market for home produce.

MOREOVER, many of the West of England men are too closely associated with the Colonies to feel jealousy of their progress, as was very evident during the meeting referred to. It was again apparent at the meeting of the Dorset Horn Sheep Breeders' Association last week, where it was decided to form an Australian branch of the association.

NOW neither Mr. Mackinnon nor Major Norton had one word to say about our home Government and agriculture. Yet the effect produced by their speeches upon everybody, apparently, was how lamentably behindhand our Board of Agriculture is in real work for the farmer.

RECENTLY, in that very district, a grievous scourge of the farmers over a wide area was brought to the notice of the Board. There was plenty of talk and correspondence about the subject, and visits paid by one or two inspectors, but as to finding a £10 note for anything practical, that was quite out of the question, though I believe the Board was honestly desirous of helping. Under either the Dominion or the Commonwealth Government it was generally felt that the result would have been very different.

A PRACTICAL view of a claim for compensation was taken by a judge in a county court in the West a day or two ago, and one which it is sincerely to be hoped will not be upset. A man on the wrong side of fifty attempted to slide down the side of a rather steep rick which he was engaged upon. The result was, as might have been easily foreseen, that he met with "an accident." The judge considered that such a risk was one the man ought to have had sense enough not to have taken. He refused to grant any compensation. The only excuse the man had for doing such a foolish thing was that a ladder had been moved.

SOME practical hints on the things that might be taught in agricultural districts, and are not, were given in a speech the other day at a prize distribution by Mr. A. F. Somerville. If, said he, the boys were going in in after life for apple growing and cider making, and intended to make it a success, they should be made conversant in school days with the various forms of tree disease, and of the methods by which trees could be freed from those diseases, and from the insects which infested them and spoilt the fruit. There was no doubt, he thought, that the growing of apples would be a most valuable asset in the future to farmers in the West.

AGAIN, he remarked, a farmer often wanted to know the weight of a rick of hay, and there was no reason why the boys at school should not be taught at school the way to measure a rick of hay. Land surveying was also a practical part of education in agriculture. If a field had to be ploughed or sown or mown a farmer wanted to know the area to be able to tell how much should be paid for the work.

ONE thing that has often struck me about the problems in these subjects which are set for school instruction is the utterly misleading figures that are given in text books. Here is one from a book before me, from an eminent firm, which suggests that it takes sixty men to mow 84 acres, and they are fourteen days over the job. A little later on it suggests that a mower can cut 7½ acres in thirty-five hours. It is quite time for a firm hand to be taken to make arithmetic studies a little more practical. And this is not the only branch of education that needs attention in the same way.

WATCHING a carnival procession in our district, I was surprised to hear a merry song from a trade car suddenly cease, and a waving of hands in my direction, and a call of my name. There were a merry group of dairymaids, who had found out a way to make agriculture attractive to the spectators of a pageant, and were showing the hand-and-tub method, dollying, and also the modern churn and worker in action. They were not alone in giving representations of agriculture, for a grey-bearded old shepherd with his dog, and a sheep which I expected to hear bark, were near at hand, and also another car with agricultural produce.

THE shepherd as well as our dairymaids were fortunate enough to be the winners of nice prizes for their enterprise, and later, at the fancy dress ball, I saw one of the damsels waltzing round with a swain in one of those rare old smocked frocks over which the needlewomen used to take so much pains, and, though ragged, it still looked well over the manly breast. England is still merry England, when people choose to make it so.

The Newcastle Royal Show.

At a meeting of the Newcastle Executive Committee in connection with the Royal Agricultural Show of 1908, held at Newcastle on Monday, the Lord Mayor (Mr. W. J. Sanderson) presiding, it was reported that the subscriptions promised (including one of £52 from the Lord Mayor) now amounted to £3,918. It was desirable to obtain over £6,000, and local subscription centres were being instituted in Northumberland and Durham.

With regard to dairying prizes, it was agreed to ask Mr. Charles Marshall, secretary of the Northumberland and Durham Dairy Farmers' Association, to submit definite proposals.

Some discussion arose on a proposed grant of £250 for farm prizes, and it was suggested that the matter should stand over until it was seen how the funds came in. Sir Joseph Ellis said he had offered £52 10s. for a dairy farm prize in the interests of a pure milk supply for big towns. The London committee had added to this, and gave three prizes, a first of £35, and two smaller ones. He thought this ought not to have been done. If special prizes were interfered with in that way the response to their appeal for funds would not be what they expected.

Sir Joseph's question was adjourned, and it was agreed to grant £260 from local funds for farm prizes.

There was a fair supply of horses at Darlington November Fair, held on Monday, but trade was not very brisk, especially in secondary qualities. Draught horses of the best class made £50 to £60, and others £25 to £35 each. Hackneys were not of high quality, and made £15 to £23. There was a fair supply of ponies, which for best kinds made £11 to £14 each, and secondary £8 to £9. Of store cattle there was a good show, and forward animals sold at good prices, but many were of indifferent quality. Good bullocks realised £13 to £14 10s., secondary £11 to £12, stirks (best) £9 to £11, secondary £8, younger cattle £5 to £7. Heifers, £11 to £13 10s., and geld cows £12 to £14.

Nottinghamshire Notes.

SPEAKING at the annual dinner of the Grantham branch of the Lincolnshire Farmers' Union last week, Mr. R. N. Walker, of Leadenham, made reference to his ancestors who at one time farmed in Nottinghamshire. He said he was descended from a yeoman who farmed at Winthorpe, near Newark, from the year 1772 to 1778. He had secured no less than thirteen five-guinea gold medals from the Nottinghamshire and Yorkshire Agricultural Societies for experimental and scientific farming. The medal he valued most was the one secured for the best cultivated farm, with gates, tiles, and ditches in the best order.

IT was in 1800, continued Mr. Walker, that the House of Lords took a great interest in agricultural matters, and they recommended certain subjects to the Board of Agriculture. Some of them were invited to write essays, and his ancestor was awarded a medal by the first Lord Carrington. It was possible that some of them did not know that the peerage was created as far back as 1779, that the family name was Smith, and that the first Lord Carrington was President of the Board of Agriculture. This fact he told to the present President of the Board of Agriculture at Lincoln Show, who told him that the position in those days was simply a private affair.

ONE of the largest turnips which I have so far seen in this neighbourhood during this season measures 33½in. in circumference and weighs 21½ lb. It was grown at Kibworth.

DEATH has this week removed one of the best-known cattle dealers in the Midlands in the person of Mr. John Rayner, of Abbeydale, near Mansfield, who died on Sunday at the age of sixty. The deceased was well known at the principal cattle markets in the kingdom, particularly in Ireland and East Anglia. In the Lincolnshire district, too, he was a familiar figure, being a large holder of grazing land, especially near Wainfleet.

AN interesting experiment is being made in Scotland in the matter of rural education, a special school of study for young farmers having been opened at Ardenconnel, near Glasgow. The scheme was originated by the Rev. Dr. Paton, of Nottingham, and is being carried out by the Scottish Christian Social Union.

IN reality the idea emanates from Denmark. All over that country are to be found what are called Popular High Schools, which this year have been attended by about 6,000 young men and women of the agricultural class—five months in winter for the men, and three months in summer for the women. Towards the expenses entailed in attending the classes, pupils receive small grants from the State To the United Kingdom at the present time the aim and achievements of these Danish schools are very suggestive.

THE material value of these schools was proved in a remarkable way. Between 1870 and 1880 Danish agriculture seemed on the brink of ruin owing to the fall in value of its staple productions—corn and cattle. A new industry was required, and there was built up that wonderfully organised system of scientific co-operative dairying which now exports many million pounds' worth of produce a year. The quickness and skill with which the change was carried out was largely due to the high schools, for they turned out sets of young men and women able at once to grasp and execute new ideas.

MANY of the public offices in Denmark are held by men who have passed through these high schools. In Sweden and Norway schools of a similar character are already in existence. But so far as the British Isles are concerned the school for young farmers at Ardenconnel, near Glasgow, is a pioneer. The whole charge, including board, lodgings, instruction, and registration, is only £4 4s., and the instruction commenced on November 4 and ends on November 29. There is a very large list of learned professors who will give lectures, the subjects of instruction including agricultural science, English, history, and geography, economic science, nature knowledge, hand and eye training, gymnastics, and arrangements have been made for lectures on the teaching of the law and the prophets, the Christian ideal of character, the romance of missions, &c.

THIS experiment comes at a most opportune time, when our reformers are hoping to see a great increase of small holdings. If it succeeds, and there appears to be no reason why it should not, the idea will doubtless be taken up elsewhere, and the small holdings movement will have a valuable ally, which cannot fail to solve the problem of "Back to the Land."

RAPID progress has been made with wheat sowing in the county during the past few

days, and many farmers have finished. Some of it has been got in well, and from what I can gather farmers are making an effort to sow as much wheat as possible this autumn, in view of the good prices realised since the beginning of October.

THE Nottingham Corporation have decided to erect structures of brick on the Stoke Bardolph Farm in place of a number of old wooden buildings which have done service for fully twenty-five years. A large number of cattle are fed at the home farm, and it has long been far from convenient for the beasts in the old and dilapidated buildings.

IN this month's circular of the Midland Farmers' Co-operative Society, the manager (Mr. Bryant) refers to the death of Mr. T. B. Handley, who was well known in Notts and Derbyshire, and says: "It is with the deepest possible regret that we have to record the death, through an accident, of our good friend, Mr. Handley. We mourn the loss of a man who cannot be replaced. Though not at first, perhaps, altogether in favour of co-operation, once he became convinced of its real benefit to farmers he was most enthusiastic in support of it, and threw himself heart and soul into the work of the association, and did much to inaugurate it and carry it on to success, giving much time and attention to it, although engaged in a great deal of public work. A most genial, upright, straightforward man, he will be sadly missed in many quarters, he was always striving to do good to someone; he has left the world better than he found it, and the good he did still lives after him. We beg to tender our most sincere sympathy to his widow and family." R. K.

November 14, 1907.

Lord Heneage on an Agricultural Party.

Speaking at the annual dinner of the Louth Ploughing Society on Thursday, Lord Heneage referred to the proper forming of an agricultural party, and remarked that the first attempt at that was made forty years ago, when he and other members of Parliament of all politics formed the Central Chamber of Agriculture. The second great question at that time was unfortunately still before them, that of the cruel incidence of rating on agricultural land, the raw material of agriculture. When he was President of the Chamber in 1872 they passed a resolution in Parliament calling for legislation on the subject, but the ugly head of Protection showed itself, and since then the protection and rating questions had been cutting one another's throats.

What did they want an agricultural party for, and how were they going to get one when they were divided among themselves! Before they could form a party or make themselves heard in the House of Commons, they must have some definite opinion upon which all parties could agree. When he was in the House of Commons each party had an agricultural committee, and whips who conferred to secure common action on important questions. There was not much harmony now between agricultural members on both sides. The idea was how much capital for political purposes could be made out of this or that question.

That was not the way a large industry should be treated. Whether agricultural districts were represented by Conservatives, Liberal Unionists, Liberals, Tariff Reformers, or Free Traders, their object ought to be that agriculture should not be treated as a party question, and that they should do their best to act together for the interests which they represented.

A greatly magnified head of Corn Thrips (larva), revealing its curious antennæ or feelers. Those of an adult are slightly different.

CORN THRIPS.

Farmers who do not avail themselves of the use of the microscope (which is an instrument possessing immeasurably valuable properties for them) may sometimes have reason to express surprise when their apparently robust corn commences to show signs of deterioration. They may often have succoured it to perfection, almost to the point of ripening, meantime preventing the attacks of such pests as the Hessian, gout, and saw flies, until the ears begin to develop; yet, in spite of their strenuous efforts, very evident symptoms of weakness exist to interfere with their hopes concerning the future harvest.

Two Thrips running over the outlets of flowers of corn, the latter of which are shown respectively closed and open, with pollen emerging. These are larvæ.

Close examination of a number of the ears reveals the fact that many of the seeds are in a shrivelled condition, from which it seems impossible to expect recovery. Late-sown wheat is liable more especially to these defects than is early-sown. As these particular disasters occur chiefly in sultry, thundery weather, many farmers are apt to spring to conclusions respecting the matter, and to associate the damage entirely with the weather.

There is some excuse for the favouring of this mistake, because, although the injuries are due to insects, the latter are so minute as to escape observation unless they are purposely sought for. It is usual to shake the attacked ears over a sheet of clean white paper, when there will almost immediately afterwards be seen several tiny black specks nimbly hopping about; and it will not be long before they have entirely cleared off. These are thrips, mischievous creatures only too well known to growers of all kinds of crops in some form or another. When fully grown and perfect they are about one-twelfth of an inch long, and blackish; but in their larval state are paler, being then of a brown tint.

They may be encountered on wheat ears throughout the whole growth of the latter, from June onwards. Within the sheathing leaves, too, is a favourite place for their accumulation and ravages. Very frequently, by sucking the juices out from the stalks at spots just above the knots during the tender stages of the plants, they considerably add to the destruction.

It should be the business of anyone who suffers from any kind of pest to endeavour to make as complete acquaintance as possible with it, notwithstanding the fact that remedies directed towards eradicating the insects may not be numerous, or may not be of a certainty always effective. Armed with knowledge, and guided by judgment based on years of practical experience, a farmer would be in a far better position to avoid continued suffering than he would be without the particular entomological information. Hence we will penetrate a little into the mystery of the thrips.

If a grower will take the trouble to look closely among the ears of his wheat when they are issuing from their sheaths he will see some bright yellow objects dangling from each flower. Naturally, these must be quite familiar things to observant men; but I must mention the subject or my other remarks will not be thoroughly understood. These are anthers, and to each flower—each flower becomes a husk, &c., later on—there are allotted three of them, in addition to a central germ which slowly develops into the grain. The anthers discharge the pollen-dust, without which no grain would properly grow. The bright, windy weather, so coveted by farmers, enables the pollen dust to be blown about from the anthers on to the prepared tips of the young seeds, which it fertilises. Up to this point all seems to be fairly comprehensible, but if we wish to get into closer touch with Nature's details we must magnify the anthers. We then discover that each one is a tiny bag which splits open along two sides, beginning the process in the manner illustrated. At the same time the pollen is disclosed as being composed of perfect balls, the contents of which can be squeezed out separately, like the juice from an orange. It is this essential fluid which is soaked into the tissues of the embryo grain; anything which interferes with the due performance of any of the necessary functions causes the seeds to become stunted and to stop growing.

Now, to make all matters clear, I have shown some thrips upon corn anthers, all parts being drawn in approximate proportions one to the others. The sketch will convey a better idea of the truth than reams of description will. You can at once learn that a thrip could worm its way into an anther, before it was ready to poke itself from the flower, and feed upon the maturing pollen, thereby viciously tampering with the desired course of events. The specks of pollen dust are, in comparison with the insect, like delicious fruit, each having a definite skin and contents. It is this "relativeness" of one minute thing with another, constituting a dwarf and almost separate world, which is so little understood by the majority of people.

The thrip, bear in mind, never exceeds one-twelfth of an inch, although it is, of course, smaller than this during its growth. It is wingless, as shown, until it becomes an adult, when it acquires either one or two pairs of feathery-like wings, which are almost useless for flight, but assist it to spring briskly about amidst fly. During all its stages each of its six legs terminates in a sucker instead of a claw; and it is these features which so annoyingly irritate the flesh of anyone who handles plants from which they emerge.

If we look for awhile at a similarly magnified seed of wheat we find that several layers surround one another like the rings of a tree stump, and enclose a comparatively large middle area. The grain really consists of a large number of separate tiny skins laid together in intimate contact, and each coat has a somewhat different appearance from that of its companions, and is composed of characteristic chemical compounds. The practical farmer will not desire me to go further into this phase of the subject.

The entire seed is built up of myriads of cells, yet each coat has an arrangement varying from the others; and all appear like tiny sets of wire-work over which transparent films are stretched and fixed. The sizes and numbers of the meshes will not be precisely the same in all seeds; so much depends on age and quality. Even a minute foe can wreak havoc upon some of its cells, to the disadvantage of surrounding ones. Thus these tiny thrips, by consuming the pollen, anthers, and young seeds, inflict very severe trouble on the growing ears, a period when every energy is concentrated on the one effort to perfect and strengthen the products for which the whole of the

Magnified Thrip in flight. Some species have four wings, while others have none. The actual length of the insect is only about 1-12th of an inch long.

plant has hitherto been toiling, under the direction of the patient farmer.

The greatest trouble is to discover a good remedy; yet nothing really serviceable seems to be available. Tobacco and sulphur recipes, and the like, which may be profitably employed against thrips in the garden and greenhouse—for other species attack all kinds of plants—generally fail in the field, as may be expected. To adopt such things is almost equal to killing an elephant with a pin. Inasmuch as sun and wind are absolutely necessary for the quick ripening of corn, care should be taken that these two factors have full and free play. It has often been noticed that the thrips pest multiplies to a greater extent on plants which happen to be sheltered in any way from the wind. This fact suggests its own routine of prevention. Avoid such situations for wheat, &c.

Early sown wheat manages, as a rule, to secure time to grow sufficiently strong to resist the attacks of thrips. The grain appears before the insects are numerous, and gets hard enough to cause them inconvenience in trying to split up the tissues. Early sown wheat also enables the pollen to get blown out before thrips can meddle with it. There is not the least doubt that they do feed on it. I have the evidence of my own eyes during my microscopical experiments to prove it.

Remember that soil which is thoroughly well drained, and from which weeds are steadfastly kept absent, in addition to neatly-trimmed hedges, will all help to ward off thrips. All cereals, such as wild barley, will harbour this pest in millions, and render all the farmer's struggles abortive if allowed to grow near his fields.

JAMES SCOTT.

Lincolnshire Notes.

THE Lincolnshire Association for the Prevention of Poisonous Drugs to Horses held its twenty-eighth annual meeting on Friday. The association is beginning to put on flesh, so to speak. Time was when it was busy enough. But the growth of education, and the general uprising of common-sense amongst the men who look after agricultural horses, is dissipating the absurd notions which used to prevail as to the magical ways of imparting condition to a horse. The association had only one case to deal with last year, and this was an instance of the servant stealing his master's corn. And having less and less work to do it is accumulating a nice little balance, which has amounted to £326 12s. 6d. May it go on accumulating. The interests of horseflesh in the county will find some very good use for the money as soon as ever it gets big enough.

SOUTH LINCOLNSHIRE is beginning to chafe against the restrictions on the pig market. During the past fortnight a petition to the President of the Board of Agriculture has been extensively signed praying for the removal of the present embargo on the markets. The signatories include a large proportion of the farmers, small holders, allotment holders, and ratepayers of the parts of Holland whose nearest market town is Spalding. The petition asks that the markets may be open for the sale of both fat and store pigs, and calls attention to the fact that the district is now practically free from disease, and has been for some time past. Let us sincerely hope Earl Carrington will incline a favourable ear. The inconvenience and loss caused by these restrictions makes it very advisable that they should be removed at the earliest safe and possible moment.

LINCOLNSHIRE'S new high sheriff, though he has not before taken any public part in the affairs of the county, is one of its well-known men. Lords of the manor, patrons of the living, owners of most of the soil in the parish, the Fanes have long been a potent force in the village of Fulbeck, which is some nine miles from Sleaford and eleven from Grantham. The new sheriff, Captain William Vere Reve Fane, of Fulbeck Hall, is a member of the county council of Kesteven, but has no other public responsibility. He has, however, attained military distinction. He was given a company command in the 3rd Battalion Lincolnshire Regiment (Royal North Lincoln Militia), in November, 1896, and served with his embodied unit in South Africa during the Boer War, under Colonel C. A. Swan, C.M.G.

CONGRATULATIONS to Mr. W. Dennis, of Kirton, whose son, Mr. J. W. Dennis, was on Saturday elected Mayor of Westminster. Amongst his other distinctions, Mr. Dennis is a prominent figure in Covent Garden, and an active member of the Central Chamber of Agriculture. He was a member of Mr. Chamberlain's Tariff Commission, and was the moving spirit in the agitation for reducing the railway rates. He will make a Mayor with brains in his head as well as energy in his nerves.

THE prospect of the realisation of small holdings is opening out the way to a discussion of some of the real difficulties which stand in the way of agricultural progress in this county. In South Lincolnshire all circumstances are favourable, and there is much genuine demand. But the housing question is standing out a grim, determined obstacle to any real progress in the question.

AT Moulton the courageous Parish Council has set itself to relieve the difficulty, but in many localities the evil is still very acute. Agricultural labourers with families, we are told, will not come to some of these parishes, and young fellows who are anxious to marry will not remain there, simply because the housing conditions are so antiquated and inadequate. Farmers all round the district are made painfully conscious of this difficulty, and altogether the prospect is anything but rosy. It is plainly the duty of the local authorities to step in. Convenient healthy cottages at reasonable rents should be secured as the very *sine quâ non* which they are to a prosperous agricultural district. It is no use expecting Providence to intervene. Even at some cost to the rates the authorities should set to work at once, the sooner the better for the prosperity for the south, and generally for the county of Lincolnshire.

THE successful inauguration of another branch at Spalding marks another milestone in the progress of the Lincolnshire Farmers' Union. It has now not 2,000 but 3,000 farmers comprised in its powerful fold. A Spalding paper declares it now really seems as though the Union has accomplished something substantial in the direction of awakening agriculturists to the value of co-operation for protective and aggressive purposes. It more than seems the Farmers' Union has lighted up the country with the real zeal for the co-operation and combination in matters agricultural.

THE ideal of an independent agricultural party in national politics has never been anything like so near its realisation. Already both political parties have begun to coquet with the Union, but I am glad to see it will have none of them. As the matter has been so well and so strongly put the Government will minister to an interest just as in the proportion that that party's interest is represented in the House of Commons. The Irish party realised that fact long ago; the Labour party has just begun to realise it, very much to its own advantage. Now that the agriculturists, who have never yet been represented there at all, have begun to tumble to the idea we look like getting on.

THE fight against the new railway demurrage charges has advanced another stage. On Tuesday members of the Lancashire Hay Dealers' Association had a conference with representatives of the railway company. A negotiation did not result, but an understanding of some kind was arrived at. The association has undertaken to discuss the matter and make a practical suggestion to the companies as to how far they are prepared to go in the matter. The rest should be only a matter of bargaining, and if both sides are reasonable the settlement should be found very near at hand.

THE uninitiated often wonder at what appears to be the stupendous folly of the farmer in refusing to gather in his corn. Well, here is his defence. A Washingborough correspondent, to a local paper, writes as follows:—

"We hear of a large quantity of corn in the North not yet gathered in, but we need not go so far to see this. We have some in our Fen, only six miles from the city, which is not yet cut, and some which has only just been cut, although it has been ready for some six or seven weeks. This is, so we learn, all through the advance in the harvest time of the price of labour to gather it. What is left of it now is practically spoilt."

THERE must be something wrong here. Corn which will not pay to reap this harvest must be expensive gathering. I am afraid it is another instance of that stupidity with which some farmers are so apt to kill their own interests.

In the description of the Shire colt foal which was given in our issue of the 4th inst., it was stated that the foal was bred by Mr. A. Nicholson, Highfield Hall, Leek. We are, however, informed that it was bred by the owner, Mr. J. G. Williams, but that Mr. Nicholson is the owner of the foal's sire, Redlynch Forest King.

LINCOLNSHIRE FARMERS' UNION.

A BRANCH FOR SPALDING.

On Tuesday afternoon a meeting of agriculturists was held at Spalding to consider a proposal for the formation in the district of a branch of the Lincolnshire Farmers' Union. Mr. James Robinson, of Pinchbeck West, presided, and there was a very fair attendance.

The chairman, in opening the proceedings, urged the necessity of the farmers combining in order to bring pressure to bear upon Parliament to secure attention to their needs.

Mr. S. E. Dean, the chairman of the Sleaford branch of the Lincolnshire Farmers' Union, addressed the meeting. He said they could not have failed to observe during late years the apathy shown by Parliament towards any measure that had for its object the benefit of agriculture, and the reason for this, he suggested, was that the agriculturists had never combined to promote their interests, which had been squeezed out by the combination of other industries. He looked to the Lincolnshire Farmers' Union to be the means of raising the agricultural interest from the present position of impotence in which it stood to a higher sphere more in accordance with its national character.

Mr. Featherstone and Mr. J. Thurlby, of Baston, the chairman of the Stamford Branch of the Union, also addressed the meeting, the latter stating that the Lincolnshire Farmers' Union had now a membership of 3,000, and they were doing their utmost to organise the whole of the county, and were also establishing branches in neighbouring counties.

Mr. W. Dennis, J.P., of Kirton, moved a resolution that a branch of the Lincolnshire Farmers' Union be established for the Spalding district, and he acknowledged the importance of combination amongst the farmers.

Mr. Henry Casswell, of Quadring, seconded, and the resolution was agreed to, and a number of names were subsequently given in for membership.

Judges for the Birmingham Fat Stock Show.

HEREFORDS, DEVONS, WELSH, KERRIES, AND EXTRA STOCK.—F. W. Shuker, Scorrier, Cornwall; J. H. Yeomans, Withington, Hereford. SHORTHORNS, SCOTS, AND CROSSES.—W. S. Ferguson, Pictstonhill, Perth, N.B; H.W. Woods, Ivydene, St. Andrew's Road, St. Anne's-on-Sea.

SHEEP.—A. Bradburne, Streethay House, near Lichfield; Cary Coles, Manor House, Winterbourne, Stoke, Salisbury; F. M. Jonas, Holly Cot, Burley, near Ringwood, Hants.

PIGS.—T. S. Minton, Montford, Shrewsbury; A. R. Baxter, Dale End, Birmingham.

CORN.—J. Edwin Mitchell, Cape Hill, Birmingham; Frank B. Ludlow, Holt Street, Birmingham.

ROOTS.—John Myatt, Lynn House, near Walsall; Thomas Palmer, Hampton Lodge, Warwick.

POTATOES.—W. Halliday, Patshull Gardens, Wolverhampton.

At the largest ploughing match in the world, that of the North Kent match held near Dartford on November 7, there was a great victory for the Howard ploughs. Twenty-one prizes were won with the Howard ploughs, including seven out of nine first prizes, and the first prize in the champion iron balance plough class, as well as two special prizes for the best work in the field with an ordinary balance plough and with an ordinary iron plough.

The King has intimated his intention to send thirty-five Devon and other cattle, 300 Hampshire and Southdown sheep, and over 100 pigs from the Flemish and Home Farms at Windsor to the Slough Christmas Cattle Show and Sale on December 10.

Specially constructed vans for the conveyance of prize cattle by passenger train can be supplied for conveying cattle to and from the Birmingham Fat Stock Show (November 30, December 2, 3, 4, and 5) on application being made to any of the Midland Railway Company's stations, Mr. J. Mitchell, District Superintendent, Derby, or to Mr. J. Elliott, Superintendent of the Line, Derby. For the convenience of exhibitors of poultry and cage birds at the same show the Midland Railway Company have made every arrangement for the convenient and careful transit of exhibits to and from the show. Through trains to Birmingham will be run on Friday, November 29 by certain trains from their principal stations, full details of which can be had on application as above.

CORRESPONDENCE.

Town or Country Life.

SIR,—As the writer of the letter to which Mr. J. L. Brown refers in your issue of November 4, I thank him for his view of the case and also for the comparison he draws between the men he employs and the junior clerk in Manchester on 12s. 6d. per week. I quite agree with your correspondent that modern restrictions and the dearth of suitable cottages have driven many men from the land, and if all labourers were paid as well as those employed by Mr. J. L. Brown and had as many perquisites there would be no need for complaint. But, alas! such is not the case, for only a short time ago I was talking with a farm hand who is trying to make ends meet on 12s. a week, and being associated with his master's animals this man, in accordance with a rule established in the district, is denied the privilege of keeping a pig of his own for fear that he might succumb to the temptation of appropriating his employer's meal to feed it with. The eighteen shillings per week labourer who has perquisites and can earn extra money in harvest time is admittedly better off in the country than he would be in the town, but what about the 12s. a week man who drudges along from morning till night without a prospect of getting any more? Is it a wonder that he leaves the land and takes the risk of doing better—he can hardly do worse—elsewhere? Your correspondent states an actual case, as also do I, and each must be treated on its merits. I do not say that it is the farmer's fault that men have to grind on 12s. a week or less as they do, perhaps in more cases than those in which labourers are as well off as those in the employ of your correspondent, and it is gratifying to think that farmers would pay more for their labour if they got better prices for their produce, but I should like to know how many of the good people who try to make out that the farm labourer on 12s. a week is not so badly off would stick it. Not many, I fancy, if there was any prospect of another job.—Yours, &c.,

ANOTHER REFORMER.

Are Times Better for Farmers?

SIR,—Certainly times are better than they have been for some years, but these conditions must remain for some time before farmers can feel the benefit, or take advantage of them. Bigger rents are out of the question. For years farms have not paid interest on the capital required to stock them and a salary to the farmer as manager, which they should do before there can be any ground for raising rents.

Farmers have not kept on at their present rents because their farms have been paying properly, but because they had no alternative occupation to take to.

Just a word about your correspondent's balance-sheet. The value of the straw from an acre of a fair crop of wheat in this locality would be about £5, which would bring the balance to the other side of the sheet; £12 per acre is a fair average for the corn and straw of a crop of wheat here, though I have made as much as £15 per acre when wheat has been 30s. per qr.

There is a good local demand for wheat straw at 65s. to 70s. per ton, and there is not much grown, only about 20 per cent. of the land being arable, and a good deal of that is cropped with clover and roots.—Yours, &c.,

November 13, 1907. A. J. R.

Crops and Rent.

SIR,—It is sad to read in your journal of the quantity of corn that is now out about the country after the splendid weather we had in September and beginning of October. I think the reason is somewhat due to other causes than the weather. For instance, I know at least of two energetic farmers on the highest point of the Cotswolds who not only got their corn in and thatched before the rainy season set in, but have their young wheat well up in drill in October, while most of their immediate neighbours have either a piece of oats or wheat still out, and at that time not a grain of wheat planted, notwithstanding the Cotswolds are as late as any in the kingdom, barring extreme north, bearing out the old adage—The early man never wants to borrow of the late.

The favourable seasons we have had of late seems to have created an apathetic and easy-going feeling amongst many, for this adverse weather at the time of year must be expected, and will be sure to come, and the consequences may to a great extent be averted by getting on with the planting in the good old-fashioned time. Wheat should at the least, in these late districts, be in not later than September. Of course, spring corn depends a good deal on the lateness of the root crop being fed off. These periodical seasons act as a caution to the unwary, and to be prepared is always the safest policy.

With regard to rents, I am at a loss to understand by what stretch of imagination some landlords should come to the conclusion that they ought to be risen, even if the rumour is correct that wheat is going to be a little better price, farmers have had no time to realise this (and of late this seems to have a downward tendency), and it is more than probable that next year may be down to the old level.

I ask where is this sudden prosperity to come in to benefit the farmer. I say the thing is preposterous, and only exists in the imagination of the class of landlords for which the new Act, to come in force in 1909, would be appropriately applicable. Good landlords would like first to see that their tenants would really benefit before thinking of this.—Yours, &c.,

GLOUCESTERSHIRE.

Agriculture and the State.

SIR,—Having read in last week's MARK LANE EXPRESS the report of Captain Mark Sykes's address, entitled "Agriculture and the State," delivered before the members of the Yorkshire Union of Agricultural Clubs on Tuesday at York, I should like with your permission to make a few comments upon that part of it dealing with the extinction of the yeoman class in Italy, which had no small share in the downfall of the mighty Roman Empire.

In order to make my remarks more forcible I will quote the passage I refer to:—

In the early history of the Roman Empire they found that the pristine vigour of the Republic was derived almost entirely from the services of the stalwart yeoman farmer who dwelt within the neighbourhood of the city; they provided the invincible powers of the early legions they infused the public with that rugged spirit of perseverance and national probity, and to them was due that stern independence which would brook neither the tyranny of a monarch at home, nor that of an invader from without.

The speaker examined the social conditions of Rome preceding her downfall in detail—the better income for the industrious in the city than on the land, and the daily pension of bread for the idle; and remarked that the yeoman farmer of Rome could not be revived for the very good reason that he was not wanted. He became extinct as the result of certain economic laws, which neither statesmen nor prophets could alter. This kind of thing, he proceeded, was very sad and regrettable.

Now it appears to me that Captain Mark Sykes can never have read that scholarly work by Dr. Dill, entitled "Roman Society in the Last Century of the Western Empire," or he would have gained some information regarding the disappearance of the justly praised yeoman class. Therefore I will take a few quotations from it to enlighten him.

On page 205 I read:—

Anyone who wishes to understand the meaning of the great social catastrophe of the Fifth Century must fix his attention on the condition and distribution of landed property and on the classes who possessed it.

And upon page 220 I find the following:—

Large landowners lay their hands on a debtor's land. The terms of one law of Honorius makes it probable that mere terrorism exercised by great nobles or officials, without any legal right whatever, often compelled the small farmer to part with his land by pretended sale or gift.

If a farmer got into difficulties from bad seasons or under municipal burdens, his readiest resource was to borrow from some rich neighbour. There were many ways by which the great man could lay his hands on the debtor's land, and the code leaves no doubt that the most unblushing oppression and chicanery were often employed to dispossess him; accumulations of interest occasioned forced sales, when there were few bidders but rich landlords, as the law seemed to discourage the merchant class from buying any land.

On Page 116 the author says:—

There can be no doubt that the hardened venality of the financial service, and the greed and rapacity of the great landowners, were the vices which did most to undermine the fabric of Roman society.

On page 190 the author states that

In the contest the middle or bourgeois class was almost extinguished, Roman financial administration was paralysed, and at its close the real victors were the great landholders surrounded by their serfs and dependants.

From the quotations I have given, it is perfectly easy to see why the yeoman as a class disappeared. Now, Captain Mark Sykes states, to quote his own words, "he was not wanted." Quite true; he was not wanted; but by whom he was not wanted the Captain does not say. Yet there is no doubt at all, when the passages I have quoted from Dr. Dill's work are kept in mind, that it was the big landlord who did not want him. Furthermore, the fact is quite apparent from Dr. Dill's writing that the class of huge landowners did not acquit themselves too well during the times of national trouble, for he says on page 135:—

Patricians fought hard to avoid the levy of recruits from their estates in the Gildonic War; they also showed what seems an unworthy timidity in the riots caused by the failure of the corn supplies from Africa. The same selfish weakness is revealed a few years afterwards in the flight of the wealthy when the troops of Alaric were closing round the city.

I would here like to insert a few quotations from Gibbon's "Decline and Fall of the Roman Empire." From page 14 of Vol. I. I take the following:—

In the purer ages of the Commonwealth the use of arms was reserved for those ranks of citizens who had a country to love, a property to defend, and some share in enacting those laws which it was their interest as well as a duty, to defend. [A footnote reads as follows:—The poorest rank of soldiers possessed above 40 pounds sterling (Dionys. Halicarn, iv., 17), a very high qualification at a time when money was so scarce that an ounce of silver was equivalent to 70 pounds weight of brass. The populace excluded by the ancient constitution were indiscriminately admitted by Marius.]

And then the author proceeds to state that

After every qualification of property had been laid aside, the armies of the Roman Emperor were still commanded, for the most part, by officers of a liberal birth and education; but the common soldiers, like the mercenary troops of modern Europe, were drawn from the meanest, and very frequently from the most profligate of mankind.

Of course, as is well known, this state of affairs, became even worse; for, in after years, when the barbarian hosts were pouring into the north of Italy, the slaves had to be pressed into the ranks of the legions—those legions whose fame, whilst they were recruited from the Yeoman class, will last as long as history remains.

I do wish that all patriotic Englishmen would read Dr. Dill's instructive work, and also, if they can command the time, Gibbon's "Decline and Fall of the Roman Empire"; and when they have done so they cannot fail to see the remarkable similarity between the state of the Roman Empire in the latter years of its greatness and the signs of the times, as well as the general social conditions existing in England to-day.—Yours, &c.,

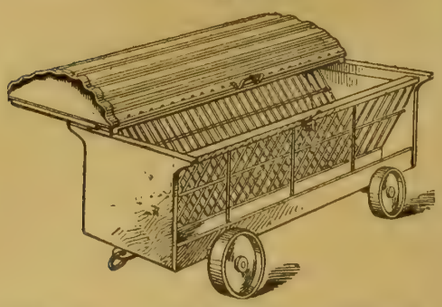
JOHN O. NICHOLSON,
Norwegian Chalet,
November 12, 1907. Bridlington.

Agriculture in East Cumberland and North Westmoreland.

SIR,—I think it will be admitted by all parties who are financially connected with farming industry that the year 1907 has been the most critical and unsteady that the oldest of the farming community can remember, and its injurious and beneficial results have been so varied in different districts in close proximity to each other that no description can be more than approximately accurate.

So far as green crop is concerned there is no doubt but that the drier and finer soils had a great advantage over those of a wetter and heavier description; although the copious rains we had in July had enabled the latter to make much headway, they will still be quite one-third below average, and in several cases not average half a crop. But the remarkably fine September which so suddenly burst upon us after the unsettled August made a marvellous change in the relative condition of crops on different soils and situations. In whatever direction you travelled, it showed how very much we depend upon that capricious element the weather, over which we have no control, and therefore must grin and bear its vagaries, and at the same time admit its absolute power over us.

Our prospects at the close of September were hopeful and glorious. Abundant crops of grass, hay, and corn, had been reaped in all directions, and the hay as a whole well and cheaply secured, and most of the corn cut and secured, although a considerable quantity too hastily, as is shown by the smoking stacks, which was speedily followed by the wettest month of the year, October, which has more than half wasted the value of the large quantity of corn still outstanding till the first week in November.



Where are our friends that still keep saying "Back to the land"? By what remedial policy do they propose to accomplish the ends they so loudly proclaim their intention to effect? Certainly not by socialistic doctrines or small allotments, or small holdings Acts.—Yours, &c.,

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General of Nova Scotia, Mr. JOHN HOWARD, 57, Pall Mall, London, S.W.

In writing to advertisers, readers will confer a favour by mentioning the "Mark Lane Express" as the source of their information.

IMPORTANT TO FARMERS AND POULTRY KEEPERS.

How is it your Hens are not laying as they ought?

THEY REQUIRE A LITTLE

'Garstang Tonic'

In the morning's soft food, which will keep them free from Colds, Roup, &c., and in a short time the Egg Production will be wonderfully improved.

All Poultry Keepers ought to know its value.

Ask those who have tried it!

Knowle Top, Bugsworth, Derbyshire, Nov. 12, 1907.

MR. THOMAS, DEAR SIR.—Will you please forward me per return of post a 2/6 tin of your "Garstang Tonic." I may say that I used your Tonic last year, and found it far superior to all others I had previously tried. It is an excellent egg producer. It keeps the fowls in good condition, and helps them to stand changes in the weather. Hoping to receive the tin per return,—I am, yours faithfully,

(Signed) G. S. KITCHEN.

To be had from all Grocers and Chemists. Be sure you ask for Thomas's "Garstang Tonic," and don't be put off with any other. If you have any difficulty in obtaining the Powder write direct, and you shall have a tin per return.

Sold in Tins, 10d., 1/6 and 2/6. Post free, 1/1, 1/9 and 2/9.

Prepared by JOSEPH THOMAS, Chemist, GARSTANG.

POULTRY.

Poultry on the Farm.

In speaking, for ease of expression, of natural and artificial methods of poultry keeping and production, we are in danger of forgetting that all our methods are more or less unnatural and artificial, as must needs be the case in our treatment of domesticated creatures of any description. We cannot keep domestic fowls under really natural conditions in this country, and any attempt to do so amid surroundings similar to their original habitat would eventuate in a reversion to primitive habits and characteristics—which would be unprofitable in the present century. Nevertheless, bearing in mind the inevitable limitations of the use of the word, the "natural" conditions of the farm are those most suited to the profitable keeping of poultry of various descriptions, and some sorts cannot be kept in a healthy and productive state in any other circumstances.

Under such conditions as prevail in this country, physically and economically, poultry can nowhere be kept so suitably—upon a commercially productive basis—as upon the farm. What is known as intensive production has been tried times out of number, and found wanting. The land will not stand it, and where the attempt has been made to make it carry an excessive head of poultry for a considerable period the ground has become fowl sick, with the inevitable result that disease has either modified or terminated the efforts to achieve the impossible. Chicken rearing, which is a common aim of the intensive enthusiast, cannot be conducted upon a sufficiently large scale for the purpose without ample room for change of rearing ground, separation from adult fowls, and the continual removal of the growing stock to "fresh fields and pastures new," such as are at the disposal of the farmer alone, to any desirable and sufficient extent. Ducklings may, of course, be reared and fattened within very narrow limits, but nowhere will the stock ducks breed so well and produce such fertile eggs as amid the "natural" surroundings of the farm. Guinea fowls would be objectionable elsewhere, and are sometimes obnoxious on even a large farm, but nowhere else can their peculiar habits be long tolerated. Geese are only possible and profitable in the possession of the farmer or commoner, and turkeys cost too much to feed without the wide range of fields and woods.

Yet although fowls have been inseparable from the farmyard from the most ancient times, and their utility "points" have been thought worthy of description by Roman agricultural writers, it is only within quite recent years that British farmers have commenced to regard them seriously, as being of any real commercial value. Individually they are not yet perhaps of much account on the majority of farms, yet collectively poultry production is an important agricultural asset; and in face of much that has been written and spoken deprecatingly, it is a fact that the farmers are the chief producers, with cottagers a good second, the so-called "poultry farmers" occupying the field. No other producer is in such a generally favourable position as the farmer in regard to cost of production, whether in relation to rent, labour, or food; the chief difficulty in some cases being the lack of facilities for marketing, which are, however, insuperable in but relatively rare instances. Poultry and eggs are extremely perishable articles of produce, and rapid collection and transit are essential to successful marketing, just as low rates for carriage are necessary where the margin of profit is narrow. Organisation, which is so generally desirable in agricultural affairs, is especially so in this particular; and where there is a natural growth of organisation, upon a businesslike basis suited to the local requirements, it is often much more lastingly satisfactory than when the motive-power is exterior to the particular needs of the locality.

Whatever immediate expedients may be resorted to in regard to marketing, the ultimate aim should be the co-operative supply of a large central market; and none is so generally remunerative, on the average of the year, as London. Such co-operative marketing does not necessitate any very elaborate organisation, or interference on the part of central officials, but may very well be engineered by an enterprising carrier in a market town, if he can induce a sufficient number of producing farmers to work with him. By such a simple method the individual charge for collection is reduced to a minimum, and the consignment in bulk has the necessary modifying influence upon the railway charges—which latter should be a matter of arrangement between the collecting carrier and the railway company.

With regard to the cash transactions, affairs may be further simplified by an arrangement under which the salesmen transmit the total cost of carriage to the carriers (who adjust matters with the railway company) and forward the balance, less their further personal charge of 5 per cent. commission, to the producers direct. The whole thing is simple, and whilst it reduces the expenses and trouble of marketing to the lowest possible point, it involves no expense for management and preserves the independence of each consigner.

This is no impossible Utopian scheme, but is the method employed in the south-eastern chicken industry, and has been adopted and grown by a simple commercial process, without any adventitious aids from those not immediately engaged in the producing industry. Without suggesting such an impossibility as the reproduction of this special industry throughout the length and breadth of the land—there are other and more vital factors operative in the success of this unique localised enterprise—it is at least reasonable to suggest that the method of co-operative marketing is applicable elsewhere.

It may, of course, be objected, and it would be a fair comment, that under this system the producer places himself rather unreservedly in the hands of the salesmen: and in this connection there is at the present time an active movement among a section of the producers with the object of safeguarding their interests by the exercise of some more definite control over the salesmen. Nevertheless, although there are always exceptions, the stall holders in the London markets are as a body men of business integrity, who are anxious to retain their stalls and who recognise that their existence is dependent upon the producers. Speaking generally, they treat their clients fairly. Anyway, despite the keen competition of imported poultry, and the grumbles of the agitators, the large and regular consigners agree that this year has been one of the best within their experience, and that good returns have been received for produce of good quality. To irregularly market inferior poultry and eggs of uncertain age is naturally to court disaster, as should be obvious to the businesslike farmer. The level of quality must, of course, remain an individual matter, but co-operative marketing will assist as regards bulk and regularity of supplies.

J. W. HURST.

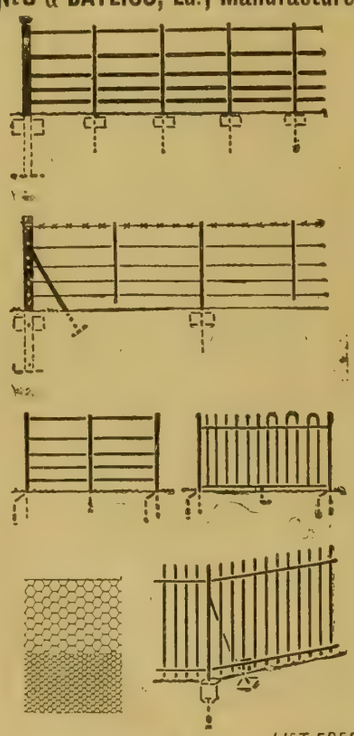
A LANGSHAN COCK, A WINNER OF MANY FIRST AND SPECIAL PRIZES.

The Twelve Months' Laying Competition.

The results have now been issued for the first month of the Utility Poultry Club's twelve months' competition, which is being held at Stocks Farm, Rayne, Braintree, under the management of Mr. E. W. Richardson, honorary secretary. Each pen consists of six pure bred pullets, hatched not earlier than January, 1907. Each pen of birds has a house to itself, and duplicate grass and scratching shelters are also provided.



At the head of the list at the end of the first month is a pen of White Wyandottes, whose total number of eggs for the month is 77, by far the best total, for the nearest approach is but 58 by a pen of Buff Rocks; whilst two other pens of White Wyandottes are third and fourth, with totals of 49 and 41 respectively, the last-mentioned figure being also the record of the next pen, six White Leghorns.

In this competition the eggs are divided into grades, eggs which scale 2 ozs. or over being termed first grade, and those which scale under 2 ozs. second grade. The records of the best half dozen pens for the month are as follows:—

Breed.	1st grade eggs.	2nd grade eggs.	Unsaleable eggs.	Total.
White Wyandottes...	34	43	—	77
Buff Rocks	12	45	—	58
White Wyandottes...	5	43	1	49
White Wyandottes...	6	35	—	41
White Leghorns	5	36	—	41
Buff Rocks	19	12	—	31

It will thus be seen that, so far, White Wyandottes have proved far superior as layers, and it

will be interesting to see if the pen maintains its position. As to individual effort, the best record is held by a bird in the third pen of White Wyandottes, she having laid twenty-five eggs during the month: second to her comes one of the second pen of Buff Rocks with a record of twenty-three eggs, whilst two in the first pen of White Wyandottes have twenty-one eggs to their credit.

The Dangers of Breeding from Diseased Fowls.

The best thing that can possibly happen to a really seriously diseased fowl is a prompt extension of the neck. It may require a little courage at the moment, but in the end it will save much trouble and worry, and prove a decidedly remunerative proceeding; and if this course is promptly followed with the first case that appears in a poultry-breeder's yard an epidemic will probably be prevented, and the great danger of breeding diseased offspring will be thus averted. With a sick mongrel it is quite likely prompt execution may be practised without much hesitation; but what happens in the case of the highly-bred exhibition or pure-bred specimen, or in the case of the pedigree layer with a champion trap-nest record, plus possibly a prominent position in one of the laying competitions? Such a bird is in its owner's opinion far too valuable to be thus peremptorily disposed of just because it happens to have contracted roup or developed symptoms of liver disease or tuberculosis, or any of the many other hereditary diseases to which poultry flesh is heir. So he coddles it up, doctors it with various nostrums, sometimes suitable, oftentimes quite the reverse, until in the end, after a vast amount of trouble, he is perhaps successful in so far patching up the patient that the outward and visible signs of the inward disease are dispelled, and the bird once again presents the appearance of a healthy specimen; but such appearances are in the majority of cases delusive. A fowl that has once been seriously affected is rarely, if ever, thoroughly and safely cured, and at any time it is liable under encouraging conditions such as unfavourable weather to break down again. But all this is not considered; the patient is "cured" (?), and if an exhibition specimen it is again allowed to follow its show career, which further strains and weakens its already delicate constitution, and finally, whether a show bird or a utility laying sprinter, it goes into the breeding pen, where it will possibly more or less, according to the disease, contaminate all the rest of the inmates, and almost certainly reproduce in its offspring the same undesirable troubles from which it has itself been a sufferer. To the thus doctoring up of a show specimen in order to again fit it for exhibition, there is not much to be said. The trouble may be worth the results to the owner, but under no circumstances should such a bird be bred from. The disease is not only liable to again crop up at all times and seasons when least expected, and thus upset breeding arrangements, but will also most surely bring trouble a hundredfold in the succeeding generations, whilst if eggs for hatching are sold from such specimens, they may prove the means of spreading the disease all over the country. Ask a farmer if he would knowingly breed from a glandered horse or a tuberculous cow, and yet such a proceeding would only be on a par with breeding from a fowl of either sex that has been affected with any of the numerous contagious and hereditary diseases to which poultry are liable, and, possibly more than any other animals, inclined to transmit to their young, and which, when they do not appear in the next, frequently crop out in succeeding generations years afterwards. Cures like that above referred to are usually superficial; the taint of the disease in the majority of cases remains in the blood—lurking within, ready to break out again on slight provocation, or to be transmitted to the offspring. The breeder of fowls who desires to produce strong, healthy, vigorous stock should exercise the greatest possible care in excluding from his breeding pen every bird that has at any time shown the slightest sign of disease. It may seem hard at the time to kill or ostracise otherwise valuable specimens, but it will pay many times over in the end, and if greater care in this respect were generally practised, we should hear much less of poultry epidemics and failures in poultry-keeping, the length of the post-mortem columns of the various poultry organs would be considerably reduced, and poultry-keeping of all phases would be much more remunerative. It is the delicate, unhealthy specimen that causes so much care and trouble, and in the end picks the pocket of its breeder.

MIDLANDER.

The Shorthorn sales in Scotland for the year show that 1,264 head were disposed of at a total value of £60,118 5s. 6d., or an average of £47 11s. 2d., against 1,051 head sold in 1906, and an average of £59 12s. 3d. last year.

Questions and Answers.

FARMING.

Cauliflowers for Cows.—Will you kindly say if cauliflower leaves are as good as cabbage leaves for milking cows? And if not, what is the objection to them.—T. P.

ANSWER: Cauliflower leaves presumably means the cup-like cluster of leaves left after removal of the edible portion of the plant for sale. The leaves of the cauliflower are somewhat stronger than those of the cabbage, and are much more stalky than their representative of the brassica tribe; but they can safely be used in moderation, provided they are quite fresh and green. The outside leaves of the cabbage are known to impart an objectionable taste to milk, cream, and butter.

Kohl-rabi.—In this part of the country (Co. Dublin) we leave our swede turnips in the ground all the winter, only pulling them as required. Can I do the same with kohl-rabi, or must I pull and store it now same as mangel?—HIBERNIA.

ANSWER: Kohl rabi can bear a fair degree of frost but is not frost-proof. Some contend that it will keep better in the land than swedes do, but this is scarcely the case on those soils and in those climates where swedes are not stored. Perhaps the truth is that the ability to stand the winter in a given situation depends upon the period of sowing and upon the development of the plant. It is well known that swede bulbs of large size, which have been sown early and have attained full growth by Christmas, do not stand nearly as much frost as swedes sown later in the season and which are in full growth when the hard r frost sets in, and the more essentially nitrogenous the manuring and the more rapid the growth of the matured crop, the smaller is its ability to stand frost. It is well known that early-sown swedes, grown with superphosphate and nitrate of soda, are far more susceptible to injury from frost than swedes grown with a dressing of bone-meal alone. The analogy holds in the case of kohl-rabi. I do not know the peculiarity of your soil—and the peculiar characteristics of the soil have more to do with the keeping properties of roots than has climate, but as you can keep swedes unstored, I should say you can keep kohl-rabi unstored also. My advice is that you store a part of your crop, the earliest sown and best grown part, and let the remainder stand and note the results.

LEGAL.

Agricultural Holdings Amendment Act, 1906.—Would you kindly, through the medium of your valuable paper, give me the opinion of your legal adviser upon the operation of the above, which comes into force upon January 1, 1909, upon this one question? If a landlord gives his present tenants "notice to quit" in view of the above, in order to bring them under a new agreement, how do those tenants stand affected under the provisions of the Act?—AGRICOLA.

ANSWER: The only Section of the Act that appears likely or could have a retrospective operation is Section 4—the one you write about. Section 9 provides that the Act shall come into operation on the 1st day of January, 1909; therefore nothing done in the way of terminating a tenancy could possibly be affected by the Act if the tenancy terminated at Christmas, 1908; that is, the tenant would have a right to claim the benefits conferred by Section 4 in respect of additional compensation. The question is not so clear if the notice given terminates a tenancy and such tenancy comes to an end after January 1st, 1909, although I am of opinion that such a case would not fall within the Act, for the object aimed at in postponing the operation of the Act was to enable landlords to make fresh agreements with their tenants.—BARRISTER-AT-LAW.

Chief Rent.—I cannot give you any good reason why we do not pay it, but I should like to know what was the origin of the chief rent, and on what we are paying it. It can't be so much in the £, because I know of a farmer who pays only tenpence, and another about the same rent pays 7s. 6d. I have heard it said that it was goodwill of our forefathers towards the keep of hounds to destroy wolves, if so, I do not believe that anybody can claim them now.—J. F.

ANSWER: A chief rent is the annual payment that a freeholder of a manor makes—this rent is also called a quit rent. The history of these rents is interesting—the lord of the manor was a feudal lord, and the tenants held under him on performance of certain services, thus if he went to war he could call upon them to render him assistance. There were certain other rights the lord had, such as homage, wardships, values, and forfeitures of marriage. He could also call upon his tenants to pay aids for making the lord's son a knight, or on the marriage of his daughter. These services were not unfrequently commuted by payments known as quit rents, or chief rents, to get rid of the obligations or services, and the lord accepted these annually. The sanctions show that the particular services of the tenants varied. Payments: At the time these bargains were struck 10d. was a very considerable sum and its purchasing power was great, but owing to the fall in the value of money it is of course now a comparatively insignificant amount. The origin of your particular chief rent you say was for your ancestors to have the goodwill of the lord in keeping hounds to destroy the wolves. This may or may not be the case. I should rather think that your ancestors had to protect the manor from wolves, and that the lord of the manor took this duty on his own shoulders by keeping hounds, etc., in consideration of the tenants paying him a rent to get quit of their obligation. The rent is perfectly good. This is of probably more interest to the student of law and to the antiquary than anyone else.—BARRISTER AT-LAW.

VETERINARY.

Mallenders.—I have a mare affected with mallenders, and have tried different things (including veterinary preparations), but nothing seems to effect a perfect cure. Can your vet. tell me of anything that will remove it?—J. C. B.

ANSWER: "Nothing seems to effect a perfect cure," is, unfortunately, by no means an uncommon experience, and the late Professor Williams, in dealing with the treatment of mallenders and sallenders, technically *psoriasis carpi et tarsi*, says: "Generally remedies seem to have no effect, and beyond modifying the condition of the cracks when inflamed, the efforts of the practitioner are productive of no positive results." Mallenders and sallenders, frequently seen in animals otherwise quite healthy, is essentially a chronic and often an intractable disease, but it never spreads over any great extent of surface, and remains confined to the flexures of the limbs. Of all local applications tar ointment is the best, but we cannot guarantee that it will effect a perfect cure, and probably you can do as much towards modifying the condition of the cracks as by means of anything we can tell you. The authority referred to above states that in the case of a valuable animal, where the eradication of the disease is a question of importance, the treatment must be both local and general. He suggests the employment of a triple compound of arsenic, iodine, and mercury, but in the ordinary case it is best to keep the animal presentable by the employment of local dressings.—M.R.C.V.S.

Pony's Eye Wrong.—Kindly give us a good remedy for pony's eye. It is running water and keeps it closed. He must have knocked it, or a draught causing inflammation.—T. T.

ANSWER: The case may be one of simple ophthalmia, due to one of the causes mentioned, or it might be one of specific ophthalmia. This condition, although not so prevalent as was once the case in this country, still occurs occasionally where the hygienic conditions are not of the best. The great number of cases of blindness due to cataract met with a quarter of a century ago were due to this specific or recurring ophthalmia, or "moon blindness." We are, of course, unable to say to what cause the inflammation of the eye is due, but that it is inflamed is obvious from its running, and the intolerance of light. Light is very irritating to inflamed eyes, and that is why the animal protects the organ by closing the lids. The first step should be a careful examination in which it may be desirable to employ cocaine, to ascertain if any foreign body is present. The trouble is sometimes due to a piece of chaff or oat husk getting into the eye. If nothing of the kind is found, foment with a decoction of poppy heads in warm water, to which a little wine of opium has been added, and drop in a little lotion of: Sulphate of zinc, 10 grains; elderflower water, 8 ounces. The animal should be kept in a darkened stable, since light is very irritating. These directions apply more particularly to the beginning of a case of ophthalmia. What it requires no v. if anything, it is difficult to foresee.—M.R.C.V.S

Northern Notes.

THE week opened with a dry day, then rain the next, and the third was a day when "half a gale" blew. Farmers are making as much haste as possible to overtake the arrears of work on the arable portion of their holdings, and they are sanguine of being able to do this before the 23rd if the weather is anything like favourable; though it is perhaps their misfortune that the hirings are intervening, and causing the working days to be so many less than are marked on the almanack. The yearly hands claim their days off to attend the hirings, and a day of fine weather is very precious at this time of the year. To-day "is cold enough for snow," folk are saying, and a fall would surprise nobody. We should be far happier if the weather remained of that open type which would permit of all the winter wheat being sown—including the increased acreage which the high "paying price" had stimulated the farmer to prepare for.

INSTANCES are rare of wheat this season reaching 40s. per qr. in this part of the country. One or two well-won samples made the two sovereigns. Now we hear of many indifferent offerings at the markets, soft and unmillable samples, which ought to have been allowed to harden before the stack was disturbed and put through the thresher.

IN talking over the question of an Agricultural Party in Parliament, it seems most strange that no account has been taken of the labourer! Who gave the successful candidates in rural constituencies at the last election the overwhelming majorities that some of them received? Was it not the vote of the agricultural labourers? And yet some candidates only cultivate the acquaintance of this most important factor in politics just on the eve of a Parliamentary contest; then some of them envy the successful party their organisation. They wonder how it is done. Elections as a rule are not won by a three weeks' campaign simply and solely.

JUST as the agricultural labourer becomes more and more weaned from the village cleric, he is sought after by the dissenting bodies, who give him more consolatory draughts of religion than he finds elsewhere. I was asked the other day if in my experience of rural constituencies I had ever known an instance of a farm labourer being summoned to attend on a committee of a Conservative organisation. I could not recall any such instance. No; smock frocks and corduroy have been too long ignored by the party that is now enjoying a rest from the toils and spoils of office, and one would be safe in saying that in most agricultural centres nothing is being done to interest the labourer in politics, or to influence his mind in relation to the government of the country, except by the Liberals. They keep in touch with the labourer, and they alone. They treat him as a man, and not merely as an asset of the farm.

THEN we talk of an agricultural party! At the same time the man who constitutes the majority is left out in the cold. Is anybody quite sure that any large body of labourers will ever be convinced that free trade is not altogether best for their interests? Farmers—or many of them at least—are eager for "fiscal reform"; how, then, in the choice of a Parliamentary "agricultural" candidate could we reconcile the two interests. The labourer would vote for cheap bread, and the farmer for protected wheat. An agricultural party would have its advantages and also its inevitably considerable limitations.

THE recent discussion in London on the subject has fallen flat in the country. I have read somewhere since the meeting was held that about the only practical recommendation in the report is the one proposing a fund for electioneering purposes. Whether this report represents the opinions generally of farmers is questionable. Something of a more definite and tangible character is necessary to arouse the agricultural interest. We see the indifference of the people even in rural districts, where no steps are taken to press forward the claims of agriculture on representative bodies such as county councils. The apathy is truly astounding.

TYNESIDE folk are beginning to realise, amid their many varied interests, the approach of another "Royal" visit, and preparations are already in progress for the great show of stock and implements. The prize sheet as drawn up will be very comprehensive and attractive. This has been rendered possible by the liberality of the breed societies and the local committee. No less than twenty-nine breed societies have already promised contributions; and the increase in the amount of some of the first prizes from £15 to £20, and in the cattle, sheep, and pig classes to offer additional prizes where the exhibits exceed a certain number, has afforded great satisfaction amongst breeders, and all intimately associated with the showyards of the country.

THE specimens of farm hands who "stood the market" for hiring this week at Driffield were a very robust lot of men and youths, who seemed as keen as mustard to secure engagements. An improvement in the behaviour of the "hands" was noted, though there is always a sprinkling of the rougher element at these fairs, who drink and fight, and get into the hands of the police. But these men are the exceptions, and the excesses are committed invariably under the influence of drink. Does anybody believe these hiring fairs are doomed? Let them see what thousands congregate in the towns of Beverley, Bridlington, Driffield, &c., between this and the 25th inst., on the special days set apart for hirings.

MR. GEO. HARRISON, of Gainford Hall, informs us that he has sold, by cable, the Leicester shearling ram that won the first prize at the Leicester meeting of the Royal Agricultural Society, and also first at Barnsley (Yorkshire Agricultural Show). He has commanded a very high price for the sheep, which he considers is one of the best he has ever bred. As a lamb this sheep was in a pen of those awarded first honours at the "Royal" of 1906, and first as a single ram lamb at the Yorkshire Show held at Middlesborough. His sire, Towthorpe Lord 726th, was first as a two shear ram at the Great Yorkshire Show at Hull. His breeding goes back to to the Wauldby flock of Mr. Jos. Thompson and the Messrs. Simpson's, of Pilmoor House, Hunmanby, Yorks. The fortunate purchaser of this grand ram is Mr. Percy Harrison, of Northumbria, Hobart, Tasmania, who had just previously bought two prize shearlings of Mr. Harrison.

November 14, 1907.

At the Evesham Fruit Pests Committee, held on Tuesday, a deputation was appointed to wait on Lord Carrington on the 19th inst. with respect to gooseberry mildew and the compensation question. Colonel Long, M.P., sent a letter from Sir Thomas H. Elliott, Bart, which stated that Lord Carrington would be happy to receive a small deputation of Evesham fruit growers as to the measures to be taken to get rid of the American gooseberry mildew.

At the twenty-eighth annual meeting of the Lincolnshire Association for the Prevention of the Administration of Poisonous Drugs, &c., to Horses, the committee were pleased to report that the association had only once been called upon during the past year to carry into effect its objects, a waggoner being convicted at the Lindsey Court, Lincoln, of taking his master's wheat and giving it to the horses. The financial statement for the year showed an increase of funds to the amount of £7 10s. 4d., with a balance at the bank of £236 12s. 6d. The membership totalled 109, compared with 114 a year ago. The balance in favour of the insurance account now stood at £602 10s. 6d.

Fertilisers and Feeding Stuffs.

FEEDING STUFFS.

(Continued from issues Nov. 4 and 11).

(Conclusion.)

Linseed Cakes and Meals.—Such cakes are often sold as "95 per cent. pure," or some similar guarantee, which is practically useless, and is made to cover occasional impurities which ought not to be present in linseed cake.

Bran is sometimes added to linseed cake, and can be easily detected in the following way:—A little of the cake or meal, about an ounce, should be brought to the boil in a glass test tube or suitable vessel, allowed to cool, and then a drop of tincture of iodine (or iodine in potassium iodide solution) is added. If bran or other material containing starch be present, the iodine will turn a deep blue colour on shaking the vessel up. If no blue colour results it may be concluded that the linseed is free from starchy impurity.

The colour of the linseed cake or meal is an aid to judgment of its purity or suitability. A too dark colour indicates over heating and fermentation, which will render it not so valuable for feeding purposes; whilst a too light colour points to adulteration with other seed or grain. As the colour varies very much with the country of origin, a good deal of experience is necessary to judge anything from this indication.

The detection of such foreign seed or grain adulteration is only possible microscopically; the method will be dealt with in another part.

Rapè Cake or Meal.—This food is not in very great favour, mainly on account of its acrid flavour, because of one impurity which is sometimes found in it—namely, mustard. This is easily detected by making a paste of the cake or meal in a little cold water, and then leaving it in a bottle or other closed vessel in a warm place for a few hours. The characteristic smell of mustard will then be readily noticeable on reopening the bottle.

Cotton Cakes. — Decorticated cotton cake is usually found to be fairly pure. Undecorticated cotton cake, too, is commonly found pure, but it may not be generally known that if fed too liberally, the latter disturbs the digestion of young animals or sheep, causing gastritis, which sometimes results in death. This is due to the large proportion of indigestible woody fibre contained therein, consisting of the husk and some short cotton fibres adhering to it. Undecorticated cotton cake is also frequently contained in compound cakes, and where these two kinds are fed together the animals receive a larger amount of an undecorticated cotton cake than their stomachs can deal with. Cotton cakes are made either from Egyptian or Bombay cottonseed. The former is more valuable from a feeding point of view and is a bright yellow colour, whilst the Bombay cake is a dark brown tint.

A common impurity of Bombay cakes is the addition of borax as a preservative, and in order to change the colour to something approaching the bright yellow of Egyptian cake. The use of borax is to be deprecated, because it has a disturbing effect upon the digestive organs, and renders them less capable of doing their proper work. Borax can be detected by allowing a little of the cake to burn to a black ash in some suitable clean vessel over a hot fire. When it has all burnt down, two drops of sulphuric acid are added and then sufficient alcohol to cover the ash is poured into the receptacle. The alcohol is lighted and the flame watched carefully. If borax is present there will be a distinct green tinge in the otherwise blue flame, more especially noticeable towards the end of the burning. The green colour is more readily observed if the burning is done in a dark room or cupboard.

In order to tell whether a cake is made from undecorticated Bombay or Egyptian cotton, a piece of the cake should be broken off and crushed to a powder. This should then be passed through a sieve with ¼ in. to ½ in. holes—an ordinary kitchen colander will do—it will then be found that a woolly residue will be left on the sieve consisting of cottonseed husk and cotton fibre.

If the cake is made from Bombay seed the fibre and husk will adhere together in little fluffy lumps, whereas if made from Egyptian seed the fibres can be picked out more or less separately, as they part from the husk and from each other easily.

Many cakes made from Bombay cotton, which have been brightened with borax and sold as Egyptian, can be detected by means of these two tests.

Compound Cakes and Meals.

In farming practice it is often found convenient to use compound cakes and meals, but as they are more liable to adulteration than linseed and cotton cakes, it behoves the farmer to be exceedingly careful to buy only from reputable firms, and to avoid anything which appears to be in the nature of a cheap lot.

An impurity which has been found in samples of compound cakes is the poisonous husk of the castor oil bean. When only a very slight proportion of castor oil bean is present, animals are always badly scoured, and very frequently die. Cakes containing it are therefore unfit for food and only useful as manure. The detection of the castor oil bean is, however, difficult, and can only be undertaken by a practised microscopist.

Corn cockle and spurrey are weed seed impurities found in compound and other cakes. Corn cockle has, it is thought, a decidedly injurious effect on stock, many deaths of calves and lambs being supposed to be due to its inclusion in their food. Spurrey is said to be specially injurious to pigs. Whilst there is not enough evidence to condemn these weed seeds on this score, their feeding value is undoubtedly low, and even though obtained cheaply there is probably not sufficient return gained for the money expended. It is certain, however, that compound cakes are more liable to serious adulteration than linseed and cottoncakes, and therefore we repeat the farmer must be exceedingly careful in buying only from reputable firms, and to avoid anything which appears to be in the nature of a cheap lot.

Microscopical Examination of Food Stuffs.

It is not possible to expect that many farmers will be able to make a proper microscopical examination of the feeding stuffs, but since with a little practice some useful result might be obtained with a strong magnifying glass, I will give, briefly, the process of preparation of the samples to be examined.

A fair sample should be taken as before, powdered, and a few ounces boiled for fifteen or twenty minutes in water. Then a little weak sulphuric acid is added and thoroughly stirred in—this should never be worked up in a metal vessel. The sulphuric acid should be of 2 per cent. strength, and can be obtained from a chemist. It is advisable to keep it in poison bottles and not to allow any spilled drops to remain about, as they will damage anything coming in contact with them. The acid is allowed to remain for ten minutes and is then poured off—down an outside drain—and the sample at the bottom is washed three times with hot water, *i.e.*, hot water is added, the whole stirred up, allowed to settle, and the water poured off, taking care not to lose any of the cake.

After washing, a little caustic potash solution is added (again 2 per cent. strength, obtainable from chemists, and to be kept in a poison bottle), and, when this has been stirred up and allowed to settle, the sample should be washed three times as before. Next add two or three drops of hydrochloric acid and the digestion is complete. It only remains to spread a little on a microscope slide and examine, or separate the particles on a piece of glass and look at them through a strong lens.

It, of course, requires practice to pick out one kind of husk or seed from another, but if some pure samples of various seed, as linseed, spurrey, corn cockle, wheat, barley, rape, millet, rice, hemp, &c. (which could be obtained from seed merchants), are treated in this way and kept for reference, it will soon become an easy matter to pick them out in any sample that may come to hand, and once this can be done it will result in much saving of money on the purchase of stuffs of inferior quality.

It is obvious that if such examinations could be made of consignments already bought they could also be made of samples before purchase, and would be an invaluable guide as to the suitability or worth of any given feeding stuff. For it is extremely probable that many deaths of stock are due to the slow, cumulative, irritating action of certain weed seeds, though by reason of their slow action the feeding stuffs are rarely suspected as the cause of death.

I do not suggest that such rough tests as these would be sufficiently accurate for them to be made the only basis of a claim for compensation or allowance; but if carefully carried out they are valuable as aids to judging samples, estimating values, and as showing where it would be worth while to submit a sample to a competent analyst for his further opinion.

The examination for excess of water and sand, or similar foreign matter, and the microscopical or lens test, should be made in all cases. The other tests are only necessary in the special instances given. With a little practice they can be done quite easily and rapidly.

I trust that these suggestions will result in a saving in pocket to many farmers, and that, as a result of increased watchfulness on their part, manufacturers will cease to produce inferior articles, which certainly will happen as soon as they find their sale for them has vanished.

So-called Cheap Pig Food.

With millers' offal at prohibitive prices an excellent opportunity has offered itself for the introduction of a cheap pig food.

The article has not been long in forthcoming, and is now being largely boomed on the market. Three samples of it have been sent to the county laboratories at Chelmsford, for opinion as to its merits, and further inquiries from different parts have been made concerning it, and West of England feeders had better keep a look out for it. The samples gave the following figures on analysis:—

	I.	II.	III.
Moisture	8·72	10·50	10·06
Oil	2·96	3·88	4·42
Albuminoids	4·72	5·60	5·16
Soluble carbohydrates	52·10	52·00	48·12
Fibre	29·94	25·52	29·60
Ash	1·56	2·50	2·64
	100·00	100·00	100·00
Food units	71½	75½	72

The price asked was £3 3s. per ton, and the article I was described as being made from cotton-seed only.

There are two important points to be considered in regard to all foods, viz., suitability for the purpose intended and value.

The article is an old friend with a new face—cotton hulls, the waste product in the manufacture of decorticated cotton cake and meal. As a refuse manure I have had samples of it before, and have generally found it to be worth 10s. to 15s. per ton. Considered as a food the high percentage of fibre at once casts suspicion on its digestibility, but this, of course, must be tested practically before an opinion can be given. The albuminoid ratio—the proportion of nitrogenous to non-nitrogenous digestible matter—is about 1 to 12, much too low for any kind of feeding, and the ration would have to be largely supplemented with a nitrogenous concentrated food.

Now, the most important question is, will it suit pigs? Henry, in his book on "Feeds and Feeding," describing some experiments on the feeding of cottonseed to swine, states:—"One lot of pigs was fed corn in each trial, and these pigs always made excellent gains, with no deaths, thereby showing that normal conditions generally prevailed. On the other hand, many pigs fed cottonseed or cottonseed meal sickened and died in from six to eight weeks after feeding began. The mortality of the pigs receiving cottonseed meal was 87 per cent.; when roasted seed was fed it was 75 per cent., and for boiled seed 25 per cent. In these experiments no trouble occurred until several weeks after feeding commenced, and it was observed that pigs escaping sickness and death for thirty days beyond the time when the trouble usually began were safe from attack, though they were permanently stunted in growth."

Concerning the cause of this effect upon pigs (and also calves) he says: "The ill-effects have been ascribed to the lint of the seed, to the leathery seed coats causing injury to the delicate lining of the digestive tract, to moulds, to changes in the composition of the meal when exposed to the air, and to some definite principle in the seed itself, as in the case of the castor oil bean," but the cause appears to be still a mystery.

With this warning in front of him a farmer will do well to let the above experiments be confuted before feeding cotton hulls to his pigs.

With regard to value Henry states that until recently the hulls were used as fuel in the factories, but it was found that cattle would eat them, and in consequence they came in the American market at from 8s. to 16s. per ton. The digestible nutrients are less than in oat straw. From these facts farmers may judge for themselves what would be a reasonable price to pay for the article, to use either as manure or for cow or steer feeding. For pigs it would appear to be the worst possible thing that could be found, and it is to be hoped that merchants will see the great danger they run in selling the article to farmers as pig food.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, *in the paper.*

USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Superphosphate.	Basic Slag.	Bone Compounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equalised.	Phosphatic.	Dissolved (soluble).										
Ammonia, organic as in Guano and Bones	s. d. 17 6	s. d. 12 6	s. d. 15 0	s. d. —	s. d. —	s. d. 12 6	s. d. —	s. d. —	s. d. 15 0	s. d. 15 0	s. d. —	s. d. —	s. d. —
,, in Sulphate of Ammonia ...	—	—	—	—	10 6	—	—	—	—	12 6	—	—	—
,, calculated from Nitrogen in Nitrate of Soda ...	—	—	—	13 0	—	—	—	—	—	—	—	—	—
Phosphate soluble in water	—	—	2 0	—	—	—	2 0	—	2 0	2 0	—	—	—
,, assimilable...	1 6	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
,, insoluble	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure)	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

Unexhausted Values.

The question of unexhausted values was discussed at a recent meeting of the Staffordshire Chamber of Agriculture, and proposals as a basis for compensation and dilapidation were adopted.

For manures applied to grass lands the following scale was approved:—

a. (1) For raw bones and lime, on land which was grazed, a basis of eight years; mown alternate years, five years; mown each year, three years; (2) dissolved or boiled bones and bone meal, grazed, six years; mown alternate years, three years; mown each year, three years; (3) basic slag, grazed four years; mown alternate years, three years mown each year, two years; (4) superphosphate, grazed three years; if mown at all, two years. For manures applied to roots (potatoes excepted) the following scale was approved:—(1) Raw bones and purchased town manure (to be hereafter defined), two-thirds of the cost price; (2) boiled bones, disolved bones, bone meal, basic slag, superphosphate, bone compound, &c., one-half of cost price, this particular scale to apply to the last year's root crop only, and no allowance to be made where one straw crop has been taken. It was also decided that ground lime for all arable land should be on a four years' basis, and agricultural lime on a seven years' basis. Compensation is limited to 35s. per acre for the cost price of artificial manures.

b. That for the consumption on the holding by cattle, sheep, or pigs an allowance be made (1) for linseed cake and meal, cotton cake and meal, or rape cake, one-third of the cost for the last year of tenancy, and one-sixth of the cost of the year preceding; (2) for corn, corn-cake, malt dust, dried grains, or other manufactured feeding stuffs of similar manurial value, one-sixth of the cost for the last year of tenancy, and one-twelfth of the cost for the year preceding; (3) for wet grains, one-twelfth of the cost for the last year of tenancy only.

c. In regard to dilapidation, it was decided that it should be charged for produce and roots (potatoes excepted) taken off the farm as follows:—(1) Clover, seeds, and hay, 10s. per ton for the last year of the tenancy, and 5s. per ton for the year preceding; (2) straw 5s. for the last year of tenancy, and 2s. 6d. for the year preceding; (3) roots 2s. 6d. per ton for the last year of tenancy only; (4) the produce and roots brought on a farm should be compensated for on a similar basis to those taken away.

The final clause of the report of the committee stated that, in respect to all other improvements, no uniform scale of compensation could be recommended, but each one should be dealt with by the valuers on the broad lines set out in the report—namely, that whilst the outgoing tenant was entitled to be paid the full unexhausted value of his improvements, the incoming tenant must be equally secured against having to pay for so-called improvements which have no value. The report was referred back to the committee, in order that the amendments made by the Chamber might be made with the view of the scale being published for the guidance of farmers and valuers.

Manuring Flax.

In the report of the deputation sent to Belgium and Holland to study the cultivation of flax it is mentioned under the head of "Tilling, Manuring, and Rotation" that the thorough manner in which every operation of tillage, manuring, cleansing, and manuring is performed is worthy of attention. Tillage operations and manuring are as thorough as in garden culture. Flax is taken not oftener than once every seven or eight years, in some instances once in every ten years. The dressings of manure, as a rule, are not heavy, except in the case of the crop immediately preceding the flax crop. Almost every crop in the rotation is manured either with farmyard manure, liquid manure, or chemical manures, or a combination of both. Experience has shown that it is best to manure the crop coming immediately before the flax heavily, and not to apply any manure directly to the flax, except an application of liquid manure a few days—in some cases two or three weeks—before the seed is sown. Chemical manures are not largely used for flax. The above-mentioned practice, "little and often," we believe to be sound practice.

Potato Blight: Digging the Crop.

Very marked results have been obtained from spraying during the past season, and there is no doubt that if the conditions of the season had been more favourable for the growth of the potato crop, the results would have been even better. Notwithstanding the late season and the early appearance of blight, there can be no question that a large proportion of the potato crop in the west has been saved from total failure by the operation of spraying.

In making their report the Department of Agriculture for Ireland add that spraying alone is not, however, sufficient to secure a good yield of sound potatoes. Potato blight, as is well known, first attacks the foliage of the plants, with the result that the leaves and stems become black and die, and all growth ceases. Spraying is carried out with the object of preventing the development of the disease on the foliage, and thus prolonging growth for at least the normal period, and until tubers are fully growd. This object can be achieved without difficulty in most seasons.

There still remains the danger of the potatoes becoming diseased and rotting before or after they are lifted. This danger arises from the spores of the disease passing from the decayed foliage through the soil to the tubers, which quickly become affected with the disease. The spores of the disease pass more readily through in wet weather, and this may be regarded as one of the causes of potatoes decaying in the ground in wet seasons and in wet soils.

When the potato haulms have become black, and all green has disappeared, further growth of tubers will not take place, and the crop should, accordingly, be dug without delay. No good can result from leaving the crop in the ground, and every day the crop remains undug increases the loss from potatoes turning "black." This is especially the case in such a season as the present.

Farmers, therefore, are urged to dig their potatoes without delay, as it is the only means of preventing the entire crop from becoming diseased.

When the crop is lifted the potatoes should be carefully sorted, the sound potatoes should be stored separately, and any that are affected with disease should be put aside for consumption by pigs or poultry.

The potatoes may be stored either in houses or in pits. If they are pitted, they should be covered only with straw or dry rushes until they are quite dry, and all likelihood of heating has passed, then the straw should be covered with a layer of soil about 6 in. deep, but provision should be made for ventilation by fixing small bundles of straw through the soil and at intervals along the top of the pit.

The pits should be situated in a dry place and away from trees, and should not be more than 2½ ft. wide, nor should the ground be hollowed out more than 6 in. deep when making the pit.

On no account should potato haulms be used for covering either the potatoes or the pit.

The Manuring of Picking Peas.

The object of the following Essex field experiment was to test the comparative results of a dressing of London dung with a dressing of artificial manure.

The application of dung involves a heavy expenditure, and it was considered desirable to see whether equally good results could not be obtained from artificials.

The manurial scheme and results were as follows:—

Plot.	Manure per acre.	No. of bags* per acre.	Weight of green haulm per acre. tons.	cwt.
1	15 tons London dung...	84½	4	1½
2	10 tons London dung...	84½	4	10½
3	5 cwt. super..... 5 cwt. kainit ..... 1 cwt. nitrate of soda	85½	4	4½
4	5 cwt. basic slag..... 5 cwt. kainit	51½	2	0¾
5	No manure	32¾	1	18

* Bags contained 93 lb.

It is impossible, as the report says, to deduce any general conclusion from the results of a single experiment for one season, but the results indicate—

1. That 10 tons of dung may give a return in foods and haulm equal to a larger dressing of 15 tons.

2. That a dressing of artificials may produce results equal to those obtained from dung.

The scheme of experiments did not include an application of dung and artificials, which would probably have been most effective.

The dressing of artificials, No. 3 Plot, would cost between 35s. and 40s. per acre, while 15 tons of dung would involve an expenditure of at least £3 15s., so that the balance of results is much in favour of the artificials, even if it is calculated that the dung would leave a larger residue of fertility in the soil.

Feeding Ratios.

The following represent what have been found by experiment to be the most suitable "albuminoid ratios" in the rations for various purposes:—

For very young animals	1 : 4·0
For oxen at rest	1 : 10·0
For horses moderately worked...	1 : 7·0
For horses heavily worked	1 : 5·5
For cows giving little milk	1 : 6·0
For cows giving much milk	1 : 5·0
For sheep for wool production...	1 : 8·0
Fattening sheep, cattle, and pigs	1 : 5·5
For laying hens or ducks	1 : 4·0

Animals undergoing hard work require more nitrogenous food than those at rest, in order to permit of the renewal of the tissue which wastes more rapidly, while young growing animals or those giving milk obviously require more of the tissue-forming material — proteid — than adult resting animals. If, in a particular instance, the ration of an animal possesses an albuminoid ratio much "wider" or "narrower" than that most suitable, then either waste of some constituent of the food occurs, or the requirements of the animal are not supplied and its health suffers.

Effect of Dung Made with Straw and with Moss Litter.

In a trial made at Cockle Park Experiment Station dung made from moss litter and from straw, produced as near as possible under the same conditions, was applied to two plots in 1905, and also to two plots in 1906, the soil being in both years a light sandy loam. The following are the results:—

Plot.	Weight of Swedes. 1905. Tons cwt.	1906. Tons cwt.
1. 12 tons moss litter dung	25 14 ...	18 14
2. 12 tons straw litter dung	23 7 ...	20 16

It will be seen that the moss litter dung gave 47 cwt. more swedes in 1905, but 42 cwt. less than ordinary dung in the following year. It should be noted that the rainfall during May, June, and July, 1905, was 3·04 in., and 9·11 in. during the same months in 1906. The bulk of the extra rainfall in the latter year was in May.

It looks as if moss litter dung had not proved so suitable for the wetter early summer of 1906.

Value of Dried Grains.

It is pointed out in Mr. Kirkham's notes on agricultural analyses that the advantage of the use of dried grains over wet grains is that since 65 to 80 per cent. of wet grains is water, the cost of cartage becomes very great when a farmer is far from a brewery. The process of drying does not impair the feeding qualities, and dried grains are, therefore, one of the most concentrated foods on the market, and at present market prices are of the cheapest for the nutritive value. In several samples of distillers' grains a minute amount of copper has been found, but the quantity is within very narrow limits, and has come through the copper vessels in the distillery being attacked by the slightly acid mash. There is no definite experience available as to whether such minute amounts could have any injurious effect on animals, but probably not, as no case of ill-effects following upon the use of such grains has been reported.

Chilean Nitrate.

From Valparaiso U.S. Consul Lupton reports as follows on the Chilean nitrate production. The exportation in 1906 of 17,279,651 metric quintals (of 220·46 lb. each), reduced to the unit of the fields, gives 37,564,460 Spanish quintals (101·6 lb. per quintal)—equal to about 1,700,000 tons, valued at 84,520,035 dols. United States gold. The cost of exploitation per Spanish quintal delivered on board and including the Government tax of 28 English pence per quintal, as given by the different countries, varies from 4·4 to 5·17 pesos. As the product is worth about 9 pesos per quintal, this shows an average profit of nearly 50 per cent. La Asociacion Salitrera de Propaganda, which regulates the exportation and the quota of each company, when arranging for the year ending March 31, 1907, took into consideration 135 officinas, with an estimated capacity of 76,000,000 Spanish quintals, and authorised an exportation of 43,000,000 quintals, equal to about 2,000,000 tons.

Price of Nitrate of Soda.

The present price of nitrate of soda may be put to-day at £11 to £11 2s. 6d., against £11 7s. 6d. to £11 10s. at this time last year. The tendency of the market appears to be in a downward direction, and we should think that buyers will act wisely in waiting to see the course of the market, or at any rate to buy at present only a portion of their probable requirements.

The gardener is able to work his small area of land into a splendid condition, and enriches it with relatively enormous quantities of manure. The result is that he gets a yield from it far in excess of what a farmer can do, but a farmer, as far as practicable, should aim at the same methods, viz, good soil cultivation and liberal crop nourishment.

WOOL-MANURE.

TO FARMERS, NURSERYMEN AND FRUIT GROWERS.

As a protection against Frost during the coming Winter

USE

WOOL-MANURE

This is nearly all Wool Fibre, and contains 6 to 8 per cent. of Ammonia.

"HAMPEL" MANURE DISTRIBUTOR

Can be used for sowing **Basic Slag, Superphosphates, Kainit, Ground Lime, Bones, and all kinds of Artificial Manure.**

The advantages are **Equal Distribution, Lightness of Draught, Simplicity of Construction,** thereby requiring little repairing and ensuring easy cleaning and **capability of adjustment** for sowing all kinds of manures.

The handling is very simple, no other assistance being required beyond that of the driver, and one horse will pull it with perfect ease.

No. 3 Sowing 8 ft. wide, £11
No. 4 Sowing 6½ ft. wide, £10

If with arrangement to transfer wheels from ends to sides for narrow lanes and gateways, **£1** extra.

J. & H. KEYWORTH & Co., LIVERPOOL.

WIREWORM
Robs you of your profits.
VAPORITE
Doubles them.

Soil full of wireworm and other pests never pays. Soil treated with VAPORITE always pays, because no harmful worm or insect can live where VAPORITE is used. It is a simple, inexpensive, certain destroyer. It doubles the farmer's profits. Just spread lightly on the soil and plough or dig it in. It is perfectly harmless to plants. *Send for Booklet No. 14a.*

THE WINTER SPRAYING OF FRUIT TREES.

These Photographs give the results of experiments in Winter Spraying, conducted by MR. W. EDMONDS, the well-known Kentish Fruit Grower, at REDE COURT, STROOD.

That on the left shows a representative sample of Apples from his unsprayed trees. These have been attacked by Apple Scab, a disease due to the fungus *Fusicladium dendriticum*, which causes dark brown and black spots to appear on the leaves, followed by spotting and cracking of the surface of the fruit, which, in consequence, is usually small and deformed. The remedy is to spray the trees before the blossom buds commence to open.

The Photograph on the right is representative of the Apples from trees in the same orchard, which have been sprayed with VI FLUID, manufactured by

MESSRS. WILLIAM COOPER & NEPHEWS, of BERKHAMSTED.

PLANTING ORCHARD FRUIT TREES.

In saying that a fruit orchard is a valuable adjunct to a farm homestead is repeating what we have contended on previous occasions, and November is the time for planting new orchards or renovating existing ones by filling up gaps with young trees. The advantages of November planting are two-fold.

First the ground still retains some warmth from the summer, and secondly trees planted in the autumn have a chance of getting hold at the root before branch growth commences. In selecting standard trees for orchard planting it is desirable that good specimens—having stout, straight stems and well-balanced heads—should be chosen, and though they may cost a little more at the outset, good trees are always cheapest in the end. It is pitiable in many farm orchards to see trees that have been planted for years, and yet they are scarcely any bigger now than when they were put in.

Perhaps they were poor and weak when they were planted, and more likely than not they have never received a bit of attention since. This kind of thing will not do, and if trees in a farm orchard are to succeed and be profitable they must be treated seriously as a crop, and not be left to look after themselves.

The necessary details of planting, staking, fencing, manuring, pruning, and cleaning must receive attention, and the time above all others when a tree needs the most care is in the early years of its growth.

OUR SLEEPY SOCIETIES.

II.

Oblivion is one of sleep's choicest gifts, and this, by a little judicious cultivation on the part of show secretaries, can be made to go far. Thus if two leading societies largely dividing the interest of the South of England between them, can so far forget each other's existence as to arrange to meet at Dorchester and Southampton respectively for the same week out of the entire year, it is clear that the maximum of confusion will be created and the minimum of success be ensured. It is the peculiar privilege of the established religion to provide us with changing festivals which happen at various dates—thus, to take the easiest of examples, Easter may fall in later March or in later April, or at any intervening date. Herein the sleepy secretary finds his chance. He has only to decide that the last Ascensiontide date for the local show was a success, and to forget that the festival changes, to arrange in advance for illimitable confusion. His committee will assuredly accept with enthusiasm his suggestion, that as the society made a record profit last Ascension Day it shall meet next year for its annual show on the same festival. This will bring his society into acute conflict with all organisations going by fixed dates, and in the assurance that this must needs be so he can go comfortably to sleep until the day of confusion arrives.

If a county, say Kent or Surrey, has a prominent name and a wealthy residential class of people who, while friendly to agriculture, are not agriculturists, then it is obvious that the way to lose their support and alienate their interest is to forget their limitations, and instead of asking them to support the county show, which they would do with liberality to a man, bid them to the show of some society which, by its very name, appears to be sectional and unrepresentative. If two shows within the same county can be fixed for the same date, this inadvertence can always be relied upon to reduce the profits of either to a minimum.

Fat stock shows give a rare opportunity.

Let each secretary outside London note that "Smithfield" opens on December 9. Then let him tell his executive that any date a little before that date will suit. After that, retirement to the dormitory will produce all the needed results. Thus we shall have a great show at Birmingham covering December 3, 4, and 5, which the Yorkshire Show also covers, and we shall have the great Scottish Show at Edinburgh beginning well before either of the two other shows are over. Several more purely local shows being fixed for the same date, we shall have due emphasis given not only to the way that societies forget each other's existence, but to the fact of the really first-rate expert judges on the Press being admittedly few. Thus it will be impossible for the most energetic of Editors, backed by the most willing staff, to cover all the ground, and then some at least of the secretaries can complain that their exhibitions were insufficiently reported, or were relegated to pens of not quite the first order. This game can also be played by ordinary societies in June and July.

An attempt which merits recognition is to hold a small but well-supported and old-established local show on the same day as the greater show of a society covering the particuler ground in question. Thus if a Durham or Westmoreland Exhibition could be fixed for the same date as that of any greater show intended to cover the North of England the officials of both shows would probably be saved much labour in adding up the gate money and would be sooner retired to their accustomed repose. Some societies are devoted exclusively to a single animal, most usually, perhaps, the noble one. If the executives of these societies can contrive to forget that a county agricultural show including horses is to be held in their district, the fixing of identical dates will naturally prevent choice exhibits appearing at both shows, and will thus prove the desired point, namely, that their officials were too sleepy to hear of the other officials.

Some minor efforts in the art of oblivion may be very briefly praised. The choice of a name that is bound to get misprinted has much to recommend it from this point of view. Thus "West Gloucestershire" would be a good descriptive and inclusive name for a show devoted to that part of the county which lies west of the Severn; but by calling the west of Severn gathering the Lydney Society, which inevitably gets misprinted Sydney, intending exhibitors are bound to be confused and may even be induced to post their entries to Australia. Names like Newcastle and Newport may be rendered very deceptive by the simple omission of the county, and the railway companies will be found most obliging over this matter, adding, indeed, to the confusion by stations like Bodmin Junction, which is seven miles from Bodmin, and by others like Abbey, which adorns a county noted for its many abbeys. The sleepiest of show secretaries can hardly improve upon the officials of our leading railway companies. Where it is customary to hold a show of poultry and pigeons, or of flowers, as the case may be, in connection with an agricultural show, the advantage of such combination can be practically neutralised by failing to note that some poultry show of national rank or horticultural show of prime consequence is already fixed for the day decided upon.

Next week we hope, in conclusion, to speak of the last crowning success which a steady use of chloral hydrate should confer on the Champion Sleepy Society. This is the absolute and entire obliviousness of the Public, of how they should get to a show, and of what they should do there. Without a careful study of this, the Higher Branch of Soporifics, a show may yield a profit, despite the best forgetfulness of the most drowsy executive. If, however, this final Degree be taken, not only will the secretary become entitled to the famous Patagonian Order of the Giant Sloth, but the *desideratum* of a deficit on the show itself can be assured, and that, even if the most delightful weather be enjoyed. This last and perfect stage, however, we must reserve for a final review.

THE FARMERS' DIARY.

TUESDAY, NOVEMBER 19.—Ipswich Live Stock Sale—Maidstone Live Stock Sale—Cattle Sales at Truro, Abergavenny, Wirksworth, and Carmarthen—Boston Horse Fair—Annual Horse Sale at St. Ives, Hunts—Fairs at Abergavenny, Wirksworth, and Lynn.

WEDNESDAY, NOVEMBER 20.—Crewe Horse Sale, first day—Sale of Pigs at Scotforth, Lancaster—Malmesbury Cattle Fair—Sutton Valence Agricultural Fair.

THURSDAY, NOVEMBER 21.—Norwich Fat Stock Show, first day—Cattle Sales at Tattenhall, Barnet, and Llan-y-bythor—Crewe Horse Sale, second day—Ashton-under-Lyne Cheese Fair.

FRIDAY, NOVEMBER 22.—Norwich Fat Stock Show, second day—Live Stock Sales at Yeovil, Lincoln, and Derby—Cattle Sales at Congleton, Altrincham, Brigstock, and Scarborough—Ipswich Great Sale of Red Poll Cattle—Fairs at Battle, Crowle, Durham, and Rugby.

SATURDAY, NOVEMBER 23.—Cattle Sales at York, Ripon, Louth, and Malton—Sheep Sale at Marlborough—Fairs at Kendal, Ripon, Skipton, and Whitby—Norwich Fat Stock Show, last day—Special Sale of Store Cattle at Norwich—"St. Clement's Fairs," at several small places otherwise unimportant, are held this day—Entries for the Leeds Fat Stock Show to be sent in.

MONDAY, NOVEMBER 25.—Live Stock Sale at Stamford—Live Stock Sale at Darlington—Cattle and Sheep Sale at Pickering, Cattle Sale at Holt—Pig Sale at Winsford—Fairs at Winsford, Lunpool, Chesterfield, and Alfreton—Cattle Sale at Wendover—Live Stock Sales at Camborne, Sleaford, Ludlow, Swindon, and Cirencester—Entries for the Maidstone Fat Stock Show to be sent in.

Notes of the Week.

Farewell, let us hope, a long farewell to the fog. It never will be missed, although it may be mist.

A friend who lived a long time in London and has since been for some years in the tropics, basking in almost perpetual sunshine, says he would give anything to see and smell a real old-fashioned English fog. Thus does absence make the heart grow fonder.

The pretty town of Evesham, celebrated for its fruit-growing industry, is just now the centre of a fine collection of branches of aristocracy; dukes and other nobles are nearly as plentiful as blackberries.

As befits the approach of Christmastide, the air is full of peace and conciliation.

The threatened railway strike has been averted by conciliation, and the visit of the Kaiser is a regular peace tonic.

Both the German Emperor and his wife are enthusiasts for agriculture. The Empress is noted for her love of animals, and the Emperor considers agriculture as the foundation of German prosperity.

In this respect he resembles our own King. By the bye, the King is disposing of a lot of his stock at the Slough Cattle Show and Sale on December 10.

"Grants for the extermination of insects injurious to agriculture" was the name under which an Italian Minister put his expenses incurred in buying a big collection of photos of pretty girls.

Terminological inexactitude seems to fit the transaction.

Mr. Jesse Collings, we are sorry to note, has been obliged by ill-health to cancel his engagements, and to take a period of rest.

Ordinary hunting in some parts of Ireland is attended with considerable difficulty. The Land League object to it, and prefer to do the hunting themselves. The hunted are the graziers.

A visit to the Motor Show illustrates the use which motors will eventually be to agriculture.

In all countries except Denmark, said Mr. Eric Gioskov in a paper read at the National Liberal Club, the great majority of small holders hardly earn a bare existence.

We fear that most of the new small holders in England will join the great majority.

The financial *débacle* in America is reacting on the corn market, as it is forcing holders of grain to realise.

A profitable crop in China is human hair, large quantities of which are exported to Europe.

Chinese pig-tails may be said to adorn the heads of European beauties; that's where, as Kipling might say, the East and West meet.

The price of sugar continues to be under 10s. per cwt., which is not very encouraging to the hopes of beet sugar enthusiasts in this country.

The live-cattle trade between America and this country is about fifty years old. One can imagine the sufferings of the poor animals before the trade was properly organised.

Cattle on board ship can smell the land and begin to bellow some time before the land is visible to the naked eye.

Now, boys, can any of you tell me what a ruminating animal is? Please, sir, it's an animal what eats its cubs.

The Crystal Palace Poultry Show is a great success. One of the varieties seems to have no legs

They are no doubt good roasters, but apparently bad roosters.

The Sunday-school superintendent was illustrating the text, "Whatsoever a man soweth, that shall he also reap." "If," he said, "I want to raise a crop of turnips, what sort of seed must I sow?" "Turnip seed," said the class. "And if I want to raise a crop of tomatoes, what seed must I sow?" The class were with him over this fence, too. "Tomato seed," they chanted. "Very good. Now, if I want to raise a crop of good manhood, of noble strength, of rigid well-doing, what kind of seed must I sow then?" An observer, who kept count, reports that half the school said "Turnip seed," while the other half went solid for "Tomato seed."

All the cattle in Belgium have a registered trade number, engraved on a ring fastened to the ear of each beast.

It would not be a bad idea to so distinguish motorists.

Norway is the land of afforestation. No one is allowed to cut down a tree without planting three.

Two farmers in Wales, who had broken a by-law, pleaded that they could not read the notice printed in English. That is where Esperanto would be useful.

Farmers and their wives interested in fruit bottling should read "On Home Bottling of Fruit" in the Journal of the Department of Agriculture for Ireland.

The Chinese are making astonishing progress in Western civilisation. In a Chinese province there is a Government notice, "English taught from A to C" in the school.

We are pleased to note, now the Cheshire cheese shows are over for this year, that Mr. W. H. Hobson, Gourlay Hill, Blackenhall, Nantwich, Cheshire, can claim to have won more with cheese than any maker of Cheshire cheese in one year, including value of challenge cups. His prizes amount to £176 13s. It will be remembered that Mr. Hobson won first prize at London this year, and first at the Royal Agricultural Show at Derby last year.

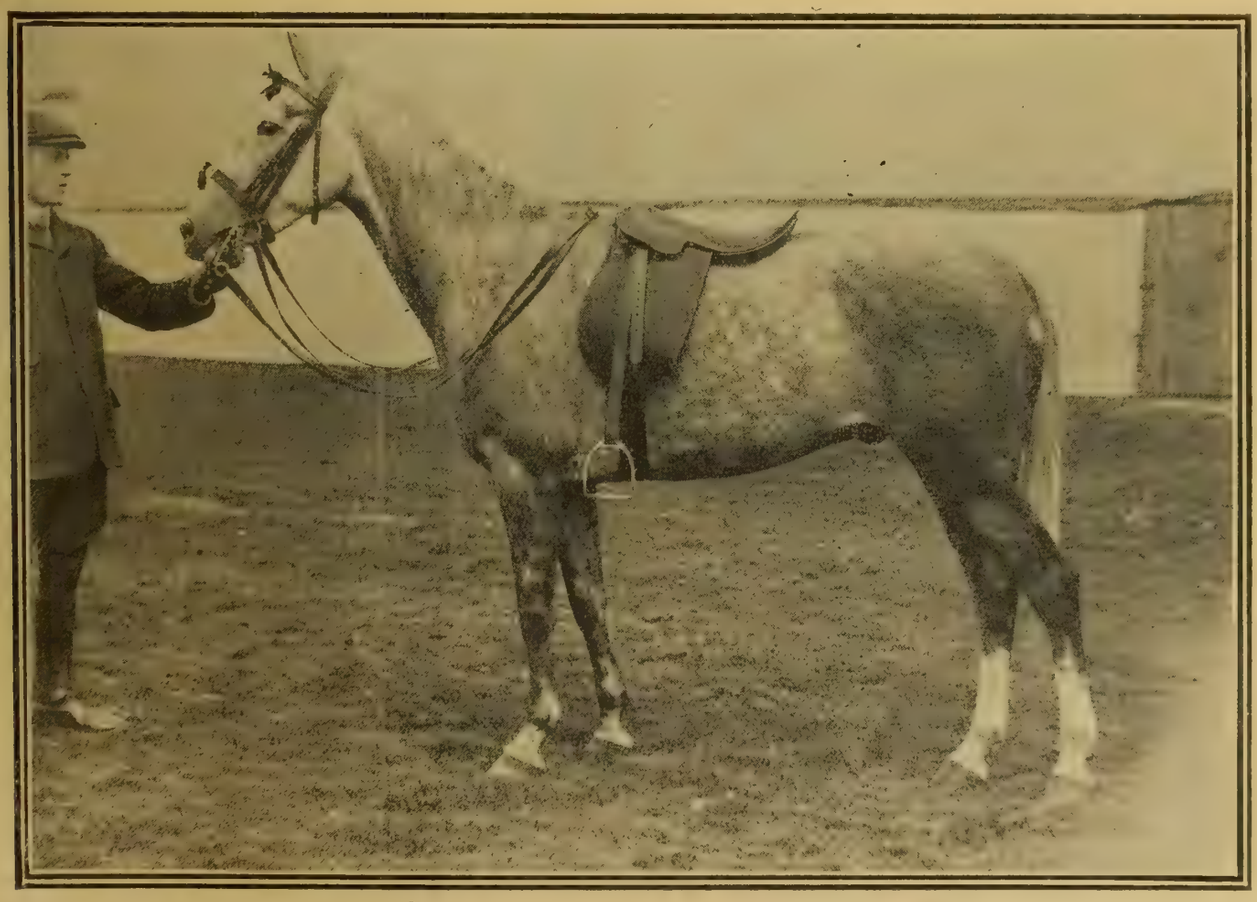
HORSES.

The Pack Horse—Sir Walter Calverley—Early Pedigrees—Ancient Breeding Theories—Nineteenth Century Breeders—A New Idea—Fluky Breeding.

The Pack Horse.

BLUNDEVILLE'S description of the pack horse, though only short, affords very interesting reading to those students who inquire into the origin of our modern breeds of horses. "The horse that is meete for the cart," says he, "maie serve also for the burthen, because he is strong and able to beare much, but the packman requireth besides strength, three other things in his horse. First, that he be a good traveller; secondlie, that his hoofes be so good as he neede not to be often shod; thirdlie, that he be no unreasonable feeder for the avoiding of expenses, for which cause I thinke our packmen here in England do most commonlie go with geldings, which lacking the fervent heat which stoned horses have, cannot consume so much meate as they do, but chiefly perhaps because the geldings are more easie to rule by the waie than horses." It is much to be regretted that a keen observer like Blundeville, who was evidently a good judge and a good horseman, has not told us more of the pack horse of his time, for probably this pack horse forms the foundation of more than one of our present breeds. Indeed, it is quite likely that the Shire horse, the Hackney, the Cleveland Bay, and the Yorkshire Coach Horse are all descended from this old pack horse, or "horse for draught."

peace of the country, General Lambert's defeat at Daventry nine years later having but little effect on the country at large, and was merely local in its effects on industry. So country gentlemen and yeomen would have more time to devote to horse breeding, then the most important subject to which agriculturists could turn their attention. And about this time the importation of Eastern horses was much increased, so that breeders had an opportunity such as had never before existed.



Early Pedigrees.

NATURALLY the Thoroughbred horses would first have their pedigrees registered, but early in the eighteenth century both Hackney and Cleveland Bay pedigrees were recorded, though in rather a perfunctory way. The Hackney would get his name from the uses he was put to, and no doubt a "stout Hackney" was a term well known before the Hackney breed was recognised as a separate one, and similarly with the pack horse, which, however, on the authority of the late Lumley Hodgson, was known as the Chapman breed quite early in the eighteenth century. Most likely it was the first of our domestic breeds to find recognition as a separate breed.

other. Between Blundeville and Blome were a hundred years, yet their opinions on breeding coincide, and our old writers were given to speaking their minds pretty freely when they disagreed with each other, of which many instances might be given.

Nineteenth Century Breeders.

IT is a curious thing that breeders of the early part of the nineteenth century were quite at one with the authorities of the sixteenth and seventeenth centuries. Mr. Thomas Parrington, in the letter he wrote to Lord Cathcart in 1882, expressed the opinion that the best way to breed a Hunter was to breed from a big Cleveland Bay or a powerful short-legged Hunter mare, and to mate her with a Thoroughbred horse not exceeding 15 hands 2 in. or 15 hands 3 in. at the outside. Mr. Parrington insisted on four things in this stallion—good action, high courage, and soundness. Many excellent Hunter sires have been even of less stature than Mr. Parrington's standard. Perion may be given as an example, and perhaps it is not too much to say that no Hunter sire, thoroughbred or half-bred, ever sired such a large proportion of good horses as he did. He filled Cleveland with good horses and with money, for no matter what kind of mare he was mated with, she was pretty certain to breed a good-looking, saleable horse to the good little son of Catton and the Darioletta. And Perion was under 15 hands, in spite of which he ran second in the Derby after running to the top of the hill in some fifteen or sixteen false starts. He was a high-couraged, even a hot-tempered horse, and beautifully put together. In some seasons he had as many as 250 mares, and only a very small number of them barren. Cleveland was full of good, powerful

The Riding Pony shown above is the Gelding Sequence, winner of First Prize in the Class for Polo and Riding Pony Mares or Geldings, foaled in 1902 or 1903, not exceeding 14·2 hands, at the Royal Agricultural Society's Show at Lincoln this year. It was foaled in 1902, and was exhibited by Mr. O. T. Price, Brockenhurst, Hants.

Sir Walter Calverley.

SIR WALTER CALVERLEY, who lived some hundred years later than Blundeville, has an entry in his Note Book bearing date, January 15, 1670, in which he says that when he wanted his coach he horsed it with the lighter "meares" (mares) used on his farm. It is very probable that mares like Sir Walter Calverley's lighted mares formed the foundation of all our modern light breeds, and that our ancestors simply bred for this foundation, crossing the lighter mares with horses of Eastern blood according to their requirements. The country had been, comparatively speaking, settled for nearly twenty years when Sir Walter Calverley made the entry in his note book, for after the battle of Worcester in 1651 there was nothing to disturb the internal

Ancient Breeding Theories.

OUR ancestors, though they had some peculiar views about horses, viewed from our standpoint, thoroughly understood the art of breeding, and their theory on the breeding of a Hunter or war horse has certainly not been improved upon up to the present day. Blunderville, Markham, De la Grey, Blome, and other writers too numerous to mention, all advocate breeding from a powerful, short-legged, roomy mare, and mating her with a horse of Eastern blood. "A horse of Barbarie" is generally recommended, and the qualities most insisted upon in the sire are stamina, constitution, speed, and those characteristics which we sum up in these days under the somewhat vague heading of "quality." Nor can it fairly be said that these writers copied each

Cleveland Bay mares when Perion flourished, so no wonder that the Cleveland farmers bred a lot of good horses.

A New Idea.

AT the latter part of the last century a new idea got about, and a new theory began to find favour, and one heard of nothing but big, powerful sires, great bone, &c. A horse under 16 hands or 16 hands 1in. and with less than from 8 to 8½in. of bone was described as a weed, the new school quite ignoring the fact that the great horses, whose loss they were always lamenting, were sired by horses like Perion, Bay President, Sir Harry Dimsdale, St. Bennett, and others too numerous to mention, all of which were well under 16 hands and some of them under 15 hands. The late Mr.

Anthony Maynard, than whom there were few finer judges of either horse or hound, and whose experience was a very wide one, said to me at the show of Thoroughbred stallions at Newcastle in 1887, that the horses the premiums were given to were the horses we wanted to ride, not to breed from, and subsequent experience has shown that he was right.

Fluky Breeding.

THE desire for big stallions has no doubt its origin to a considerable extent in the wish to raise a special breed of Hunters. This has been the object of some breeders for about a quarter of a century, and they have not got very far yet. The idea, no doubt, is that by mating a big, powerful horse to a big, powerful mare a big, powerful weight carrier will result. This may occur sometimes, but both theory and experience go to prove that the result of mating two crossbred animals must always be fluky. We know that when one of the parents is of pure race the result is often very different to what has been anticipated, and risk must be more than doubled when both parents are crossbred. The prepotency of a pure-bred animal is much greater than that of a crossbred, and it stands to reason that it should be so. It may be said that the theory of breeding from a big mare and a big sire receives the support of the authority I have often quoted—Blundeville to wit—and I often hear a variation of his opinion used in argument. "Like begets like," says the man of theories. Like most epigrams this is only a partial truth. Blundeville says this: "If anie man desire to have swift runners, let him choose a horse of Barbarie, or a Turk to be his stallion, and let the mares, which he shall put unto him, be of like stature and making unto him, so nigh as maie be, for most commonlie such sire and damme, such colt." Here are two particulars which call for notice. In the first place, Blundeville is speaking of what was practically, even in his day, a pure bred. No man would attempt to breed a "swift runner," in other words a racehorse, from a pack mare, even in the sixteenth century. Lancelot, Leonard, and Christopher were "Ryders of the runninge Gueldens" for Henry VIII., a proof that there was a special breed for "running." And it will be noticed that Blundeville emphasises the necessitie of "like making" to the sire of Eastern blood. Secondly, even when horse and mare are of kindred race he qualifies his statement "such sire and damme, such colt," by the words "most commonlie."

THE LOOKER-ON.

Prizes for Polo and Riding Ponies in 1908.

At the meeting of the Council of the Polo and Riding Pony Society held on the 7th inst. Mr. G. Norris Midwood, chairman of the Horse Show Committee, reported that suggestions from the judges at the 1907 show and from members and exhibitors had been carefully considered in drafting the schedule of prizes for the 1908 show to be held on March 13 and 14, and their recommendations were as follows:—

(*a*) To omit the class for brood mares "not exceeding 12 hands 2 in.," and to devote the prizes to increasing the grants to the Mountain and Moorland ponies at the district shows.

(*b*) To raise the height of the 13 hands 2 in. stallions and brood mares to 14 hands.

(*c*) For the best Polo pony in the riding classes, whose sire and [or] dam is registered in the Polo Pony Stud, and which has been reasonably played during any season at any recognised club, the offer of a £20 silver challenge cup carrying with it a gold medal and a first prize of £5, with second and third prizes of £3 and £2 respectively. This challenge cup to be won two years in succession, or three times in all, to become the property of the exhibitor. A further offer of £5 was added on condition that the breeder of the winner is not the exhibitor.

(*d*) The challenge cup offered by the proprietors of the *Ladies' Field*, value £25, is to be offered for the best Polo pony exhibited in the riding classes. The cup to be won three times to become the absolute property of the exhibitor; a small silver replica being also given as a memento.

The total amount offered at the 1908 show would therefore not fall short of £500, while the increase of and improvement in the competitions, in view of the improved accommodation and larger ring, had been referred to a small sub-committee for report at the December meeting.

The two classes for Shetland ponies would be also maintained by the guarantee given by Mr. R. W. R. Mackenzie and other Shetland pony breeders.

The returns of gold and silver medals awarded in 1907 had been laid on the table, showing that thirty-three had been awarded during the past season. The committee recommended that the four schemes for brood mares, fillies, stallions, and colts, and Polo ponies, the property of a member of the society, should be continued. Appreciative reports had been received from the conveners of the Mountain and Moorland sections as to the award of the society's prizes, and it was resolved to increase the grant given to each section, to be offered at the following shows:—

Dartmoor.—Brentor and Lydford Show.
Exmoor.—Lynton Show; Exford Show.
Highland.—Highland and Agricultural Show.
New Forest.—Burley Show.
Welsh.—Northern Division: Conway Show; Southern Division: Welsh National Show.

This report having been presented, an interesting discussion arose upon the proposal by a member (who was willing to provide the prizes) as to the desirability of re-including the class for Eastern sires in the schedule. The general feeling of the council was in favour of acceding to the suggestion, though Arab stallions were not now fashionable, and the demand for Eastern ponies in polo was practically dying out; whereas twelve years ago they would see Arab and Syrian ponies playing in high-class polo, their appearance now on the polo field was only watched with curiosity. The English and Australian ponies had cut the Arab out.

Mr. C. D. Miller informed the council that the Roehampton Club would again be prepared to provide classes at a summer show for members of the society, and it was thought desirable that it should take place on Friday, June 26, during the International Horse Show week.

The chairman, Mr. C. Howard Taylor, thanked Mr. Miller for his interest in the matter, and it was resolved to bring the fact to the notice of members, with the view of securing their co-operation.

The council resolved to offer the R.A.S.E. two gold medals for the best Polo pony stallion and for the best Polo pony mare exhibited; and to contribute the sum of £50 towards the class prizes for Polo ponies.

CATTLE.

Notes and Jottings.

ALTHOUGH the weather of the past few days has been mild and genial for the time of the year, yet we must not forget that the dull and dreary days of winter are close upon us, so that the genial weather may at any minute be succeeded by a period of great severity. In a very few days' time the Martinmas term commences, a period that our forefathers looked forward to with great concern, the common saying being that wherever the wind sat on Martinmas eve, there it would remain until Candlemas quarter. Many a winter has the writer lived to prove the correctness of this old adage. One winter especially, on that important evening the wind veered round to the extreme north and one of the severest winters on record followed. It is wise, however, to see that all roots are covered and made secure, and all the cattle that are to be housed should have their quarters made quite ready for them, so that in case of emergency they can be moved at short notice.

WINTER'S advent does not appear to be affecting the prices of pedigree stock. I notice in the States a large herd of Herefords, of which number thirty were bulls, realised the very satisfactory average of nearly £30 per head, the male portion exceeding that amount by £2 per head. When we look at these as being American-bred specimens the sale must be accounted highly satisfactory.

IN the Argentine, however, the Shorthorn is still holding sway, and appears likely to do so, as, in addition to the great demand for beef-bred animals, a very increased inquiry is being instituted for the dual-purpose Shorthorn.

AT a recent sale a bull of Lord Lovatt's breeding —Beaufort Prince—topped the list, reaching £306 5s.; other bulls were disposed of at figures ranging between £288 15s. down to 100 guineas. Things in general point to a continued demand for the best of our pedigree stock for the herds in that Republic. Breeders, however, must bear in mind that, though considerable pedigree is demanded by the Argentine buyers, pedigree is not by any means the only thing concerned, buyers for that county require that the highest price stock they purchase shall be as symmetrical as possible, showing style, and covered with a great wealth of flesh and hair. The medium Shorthorn is in but very little demand now by the foreigner.

A RATHER important matter was discussed by the Shorthorn Society recently; we allude to the use of registered names, which, it was decided on the motion of Lord Moreton, should only be used for animals bred by the owner of such registered name. This arrangement should meet with the general approval of all breeders; many times in our showyards we have met with a prefix which led us to suppose they were bred by the person using that prefix, whereas on inquiry it was found that the animal was bred elsewhere. Entries so made are very misleading.

THE Bates tribe of Shorthorns appears once more likely to take the lead in demand and probably in prices too. The institution of the Dairy ShorthornSociety has had a good deal to do, doubtless, in bringing this fine old strain of cattle to the front. A better type of Shorthorn than a genuine Bates need not be desired. In the long past we have known herds of these that in the way of size, milk-vessels, and constitution were all that could be desired. We have also seen many members of these herds, after being dried and given three months' feeding, realise considerably over £30 for beef, this, of course, being when that commodity was much higher in price than to-day.

OUR leading feeders for the Christmas markets are brining out a splendid supply of highly-fed stock, both for private auction and also for many of the local auctions. The Slough Christmas auctions, doubtless, will form the chief centre of attraction to butchers, as we see the Royal feeding yards at Windsor are contributing no less than twenty-five grand Devon bullocks, as well as heavy contingents of choice blues and Shorthorns. Miss Alice de Rothschild, too, is offering no less than ninety-two at the home farm at Waddesdon, Bucks. It may be taken for granted that these will be of choice quality and thoroughly finished. The breeds here represented will be Angus, Shorthorns, and Jerseys.

TO speak about Jersey bullocks at a great Christmas auction savours somewhat of the ludicrous, yet it is astonishing how the numbers of this breed offered increase of late years, and some feeders speak very favourably of them. The immense quantity of suet they carry is always valuable as the festive season is coming on, and both feeders and butchers have become aware of the fact.

RED POLLS appear to be doing fairly well, and good prices may be anticipated at the dispersion sale of Mr. A. J. Smith's herd, which are coming under the hammer of Messrs. Robert Bond and Sons at Ipswich on November 22. At a special sale of this breed at Shotford Hall the other day, Red-Polled steers realised as much as £26 per head, and others down to £21 10s. The Red Poll appears to be a very good cutter when made ripe; the carcase is seldom overburdened with fat.

THE average of Aberdeen-Angus cattle sold in Scotland during 1907 shows a satisfactory advance over the prices of 1906, and a total of just upon 1,300 were sold. The opening fat stock show of the season commences at Norwich on Thursday next, where it is pretty safe to say we shall find many very fine animals of the bonny black breed with their shiny coats and rotund forms. It is to be hoped that prices will be a little more cheerful during the next month than they have been recently. Our markets are now continually being scared with one thing or another, butchers in hundreds of cases buy with extreme caution lest they should find themselves with a tuberculous carcase upon their hands; surely it is high time something was done to secure the buyer against losses of this kind.

MOST remote islands of the sea have occasionally, during recent years, been purchasers of Shorthorns from our shores, and, wherever landed, these have invariably given a good account of themselves. It is very interesting to find that the Devon breed is beginning to be sought after, as we read that two bulls of this herd have recently been exported to Cyprus. If the Devon is well cared for in a new home, he is not long in acquiring a good bevy of friends, and it is quite likely that the island of Cyprus will find that it is acquiring a very valuable breed in the red rubies from the Devonshire pastures.

Sale of Irish Store Cattle.

There was a grand show of cattle, totalling 1,200 head, at Mr. Gavin Low's sale by auction at 50, Prussia Street, Dublin, on the 7th inst. The consignments were strong in forward conditioned horned cattle and Polly bullocks, as well as Aberdeen-Angus and Hereford crosses. There were also a very good entry of young cattle, a good

proportion of which were Aberdeen-Angus-Hereford and Shorthorn-Hereford crosses from six to eighteen months, many of exceptional merit. Trade was fairly uniform throughout, buyers being pleased with good condition of stock. Young cattle were exceptionally good, and sold at prices that must ensure remunerative profit.

Shorthorn bullocks, two and a-half and three years, sold from £9 to £14 2s. 6d.; Shorthorn heifers, two and a-half and three years, sold from £8 15s. to £12 2s. 6d.; Polly bullocks, two and a-half and three years, sold from £9 15s. to £14 5s.; Aberdeen-Angus and Hereford crosses, two to two and a-half years, sold from £9 to £12 5s., yearlings from £5 15s. to £9 10s.; Aberdeen-Angus and Hereford cross yearlings sold from £7 to £9 15s.

Norwich Fat Stock Show.

The thirty-first annual exhibition of the Norfolk and Norwich Christmas Show Association will open at the Agricultural Hall, Norwich, on Thursday, the 21st, and will continue during Friday and Saturday, the 22nd and 23rd, under the presidency of Sir Charles R. Gilman.

Being the first of the great winter fat stock exhibitions, the Norwich Show naturally excites a great deal of interest all over the country, as all concerned in the breeding and grazing of stock look forward to this first event of the Christmas season to provide some indication of what may be expected at the Birmingham and Smithfield Shows, which follow the Norwich Show.

ingham and Smithfield on several occasions, so, taking it altogether, Norfolk, pitted against the whole country, has taken a lot of beating.

Nearly half the number of championships have been awarded for cross-bred cattle, these having won on fourteen occasions (without a break for the last seven years). Shorthorns come next with six, Herefords four, Red Polled three, Aberdeen-Angus two, and Devons one.

There is a very good entry for the present show, as will be observed by the following comparative statement, and some of the most prominent breeders and graziers in the country are sending their stock for competition, his Majesty the King as usual sending a large number of exhibits :—

Year.	Beasts.	Sheep.	Pigs.	Roots, Grain, &c.	Poultry, Butter, &c.	Seedsmen's Prizes.
1900	90	105	48	31	161	208
1901	113	97	—	42	145	207
1902	98	63	27	47	157	202
1903	120	84	36	43	158	221
1904	107	96	15	58	159	215
1905	122	96	33	61	164	219
1906	99	90	36	64	174	214
1907	103	105	12	80	168	220

About 60 per cent. of the cattle are entered by Norfolk exhibitors, and about 34 per cent. have been bred in the county.

The prize money offered in the various sections amounts altogether to £773 13s., as follows:—Cattle, eighteen classes and eight champion and special prizes, £506; sheep, six classes and four special prizes, £114; pigs, three classes and one special prize, £35 5s.; roots and grain, eight classes, £14; dead poultry, ten classes, £16; butter, cheese, eggs, bread, eighteen classes, £38 12s. 6d.; dinner-table decorations, £5 15s. 6d.; root prizes offered by various seedsmen, sixteen classes, £45.

The judges appointed to award the prizes are as follows:—

CATTLE.—Mr. Peter Dunn, Pasture House, Sigglesthorne, Hull; Mr. W. Reid, 160, Central Meat Market, London, E C.

SHEEP.—Mr. T. B. Eagle, Thrupp, Oxon; Mr. G. F. Hempson, Estate Office, Gatton Park, Reigate, Surrey.

BUTCHERS' PRIZES (CATTLE AND PIGS).—Mr. J. Lindsay, 107, High Street, Putney, S.W.: Mr. Geo. Raby, Melton Constable; Umpire, Mr. W. H. Hinde, 103, Grove Road, Norwich.

ROOTS AND GRAIN.—Mr. William Case, Tuttington, Aylsham; Mr. Chas. Waters, Postwick, Norwich.

The Large Assembly Room, as usual, will be occupied with the exhibits of dead poultry, butter, cheese, eggs, bread, and table decorations, and the Board of Agriculture for Ireland will display some Irish produce, which doubtless will be of much interest.

Both the Great Eastern Railway and the Midland and Great Northern Joint Railway Companies are running excursions and special trains at cheap fares, full particulars of which may be obtained at all railway stations.

The show opens at 10 a.m. on Thursday (at which hour catalogues may be obtained), and the admission each day will be as follows:—Thursday, from 10 a.m. to 2 p.m., 2s. 6d.; from 2 p.m. to 9.30 p.m., 1s. All day on Friday, from 10 a.m. to 9.30 p.m., and Saturday 10 a.m. to 5.30 p.m., 1s.

The Pen of Sheep illustrated above is that with which Mr. John Anwyl, Priest Weston, Chirbury, Shropshire, won the First Prize for a Pen of Three Kerry Hill Shearling Ewes (of the same flock) at the Royal Agricultural Society's Show at Lincoln. The sire of the Sheep was Roundabout's Pride, and the dam by Protector.

The show is open to the United Kingdom for nearly all classes of stock and farm produce, with the exception of roots and grain, the classes for which are confined to the county, as also are the classes provided by the Norfolk Education Committee for dairy produce exhibited by students who have attended dairy lectures, and a few of the cattle classes are reserved exclusively for Norfolk exhibits. However, the majority of the classes are open, and it is always an interesting feature to see whether the championship of the show falls to the lot of a Norfolk exhibitor or to an exhibitor outside the county.

In the course of the thirty shows which have been held since the establishment of the association, the championship, which carries with it the handsome prize of £100 sterling, has been won by Norfolk exhibitors fourteen times, the late Mr. J. J. Colman taking the lead with six wins—viz., in 1880, 1888, 1889, 1892, 1895 and 1898. The late Mr. Robert Wortley comes next with three wins, in 1879, 1882, and 1884. Mr. John Wortley won two years in succession—viz., in 1896 and 1897, when he also secured the championship at both Birmingham and Smithfield, and Mr. E. T. Learner and his son (Mr. W. E. Learner) have won it twice and once respectively. Mr. W. E. Learner, we believe, was reserve for championship at Norwich, Birm-

Sheep Notes and Jottings

CHRISTMAS Fat Stock Shows will shortly be the leading matter of comment in our agricultural papers. The admiration so generously given by the public and by the judges to the winning pens of the different breeds of sheep will be expressed in much the same language as those of us who are getting on in life have been accustomed to hear for many years past.

THE judges will go through their accustomed task—for most of them who are engaged at the important shows are old hands at the work—they will make their awards, the public will inspect the different winners, and the shows will be over.

TO those, however, who view these shows in more important light than many, the result of these shows, if properly thought out, is a matter that does not end at the conclusion of the show-yard season.

"WHY should feeders fat up their animals to the enormous extent they do?" asked a fellow traveller, coming to town the other day, when talking of the coming Smithfield Show. "It must be a great waste, and it certainly appears to me, from a commercial point of view useless."

THE reason why this excessive feeding was practised, which is well-known to all breeders, was explained to him, *i.e.*, that it is the object of each breeder to show to those who come to these exhibitions, the greatest possible development that any particular breed can produce within a given time, so as to prove the advantage of one breed over the other.

THE writer has for many years urged that, as at present conducted and managed, the Christmas fat stock shows at the best only do a part of the good they should. The Smithfield Show, with its dual set of classes could, if the management of it fully realised the importance o

200 tons CHEAP DEFECTIVE ROOFING SHEETS.

JOHN ATTWOOD REEVE,
3 Dept., STONY STRATFORD.

the opportunity that this dual exhibition affords them, be made one of the most valuable exhibitions of live stock to the feeder, and also to the breeder, in the world.

IT is no use mincing matters at all, as the exhibition is arranged and carried out at the present time the general breeder and feeder gets little or no benefit at all from it. He is told in the catalogue, and by the weigh bridge, that certain pens of sheep or lambs are a given age, and that their weight alive is a given weight. In the carcase test classes similar information is given, with the additional information of the carcase weight, but here the opportunity for comparison ends, and the need of further information commences. The further information that is required, and that ought to be given, is: What has it cost to produce the grand specimen pens exhibited alive, and what is the result given by them when dead, and the same information is equally essential in respect to the cost of the production of the animals exhibited in the carcase test.

IT will be said that in years gone by many of the shows used to make it a condition of entry that on the entry form there should be stated how the different animals had been fed. Experience proved that the information given in this respect was useless, or nearly so, but that was not the fault of the system, but the way the system was worked. If breeders and feeders are keen enough to prepare animals for exhibition, and take the trouble that is necessary to do so, it is quite certain that amongst them there would be found sufficient who would also take the trouble to give full and complete details of the amount of food consumed and its cost.

IF this information could be obtained, it would indeed increase tremendously the value of the great exhibition we shall witness in the course of a few weeks at Smithfield; particularly so, because at that exhibition, owing to the energy and determination of the London butchers, there is a dual exhibition—*i.e.*, animals alive, fed and prepared for exhibition alive, and the carcases of animals slaughtered, fed and prepared specially for that object.

THE difficulty one finds in bringing to the fore new points for consideration is well known. The reference made above certainly does not bring forward a new point, but it revives, it is hoped, a very old one, on a subject that may ultimately secure its proper recognition, resulting in the breeders and feeders of this country, and also of the world, being put in possession of data in respect to the feeding and cost of the feeding of the two distinct types of animals that will be seen at our great annual Smithfield Show.

THE imported supply of mutton during the past month has been a very large one compared with the corresponding periods of previous years. The total declared value of these imports—*i.e.*, mutton and live sheep—during the past month was £693,123, which is the highest total on record for the month of October since this business was started.

THE increase, as compared with the same period last year, is 16·63 per cent. The actual quantity of mutton imported during the month was 362,677 cwt.; this quantity was 14·28 per cent. more than in the same period of 1906.

PRACTICALLY the whole of this increase is accounted for by the very large increase in the quantities imported from both Australia and New Zealand. Compared with 1906, Australia sent us 79 per cent. more and New Zealand 50 per cent. more. On the other hand, the Argentine shipments received during October last were 21·85 per cent. less than in 1906.

THE supply of live sheep imported is the smallest on record for the month of October since before the year 1895. We only received during the month 8,634 head of sheep; 2,532 of these came from "other countries," *i.e.*, from countries other than United States and Canada, mainly, we believe, from Iceland. This supply is one that generally appears in the returns for the month of October, but the number imported during the current year was just about half that which was imported in the previous year for the same period.

THE export demand for sheep continues to be a very satisfactory one, and we observe that several important shipments have been despatched during the past month to both North and South America.

A VERY fine lot of Kent ewe lambs left last week for Uruguay from Messrs. G. W. Finn's flock, Cotswolds from Mr. W. T. Garne's flock were sent to North America, and Hampshire Downs from Mr. H. C. Stephens' and Sir A. Henderson's flocks were sent to the same country.

Dorset Horn Sheep at the Bath and West Show.

At the last meeting of the council of the Dorset Horn Sheep Breeders' Association the secretary, Mr. T. H. Ensor, read a letter from Lord Wynford, who stated that at a meeting of the Stock Prize Committee of the Bath and West Society, which show is to be held at Dorchester in 1908, he noticed that there were only three classes for Dorset Horn sheep. The Dorset Down Society had offered prizes which had enabled the Bath and West Society to arrange for four classes, and it seemed a pity that when the show was at Dorchester the older sheep society should not have as many classes as others.

Mr. Attrill asked if the Dorchester Agricultural Society was giving any prizes for Dorset Horns?

Mr. Hawkins answered that they had handed over their subscriptions to the general fund, which was giving £100 in prizes. Seeing that the breed societies were offering good prizes, they practically left the sheep classes to the Dorset Horn Society and the Dorset Down Society.

Mr. Attrill said it behoved them to do the best they could in those circumstances. The show would be in the midst of the breed and he moved and it was agreed that substantial prizes be granted.

After a lengthy discussion it was ultimately resolved that £51 be granted in prize money by the association, and that the classes be as follow:—

Three chilver lambs (dropped after November 1, 1907) £10, £5, and £2; five chilver hoggs, in their wool (not trimmed after January 1, 1908) £10, £5, and £2; ram, any age, except shearling ram or ram lamb, £5, £2; five chilver lambs, the property of an exhibitor who has never won a prize at the Bath and West, Royal, or Royal Counties Shows, £5, £3, and £2.

The secretary stated that the prizes to be given by the Bath and West Society for Horn sheep were:—Shearling ram, £10, £5, and £2; pair of ram lambs (dropped after November 1, 1907) £10, £5, and £2. He added that the total amount now offered for Horn sheep at the show would be £102.

The association also decided to give £18 in prizes for Dorset Horn sheep at the Newcastle Show of the Royal Agricultural Society in 1908 as they did at Lincoln.

PIGS.

Sale at Walton Hall.

Owing to alterations and reorganisation of Sir Gilbert Greenall's famous herd of pigs, a second and unreserved sale for this season was held at Walton Hall, Warrington, on Thursday, when there were brought under the hammer many excellent representative pigs, which should do well in the showyard as well as for breeding; in fact, many had already won prizes and were eagerly sought after by the large company of breeders. Close on ninety lots were offered, and they realised a total of over £500. Among notable middle-breed animals sold were Walton Rose 30th and Walton Daisy 8th, bought by Earl Sefton for 20 and 17 guineas respectively; Mr. Fraser, of Huyton, secured, amongst others, animals of the Walton Rufus strain for 19 and 16 guineas apiece; Mr. Stanga gave 15 guineas for a Large White boar and 13 guineas for a Large White sow; Mr Purvis gave 14 guineas for the Large White sow Walton Beauty 8th, whilst other buyers paid up to 11½ guineas. A list of the chief lots is appended:—

Large White boar, Mr. Wade, 7 guineas; Large White gilt, Mr. Fraser, 6½; Middle White gilt, Mr. Loram, 5; Middle White gilt, Mr. Fraser, 5½; Middle White gilt, Mr. Lees, 5½; Middle White gilt, Mr. Loram, 5; Middle White gilt, Mr. Fraser, 6; Large White sow Walton Sarah 20th, Mr. Fraser, 9½; Middle White boar Offley John, Mr C. Spencer, 11; Middle White gilt, Mr. Fraser, 16; Middle White gilt, Mr. Fraser, 19; Middle White sow Walton Daisy 8th, Earl Sefton, 17; Large White sow Walton Beauty 8th, Mr. Purvis, 14; Large White sow Walton Beauty 9th, Mr. Darlington, 8½; Large White boar Walton William 2nd, Mr. Hallas, 6; Middle White gilt, Mr. Ventriss, 11½; Large White boar Walton William 3rd, Leeds Co-operative, 10½; Large White sow, Mr. Stephenson, 11½; Middle White boar, Mr. Twentyman, 5; Middle White gilt, Mr. Paget, 5½; Middle White sow Walton Rose 30th, Earl Sefton, 20; Large White boar, Mr. Stephenson, 9; Large White gilt, Mr. Stanga, 10; Large White boar, Mr. Taylor, 6½; Large White sow, Mr. McIver, 10½; Large White sow Walton Betty 5th, Mr. Stanga, 15; Large White boar, Mr. Stanga, 13; Large White boar, Mr. Howson, 7½; Large White sow Walton Elenora 7th, Mr. Priestner, 8½; Large White sow, Mr. Dodd, 6½; Large White sow, Mr. Fogg, 8½; Large White gilt, Mr. Bridge, 8½; Large White gilt, Mr. Whalley, 7½; Large White gilt, Mr. Potts, 9½; Middle White sow Walton Rose 46th, Mr. Fraser, 7.

The Demand for Small Holdings in Cheshire.

An inquiry has been made in Cheshire by the Small Holdings and Allotments Committee of the County Council as to the number of holdings exceeding one acre and not exceeding fifty acres in the municipal boroughs, urban districts, and parishes comprising the rural districts of the county. Inquiry was also made as to the demand for small holdings, and whether land was available for the purpose.

It appears that out of 450 parishes, twenty-four reported that there was a demand for small holdings, but that no land was available for the purpose; five that there was land available, and 211 that there was no demand for small holdings, and that no replies had been received from the remaining 210 parishes.

Live Stock Record.

DIRECTORY OF BRITISH PEDIGREE STOCK OWNERS.

OXFORD DOWNS.

ADAMS, GEORGE, Royal Prize Farm Flock, Faringdon, Berks. Pure Oxford Down Sheep, Shearling Rams, Ram Lambs, Ewes and Ewe Lambs for Sale. Special arrangements with foreign buyers. Many first prizes at R.A.S.E. and other shows during past 25 years, including 2 first, 2 second, and 4 other prizes, World's Fair, Chicago, and 7 firsts, 4 seconds and champion at Royal Bath and West, Royal Counties, etc., this year.

COWLEY MANOR FLOCK, property of James Horlick, Esq. Pedigree Oxford Downs of best and purest strains. Ewes and Rams for sale privately. Rams sold annually, Cirencester. Prize-winners Royal, Bath and West, and leading Shows.—Apply, W. HITCH, Estate Office, Cowley, near Cheltenham.

TREADWELL, JOHN, Upper Winchendon, Aylesbury.—Oxford Down Sheep. Annual Ram Sale first Wednesday in August. Prizes won at R.A.S.E. 24 years in succession. Ewes for Sale.

SOUTH DOWNS.

BABRAHAM SOUTHDOWNS, property of Mr. Adeane. Pedigrees registered. This old-established flock has won numerous prizes, including 2 firsts, 1 second in three-ram classes, Royal Show, and 2 champion, 1 first, 2 seconds, Royal Counties Show in two-ram classes, 1906.—For catalogue and particulars, apply F. N. Webb, Babraham, Cambridge, England.

CHEVELEY PARK SOUTHDOWNS, the property of the Executors of the late Col. McCalmont. This flock has won numerous prizes at the principal shows, and animals purchased from it have been very successful in New Zealand, Canada, and the United States. Rams and ewes usually for sale.—Apply to H. J. Garrod, Cheveley, Newmarket, Cambs.

COOPER, ALLAN, Norton, Bishopstone, Lewes, Registered Southdown Flock, No. 70; trade marked; hardy constitution and good wool. This flock of 520 ewes is kept on its native hills. Rams, ewes and lambs for sale.

GATTON PARK SOUTHDOWNS, belonging to Mr. Jeremiah Colman. Prizes won in 1902-5 include Blythwood Challenge Bowl, reserve for Blythwood Challenge Bowl, 18 championships, 12 reserve for championships, 51 firsts, and 30 seconds. A few choice selections of breeding animals always on sale.—Particulars G. F. Hempson, Estate Office, Gatton Park, Surrey.

SHEEP—*continued.*

SOUTH DOWNS—*continued.*

NORTHBOURNE, Lord, Betteshanger Park, Dover. Registered Southdowns for sale, combining best strains.—For particulars, apply Manager, Home Farm, Betteshanger, Dover.

PEEL, G., Wymering, Cosham, Hants, Registered Southdowns, Flock, No. 44. Yearling Ewes and Ram Lambs for sale, sired by rams of highest merit, out of specially selected ewes.

WALTER, Colonel A. F., has a registered flock (No. 159) of Pedigree Southdown Sheep, Rams on sale.—Apply for particulars to R. Holloway, Home Farm, Boarwood, Wokingham, Berks.

WENSLEYDALES.

ABBOT BROS., Thuxton, Norfolk. Breeders and exporters of many winners at home and in the Colonies of the best possible breeding. Illustrated catalogue free.

UNDERLEY WENSLEYDALES (Blue-faced) from the best blood obtainable. Successfully exhibited.—Apply, G. G. ROBINSON, Bailiff, Underley Farm, Kirkby Lonsdale.

PIGS.

LARGE WHITES.

CHARLES SPENCER, having taken over the Holywell Manor, St. Ives, Hunts, herd of Large and Middle White Pigs, which won 12 prizes and reserves with 11 exhibits at Derby Royal, will price any of them.

FULWOOD HERD LARGE WHITE YORKSHIRES, property R. R. Rothwell. 200 head bred from winners at leading shows.—Apply to D. COLLYER, Estate Office, Miller Arcade, Preston.

HUGHES, ALFRED, Packwood Grange, Knowle, near Birmingham. Select Herd of Pedigree, Large White Yorkshire Pigs, bred from prize-winners. Young Boars and Gilts for Sale at moderate prices

KIRBY BEDON HERD of Pedigree Large White Pigs of prize-winning strain. Grand young Boars and Gelts for sale at moderate prices. Hardy constitution, size and bone a speciality.—For particulars apply W. MITCHELL, The Vale, Kirby Bedon, near Norwich. Two miles from Trowse Station, G.E.R.

LARGE WHITE PIGS.—Boars and Gilts, eligible for Herd Book; also registered Oxford Down Sheep, descended from Prize-winners. At moderate prices.—J. PHIPPS SMITH, Salford Priors, Evesham.

NOTTINGHAM CORPORATION, STOKE FARM. Herd of Large White Pigs. The oldest and largest Herd in Notts County. Over 100 Breeding Sows kept. Upwards of 600 to select from. Boars and Gilts at moderate prices. Inspection invited.—Apply ARTHUR A. AVIS, Stoke Bardolph, Nottingham.

OWTRAM, HERBERT H., Newland Herd Pedigree Large White Yorkshires, winners many prizes, Champion Cup and Medal; Boars, Gilts, in-pig Sows for sale—FARM BAILIFF, Newland Hall, Bay Horse Station, Lancaster.

SPALDING HERD of Pedigree Large Whites, young stock and in-pig Gilts for Sale. All bred from great winners.—ALFRED W. WHITE, "Hillegom," Spalding.

THE NEWNHAM HALL HERD of Large and Middle White Yorkshire Pigs is one of the largest and oldest herds of pure-bred pigs in the United Kingdom Prices moderate. Inspection invited.—NEVILLE J. HINE, Newnham Hall, Baldock, Herts.

THE WATFORD HERD of Large White Yorkshire Pedigree Pigs of the choicest breeding. 100 to choose from. Correspondence invited. Grand young breeding stock always on Sale.—Apply R. AYRE, Bushey Lodge Farm, Watford, Herts (15 miles from London).

WALTON HERD of Pedigree PIGS, owned by Sir Gilbert Greenall, Bart., Walton Hall, Warrington. Large and Middle White Yorkshires, unsurpassed for purity of breed, size and general excellence, as proved by the numerous Championship and Class Prizes won at all the leading shows. A choice selection of Boars and Sows for sale; stock carefully shipped.—Apply to Mr. W. BAINBRIDGE, Walton House, Warrington.

MIDDLE WHITES.

DEWHIRST, A., Ryecroft Farm, Dudley Hill, Bradford. Pedigree Large and Middle White Pigs also a few Berkshires of the choicest breeding. The following prizes have been won in 1902 by pigs bred by myself: 2 champion prizes for the best pig in the show, 36 firsts, 25 seconds, and 6 thirds, with numerous reserves and V.H.C Send 2 stamps for Illustrated Book.

THE CATTON HERD of Prize-winning MIDDLE WHITE PIGS, property of J. E. Breeze, Edingale, Tamworth. Stock Boar Castlecroft Mikado, 1st Park Royal, 1st Bath and West. Gelts and Boars on Sale. Prices moderate.—Apply BAILIFF, Raddle Farm, Edingale, Tamworth.

LARGE BLACKS.

BANNISTER, T., Limehurst, Haywards Heath, Sussex (mile from Station, one hour from London). Pedigree Large Black Pigs of the best strains of blood, noted for their docility and for the production of a large proportion of lean meat. Good selection of Boars, unrelated Gilts, and in-pig Sows for Sale at reasonable prices.

PIGS—*continued.*

LARGE BLACKS—*continued.*

CATTON HERD OF PRIZE-WINNING LARGE BLACK PIGS. Stock Boar Treviglas Excelsior 1487, 1st Devon County, 2nd and Reserve Champion Royal Show, 1906; pigs kept in hardy natural condition; gelts and boars always on sale.—Apply, J. E. Breeze, Edingale, Tamworth. Stations: Croxall, 2½ miles (M.R.); Alrewas, 3½ miles (L.N.W.).

HASKETON CHAMPION PRIZE HERD OF LARGE BLACK PIGS.—This herd has won the Royal championship three out of four times, and is the only herd having won the breed challenge cup. Record: 47 firsts, 37 seconds, 11 thirds, 126 prize-winning cards; the herd this year being the winners of 14 firsts, 6 seconds, 2 thirds, championship and silver cup in five shows. Gelts and Boars at moderate prices consistent with quality. Expectation a speciality.—Apply, C. F. MARRINER, Hasketon, Woodbridge, Suffolk.

PEDIGREE LARGE BLACKS.—Select Herd-bred from choice Prize Winners. Young Boars and Gilts for sale, moderate prices.—H. J. CLARKE, The Slade, Roughley, Sutton Coldfield.

WHEN Breeding, breed from the best Pedigree Large Black Prize-winning Pigs. TREVEGLOS HOPEFUL II., winner of First prizes and R.A.S.E. Silver Challenge Cup, 1907, beating all other Cup winners; also 1st Prize Bath and West, Newport; 1st Royal Counties, Maidenhead; 1st Royal Cornwall, Liskeard; 1st Devon County, Bideford; also 1st prize at the Royal Show, Lincoln, for Boar and Reserve for Champion prize. Boars and Sows for Sale of the above strain at moderate prices.—Apply to JOHN WARNE, Treveglos Farm, St. Mabyn, R.S.O., Cornwall.

BERKSHIRES.

CARNARVON, the Earl of.—Prize winning Pedigree Herd. BOARS and GELTS, eligible Herd Book. Prices moderate.—Apply W. T. HALL, Highclere Farm, Newbury.

CORY, CLIFFORD J., M.P., LLANTARNAM ABBEY, MONMOUTHSHIRE.—Pedigree Boars and Gilts.

CRIBB, ARTHUR LEWIS, Well End Lodge, Shenley, Barnet, Breeder of PEDIGREE BERKSHIRE PIGS. Young stock from noted strains, and eligible for Herd Book, for sale at moderate prices.

READING CORPORATION.—150 Pedigree Berkshire Pigs, leading prize-winning strains, from son of Champion Mikado 10433 and prize-winner Domino 11323; inspection invited.—Apply, Mr. T. Chettle, Manor Farm, Reading, Berks.

STALL PITTS HERD OF PEDIGREE BERKSHIRES. One of the Oldest Herds. Unsurpassed for true character size, and quality. Choice selection of Boars and Sows on offer at moderate prices—J. LAWRENCE, Stall Pitts, Shrivenham, Berks.

TAMWORTHS.

PEDIGREE TAMWORTHS, the property of C. HOWARD TAYLOR, Middlewood Hall; a few good young Boars and Gilts for sale.—Apply, Hampole Priory, Doncaster.

BORROWFIELD & COLSTON HERDS.

The property of R. MILLINGTON-KNOWLES Colston Bassett Hall, Notts.

LARGE WHITE YORKSHIRES.

The following First Prizes, Championships, and Medals have been obtained by pigs **BRED** in these Herds in 1907:
1st and Champion, Gold Medal, R.A.S.E., Lincoln.
1st & Champion, President's Medal, Highland, Edinburgh.
1st Welsh National, Aberystwyth.
1st Bath and West Newport; 1st Royal Counties.
1st Nottingham; 1st Suffolk; 1st Norfolk.
1st Derby.
1st Hereford and Worcester; Special Prize Lincoln Agricultural Society; 1st Great Yorkshire; 1st Newark.

A number of additional Firsts and other Prizes have also been gained at the above Shows.

At the St. Louis Exposition, U.S.A., in 1904, the Champion Boar, and the Grand Champion of the Exposition were bred at Colston Bassett.

The Foreign and Home trade has largely increased during 1907.—GILBERT H. ELLIOT, Estate Office, Colston Bassett, Notts.

For Sale.
PRIZE BRED POLLED ANGUS COWS, BULLS, and HEIFERS.
Finest Strains. Inspection Invited.
GEORGE HOYLES,
Skidby Manor, near Hull.

GEORGE HOYLES
SKIDBY MANOR, HULL.
Breeder of Pure Lincoln Long Wool Sheep.
Lustrous Fleeces. Good Constitutions.
SUITABLE FOR HOME AND ABROAD. STOCK FOR SALE.

Shorthorn Society.

There was very little important business transacted at the last meeting of the council of the Shorthorn Society, the chief perhaps being the consideration of the suggestion made by Mr. John Thornton at the annual general meeting that at the Royal Agricultural Society's Show next year the group class should be for a "bull and his offspring," instead of for a "bull and his male offspring."

After some discussion the wording of the group class was altered to read as follows:—"Group class consisting of a bull of any age (not necessarily bred by exhibitor), and two, three, or four of his offspring, bred by exhibitor, not less than six months old on the day of entry," and the secretary was instructed to send a copy of this to the Royal Agricultural Society.

In pursuance of notice, Lord Moreton called attention to the use by owners of their registered prefix and affix in the naming of animals purchased by them. He felt that this was using the registered name in a manner which was not intended, and he moved that registered names should only be used for animals bred by the owner of such registered name,

The motion, seconded by Mr. Ackers and adopted, was ordered to be entered on the rules of entry.

The General Purposes Committee recommended and it was agreed that the same prizes be offered at the shows of the following societies in 1908 as were offered this year, viz.:—Royal Agricultural Society of England, Bath and West, &c., Agricultural Society, Highland, &c., Agricultural Society, Royal Dublin Society, and that a full scheme of the prizes to be offered in 1908 will be considered at the next meeting.

Twenty new members were elected, and the council adjourned till December 10.

SOCIETIES.

Smithfield Club.

A meeting of the council of the Smithfield Club was held at 12, Hanover Square, on the 6th inst, when the president, Mr. James Hornsby, made the following allusion to the death of Earl Winterton, a vice-president of the club, and who for some years had been chairman of their Stock Prize Committee. No man on the council, said Mr. Hornsby, had done more for the Smithfield Club than had Lord Winterton. He had attended most of their meetings, and had given a great amount of time to the interests of the club.

On the motion of the president, seconded by the Earl of Coventry, a unanimous vote of condolence and sympathy with the family of their late vice-president, Earl Winterton, was passed.

The Selection Committee recommended twenty-two names to be submitted to the members for the election therefrom of eleven names to serve on the council in the place of the eleven gentlemen who retire by rotation at the end of the current year. This report was adopted.

Scrutineers were appointed to examine the voting papers sent in.

Other business (of no particular interest) in connection with the forthcoming show was transacted, and after the election of forty-one new members the council adjourned until December 10.

Royal Lancashire.

A meeting of the council of the Royal Lancashire Agricultural Society was held at Liverpool on Wednesday, when the secretary, Mr. Edward Bohane, presented the balance-sheet, and it was a remarkable testimony to the popularity and success of this well-managed society.

The annual subscriptions during the closing year, he said, had amounted to £1,912; entrance fees for implements and live stock had brought in £2,006; the receipts at the show-yard and grand-stand (including season tickets) totalled £6,505, and, together with a donation of £2,240 from the Bolton Committee and other items, the total receipts came to £13,616 15s. 7d. After meeting the expenditure there was a balance of profit to the net revenue account of £3,233 2s. 8d., while the general balance in favour of the society now stood at the satisfactory sum of about £15,000.

Mr. James Kay gave the report of the Catering Committee, which was also satisfactory. The society had appointed its own staff, numbering 375 persons, and they had not only given the public better food and refreshments, but by reduced charges had saved them €1,500. They had supplied 8,532 luncheons 17,000 teas, and although the wages list was double that of the Lancaster Show the results were even more favourable, and a surplus was left of £250.

On the motion of Mr. Harrison, seconded by Mr. Backhouse, a vote of thanks was passed to the committee and Mr. Bohane, Mr. Harrison remarking that no show was better catered for.

Mr. Bohane gave the report of the House Committee, which stated that the new headquarters of the society in Winckley Square, Preston, would be opened by Lord Derby on December 19. Mr. Bohane reported that he had received a letter from Lord Egerton of Tatton intimating that he would be pleased to accept the presidency of the society on the occasion of his visit to Manchester.

Mr. Windham E. Hale, chairman of the Works Committee, said that the site of the society's next year's show in Manchester had not yet been decided on, and it had been found necessary for the time being to continue the tenancy of their works. yard. The total cost of fitting up the Bolton show ground had been about £2,191. No society in England fitted up so satisfactory a show ground at so small a cost as did the Royal Lancashire. He hoped shortly to be able to report on the subject of removal to Manchester for the forthcoming show.

Lancashire Federation.

A meeting of the Lancashire Federation of Agricultural Societies was held at Bolton on the 9th inst.—Sir Lees Knowles, Bart., presiding—when it was decided to admit the Saddleworth and Mid-Cheshire Societies as members of the Federation, and a resolution that the title of the Federation be changed to the Lancashire and Cheshire Federation of Agricultural Societies was passed, and alterations to rules as suggested by a special committee were accepted. The secretary announced that the Federation challenge trophies for horses had been won as follows:—First half of the season, Mr. F. V. Grange, of Farndon, and second half, Mr. John Taylor, of Ormskirk. He also reported that the Federated Societies had received during the past season 31,536 entries, the average per show being 1,233, as against 1,136 last year, and 1,088 for 1905.

The annual dinner and meeting was fixed for Manchester on December 13, and a local committee was appointed to make arrangements.

On the motion of Mr. J. W. Parkinson, secretary of the Worsley Society, Sir Lees Knowles was requested to retain the presidency for another year.

The President, while acknowledging the feeling displayed in his favour, said he did not feel justified in keeping out anyone who might be appointed in his place. While he had a large amount of public work, he took an immense interest in the Federation, and would leave himself in the hands of the conference.

Mr. Kenworthy seconded the proposal, saying they could not get a better man, and the resolution for the re-election was carried with acclamation.

Sir Lees Knowles, in reply, promised to do his best in the interests of the Federation.

Mr. Kenworthy suggested that the Federation should do something to help individual societies in settling disputes with exhibitors. Could not something be done, he asked, to bind exhibitors to submit all disputes to a committee of the Federation, or to arbitrators appointed by the Federation.

The president thought the difficulty was one which might be met by a special rule, and the matter was left to be dealt with by the committee.

Yorkshire.

At a special meeting of the council of the Yorkshire Agricultural Society held at York on the 7th inst., there was present a deputation from the Halifax Local Committee, including Mr. R. Whitworth (president) and Mr. Learoyd (hon. secretary), who attended on the subject of the date of the show at Halifax next year, and it was decided to hold the show on Wednesday, Thursday, and Friday, August 5, 6, and 7.

The draft prize list for the show of 1908 was submitted, and was referred for revision to the next meeting of the council.

A deputation from the Yorkshire Poultry Club drew the attention of the council to the fact that the Yorkshire Agricultural Society was the only county society which did not do anything towards the encouragement of the breeding of poultry. The council decided to obtain further information on the subject, which will be brought before their next meeting.

Cornwall Farmers' Union.

The Cornwall Farmers' Union discussed a variety of subjects at their meeting on Monday, prominent amongst them being the question of an Agricultural Party and Small Holdings. On the former matter there was a diversity of opinion, and in the end it was agreed to discuss the subject at length at the next meeting. Regarding small holdings, the following resolution was proposed:—"That the Cornwall County Farmers' Union favours the formation of small holdings on sound economical lines, but is of opinion that the matter being of national importance, all expenses connected therewith should be a national charge." This met with general approval and was carried, whilst it was decided to send copies of it to the members of the county council, the Board of Agriculture, the Central Chamber of Agriculture, and the local Members of Parliament.

One speaker remarked that the cry of "Back to the land" was all very well, but from the ratepayers' point of view it would be a very bold county council—and he for one would strongly oppose it—to put back men on the land from the town indiscriminately. It seemed to him applicants should have at least two qualifications: they should prove their ability to farm the small holdings, and that they had the necessary capital. He would not be a party to establishing a class of small holdings if any financial loss was to fall upon the local ratepayers. Except in favoured neighbourhoods, near towns, where there was a first class market for produce, he failed to see how a small holding of under 10 acres was to be made to pay.

Another speaker pointed out that there was a great deal of waste land in the county that was available for small holdings. There were thousands of acres. They should not go and attack the farms that were well equipped in the first instance. They could deal with land in a dilapidated state, so far as the buildings were concerned; they could deal with land in the market, and then the Act specified that they were to deal with glebe lands, Crown lands, and land under Ecclesiastical Commissioners in the first instance. He hoped that, so far as they were concerned, there would be no idea of displacing one man to put in another.

It was decided to advise the desirability of fixing and using weighbridges in the receiving pens of all public cattle markets in the county where auction sales were held for the sale of fat cattle, for the use of which the farmers were prepared to pay a fee; and it was also agreed that it was desirable that one uniform system of weights and measures throughout the county should be established.

NOTES AND NEWS OF AGRICULTURAL SOCIETIES.

The Staffordshire Chamber of Agriculture had under consideration at its last meeting the report of a special committee which had been appointed by the Chamber to consider the question of unexhausted improvements in tenant right valuations for the county. The committee presented recommendations in regard to dilapidation and compensation as to produce and roots sold off or bought on a farm, which they agreed should be on the same basis. In two or three instances the recommendations were varied, and the amendments were referred back to the committee to embody in a scale which is to be published.

In regard to compensation to the out-going tenant for unexhausted improvements, the Chamber approved of a scale which, for the last year of tenancy, awarded one-third of the cost for linseed cake and meal, cotton cake and meal, or rape cake, and one-sixth of the cost for the year preceding. For the same periods the allowance in regard to corn, corn-cake, malt dust, dried grains or other manufactured feeding stuffs of similar manurial value was one-sixth and one-twelfth, while for wet grains one-twelfth of the cost for the last year of tenancy only.

The proposals with regard to dilapidations for taking off the farm produce and roots, with the exception of potatoes, were, for clover, seeds, and hay so removed, 10s. per ton for the last year of tenancy, and 5s. per ton for the preceding year, while straw for the periods named was fixed at half the sums named, and for roots removed the figure was fixed at 2s. 6d. per ton for the last year of tenancy only. It was agreed that produce and roots brought on the farm should be compensated for on a similar basis.

For manures applied to grass land the scale adopted was—for raw bones and lime used on grazing land a basis of eight years, for land mown in alternate years five years, and for land mown each year three years. Under like conditions in regard to dissolved or boiled bones and bone meal the compensation was fixed on a basis of six, three, and two years respectively, while in regard to the use of basic slag the basis was four, three, and two years.

With respect to superphosphates, the basis was three years if used on grazing land, and two years if the land was mown at all. For ground lime used in arable land the basis was fixed at four years and seven years for agricultural lime. Compensation is limited to 35s. per acre for the cost price of artificial manures.

In respect to all other improvements the committee reported that no scale could be recommended, but each one should be dealt with by the valuers on the broad lines set out in the report.

At their meeting on the 1st inst. the Lincolnshire Chamber of Agriculture considered the report of the Organisation Committee, with special reference to an independent agricultural party in the House of Commons, and a resolution was passed fully approving of the report, and urging the Central Chamber to further the formation of such a party. The draft of the Larceny and Trespass Bill, introduced by Mr. G. L. Courthope, M.P., on behalf of the Central Chamber, was also considered, several members expressing the opinion that the present law of trespass is inadequate, and on the motion of Sir Montague Cholmeley, a resolution was passed that trespass and other menaces to agriculture should be dealt with in a much simpler and more practical manner than the present state of the law allows. A resolution was also passed expressing the opinion that while the insurance companies, with regard to workmen's compensation, are treating their clients very fairly, there is without doubt a great opportunity for the Government to offer further facilities for insurance through the Post Office.

The thirty-third anniversary dinner of the Metropolitan Dairymen's Benevolent Institution is appointed to take place in the King's Hall, Holborn Restaurant, High Holborn, on Thursday, December 5. The object of the institution is to relieve the deserving members of the trade and their widows in old age and infirmity by pensions or otherwise, and the orphans of annuitants by gratuities. Since the foundation of the institution on February 4, 1874, 107 male and female candidates have been admitted, thirty-eight of whom are now on the register, and are in receipt of annuities, the total amount of which exceeds £800 per annum. The pensions are from £18 to £26 per annum, and the total outlay in pensions and special grants during the past year was £915. The institution has expended over £15,000 in affording relief to distressed members.

Market Notes.

London.

The passage of another week has unfortunately neither dispersed nor lessened the dull cloud that has hung about the Borough for too long a period. We hear of business being done, and some of our factors are able to report that a fairly considerable quantity of hops have changed hands, but when prices are quoted they are found to be very unremunerative to growers. This fact, coupled with the increasing desire of growers to sell, justifies the general opinion that the present condition of the market is "rotten," and that the outlook for the early future is far from encouraging. Personally, I am reluctantly compelled by the force of surrounding circumstances to accept the general view of the situation. I would gladly write in a more hopeful strain if it were possible, for as a rule I endorse Milton's lines in "Comus," "Where an equal poise of hope and fear does arbitrate the event, my nature is, that I incline to hope, rather than fear." But now "the sickening pang of hope deferr'd," unhappily brings fear to the front, and makes me hesitate as I look ahead. Seeking for a solution of the problem before us, it appears that it can only be found by reference to the consumers of our produce. We know that the brewing industry is kept in a state of suspense, by reason of the threatening attitude of the Government, whose intentions, evidently inimical, are not yet fully revealed. It is, therefore, not difficult to understand, why brewers are not disposed to increase their stocks until they know something definite as to their future position.

Thus they are buying very sparingly, and are further induced to this course of action by the reserves held in cold storage from the large crops of 1905, and the reports of the supplies available this year from America and the Continent. Unless an unforeseen change takes place in this direction, it hardly appears probable that our demand for hops can be improved or that values can be advanced. These views are confirmed by cables I have recently received from America, by one of which I am informed that large consignments of hops are coming forward to London, and in the other, to hand to-day, I am told that the markets on the other side are very unsettled, and that choice Oregons are being bought at 6½ to 7 cents, and prime Oregons at 5½ cents per lb. These figures mean that the hops can be landed in London at from 43s. to 50s. per cwt. forecasting keen competition for English business, at rates that must be disastrous for our growers. I am sometimes told in the Borough, that it is not always expedient to declare the "whole truth," and I can assure my readers that I would much more willingly conceal unpleasant things than display them. But, after all, "facts are stubborn things," and it must be better to be forewarned than to be taken by surprise. This is my apology for what I quoted, although I know that such intelligence cannot be otherwise than unpalatable to those whose interests I certainly endeavour to support.

Nuremberg.

During the past fortnight a steady trade has been maintained, strengthened to a considerable extent by the export demand from England and America. The bulk of the shipments has been taken at prices varying from 30s. to 45s. for mediums, up to 50s. and 55s. for better samples of Hallerdans and Wurtemberg, and some parcels of good colour at 60s. The local business is also fairly active at rates ranging from 55s. to 95s., the higher figures being paid for exceptionally fine selections. Bohemian buyers have also done business in Bavarian hops at 50s. to 65s. The demand had somewhat relaxed, but quotations remained firm at the date of the latest report. During the fortnight ending November 6 the arrivals amounted to 10,200 bales, and the sales totalled 9,000 bales.

Brussels.

The recent hop trade has only been moderate, but values have not materially altered. Certain speculators, being deficient of hops to cover their contracts, have been compelled to buy, and this necessity has given a temporary firmness to Alosts, but apart from this the tendency is rather towards reduced quotations, especially for Pops, which are now being offered at 30 francs, or about 24s. English currency. Alosts for December delivery are quoted at 42 francs, or 3 francs less than they can be bought for present consumption.

America.

My correspondents write me under date October 26 anticipating the lower prices, which have since been realised. Growers are ready sellers in all sections, and with present financial pressure cannot hold their produce. It is added that the U.S.A. crop is now confirmed at 300,000 bales, which, in addition to the large carry over stock, will again give them a heavy surplus for export.

Drying and Curing.

(*Continued from page 578.*)

Practical Drying.

No other factor affects the quality, appearance, and market value of hops as much as the manner in which they are handled during the curing process. In this process three points are of primary importance. These are:—1, The degree of temperature applied; 2, the length of time in drying; 3, the volume of air passing through the hops. In drying at a very low temperature the humidity of the air is also an important factor. Only the first two of the factors named are generally recognised, and the high temperatures too frequently used are the result of the attempts to shorten the time of drying. It is, however, possible to diminish the temperature materially without prolonging the time of drying, by forcing through the hops a large volume of air at a low scale.

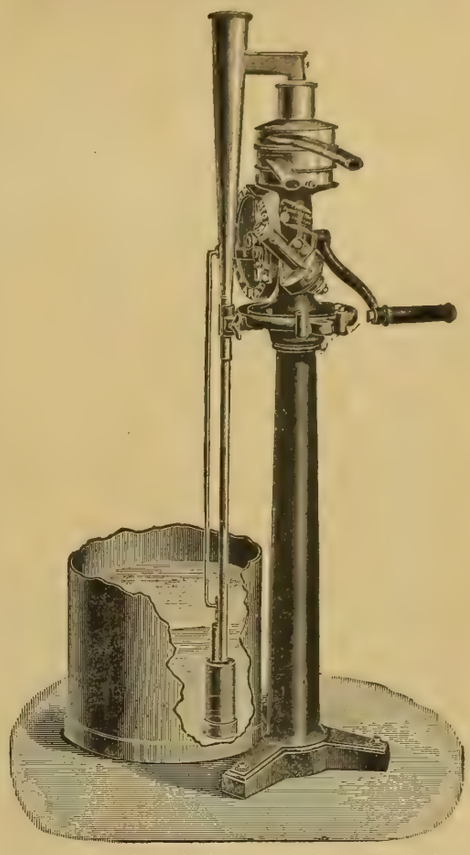
Dr. Stockberger emphasises the evident necessity for the even laying of the hops upon the drying-floor, and notes that some advanced growers set a stout wire screen of about 5 in. mesh at the desired height above the floor, the hops emptied from the bags upon this screen falling lightly and evenly to the floor beneath. He advocates starting the drying at a very moderate temperature, so that the hops may be very gradually warmed throughout, and strongly condemns the practice of turning the hops with a fork or by any other means, as the cones are thereby broken, and much of the lupulin is lost. Warming the air and the sides of the kiln above the hops materially aids drying, and encourages the necessary ventilation.

The almost universal failure to recognise the harmful effects of high temperatures has caused wide diversity in practice. Experiments made with hops cured on kilns at different temperatures have proved that, apart from ruining the flavour by overdrying or scorching, there is a distinct loss of valuable essential principles by drying with excessive heat. The volatile oils, to which the aroma is largely due, are partially evaporated, and the lupulin is deteriorated since the amount of the desirable soft resins becomes proportionately less as the drying heat is increased. The best temperature for drying has yet to be determined, but every consideration indicates that it should be much lower than that commonly employed, and should probably range from 100 to 140 deg. Fahr. Practical experience has shown that good drying may be accomplished at 110 deg. Fahr., and the general trend of opinion is towards the use of the lower temperatures. In taking the temperature, care should be exercised in seeing that the thermometer is placed where the heat on the hops is greatest. This point has been found to be just below the drying floor.

The advantages of slower curing or curing at a lower temperature should be universally understood by hop growers. Even a moderately high temperature, continued too long, will damage the quality the same as if it were too high. In order that the hops may be dried at as low a temperature as can be made to do the work, a strong draught is absolutely necessary, and there is no doubt that the principle of the air-blast kiln at present most satisfactorily meets these requirements.

In general, drying should continue until nearly all the stems or cores are shrivelled, but are still soft and pliable. If overdried, the stems crumble and break readily, and the lupulin loses its bright, clear, yellow appearance, and turns brown. If the hops are taken off the kiln slack or underdried, they are apt to heat in the bales, the lupulin turns brown, and a sour, musty smell is developed.

If they are high or over-dried the cones will break easily and become chaffy, and they may also develop a burnt, pea-nutty flavour.



The thin petals of the hop usually become dry enough to break readily by the time the stems or strigs are dried sufficiently to make it safe to remove the hops from the kiln. This condition may be remedied by closing the ventilator half an hour before the drying is finished. This will also somewhat restore hops that have been over-dried, as the further escape of moisture from the kiln is prevented, which then tends to equalise in the hops, soon softening and toughening them. The same result may be accomplished by opening all the doors of the kiln and letting the hops cool for about an hour, as by this means they absorb moisture from the outer air, and become less brittle.

(*To be continued*).

DAIRY.

The Pump Separator.

We give on this page an illustration of a separator which is gaining in popularity every week—namely, the Pump Separator, the sole importers of which for the British Isles are Messrs. F. C. Southwell and Co., Ltd., 75, Southwark Street, London, S.E. As our illustration will show, one of its chief advantages is that it does away with the troublesome repeated filling of the milk tank on top of most separators. With the pump separator all that is required is to put a milk basin (of any size) on the floor beside the separator and the milk is then automatically lifted up by the pump. What a saving this is will be readily seen. The pump also acts as a speed controller, whilst two other important advantages are:—Always very sharp skimming, because the supply of milk depends on the speed of turning, therefore less milk is supplied if the speed is slower; and the sharpness of the skimming can be regulated, because the supply of milk by the pump

can be altered, and if less milk is supplied the skimming will be sharper.

As regards the running of this machine its extreme ease is one of the chief points, and this is evidenced by the fact that the hand power sizes can be made up to 260 gallons per hour. All the parts are easily accessible, and are fastened in a simple and solid way, whilst when any particular part wears out it can be easily replaced by the merest novice. As regards capacity, the smallest will separate 17 gallons per hour, and can be worked easily by a child, whilst as many as 260 gallons per hour can be separated by the No. III. hand machine. Power attachments can also be obtained. In conclusion, we may add that the pump separator has won the silver medal of the Royal Agricultural Society of England and the bronze medal of the German Agricultural Society, in addition to numerous other medals in all parts of the world, so that its merits have been appreciated as much in showyards as they have by its many users.

Whitchurch Cheese Show.

The last of the three great Cheshire cheese displays of the year opened on Tuesday last in the Whitchurch Market Hall, when an enormous number of people attended the nineteenth annual show under the auspices of the Whitchurch Dairy Farmers' Association. The show was in most respects the largest and most successful ever held, and as an example of the extraordinary growth of the institution it may be stated that the entries for cheese alone numbered no less than 533 (an increase of eighty-seven as compared with last year), and that these entries represented a total of 3,400 cheeses—an increase of some hundreds—while the weight of cheese displayed exceeded 110 tons, the largest entry yet recorded. The quality was on the whole fully up to the average, and the judges remarked upon the increasing

excellence and uniformity of the cheese, especially in the larger classes.

A conspicuous feature of the show was the striking success of Mr. Harry Denson, of Pulford, Chester, who succeeded in obtaining the championship gold medal and also the 20 guinea challenge cup (given by Captain Ethelston) for the best cheese in the show. Mr. Denson has achieved a remarkable distinction this year, having won the gold medal championship at Chester, Nantwich, and Whitchurch, thus establishing a record in the way of prize-winning. Mr. Denson is a tenant of the Duke of Westminster, and his wife comes of an old cheese-making family, her father winning the first prize in one of the open classes at this show. Mr. Joseph Ankers, of Cholmondeley, was the reservist for the chief honours, and Mr. W. H. Hobson, another notably successful exhibitor, also figured largely in the prize list.

Cheese.—In the fair the pitch of cheese was 115 tons, and the total weight in the show and fair was 228 tons. There was a very large attendance of buyers, and a satisfactory clearance resulted. In the show, 210s. per cwt. was realised, this being the price which was paid for the championship dairy of Mr. Harry Denson. The dairy was bought by Mr. Driver, a cutter-up, of Bradford. In the fair, best dairies made from 68s. to 72s. per cwt., and lower grades from 60s. per cwt.

The Brewers' Exhibition: Amended Awards.

As the result of disqualifications for various reasons the award list of malting and seed barley competitions at the recent Brewers' Exhibition at the Royal Agricultural Hall, have undergone some changes. For instance, the championship now goes to Mr. S. Champion, The Elms, Sarre, Isle of Thanet, for his Kent barley No. 44 in the catalogue, this being awarded the MARK LANE EXPRESS Challenge Cup, the Burton Challenge Cup, the R. Boby Champion Screen prize, and Messrs. E. Webb and Sons Special Prize.

Then again in Class 1 (Chevalier) the prizes have been re-awarded as follows, the numbers in parentheses being the catalogue number:—1, Kent barley (44), Mr. S. Champion, The Elms, Sarre, Isle of Thanet; 2, Somerset barley (108), Mr. T. Rawle, Court Place, Porlock; 3, Bucks barley (14), Mr. R. E. Horwood, Drayton Beauchamp, Tring; vhc, Essex barley (25), Mr. M. G. Bacon, Lower Marsh Farm, Brightlingsea.

All the awards in Class 4, foreign malting barley, two-rowed, have been cancelled; in Group C of Messrs. J. Fison and Co.'s prizes, the awards are now—1, Mr. T. Rawle, Court Place, Porlock, catalogue number 108; 2, ditto, No. 107; 3, Mr. T. E. James, Lower Moor, Minehead, catalogue No. 183. In the Somerset Class for the MARK LANE EXPRESS Diplomas (Chevalier), Mr. T. Rawle is now given only one for his lot, catalogue No. 108; whilst the two following classes for Messrs. Fison's prizes did not figure in the prize list given in our issue of October 28:—

Group G.—1. Mr. J. Thurlby, Baston, Market Deeping, Lincolnshire (No. 65); 2. Mr. R Bland, Baston, Market Deeping, Lincolnshire (No. 56); 3. Mr. W. T. Dixon, Ashby-de la-Launde, Lincoln (No. 59).

Group H.—1. Mr. T. W. Bebb, Brockton, Newport, Salop (No. 177); 2. Mr. H. F. Parsons, South Brook, Portskewett, Chepstow, Mon. (No. 72); 3. Mr. J. Hoey, Annagassan, Castle Bellingham, co. Louth (No. 169).

With the above exceptions our prize list of October 28 stands good.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended November 9, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (9,735), 11,927; sheep and lambs (1,063), 3,188; horses (418), 319.

Fresh meat:— Beef (70,145 cwts.), 100,105; mutton (36,295), 48,051; pork (11,365), 11,436.

Salted or preserved meat:—Bacon (103,814 cwt.), 94,640; beef (2,401), 1,683; hams (17,077), 27,228; pork (3,766), 4,676; meat (8,690), fresh, 10,898, salted, 1,380; meat, preserved (2,443), 5,645.

Dairy produce and substitutes:—Butter (67,084 cwt.), 61,056; margarine (18,825), 15,767; cheese (39,589), 49,365; milk, fresh in cans or drums (—), —; cream (74), 110; milk, condensed (14,674), 21,303; milk, preserved, other kinds (187), 184.

Eggs (great hundreds):—(453,591), 480,978; poultry (value £7,244), £12,105; game (value £2,479), £2,549; rabbits, dead (not tinned), (40,233 cwt.), 19,554; lard (31,073 cwt.), 46,616.

Corn, grain, meal, and flour:—Wheat (1,239,000 cwt.), 1,298,700; wheat meal and flour (304,100), 324,200; barley (660,300), 626,700; oats (285,700), 369,200; peas (116,380), 27,620; beans (4,330), 19,750; maize or Indian corn (941,500), 1,239,500.

Fruit (raw):— Apples (195,347 cwt.), 150,102; grapes (36,294 cwt.), 77,544; pears (8,845 cwt.), 9,434; plums (4,384 cwt.), 289.

Hay 2,671 tons), 1,218; straw (708 tons), 539; moss litter (1,675 tons), 1,141; hops (12,665 cwt.), 7,993; locust beans (31,100 cwt.), 9,200.

The annual horse fair at Kendal took place on the 11th inst, when there was a large attendance of dealers and a larger number of horses than in recent years. Trade was slow during the early part of the day, sellers asking high prices; later there was more business, and many sales were effected. Cobs varied from £10 to £20, finished roadsters reached £40, but the majority averaged between £25 and £30. There was a large show of heavy horses The best price was £45, and geldings of quality varied between that sum and £35.

In his quarterly report to the Cheshire County Council, Mr. J. Carter Bell, the public analyst, remarks:—"Again this quarter the milk supply has been excellent, and it seems almost hypercritical to single out five samples when the deficiency in fat was so exceedingly small, but still I could not pass them as pure." He adds that the result of analyses of samples conclusively shows what a first-class supply of milk the Cheshire farmers give. All the milks were examined for preservatives, and with the exception of traces of formalin in some samples, they might be said to be practically free from preservatives.

By the *Narrung*, which sailed on the 12th inst., Mr. G. P. Doolette shipped to the order of Captain Philip Charley, of Belmont Park, Richmond, New South Wales, two Lincoln rams from the flock of Mr. W. B. Swallow, of Wooton Lawn, Ulceby, Lincolnshire. These rams are being shipped to Captain Charley's run at Narrung, South Australia, and are named Nocton Hercules and Mere, and are pedigreed stock.

The Petworth and District Agricultural Association's ploughing, hedging, and ditching, stack-building, and thatching competitions, and show of corn and field roots will be held at the Park Farm, Pulborough, Sussex, on Thursday next, the 24th inst., and as prizes worth winning are offered, a good entry has been received, and some keen competition should be witnessed. At the conclusion the ploughing match dinner will be held in the Corn Exchange, Pulborough, at which Lord Leconfield, president of the society, will preside. The secretary of the society is Mr. B. A. Nevatt, Petworth.

The profound interest now being taken in Canada by the British working classes may be realised from the fact that 2,100,000 copies of a little pamphlet entitled "Work and Wages" have been sent out in the last five years in response to inquiries from the various offices of the Canadian Pacific Railway. Of these, 935,000 have been sent out in the last eighteen months. This pamphlet is compiled with the assistance of the Canadian Provincial Governments, and gives a statement of wages current in the various trades throughout the Dominion.

Swede-Growing Competition.—The judging and awarding of prizes has now been announced in connection with the annual swede-growing competition inaugurated and promoted by Messrs. Wm. Fell and Co., Hexham, and Messrs. Henry Bell and Sons, Hexham, for the best 5 acres of swedes. The competition is open to the Northern counties, and the awards are as follows:—First prize, £10 10s., Wm. Potts and Son, Kenton, Newcastle, 36 tons 17 cwt. 1 qr. 17 lb. per acre; second prize, £5 5s., J. R. Spraggon, Priestman Colliery Farms, Blaydon, 36 tons 11 cwt. 3 qr. 24 lb. per acre; third prize, £2 2s., George Hodgson, Carlattan, Head's Nook, 35 tons 18 cwt 0 qr. 6 lb. per acre; fourth prize, £1 1s., J. Fisher, Houghton Mains, Humshaugh, 35 tons 1 cwt. 1 qr. 0 lb. per acre; highly commended, Wm. Appleby, Bewridge Mill, Morpeth; commended, Wm. Harrington, Brainhwaite, Cockermouth. The judges, Messrs. G. P. Graham, Manager, Colliery Farms, Ashington, and W. Y. Younger, Willington Farm, Willington-on-Tyne, report that they were exceedingly pleased with all the crops inspected, and all competitors are deserving of great credit for general cleanliness of the land and good management, while they were much struck with the sound, health, and vigorous appearance of the roots and their freedom from running to seed. There was a larger entry this season than on any previous occasion, and this fact goes to prove the keen interest displayed in the competition by agriculturists. The weights have been arrived at by careful weighing and testing of each crop. The first prize variety was Fell's Selected Halewood Bronze-top Swede; second and third prizes were awarded for Best of All; and fourth prize for X.L. All Swedes.

FARMS, BUSINESSES, &c., TO BE SOLD OR LET.

BAXTER, PAYNE, & LEPPER, LAND & ESTATE AGENTS, AGRICULTURAL VALUERS, SURVEYORS, & AUCTIONEERS.
Special Agents for

LIST OF

FARMING, LIVE STOCK REARING, POULTRY & GARDENING BOOKS

Obtainable by post only from 3, Wellington Street, Strand, London.

Postage on Books where not stated, 3d. to 5d., balance returned.

NOTE.—All Orders must be accompanied by Remittance sufficient to cover Carriage or Postage. For easy Reference, please quote the Number of Book when Ordering.

UTILITY BOOKS.

Price 6d. each net; post free 7d.

Each book of the series is written by a practical man. In almost every case the writer makes the whole or a material part of his living from the subject of which he treats. Therefore the directions are plain and are based on accurate knowledge.

No. 1.—Out-Door Carpentry. By S. Walter Newcomb.—Deals with useful, as well as decorative structures—with plans, sketches, and details for doors, gates, stiles, fences, seats, summer-houses, dog-kennels, chicken coops, window-boxes, greenhouses, &c. Designs of some fifty subjects. D.

No. 2.—Gardens and Grounds: How to Lay Out and Arrange. By T. W. Sanders, F.L.S., F.R.H.S., &c.—Suggestions for laying out, planting, and improving the small plot, or the country grounds of several acres. The best aspects and positions, considering appearance with economy of space, labour and expense. With plans and sketches.

No. 3.—Heating and Ventilation of Houses. By C. F. Townsend, F.G.S.—Intended to enable anyone, in any house, to secure full supply of fresh air without chilling draughts. Economy and existing conditions are first considerations.

No. 4.—Utility Fowl Houses and Appliances. By H. Francklin.—With about forty measured drawings and plans, and with concise instructions, not only for home construction, but for guidance in purchasing for the fowl-yard. Treats of ventilation, site, aspect, &c., of houses; the laying out of large and small runs, construction of nest boxes, coops, &c.

No. 5.—Utility Fowl Feeding and Management. By H. Francklin.—The requirements of fowls from birth to maturity, feeding stuffs, and how to use them for feeding of chickens, hens for summer and winter laying, and for the fattening of surplus stock, The management of fowls in large or small numbers, the selection of breeding stock, the management of the sitting hen, the keeping of accounts, and many other factors in successful poultry farming.

No. 6.—Utility Fowls: Their Selection, Improvement and Diseases. By H. Francklin.—The breeds most suitable for confinement or a free range; crossing, and the improvement of mongrel stock. Turkeys, guinea fowl and water fowl are spoken of.

No. 7.—Incubating and Rearing Utility Fowls. By H. Francklin.—Water-tank and non-moisture incubators; brooders and brooder-houses, with hints, instructions, and precautions for the hatching and rearing of fowls for profit.

Utility Fowls. Nos. 4, 5, 6, and 7 together, bound in handsome cloth, price 2s. 6d. net; postage 3d. The best guide for the poultry keeper; and an excellent present for a beginner.

No. 8.—Propagating Plants: By Seeds, Cuttings, Layers, Grafts, Buds, &c. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Propagation of all classes of plants, by many methods, with lists of those suitable for the various treatments, hints on the preparation of seed beds, &c. Many illustrations.

No. 9.—Hardy Perennials. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh. Illustrations and plans from the Author's Sketches. All information necessary for selecting hardy perennials and for arranging borders, wild gardens, water gardens, &c.

No. 11.—Cold Greenhouses and Frames. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—How to secure foliage and bloom through the whole year. Lists of most useful plants, with brief description and cultural directions.

No. 12.—Carnations, Pinks and Picotees. By E. Hasler Potter, F.R.H.S.—Simple and sufficient directions for raising pinks, selfs, bizarres, flakes, fancies, picotees, winter flowering, malmaison, and marguerite carnations from seeds, cuttings, or layers, and for their culture for exhibition flowers, cut blooms, &c.

No. 13.—Spring Gardening. By H. Francklin.—Deals with the aspects of out-door Spring gardening; wild woodland, border walks, edgings, bulbs in grass and under trees, flowers in orchards, bog gardens, rooteries, walls, arches, bedding, house decoration, &c.

No. 14.—Hardy Fruits. By E. Hasler Potter, F.R.H.S.—Full instructions for growing all British fruits.—Propagation, culture, manuring, watering, training, pruning, gathering the fruit, and storing. With diagrams of garden arrangements, forms of trees, &c.; also recipes for cures for pests and diseases.

No. 15.—Keeping a Dog. By A. Nicol Simpson, F.Z.S. Written clearly and concisely, for the keeper of one or two dogs as pets, companions, or guardians of the yard.

No. 16.—Rose-Growing. By D. Grant McIver, A.R.H.S.—The whole elementary art and practice of rose-growing, for garden glory, for cut blooms, or for perfect exhibition specimens. Preparation of ground, site and aspect, when and how to plant, propagation, roses in the greenhouse, roses for exhibition, lists of varieties, and a complete, concise rosarian's calendar.

No. 17.—Chrysanthemums. By E. Hasler Potter, F.R.H.S.—Directions for treating the principal varieties of chrysanthemums, annual or perennial, indoors or out-of-doors, for pleasure, profit, or show. With special suggestions for the town man who can only give attention at night and morning.

No. 18.—Bulb Culture. By D Grant McIver, A.R.H.S.—Directions for growing all kinds of bulbs under glass and out-of-doors. Also for many tuberous (&c.) rooted plants which are familiarly called "bulbs." Lists and illustrations.

No. 19.—The Vegetable Garden Calendar. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Gives, in twelve openings, graphic charts of the vegetable garden for each month. Each chart shows at a glance what crops should be in the ground, what should be yielding produce, what proportion of space should be occupied by each, and what operations should be in hand. Many illustrations.

No. 20.—Goats for Profit. By a practical Goat and Rabbit Farmer. Selection and purchase, housing (with working plans), breeding and the treatment of young kids, feeding, grooming, milking, uses of the milk, making of butter and cheese, killing and dressing kids, training goats to harness, treatment of their diseases, etc.

No. 21.—Garden Operations. By Wm. F. Rowles.—Digging, trenching, preparing for seed, sowing, thinning, planting, ridging, earthing, hoeing, weed-killing, staking, protecting, harvesting, tools and make-shifts, water-supply, watering, lawn-making, mowing, rolling, making paths and beds, and many other operations. The how, the when, and the why clearly explained.

No. 22.—Pruning, Training and Trimming Trees and Shrubs. By D. Grant McIver, A.R.H.S.—Explains and illustrates the whole art of using knife and shears in a garden. D.

Price 6d. each net; post free, 7d.

Nos. 16 to 21 also in cloth, price 1s. each, net: post free, 1/2

No. 23.—To Manure at a Profit. Every Farmer his own Experimenter. By H. B. M. Buchanan, B.A. (Cantab), Author of the "Country Readers," and joint Author of "Lessons on Country Life," and J. J. Willis, Superintendent of the Rothamsted Field Experiments. L.

No. 24.—Profitable Hobbies. By H. Snowden Ward. Gives advice on the cultivation of hobbies, and how to turn them to profitable account. The book is illustrated throughout, and deals with such subjects as wood-carving, photography, collecting, grangerising, drawing and designing, marquetrie staining, metal working, glass blowing, art enamelling, stone-cutting and polishing, the keeping of pets, etc., etc.

THE FARM.

No. 44.—The Agricultural Annual and "Mark Lane Express" Almanac. The Farmers' Red Book. Brimful of Facts and Figures relating to the Farm and Markets. Compiled by well-known Writers on Agricultural Subjects. Profusely illustrated. 272 pp., 8vo. Price 1s., by post 1s. 4d. Published early in December each year. L.

LIVE STOCK.

No. 47.—Rational Pig-Keeping. To Ensure Profit. Revised Edition. By W. J. Malden, late Principal Colonial College, Hollesley Bay, Suffolk; Superintendent Royal Agricultural Society's Experimental Farms, Woburn; Professor of Agriculture, Downton College; Agricultural Superintendent, Royal Dublin Society, etc., etc. Illustrated. Dealing with Principal Breeds, Selection of Stock, Housing, Foods, Breeding, Management, etc. In paper, price 1s., by post 1s. 3d.; in cloth, price 2s., by post 2s. 3d. L.

No. 48.—Goat-Keeping for Amateurs. A practical Manual on the Management of Milch Goats. By H. S. Holmes Pegler. Illustrated with four full-page plates, and other engravings. In paper, price 1s.; by post, 1s. 2d.

Seasonable Topics.

Farmers and Hunting Men.

IT is at public dinners when the wine flows freely that one hears the most about the glories of fox-hunting, and the benefits that the farmer derives from the time-honoured sport. In his quiet moments at home, however, the latter is not so sure that fox-hunting is much of a blessing to him, particularly if he has just had a field of seeds ridden over or Reynard has paid a recent nocturnal visit to his poultry yard. After all, the farmer can be induced to think well or ill of the hunt by the way the latter treats him, and we have just read with satisfaction a letter from a Master of Hounds to a local paper urging those who follow the hounds to do as little damage as possible, either by jumping unnecessarily or riding over seeds and roots. The master also urges the desirability of shutting gates, and giving explicit instructions to menservants to do the same, either when hunting or returning from the sport. This is as it should be, and we contend that if instructions like the above were generally followed it would be a good deal better than patting the farmer on the back at a hunt breakfast or public dinner. Do as you would be done by is the motto to follow if the farmer's sympathy with hunting is to be maintained.

Methods of Whitewashing.

WE need not urge again the necessity of cleanliness or the desirability of a liberal use of whitewash on the inside walls of stables, cowsheds, and other buildings, and this, by the way, is an operation for performance on wet days and at the time of the year when outdoor work is impracticable or not pressing. But if the necessity of whitewashing remains the same, methods of application are changing. Perhaps the general, and certainly the old-fashioned idea of whitewashing is a man with a pail and a brush slapdashing the mixture on to the wall, and bespattering the general surroundings, himself included. This is not so in all cases nowadays, for the time-honoured whitewash brush has had to give place to the modern spraying apparatus, by which lime wash can be applied to walls quicker, easier, without splashing and with much less waste of material. The saving in labour is alone sufficient to merit the use of a whitewashing machine where there is a good deal of this work to be done, and it may be used for a double purpose—*i.e.*, for the spraying of fruit trees and crops, and in view of the ravages of insect and fungoid pests, this is becoming to be treated as an essential operation.

Amateur Farmers.

IN spite of all that has been said and written about the depression in agriculture, and the difficulty experienced for years past to make ends really meet, the life of a farmer seems to hold out attractions for a number of people. There seems to be an impression amongst amateurs and novices that established and practical farmers do not work on the right lines, and that they would do better if they were more up-to-date in their methods. This is all very well, so far as it goes, but we are not sure whether the amateur farmer, with his advanced ideas and no sound experience to base them on, has not done more than anybody to check the development of modern ideas. We have known more than one man, possessed of capital but no experience, who has set out to farm on what are wrongly termed scientific lines. As a rule these amateurs, for they cannot be described in any other words, promptly lose their money in gaining the experience they should have had at first, while the old practitioner expresses no surprise, and has another sarcastic dig at "these scientific methods," though if he would only admit it, he knows that is not the method that is at fault, but rather the mode of application. We like to see a man enthusiastic, and perhaps this virtue is a little wanting amongst the members of the old school, but we have felt it our duty more than once to damp the ardour of amateur farmers who would put their money into agriculture before first getting the experience.

Working Oxen.

WE travelled in a railway train the other day with a number of hill country farmers who were discussing—we thought a little regretfully—the days when they could work a team of oxen on the land, and after getting a good bit of labour out of the beasts fatten them up at five or six years old, and make from £30 to £40 apiece of them at a Christmas market. That day is gone, however, and while bullocks on the one hand are too slow for labour on the land, the butcher of to-day makes no demand for those huge mountains of fat, about which there is so much waste. Some men were so loth to give up the old ways that they stuck to working oxen even against their better judgment, and it was not until they had carted the beasts from market to market to no purpose that they realised that the game was played out. Now and then one sees a team of oxen slowly labouring their way round a field, and there is something picturesque and old worldly about the sight, but, generally speaking, where they are kept it is more for the sake of old custom than anything.

Will Farm Labourers Combine?

IN view of the times the question is not unreasonable, nor is it altogether novel when we think of that doughty champion of years ago, Joseph Arch, who worked so hard in the interests of the class he represented, and was certainly the means of bringing about some reforms. But the position is this: There is an organised movement on foot for farmers to combine in their mutual interest, and the general feeling is that it is a wonder they have not done it before. This movement will naturally lead to the landlords having their organisation, and in this age of Union it is not unlikely that the labourers will be caught by the spirit of combination. And even if it were so there would not necessarily be anything disastrous about it, for in the relations between capital and labour a more sensible spirit has prevailed of late years, and union does not essentially mean strikes and all sorts of turmoil. At any rate what is sauce for the goose is sauce for the gander, for when farmers over the whole country are combined, the movement must essentially spread to the labourer, and it may be added that for leading and organising there are men amongst the class who are not wanting in ability.

Milk from Producer to Consumer.

IN view of infantile mortality, and in the interests of general health, it is of course essential that the public should be supplied with pure milk, and without discussing the rights and wrongs of Mr. John Burns's Bill, we will give it credit for having this for its object. Now there are three stages that the daily milk supply passes through. At first it is in the hands of the producer, the farmer, who passes it on to the middleman, the milkseller, and he in turn disposes of it to the consumer. The law will bring its force to bear on the two former parties, but what of the milk when it gets into the hands of the third? Some time elapses before the daily milk is consumed after purchase, and if one could see the conditions under which it is kept in hundreds of poor households, there would be no need to discuss the possibilities of contamination. It may be urged that the fault rests with the consumer if any ill arises through the milk, after purchase, not being kept under clean and sanitary conditions. Just so, but if this happens, it is unfair to saddle the blame on the farmer or the milk-seller.

Hares Past and Present.

WE are again in the midst of the shooting season, and once more we hear the wails of sportsmen about the decrease in the hare population. It is quite true, for though on some estates where game is stringently preserved hares are still plentiful, in other districts puss is as extinct as the dodo, and shooting men, with tears in their eyes, tell of the hares they used to get in course of a day's shoot, and now they never see one. Of course, if you discuss the matter confidentially with the gamekeeper, he will tell you how farmers have slaughtered hares since the passing of the Ground Game Act, almost to the point of extinction, but other people have had a finger in the pie besides farmers, for puss is a proverbially foolish creature where her own safety is concerned, and falls an easy prey to the wiles of the poacher. A short time ago we were discussing the question with a man who has a few solitary hares on his farm where there used to be scores, and he said he might as well have them, because if he did not somebody else would. It is this sort of thing, no doubt, that is responsible for the decline in the hare population.

Agricultural Politics.

BY A LOBBYIST.

Why Another Small Holdings Act?

Of course, we assume that when Mr. Balfour spoke of further legislation on the Small Holdings question being the purpose of the Conservative party he intended to convey the idea of a scheme of peasant proprietorship as opposed to the present policy of peasant tenancy. Let me ask Mr. Balfour if it be not well for a juncture to let this question lie? Frankly, apart from the incentive which the idea of possession must always give to a man, I cannot see the irrevocability of occupation meaning the ruin of the principle, and ownership meaning its inevitable success. And putting the question of ownership *versus* occupation aside, what could be the purpose of any new legislation? Mr. Balfour certainly would not introduce a Bill simply to relieve the county councils of what, I think, was, during the debate in the Commons, described as the tyrany of the commissioners—and those commissioners, moreover, are the mildest-mannered men that ever scuttled ship. Then I come back to my question—why more legislation? The Ministerial policy may be said to be a great experiment following on the lines of minor experiments. Why not wait until the disciplined results of those experiments are to hand? Of course, I comprehend that with all statesmen it is necessary to descend to the game of tickling-the-ears-of-the-groundlings; but the land is too grave and serious a matter to be made the subject of policy based upon that game. Perhaps, after all, Mr. Balfour does not mean to embark on a small holdings policy. 'Twere well, in very sooth.

* * *

The Evasion of the Tenure Act.

I had a brief conversation a few days ago with Earl Carrington on the subject of the attempts to evade the Land Tenure Act. For my part, I cannot understand attempts to evade the specific anxiety of the law by constitution-lovers. These, pray understand, are the very men who scoffed at passive resisters, and now demand the obedience of the Irish cottiers to the law of the land. True, they will urge that their case is different inasmuch as a loophole was accidently provided for them by the State. This reasoning is beyond me—it smacks too much of casuistry. The purpose of the State as indicated by Act of Parliament was made clear and distinct. This is, that this new tenure-law should apply to the farming industry. To seek to evade it is worse than passive resisterism—it is belligerent resisterism. The law may be right or wrong—if it be wrong seek to impress the public conscience that it may be altered. The landed interest of Great Britain has behind it so many ennobling traditions and fragrant policies that to evade and thwart the deliberate design of the State is not altogether worthy of it. But to my conversation with Lord Carrington: there was no doubt whatever about his lordship's temper. During the passage of the Bill through Parliament the Earl declared that if there were a deliberate intention to evade the Act, he would know how to deal with it—a hint at future legislation which the Radicals greeted with enthusiasm. That legislation is not merely possible, it is probable if the evading tactics be persevered in. Is it well to invoke it? Is even an escape from the damage caused by winged game worth it? Is compensation for unexhausted improvements?

* * *

A Ministry for Health and Agriculture.

I can certainly understand the anxiety which is attributed to Mr. John Burns to establish a Ministry of Health having absolutely independent authority from the Local Government Board. There can be no doubt that the Ministerial responsibility for securing the purity of the food of the people is going to be considerably increased. The new Foods Regulations Act will impose upon it duties sufficient in themselves to absorb an engrossed attention. While this is so Mr. Burns designs a housing scheme and an afforestation policy which will require a persistent, close, and most vigilant observation. The trend, too, of political opinion is in the direction of making the State increasingly responsible for the care not of the ne'er-do-wells of the community but of the unfortunates. This being so, the creation of a body having the care of the people's health has simply become inevitable, and it says much for the prescience of Mr. John Burns that he should have appreciated the fact. Now, if a Health Department—a Purity of Foods Department—be called into existence, it will have a direct and close importance for the agricultural interest. Our's is a food-producing calling and nothing else; this would be a food-safeguarding department and nothing else. What steps will the bodies associated with our interest take to secure an adequate representation on the *personnel* of this new department? Supposing there be an actual Ministry of Health, will it seek to associate with itself an active representative body? We have, of course, connected with each of our national departments and its statesman-chief a body of titular personages who are never consulted or considered. Will it be possible to give this advisory body of the Ministry for Health an actual definite existence?

* * *

The Villagers and the Act.

Mr. R. Winfrey, M.P., the Parliamentary Secretary of Lord Carrington, assured me the other day that the Board of Agriculture has every reason to be gratified at the reception which has been accorded the Small Holdings Act. "There is," he remarked, "behind this enthusiasm an intelligence, a wise anxiety, and a sane moderation which are the best sureties of its success. I am not merely speaking of the expository meetings we have held," proceeded Mr. Winfrey. "They have been certainly characterised by an interest, and even at times by an appreciation of the machinery we have set up, which can only be described as remarkable. These meetings have illustrated anew what many of us have felt to be the fact — that the clearer-eyed workers in the rural areas look to colonies of small holdings as one of the vital redemptive influences of the villages." I perceived from Mr. Winfrey's tone that he himself is under no illusions in regard to this fact. The political world does not need to be told that he is an enthusiastic pro-smallholder; but he does not believe that small holdings constitute the last word in rural politics. He, like Lord Carrington, is anxiously interested in the new Housing Bill. What will be the authority Mr. Burns will dower with responsibility? If the parish council be the unit, will the parish be given powers to coerce it should it refuse to act? Will a body, say of twenty parishioners, be able to set the Local Government Board in operation?

* * *

The State and Agricultural Organisation.

Mr. Yerburgh is a man who has pursued a just and righteous intention under discouraging conditions. His Agricultural Organisation Society is one of the most beneficent influences that has ever thrived under the pallid sun of an indifferent official sky. True, that sun has now been given a greater warmth, and the sky has a more roseate tone. Neither warmth nor sun means dollars. I beg Mr. Yerburgh to pursue the anxiety to secure a more definite grant from the State. It is pitiable that clear-eyed statesmen like Mr. Harcourt and Earl Carrington should, in a matter involving the very life of agriculture under modern conditions, have been content to rely on mere voluntary effort. Heaven forfend it be deemed I would discard voluntary effort. I am no State-Socialist, but I would have the State associate itself deliberately and practically with a policy which involves the whole scheme of agrarian distribution. Perhaps Lord Carrington deems it wise to make his first demand on the Treasury provide for the better equipment of his own department. I pray this may be his second anxiety.

The report of the Central Chamber of Agriculture with reference to the formation of an Independent Agricultural Party was considered at a meeting of the Herts Chamber of Agriculture held on Thursday, and after some discussion a resolution to the effect that "an Independent Agricultural Party was absolutely necessary, and could be formed," was carried by 14 votes to 5.

SOCIETIES.

Cambridgeshire.

The forty-fourth annual meeting of the members of the Cambridgeshire and Isle of Ely Agricultural Society was held at Cambridge on the 6th inst. The annual report and financial statement for 1906-7, which showed a surplus on the show at Cambridge in July last, and a total balance in the favour of the society of £262 16s. 4d., was received and adopted. An invitation to hold the show for 1908 at Chatteris was considered and accepted, and it was decided that the forty-fifth annual exhibition be held at Chatteris on July 22 next. E. Cecil Beck, Esq., M.P., the Liberal member for North Cambridgeshire, was unanimously elected president for 1907-8. Three vice-presidents were elected, most of the retiring members were re-elected, and Messrs. R. G. Heaton, J. C. Smith, W. Kent, and J. P. Pentelow were elected new members of the committee until 1911. Mr. E. B. Foster, J.P., was appointed treasurer, whilst Mr. R. Peters, who has been associated with the secretarial duties since 1863, was re-elected secretary.

Devon.

At the last meeting of the council of the Devon County Agricultural Association a letter was read from the Earl of Morley stating that he had great pleasure in accepting the presidency of the association for the current year.

The Royal Agricultural Society sent a communication suggesting that any legislation on the subject of tuberculosis and other diseases of cattle should issue from the Board of Agriculture, and that the matter should be carefully watched. The society had formed a committee, and invited this association to appoint representatives to attend a meeting during Smithfield Show week.

Mr. Morgan regarded the matter as a very serious one, and thought it would be well for the association to carefully consider the question before taking action. He maintained there was not half the disease in cattle in this country as was represented. He moved that no representative from that association be appointed to attend the meeting.

This, however, found no seconder, and it was decided to ask Mr. F. B. Mildmay, M.P., Mr. H. Eve, M.P., and Mr. Morgan to attend the meeting.

Mr. W. J. Crossing moved:—That the advantages conferred on members of local agricultural associations within the prescribed radius of the place in which the county show is held be restricted to subscribers of 10s. and upwards to any such show.

Whilst they were anxious to work in harmony with local associations, and to do all they could to promote their show, yet it was, he said, rather an unfair advantage to admit 5s. subscribers free to the county show. If the resolution was carried it would considerably restrict the issue of free tickets.—The motion was carried *nem. con.*

The report presented at the annual meeting of the East Sussex Farmers' Club was of the most satisfactory nature, showing a balance to be carried forward of £19 10s. 11d. compared with £11 14s. 1d. last year. Subscriptions for the past year represented £49 15s. With unanimity Mr. W. F. Ingram was re-elected chairman, and Mr. A. Wadman vice-chairman. In thanking the meeting Mr. Ingram said the club had existed for some twenty-seven years, and as it aged it increased in usefulness and certainly was appreciated, because every year they got considerably more members. It was a matter for great congratulation that they had now nearly every farmer in the district belonging to it, and also nearly every landowner; and it might thus be said that the agricultural interest of East Sussex was well represented and, further, the intellect and acreage of East Sussex.

The Canterbury Farmers' Club and East Kent Chamber of Agriculture, at their last meeting, discussed the following proposition by Mr. Alfred Amos: "That all tenant farmers who have received notice to quit this Michaelmas be invited to send in their names and addresses, the name and address of the owner of their farm, and of his agent (if any), also stating the reason for notice being given." He referred to the fact that several farmers whose leases were nearly up had received notice to quit, and called attention to the promise of Lord Carrington that if he found the new Land Tenure Act was being systematically evaded in order that its benefits should not be enjoyed by the tenants, he would make its provisions retrospective. He (Mr. Amos) considered it very hard that these notices to quit had been given, because there was nothing to warrant a rise in rents at the present time, and therefore no notice could have been given on that score. These notices had been issued not only in Kent, but in several other counties. Considerable discussion ensued, the general view being that the resolution had been much too widely drawn. It was eventually negatived by twenty-two to two votes.

NORWICH FAT STOCK SHOW.

The annual Fat Stock Show commenced on Thursday last in the Agricultural Hall, Norwich, with favourable weather, and a very good entry of live stock. Indeed the hall was quite crowded to excess, the number of entries totalling more than last year. Naturally the chief feature of the show is the display of cattle, and these were, on the whole, up to the average, the superior quality of several of the best specimens compensating for the rather large number of inferior animals that were present in some of the classes. The cold season had done much to enable the animals to retain their good coats of hair, which is a very important item in the bringing out of fat stock. Red Polls, Shorthorns, and the small cattle classes were capitally filled, both as regards their number and quality. Some of the county classes and the cross-bred classes were not quite as level as usual. Coming to the sheep section, the display of lambs was quite wonderful, many of them being brought out to perfection. Pigs formed a very small portion of the whole.

CATTLE.

The catalogue commences with the local breed of Red Poll, steers not exceeding two years old coming first. The first prize in this class was won by Mr. R. J. Harman for a steer of very good beef quality, shape, and the very satisfactory live weight of 14 cwt. 1 qr. 23 lb.; second and third prizes were awarded to two remarkably typical steers from the Hon. A. E. Fellowe's herd; these as regards symmetry were exceptionally good and evenly filled up with roasting beef of choice quality; on the scales, however, they fell fully 2 cwt. short of the first-prize steer. The reserve was accorded Sir Walter Corbet for another evenly-fed and well-brought-out steer. The older class, not exceeding three years, mustered but two entries, the best of which was bred and shown by Sir Walter Corbet and sired by Albert. This bullock has a capital top line and is well covered with excellent beef; his weight, too, 16 cwt. 0 qr. 4 lb., is excellent for a Red Poll. The other entry was also excellent beef and well moulded, but 1 cwt. lighter on the scales than the winner; this was exhibited by Sir Edward Mann.

The females were also very strong. Sir Walter Corbet's heifer Acton Beryl is wonderfully symmetrical, heavily fleshed, and of ripe good quality; she scales 12 cwt. 3 qr. 15 lb. Sir Richard Cooper provided a very good second in Ashlyn's Pitwood, bred by her owner, well put together and finished, with a live weight of 14 cwt. 1 qr. 5 lb. Lord Cranworth carried off the third prize with a young cow, which, though massive in form and heavily fleshed and recording 15 cwt. 3 qr. 8 lb. on the scales, was obliged to yield to the previous winners in point of quality. The champion prize for the best Red Poll was awarded to Mr, Thurman's young steer, and the reserve to Sir Walter Corbet's heifer.

Shorthorn stores above two years and not exceeding three were the next class to deal with. His Majesty the King came well to the front in these with a white of exceedingly good quality, bred by exhibitor and sired by Royal Carlisle. In outline he is very perfect, and he handles with a beautiful touch, which denotes good beef, his capital covering of hair, too, is very pleasing. He pulled up the beam at 15 cwt. 2 qr. 19 lb., and was also awarded the special prize for the best animal bred and fed in Norfolk. Sir Walter Corbet contributed the second prize winner in a roan of Mr. John Ross's breeding, with 16 cwt. 1 qr. 15 lb. to his credit, level in his feeding, and a great wealth of roasting beef. Mr. Charles Emmerson came in third with a much heavier bullock than either of the preceding, bred in the North of England, and possessing a capital back of beef. The other two steers in the class were very big, their weights being respectively 17 cwt. 3 qr. 16 lb. and 18 cwt. 2 qr. 1 lb.

Shorthorn cows or heifers followed, and these, too, were well represented. The winner turned up in Mr. H. S. Leon's famous heifer Silver Streak, bred at Bletchley Park, and sired by Uppermill Challenger; she is very level, and well filled in her roasting parts, her fore end being particularly good, and her weight, 16 cwt. 1 qr. 3 lb., she is also very satisfactory.

The Sandringham herd contributed the second prize-winner in Molly, a very evenly-fleshed white by Royal Carlisle. Her sweetness of breed, character, and excellent top, together with a scale record of 14 cwt. 3 qr. 12 lb. at two years and five months old are not easily beaten. Mr. Robert Mattocks had a sappy, heavy-fleshed heifer to which the reserve card was awarded.

Steers of any other breed than Shorthorn or Red Poll consisted of a Galloway of Mr. R. W. Hudson's, Danesfield Challenger and an Aberdeen-Angus of Mr. B. W. Parsons', the latter, however, was a long way behind his companion the Galloway, which at two years and eight months records 16 cwt. 1 qr. 15 lb., and both in outline, quality, and finish is a very awkward opponent.

The next class was for steer of any breed, including cross or mixed, but excluding Red Polls. This was a somewhat moderate class with the exception of the first prize winner. This was Mr. R. W. Hudson's Aberdeen-Angus Danesfield Waterman, which records 12 cwt. 3 qr. 9 lb. on the scales, is of extremely perfect symmetry, and in point of finish and quality is one of the best of his age seen for a long time. He was eventually awarded the president's prize as best ox or steer in the show. Mr. Charles Emmerson, Sir Walter Gilbey, and Sir F. E. A. Adair, were the other exhibitors in the class with promising steers for another year.

The older class of crossbred steers, not exceeding three years, consisted of a number of big, Shorthorn and other crosses without anything of outstanding showyard points. Mr. C. Emerson, Mr. Martin Gurry, and Mr. Murrell carried off the prizes in the order written.

Cows or heifers of cross or mixed breeding, or pure breeding other than Shorthorn or Red Polled, brought out the champion of the show and best female; this was Mr. J. J. Cridlan's Aberdeen-Angus Elegance of Maisemore, a daughter of Aachen. She was bred by her owner, and is a heifer of quite wonderful proportions, coming near to the ground, with a perfectly even top line, and covered with a great wealth of first-class beef; she comes out and shows herself well, too, her scale record is 14 cwt. 2 qr. 5 lb. A close second was found in Lord Calthorpe's Devon and Angus cross, very shapely in her build, ripe in her finish, and with a record of 15 cwt. 2 qr. 25 lb. on the scales, she is by no means an easy one to beat.

Steers of any breed, bred and fed in Norfolk, not exceeding two years old, followed, and severa

The subject of our illustration above is the Champion Beast at the Norwich Fat Stock Show last week—namely, the Aberdeen-Angus Heifer Elegance of Maisemore—sire Aachen, dam Elegance of Preston—bred and exhibited by Mr. J. J. Cridlan, Maisemore Park Farm, Gloucester. Elegance of Maisemore was shown in the Class for Cow of Any Breed other than Shorthorn and Red Polled (including Cross and Mixed) that has produced at least one live calf, or Heifer of Any Breed not exceeding four years old. She was placed top of this class; was awarded the Special Prize for the Best Cow or Heifer in the Show, and the Patron's Prize for the Best Beast in the Show. Her age was given as 2 years 9 months 3 weeks 3 days, and her weight 14 cwt. 2 qr. 5 lb.

useful ones were included in the ranks. Mr. J. M. Bond, Major Jary, and Mr. W. Le Neve were the winners.

Steers of any breed, bred and fed in Norfolk, above two and not exceeding three years, brought out two or three remarkably good bullocks, including a Shorthorn of his Majesty the King's, pulling up the beam at over 18 cwt. Very level, both in outline and flesh, covered with a good coat of hair and handling very firmly; following him

Photo by [*G. H. Parsons.*

The Shorthorn Steer illustrated above won the Second Prize for Shorthorn Steers above two years and not exceeding three years old at the Norwich Fat Stock Show last week. It was exhibited by Sir W. Corbet, Bart., Acton Reynold, Shrewsbury, but was bred by Mr. J. Ross, Millcraig, Alness, N.B., its sire being Winning Count and its dam Alina. Its age last week was 2 years 9 months 1 week 6 days, and its weight 16 cwt. 1 qr. 15 lb.

was another very good Shorthorn of Mr. E. H. Evans-Lombe's, a little lighter than the Sandringham bullock, but an admiralbe class. Sir Edward Mann had also a very good bullock in the third place of Hereford cross that weighed 18 cwt. 1 qr. 24 lb.

The Norfolk class of heifers under two were a useful class of five entries, the honours falling to Mr. Thomas Kidner, His Majesty the King, and Mr. B. E. Fletcher. There was seven entries of cows in the class following, consisting of Shorthorns and crossbreds chiefly. Mr. J. B. Dimmock was awarded first prize for a massive well-fed Shorthorn of 16 cwt. 1 qr. 20 lb. Another of Royal Carlisle's daughters taking second for his Majesty the King, and a Shorthorn and Red Poll cross of Mr. Robert Mattocks' came in third, a capital quality heifer, too.

Small cattle were again wonderfully represented; for symmetry and finish, indeed, they were fully equal to anything in the show. The Danesfield contingent were quite at home again in these classes, carrying off first prize for steers and also for females, as well as the champion prize. The first prize steer was a Dexter and Shorthorn cross, most perfect in his moulding, and as ripe as a plum; he pulled up the beam at 8 cwt. 3 qr. 7 lb.

Mr. B. de Bertadano had also a very sweet steer in the second place, and His Majesty the King contributed an excellent beef steer for the third prize. The champion, Danesfield Marjory, is a pure Dexter, a marvel of beauty and quality, with the excellent weight of 8 cwt. 3 qr. 21 lb.

Sir Walter Gilbey had also a beautiful heifer placed second, of Red Poll and Dexter cross, she scales 8 cwt. 0 qr. 15 lb., and was reserve for the championship of the section. A second entry from the same herd secured the third prize.

Irish cattle, though on the whole well represented, contained several of rather plain character. This, however, could not be said of Mr. Thomas Cook's first in the young class, or of the one similarly honoured in the older class from the same herd, which scaled 18 cwt. 1 qr. 19 lb. Other winners in these classes were shown by Mr. W. A. Starling, Mr. Gowing, Mr. Emery, and Mr. Hargrave. In the butchers' class Mr. F. Nash was placed first with an Irish bred one, and Mr. Cook second with another similarly bred.

SHEEP.

The chief strength of this section consisted in the magnificent show of lambs, the champion prize for the best pen in the show being readily accorded to H.M. the King's first-prize pen of Southdown lambs, which were wonderfully true and ripe and scaled 4 cwt. Other winners amongst the Southdown lambs were the Exors. of the late Colonel McCalmont, with a considerably heavier pen, and his Grace the Duke of Devonshire. Lambs of other short-wooled breeds were headed by a pen of Mr. H. E. Smith's Suffolks, wonderfully ripe and finished, with a record of 5 cwt. 2 qr. 20 lb. on the scales. Mr. T. F. Buxton's Hampshires, placed second, scaled 5 cwt. 1 qr. 13 lb. Captain Fielding had also two capital pens of Suffolk lambs. Mr. Thomas Rush, as usual, carried off the lion's share of the crossbred classes with his Oxford and Hampshires, the first prize pen pulling up the beam at 6 cwt. 0 qr. 15 lb., and the second at 5 cwt. 3 qr. 14 lb.

The best pen of wethers in the show proved to be Mr. E. Smith's Suffolks, 7 cwt. 1 qr. In Southdown wethers the executors of the late Colonel McCalmont came in first, the Royal flock second, and the Duke of Devonshire's third. Wethers of other breeds consisted of a famous pen of crossbreds of Mr. Rash's, 8 cwt. 0 qr. 12 lb., and a pen of Hampshire's shown by Mr. T. F. Buxton, scaling 7 cwt. 2 qr. 15 lb.

SWINE.

This section of the show mustered but very few entries. The executors of the late Colonel McCalmont were awarded first for the only pen of Berkshires under ten months, and a very neat entry. Mr. W. Mitchell had the only entry of Whites, which were awarded the second prize. The Norwich Corporation exhibited several useful pens of crossbreds, as did also Mr. W. H Webster.

ROOTS.

There was an uncommonly good show of roots, which, though not large, were of excellent quality. Of mangolds especially there was a big entry in the various classes, especially of Globe and Tankard. As to the swedes, there was about a score entries in one class, and, viewing the roots in their entirety, the root season in the great agricultural county of Norfolk must be a very satisfactory crop, judging from the examples benched.

GRAIN.

The grain was rather a better show than usual, all the prize-winning samples of barley being very fine indeed. The first prize was of beautiful colour, but there was a drawback in all this year's barleys, in that they had not got as fine a skin as maltsters like, which is accounted for by the absence of sun. The first prize barley was grown on a gravelly soil. Those grown on the heavy land, which usually take a high place, were this year somewhat inferior to those grown on the ight lands.

CHAMPION AND SPECIAL PRIZES.

CATTLE.

The Patron's Prize for the best beast in the show.—1, Mr. J. J. Cridlan's Elegance of Maisemore; r, Mr. R. W. Hudson's Danesfield Waterman.

The President's Prize, to the value of £20, for the best ox or steer in the show.—1, Mr. R. W. Hudson's Danesfield Waterman; r, Mr. R. W. Hudson's Danesfield Challenger.

A prize of the value of £15 for the best cow or heifer in the show.—1, Mr. J. J. Cridlan's Elegance of Maisemore; r, Mr. R. W. Hudson's Danesfield Marjorie.

The Members' Prize of the value of £15 for the best Red-Polled beast in the show.—1, Mr. R. J. Shurman; r, Sir W. Corbet, Bart.'s Acton Beryl.

A prize of the value of £15 for the best beast in the show bred and fed in Norfolk—1, H.M. the King, Sandringham; r, H.M. the King, Sandringham.

Special Prizes for Norfolk fed beasts—1, Mr. W. A. Starling's Tinker; 2, Mr. G. Emery; r, Mr. F. Nash's Butcher Boy.

A prize to the value of 10 guineas for the best beast in the Small Cattle Classes Nos. 14 and 15—1, Mr. R. W. Hudson's Danesfield Marjorie; r, Sir W. Corbet, Bart.

A Silver Challenge Cup for the best beast in the show exhibited by a Norfolk farmer—1, Mr. J. M. Bond; r, T. Kidner's Darling.

SHEEP.

Champion Prize for the best pen of sheep in the show.—1, H.M. the King, Sandringham; r, Mr. H. E Smith.

Special Prize of the value of £5 for the best pen of lambs in the show.—1, H.M. the King, Sandringham; r, T. Rush.

Special Prize of the value of £5 for the best pen of shearling wethers in the show.—1, Mr. H. E. Smith; r, the Exors. of the late Colonel McCalmont.

Special Prize of £5 for the best pen of sheep in the show exhibited by a Norfolk farmer.—1, Captain A. B. Fielden; r, Captain A. B. Fielden.

JUDGES.

CATTLE.—Mr. Peter Dunn, Pasture House, Sigglesthorne Hull; Mr. William Reid, 160, Central Meat Market, London, E.C.

SHEEP.—Mr. T. B. Eagle, Thrupp, Oxon; Mr. G. F. Hempson, Estate Office, Gatton Park, Reigate, Surrey.

BUTCHERS' SHEEP AND PIGS.—Mr. J. Lindsay, 107, High Street, Putney, S.W.; Mr. George Raby, Melton Constable, Norfolk.

ROOTS AND GRAIN.—Mr. William Case, Tuttington, Aylsham; Mr. Charles Waters, Postwick, Norwich.

Photo by [*G. H. Parsons.*

The Red Polled Heifer shown above is Acton Beryl, winner of a First Prize and Reserve for the Best Red Poll at the Norwich Fat Stock Show last week. She is by Albert out of Acton Ruby, and was bred and exhibited by Sir W. Corbet, Bart., Acton Reynold, Shrewsbury. Her age at the Show was given as 2 years 10 months 4 days, and her weight 13 cwt. 3 qr. 15 lb.

SHOW GOSSIP.

The second of the great fat stock shows for the year opens on Saturday next, when the 59th annual exhibition will be held in Bingley Hall, Birmingham, and extend over the following Monday, Tuesday, Wednesday, and Thursday. The entries are:—Cattle, 175; sheep, 56; pigs, 92; corn, 63; roots, 144; potatoes, 39; poultry, 2,090; eggs, 24; pigeons, 964. His Majesty the King is a large exhibitor, having entries of Herefords, Shorthorns, and Devons from the Royal Farms, Windsor, while four pens of Southdowns will be sent from Sandringham. The challenge prizes, value £105 each, given by Messrs. Elkington and Co., Mr. J. Thorley, and Messrs. Webb and Sons, will be offered for competition. The first and last-named are new cups this year, as his Majesty won these trophies outright in 1906. There are also two £50 challenge cups, the gift of the proprietors of the *Birmingham Daily Post* and Mr. J. J. Cridlan respectively.

For sheep there is the Cooper challenge cup, and the one offered for pigs (in which section there is in excellent entry) is provided by the hotel and innkeepers of Birmingham. Mr. G. F. Hempson, Estate Office, Gatton Park, Reigate, will act as one of the sheep judges, instead of Mr. Jonas as announced last week. The Board of Agriculture and the local authorities have passed special orders and issued licences to allow the exhibition of swine and to facilitate their movement to and from the show. There will be an excellent show of corn, roots, and potatoes, and the usual number of attractive stands, implements, &c. The leading railway companies are running a large number of excursions at low fares.

The Denbighshire and Flintshire Agricultural Society's sixty-sixth annual show is fixed to take place at Rhyl on Thursday, August 6.

The Devon County Agricultural Association's 1908 show has been fixed for Tuesday, Wednesday, and Thursday, May 19, 20, and 21, at Plymouth, the entries to close as follows:—Implements, April 7; stock, April 14; and poultry and pigeons, May 5. The secretary is Mr. E. R. Callender, Starcross, South Devon.

A highly satisfactory balance-sheet was presented at the annual meeting of the Woodbridge Horse Show Society, for it showed a large balance in hand—viz, £58 19s. 3d., as against £8 4s. 3d. last year. This result was due to new subscribers, increased subscriptions, the special donations, and a record gate at this year's show. Such a state of affairs naturally gave considerable satisfaction, but the committee wisely reminded them they should continue to do their very best for the society. The balance-sheet showed receipts to amount to £358 18s., the principal items being subscriptions, £122 6s.; donations, £47 2s.; entry fees, £29; box fees, £29; gate money, £104 19s. 6d. On the other side £138 went for prize money, £70 1s. for materials and labour, whilst smaller items brought the total up to £299 18s. 9d., leaving a balance in hand of £58 19s. 3d.

The disadvantages under which the Devon and Exeter Horse Show Society's annual exhibition was held this year were set forth at the annual meeting of the society, when the secretary had to report that the credit balance had been reduced by £53 6s. 11d. It was reported that the ground space at the County Ground had been curtailed to rather an alarming extent, whilst freedom of action had also been limited. Almost every available space had been let for advertising by the County Ground authorities, so that even decoration was objected to, whilst the right of catering was absolutely taken out of the hands of the Horse Show Committee, and this department alone in former years brought in a revenue of £30. The question as to whether the show should be continued was seriously discussed, and, happily, it was decided to hold a show next year, a committee being appointed to consider the question of a new site.

The prize schedule has now been issued for the Scottish National Fat Stock Club's show, to be held in the Waverley Market, Edinburgh, on December 4 and 5. The handsome sum of £1,470 is offered in prizes, divided up as follows:—£1,018 for cattle, £156 for sheep, £33 for pigs, £225 for roots, grain, &c., and £38 for butter making. How valuable the awards are will be imagined when it is stated that it is possible to win with one steer or one heifer £95, in addition to challenge cups, or with a pen of sheep to win £20, and with a pen of two pigs £8. The show has long earned the title of the Smithfield Show of Scotland, and that the forthcoming exhibition will maintain its reputation practically goes without saying, for the fixture is more popular than ever, a fact well proved by the present flourishing condition of the society, who have, we understand, the substantial sum of £600 in hand and a membership of about 700. The following is a list of gentlemen who have been selected to act as judges at the show:—

CATTLE: Shorthorns, Aberdeen-Angus, and cross breeds.—Messrs. George Harrison, Gainford Hall, Darlington; Alex. Beddie, Adziel, Strichen; and James Lawson, Scotsmill, Alford. Galloway, Highland, and president's prizes.—Messrs. John M'Turk, Ashley Bank, Castle-Douglas; Archibald Whyte, Inverquharity, Kirriemuir; and Robert Thomson, 29, Port Street, Stirling. Extra class and dairy cows.—Messrs. S. W. Hackney, Leopold Mount, Chapeltown Road, Leeds; Joseph Brown, Hermitage, Dalbeattie; and John Harrison, Tems House, Giggleswick, Settle.

SHEEP: Blackfaced, Cheviots, and Half-Breds.—Messrs. John Robson, Newton, Bellingham; Donald Innes, Sandside, Thurso; and James Thomson, 1, Belmont Villa, Haddington. Crosses and Extra Classes.—Messrs. W. Shiel Dods, 38, High Street, Berwick-on-Tweed; Wm. Jackson, Broomlands, Symington, S.O., Lanarkshire; and R. B. Meiklejohn, 36, St. Enoch Square, Glasgow.

PIGS.—Mr. James Wilson, 27, Albemarle Crescent, Scarborough.

ROOTS, &c.: Swedes, Yellow and White Turnips, Cabbages, and Potatoes.—Messrs. John A. Bell, Ploughlands, St. Boswells; Thomas B. Wright, Cairnhill, Girvan; George Donald, Ladyhill, Keith; and William Duthie, Collynie, Tarves, Aberdeenshire. Referee.—Mr. James Cook, Arniston, Gorebridge.

GRAIN.—Messrs. William Inglis, Bonnington Park House, Edinburgh; George Maclennan, 14, Cluny Terrace, Edinburgh. Referee.—James Wyllie, Pathhead, Cockburnspath.

BUTTERMAKING.—Messrs. R. J. Drummond, Dairy School, Kilmarnock (open classes and championship); and Fred. Smith, 7, Shandon Street, Edinburgh (novices' second day).

SPECIAL JUDGES: For Best Steer, Best Heifer, and Best Animal at the Show.—Messrs. George Harrison, Gainford Hall, Darlington; Archibald Whyte, Inverquharity, Kirriemuir; and James Wood, Faussett Hill, Gullane. Best Pen of Sheep.—Messrs. Donald Innes, Sandside, Thurso; William Jackson, Broomlands, Symington; and Mr. J. M'Kinnon, live stock agent, Blairgowrie. Best Pen of Pigs.—Mr. James Wilson, Scarborough.

The Suffolk Fat Cattle Club have received a record entry for their forthcoming show, the total being 1,284, as compared with 1,020 last year. With the exception of corn and dairy produce, the increase is spread over each section, the most notable being that for pigs, for whereas last year there were only eighty entries, in this section this year there are no fewer than 200. Cattle number eighty as against seventy-four, and sheep thirty-two against fifty-seven, whilst the entries in the other sections are as follows:—Corn, forty-six, a decrease of twelve; roots and vegetables, 310, an increase of twenty-five; cottagers' fruit and vegetables, ninety-three, or forty more han last year; dairy produce, eighty-four, a drop of six; poultry and eggs, sixty, an increase of twenty-seven; bread, sixty-six, four more than in 1907; fruit and flowers, seventy, against fifty; and miscellaneous, 218, an increase of fifteen. With such good entries the show should prove the best of the series.

The West Riding Chamber of Agriculture at their last meeting passed the following resolution:—"That the members of this Chamber, having considered the Larceny Bill, are unanimously of opinion that, as soon as possible, it should be introduced and passed by Parliament, as, in these populous districts, petty thieving and trespass have now become intolerable." In pointing out the need of such a Bill, one of the members remarked: "If a man steals a hen, or some turnips, or potatoes, I have to bear the expenses of prosecution myself, but if a man walks down the street and takes a penny novel, or anything else, from a shop the Government takes the matter up and pays for it."

Stockton Hirings took place on Wednesday in unfavourable weather, and the attendance naturally suffered. There was a poor supply of practical men, who wanted £14 for the half-year, and a good demand for plough boys, who asked from £10 to £11 for the year. The wages for women and girls were considerably lower, whilst there was only a fair number seeking employment. Women obtained £18 for the year, and girls for a similar period received from £8 to £10.

CORRESPONDENCE.

Farmers and Protection.

SIR,—"Lobbyist," in yours of November 18, puts forward a number of questions for Mr. Chaplin to answer. These make a suitable series for winter evening answering, and as Mr. Chaplin is doubtless otherwise engaged, I should like to give my answers.

We have in the first place to remember that the dark days of farming during the past twenty-eight years are undeniably the result of the Free Trade which swamped the British farmer. Is there any reason to suppose that the British farmer is going to face a worse competition than he has? "Lobbyist" apparently does not disagree with Mr. Balfour on the probability of Canada, Argentina, &c., smothering the British farmer in the years to come. If this is to be, surely farmers look to some protection against it. Free Trade has not protected him in the past, and it will not in the future. Personally I do not see anything illogical in Mr. Balfour's observations quoted in the paragragph on corn. He points out the situation of this country is not relatively the same towards the rest of the world now as it was sixty years ago; and he gives the reason why—because the wheat-growing areas of the world have been hugely developed since then; competition, small then, is immense now; therefore the necessity for using other weapons.

To me, "Lobbyist's" argument loses the whole of its force because he does not recognise that colonial preference does not necessarily mean that colonial-grown corn must come in duty free. We can put some duty on the Colonies, and a bigger duty on foreign countries not belonging to the British Empire. Surely Mr. Balfour and Mr. Chaplin, who have studied this question, must see it in this light, if "Lobbyist" does not; and I take it the public also see it in this aspect.

How is Protection to benefit the British farmer? Mr. Chaplin is asked. My answer is, by modifying the present overpowering competition which Free Trade has imposed upon him, and in the place of it give him protection on a high scale from the foreigner, and on a lower scale from our colonial relatives; then he will be so much better off than he otherwise would be. He will be benefited to the extent of the duty placed on those who do not pay our country's taxes but use its markets.

And why should not this be done? 'Lobbyist" asks. "Why should the old traditional industry of the nation, agriculture, be the Cinderella of the family?" I repeat, why should it? Why should not this protection be given to it which has been withheld under Free Trade? What substitute has he to put in its place unless he would serve up the panaceas of the Socialist? I have looked round farming from many aspects, but I do not see others. Take off taxes? Well, that only means someone else but farmers will have to pay them, just as they would have to pay a little more if food were taxed.

Now, as to the seven questions put by "Lobbyist."

The three first have been answered by giving the Colonies preference over other countries in the manner indicated.

As to the fourth (*d*). Foreign competition would not be really put a stop to. This is a guarantee that the large population in this country need have no fears in this respect. Every farmer agrees that duties must be small. They must be, and there is no need for them to be big; but they must be big enough to substantially assist, in so far that they make it profitable to grow wheat. At the present time the people are eating bread made from wheat which costs 40s. per qr.; in 1893 or thereabouts it cost 18s. a qr., at which price I sold hundreds of quarters of sound wheat. Of course the doubling of the price ought to bring about a revolution, but it has not. It is awfully stupid of it not to, because our Free Trade friends took off 1s. per qr. because of its serious detriment to British industries other than farming; and they resist any increase through taxation on principle. Now wheat may or may not go up to 45s. a qr. Suppose it does, will everything be unhinged? Yet at that price a very large increase in the wheat area and a general all-round improvement in farming would take place, greatly to the benefit of those industries which cater for the country markets. Personally, I believe practically every farmer would farm without grumbling if wheat were guaranteed at 45s. Therefore, I say the tax need not be great, but it should be enough to keep the balance between farming and other industries, and not let farming be the Cinderella.

As to No. 5 (*e*). No serious import would be put on wheat. Commonsense would, of course, have to be applied to "raw materials." That is to say, the extent of duty on raw material should be in close relation to its value for developing into a manufactured material. Some articles require very little labour spent on them, others require more, and they are therefore of different value to the industrial population.

No 6 (*f*). I do not see that Mr. Balfour's state-

Questions and Answers.

FARMING.

Rats and Potato Clamps.—What is the best way to keep rats from boring potato pits?—TROUBLED.

ANSWER: The only advice I can give is that you kill the rats or take steps to remove them from the vicinity of the clamps. If you allow the rats to remain unmolested you cannot keep them out of the clamps, but by the persistent use of ferrets and traps, or of poison and traps, you might prevent the rats doing much damage to your potato clamps, and in very bad situations you might find narrow-meshed wire netting of considerable service. The rats would soon learn to go under the netting, but you could readily detect that.

Fattening Bullocks.—What is the best and quickest fattening food to give 18 months' old bullocks? I have nothing but some very good hay, no roots. Kindly say what quantity, by weight or measure, to give?—RANCHER.

ANSWER.—If you desire to fatten your bullocks as speedily as possible, and you have plenty of good hay, but must buy all other food you may require, I think you must make your hay the basis of your feeding and supplement it with oilcake. Perhaps you could not do better than give your bullocks all the hay they will eat, 3lbs. of linseed cake, and 3lbs. of undecorticated cottoncake per head per day. If you can obtain it, you might find it advantageous to also give a quantity of oat-straw, say about 5lbs. per head per day, chaffed, along with the cake. If you want to put a limit to the hay, say 21lbs. per bullock per day.

VETERINARY.

Recipe for Thrush.—Would you be kind enough to give recipe for the above, as I have a horse that has got it slightly?—READER.

ANSWER: A recipe is not the sole essential for the cure of thrush, for the most efficient dressings will fail if the exciting causes are allowed to persist. There must first then be a removal of the cause, or the recipe will not assist you much. Do you know the common causes of thrush in horses, or that in operation in your particular case? Mild cases disappear with attention to cleanliness, proper shoeing, and simple dressing with tar ointment. More advanced cases require to have the cleft cleaned out, loose and decayed bone removed, but strictly conserving anything that is sound, and to be kept clean and dry, and to be dressed with astringent agents. A popular dressing for thrush is equal parts of butyr of antimony and aloctic tincture of myrrh, but the modern veterinary surgeon generally gives preference to dry dressings, and dusts the affected parts with calomel.—M.R.C.V.S.

Mare with Swelled Legs.—Would you please tell me what I am to give a mare? She was out of health last winter, but appeared to get right in the summer. She was put in the house by night about three weeks ago, and her legs swell. She is on the grass by day, and does some work. When in the stable she gets nothing but hay. The water she makes is as clear as spring water, different from the other horses. She also passed some worms, rush worms we call them. The hair is standing. She is eight years old, and with foal. Her heels are a little cracked.—W. F.

ANSWER: Debility is the usual cause of swelling of the legs, and of this dropsical condition cracked heels is not an uncommon accompaniment. The mare suffers from worms, and perhaps from diabetes insipidus, and she is known to be in foal. Add all these drafts together, consider that they are operating on an animal apparently naturally unthrifty, and far from robust, and ask yourself if it is giving such an animal a fair chance to ask her to work on the food provided? She is "on the grass by day," presumably when not at work, and "when in the stable she gets nothing but hay." Then you go on to ask what to give her. Give her? Give her some corn, and do not be so foolish as to suppose that drugs can provide nutriment for a debilitated body, or compensate for insufficient feeding. To begin with, either get the mare in altogether, or let her run and cease to work her. Do not expect work and carrying a foal on a grass belly. Next get rid of the worms. I do not know what particular parasite is known locally as "rush worms," but they are probably one of the several sclerostomes to which the horse so often plays the part of host, and you may try the following balls:—Santonine, 20 grains; thymol, 10 grains; Barbadoes aloes, sulphate of iron, and calumba root, of each 2 drachms; treacle to form a ball. Get three made, and give one at intervals of a week. Feed generously with corn and good hay, frequently handrub the legs, and bandage them regularly after work. In the passing of the pale-coloured urine there is a suggestion of diabetes insipidus, and in these cases care must be taken to avoid musty hay, grain, or bran, new or inferior oats, watery foods, or diuretic plants. The food should be of top quality, and nourishing and easily digested. As to the cracks in the heels, they will probably disappear with a reduction in the swelling of the legs, but keep them dry and clean, and dress with calamine ointment. If you elect to throw the mare out of work, still give the corn; in fact, nurse her up into something like condition.—M.R.C.V.S.

Cow Retaining Milk.—My master has a cow, who has for this last month or two thrown no milk. She eats pretty heartily. I should be very glad if you could enlighten us as to what is the matter with her. I should also be very glad if you could tell me what to give a colt, just weaned from its mother, to eat to make it grow? He was five months old on November 3.—ANXIOUS ONE.

ANSWER: Cows have the power of retaining their milk at will, and sometimes they exercise it as against a particular milker to whom for some reason they have conceived a dislike. The remedy in such a case is to change the milker. If no one can be found to whom the cow will yield her milk, about the only thing to do is to sell her, or set her to rear calves. If this refusal to give down the milk goes on for any length of time secretion will soon cease, and the animal go dry, unless something worse, in the shape of mammitis or garget, happens on account of retention. The best food for the newly-weaned foal to "make it grow" is crushed oats and bran.—M.R.C.V.S.

LEGAL.

Notice to Quit.—Will your legal adviser kindly inform me whether a tenancy from year to year of an agricultural holding in Norfolk, commencing October 11, can be determined by a years notice, given on the afternoon of a succeeding October 11, to quit on that day in the following year? There is no question about a year's notice being the proper one; but it seems to me that as each year of tenancy expires at midnight of October 10, the notice to be good must be given on that day at latest. A reference to cases on the matter would oblige.—ALPHA.

ANSWER.—A tenancy from year to year ending on a quarter-day can be determined by notice expiring on the proper day. The notice, so long as it is posted so that in the ordinary course of post it would be delivered on a quarter-day, would be good. There is authority for this statement in the text-book. In such a case, the tenancy is to determine on one of the four quarter-days. If the year is divided into the half year from December 25 to June 24, and the half year from June 24, it will be found to be unequal. The cases, therefore, as to notice on quarter-day are probably not applicable for the moment. I know of no authority on the point that you mention.—BARRISTER-AT-LAW.

POULTRY.

To Fatten Geese.—Will you please to kindly give a few notes on how and when to begin fattening geese for Christmas, and as to how old a gander has to be before fertile?—R. S.

ANSWER: These birds should be fed on a mixture of barley meal, ground oats, and maize meal, mixed with rough fat and milk, if obtainable each morning, and at night should have boiled maize one day, and boiled barley the next, and so on. Toulouse and Embden ganders should be in their second season, but Chinese ganders breed well during their first season.

ment that "he would not support any import tax if it augmented the proportion paid by the working man," suggests that he will not tax imported food products. It would be absurd if he did. He says proportion, and means that as the working man benefits in one direction he may reasonably be called upon to meet it proportionately in another. It is not far away from justice or commonsense. Possibly the working man eats more bread than any other section of the community; by working man I do not know who is included. The very lowest stratum of labourers may, but except for them, I doubt if the artisan does eat more than a vast portion of the country, farmers included. Food does not take up anything like the proportion of a man's earnings that it used to.

No. 8 (*g*). The foreign rival of the British farmer must be seriously rebuked, the colonial farmer must have preference over the foreign farmer, and the Cinderella, the British farmer, must not have his foot squeezed in the future as he has in the past; he has stood in the crowd to have his foot trampled upon by all, and Mr. Balfour propounds a means for relieving him. It is in this way that the bogey seen by "Lobbyist" in the question must be guarded against, for it is certain that it will not be done under the present system of Free Trade.—Yours, &c., W. J. MALDEN.

Are Times Better for Farmers?

SIR,—"A. J. R." lives in a specially favoured district for the sale of straw, and I do not think his case affects my balance-sheet, which is a sample of what the wheat crop is returning over a large area of one of the largest corn-growing districts in the United Kingdom. The majority of farm agreements in Lincolnshire forbid the sale of straw, and there is not much desire to do this where the distance from a railway is considerable.

The prices quoted in the return issued by the Board of Agriculture for the week ending November 14 last vary from 53s. 6d. first quality wheat straw in London to 20s. on rails Peterborough per ton. Considering the expense and work there is in dealing in the straw these prices are not very tempting.

I admit it is difficult to value straw for use as litter and manure, but I would point out that any higher value that I have put upon it would have to appear on the other side of the account in manure applied to the crop.

The main object of my letter was to show that much of what is written as to the result of this year's harvest, and the farmer's position generally is very unreliable, and the exaggerated statements that have appeared in the press are likely to add to his other troubles. In this "A. J. R." cordially agrees, for which he has the thanks of yours, &c.,

SON OF THE SOIL.

North Lincolnshire, November 21, 1907.

Tariff Reform and Agricultural Interests.

SIR,—I read with great interest the well-thought-ought problems propounded by "A Lobbyist" in your last issue, in connection with Mr. Balfour's speech at Birmingham.

The question of Tariff Reform, as outlined in that speech, is one that requires the earnest attention of all farmers.

When Mr. Chamberlain's proposals were first published I immediately looked through the accounts of my farm of 700 acres, to see how I should be affected, and I found that if I realised on all the farm produce which I sold, an enhanced value equal to the full import duty which it was proposed to put on such produce, and if, on the other hand, I paid a similarly enhanced price for all that I required to purchase, I should on an average be better off by the sum of about £100 annually. And this £100 would be all that I should have to meet the extra cost of living, the extra demand for rent from my landlord, and the extra wages which my labourers would surely require.

It naturally did not take me long to decide that I should be worse off under that system of Tariff Reform than under the present Free Trade.

But since then Mr. Chamberlain's proposals have been greatly altered, and all to the farmer's detriment. Colonial preference is to be given, which probably means the sacrifice by the farmer of at least half the benefits he would receive from the imposition of a universal import duty, and now, to cap all, we are told that raw materials are not to be taxed. Wheat and wool are my finished productions, but to bakers and clothmakers they are raw materials. Will Mr. Balfour or Mr. Chaplin say under which category they class them.

This is an all-important question to farmers, and one that will give rise to endless dispute and worry. In all human probability they will be held to be partly manufactured, and the duty reduced to, say, one half.

So that instead of a 10 per cent. duty, corn and wool will have 5 per cent. only to pay, and Colonial imports will have a further preference, which will reduce the duty they pay to 2½ per cent. And then where will the British farmer be?

Many years ago Free Trade was introduced to satisfy the inhabitants and manufacturers in the towns, and British agriculture was sacrificed. Now, it seems strongly to me, that the same process is to be repeated, and that just at the moment when farmers of the present generation have adapted themselves to present circumstances, and by sheer economy and industry are making a living, they are again to be sacrificed under a fantastic system of Tariff Reform, to the benefit only of the manufacturing interests of the country. I may be wrong, and I sincerely hope so; but, anyhow, let us press Mr. Balfour in the first place to declare clearly whether corn, wool, hops, &c., are raw material or not, and then, with that point settled, let every farmer take his last year's accounts and add to the value of his sales the amount of duty which they would bear if imported, and to the amount of his purchases a similar duty, and he will clearly see to what extent he will be better off under Tariff Reform, and what extra rent and extra labour bill he will be able to pay without being worse off than hitherto.—Yours, &c,

Feering Bury, Kelvedon. PERCY C. REID.

Where is the Flail Still in Use?

SIR,—Could any of your readers give me any information as to whether the flail is still in use on any farm in their district? I believe it is not quite obsolete, and should be glad to have any facts relating thereto.—Yours, &c.,

H. W. LEWER,
Priors, Loughton, Essex.

November 18, 1907.

The Farmers' Club.

The annual general meeting of the Farmers' Club will be held at the Whitehall Rooms, Hotel Metropole, S.W., on Monday, December 9, at 6 p.m., when Mr. Alfred Mansell, of Shrewsbury, will read a paper entitled "The Value of Live Stock on the Farm."

Immediately after the meeting (about 8 p.m.) the usual club dinner will be served in the dining room, No. 2, Whitehall Court, S.W.

The annual dinner will be held, in conjunction with the Central Chamber of Agriculture, on Tuesday, December 10, at the Criterion Restaurant, Piccadilly Circus, W., at 7 o'clock precisely, under the chairmanship of Lord Desborough.

Owing to the high prices of butter at Toronto, the dealers are importing butter from Ireland for retail at 25 cents per lb.

The second and main hirings at Bedale took place on Tuesday, when the supply of servants was hardly equal to the demand, this being particularly the case with the female servants. Wages ruled as follows:—Managing foreman, £20 to £28 for the year with board and lodgings; waggoners and ploughmen, £14 to £18 10s.: plough lads, £9 to £12, and lads first time out at service from £6 to £7 10s. for the year. Hinds' wages were up to 21s. per week with the usual cottage, garden, potatoes, milk, &c. The wages of female servants ruled as follows:—Capable dairy managers, £20 to £23 per annum; female servants for farm houses, £13 to £15 for the year, and young girls for farm houses, £7 to £9 for the year.

DAIRY.

Ayrshire Milk Records.

A special meeting of the Ayrshire Cattle Herd Book Society was held on Tuesday for the purpose of receiving the report of a committee appointed to draw up a scheme for the management of milk records among Ayrshire cattle.

In May last the Ayrshire Cattle Herd Book Society received from the Highland and Agricultural Society a letter on the subject of milk records for Ayrshire cattle, pointing out that the Highland Society were favourable to continuing the fostering of milk tests, but realised that with the substantial change in the management of work, it could not be of real service to breeders. They therefore invited the co-operation of the Herd Book Society to consider the future working of the scheme, and asked for the appointment of a sub-committee to confer with the Milk Records Committee of the Highland Society. The committee met, and as the result of their discussion drafted the following scheme for the management of the milk records:—

"That there be appointed for the management of milk records among Ayrshire cattle a new body, to be known as the Ayrshire Milk Records Committee or Association. This body would have the general management of the Ayrshire milk records. It would arrange as to the lines to be followed in weighing and testing milk, as to ensuring the accuracy of the records and the taking of samples. It would arrange for the keeping of the records in an official register, and for publication of the results. It would grant certificates free, or upon payment of reasonable fees for herds or individual cows. It would arrange the terms for conducting records on individual farms or groups of farms. It would consist mainly of representative breeders and owners of Ayrshire cattle, and would include a small number nominated by the Highland Society."

The above scheme, the report stated, had been submitted to a meeting of the Herd Book Committee, and after full discussion it had been unanimously agreed to recommend its adoption. The committee considered that well-conducted milk records might play an important part in the development of Ayrshire cattle. The above scheme had also been approved generally by the directors of the Highland Society, and the Herd Book Committee thought there was reason to hope that that society would continue for the present to give financial aid, and thought that aid should be given through the new body.

The Highland Society had signified that they wished representation on the new body only to the extent of two members, and the Herd Book Committee recommended that the composition of the new body should be—Two representatives to be appointed by the Highland Society, eight representatives to be appointed by the Herd Book Society, one representative to be appointed from each local Milk Record Society, and any other persons whom the new body as above constituted may associate with themselves. It was thought that if this scheme were adopted that the new body might be in a position to start work in the beginning of January.

At the meeting on Tuesday the report was unanimously adopted. It was explained that the Highland and Agricultural Society would be represented on the Milk Records Committee, and that the members of local committees would be asked to send one or more representatives.

The secretary, Mr. John Howie, stated that the Highland and Agricultural Society had agreed to give a certain classification for Ayrshire cattle in the event of the Herd Book Society contributing £40 of the prize-money at the Highland Show next year. The society had given £10, and there had been raised in subscriptions £27, making a total of £37 in hand of the required £40. It was agreed to raise the other £3 by subscription through the secretary. In view of the contribution the Highland and Agricultural Society agree to give six classes at their show in 1908 for Ayrshire bulls and stirks and cows and queys, with £20 in prize money for each class, or £120 in all for Ayrshires.

Boracic Acid in Cream.

After a hearing spread over three days, Mr. Robert Wallace, K.C., and a bench of justices, sitting at the Clerkenwell Sessions, on Monday, gave their decision in the boric acid in cream case, which had aroused considerable interest. It was the appeal of W. H. Cullen, a grocer, of Lupus Street, Westminster, against a conviction and fine of £2 and costs for unlawfully selling cream which was mixed with boric acid, so as to render the article injurious to health.

A large number of eminent men were called on both sides, and the court, in deciding the matter, found as a fact that the boric acid in the cream, supplied in this case was not injurious to adults of normal health, but would be injurious to children and invalids. As the court found as a fact that cream now formed part of the ordinary diet of children, the supply of cream under the present circumstances must be taken to be within the section. The appeal would, therefore, be dismissed, and the conviction upheld, with costs.

The Bench, however, expressed its willingness to state a case upon a point of law subject to the finding of the fact that cream now formed part of the recognised diet of children.

During the hearing of the appeal it was stated that if the conviction were upheld it would practically stop the cream supply of the metropolis, as the sale of cream without a preservative would almost be impossible.

Nantwich Cheese Fair.

At Nantwich Cheese Fair, on Thursday, there was a pitch of 60 tons of cheese. The tone was good, and there was a good clearance. Finest dairies made from 68s to 71s.; medium qualities from 63s. to 67s.; and lower grades from 58s. per cwt.

Photo by [*J. T. Newman.*

Our illustration above is of the Shorthorn Cow Minnie, which was placed Second in the Class for Single Cow of Any Breed or Cross, in milk, at the recent London Dairy Show, but has now received the First Prize in consequence of an objection against the First Prize winner at the Show having been sustained. Minnie is the property of, and was bred by, Mr. J. L. Shirley, Bletchley.

West Country Notes.

THE movement for securing some compensation to farmers where it is found necessary in the public interest to slaughter their cattle, or to condemn the carcases when slaughtered, on account of disease which may or may not be communicable to human beings, is growing in strength. This week an important meeting of Somerset farmers has been held to discuss the subject, at which it was decided to circularise various societies in England with a view to joint action, and suggesting that a meeting of delegates be held in London to discuss the matter.

THIS was, in particular, in regard to compensation in cases of tuberculosis, but the question is really of much wider importance, and should be made of a general character. When in the old days of cattle plague and so on a very heavy loss fell upon the farmer from disease, the enhanced price of meat helped to recoup the loss, and made it possible for the voluntary insurance schemes to work with fairness to all participating. There was not then the competition from abroad to keep the prices uniform; and though the farmer suffered, the loss was shared by the consumer.

TO-DAY the losses fall wholly upon the agricultural community, whose burdens have not been lightened of late years in the way of contributions to the expenses of local government. Their means of meeting the increased calls for sanitary and traffic improvements are certainly no better than they were. The slight enhancement of value in some classes of produce, which are of recent date, do not affect the general bulk of the farmers.

HENCE if further calls are to be made upon them to bear the whole loss arising from the trend of modern science in the inspection and supervision of food supplies, the industry will be charged with a grievous burden. This must be mitigated by immediate relief, either direct or by removing some of the burdens which farming has already to bear for the general community. The readjustment of local taxation will have to be conceded if compensation for confiscation of diseased cattle is not possible.

THE great difficulties in the detection of some of the diseases make the position of the owner of cattle a very precarious one, and if the public are to be adequately protected, and the industry to be preserved, some revision of the existing methods is imperative.

THE principle applies not merely to cattle, but with the new Act—the value of which is fully recognised by fruit growers—for dealing with fruit trees, the principle should be carried further to all branches of industry where protection is afforded to any one section of the community by destruction of diseased produce to prevent the spread of the disorder.

THE week has been productive of rather more than the usual crop of reports of sudden deaths and serious accidents connected with hunting in the West, and this not so much in the actual sport as to persons who are returning from the field or are scarcely to be said to be participating in the chase. Dorset, Devon, and the vicinity of Bath have all contributed their share of cases. Mr. J. C. Ware, of Moorstone Farm, Halberton, Devon, who dropped on the way from the hunt on Monday, was a member of a family that has occupied one farm for over 200 years.

THE character of the stock at the markets show the close approach of Christmas, and the next fortnight will see the great majority of the Christmas sales of the season in full swing. There are some very good stocks to come forward, if one may judge from the comments of those who are behind the scenes, but the very great bulk of fat which was shown by some of the animals of a few years ago will probably not be sought after by the feeders ever again, unless the public taste alters. There is the demand now for prime meat rather tending to red than white in all classes of cattle.

A SIGNIFICANT statement was made at a meeting of Devon agriculturists lately by the Right Hon. Sir John Kennaway, who pointed out that during the last thirty or forty years, something like eighty-four Acts had been passed which added to the burdens of local taxation. This had been met by an attempt at readjustment of the burdens by the passing of the Agricultural Rates Act.

THE Act was of course of some immediate benefit to the agricultural ratepayer. It is still of benefit, but the farmer is again paying as much (and in many cases more) in rates as he was at the time the Act was passed owing to the many forms of increase.

THE root crops are now in almost all cases properly secured. The results are better in the case of cattle-feeding roots than were at one time anticipated. Potatoes, however, are very disappointing, and it is somewhat difficult to secure really good samples.

THE season has so far been a mild one in the West, and it is only within the past week that the first white frost severe enough to put a stop to the picking of French beans and other delicate garden produce has occurred. Many of the spring flowers are showing signs of precocious blooming, whilst the summer wild fruits are lingering on, as well as garden fruits. In many cases fruit trees have flowered and borne fruit a second time.

THE price of bread, which has been pretty generally at sixpence per 4 lb. loaf in the West, shows signs at last of going back a little. It is many years since the figure was so high, and with the shortage of potatoes some signs of distress in the poorer quarters are manifest.

November 22, 1907.

Nottinghamshire Notes.

A WEEK or two back I referred in the MARK LANE EXPRESS to the great success that had attended the efforts of local potato growers by using Irish seed, especially Mr. H. Heath, J.P., C.C., at Bestwood Park, near Nottingham. A large number of farmers in various parts of England have, in consequence of my notes, written to Mr. Heath, asking for further details, which at once shows the good done through publishing items of this character, and also speaks well for the circulation of this journal.

WHAT surprised Mr. Heath was his receiving a number of letters from farmers in Ireland, and one especially deserves mention. I refer to the letter sent by that well-known Irish potato grower Mr. J. F. Williamson, F.R.H.S., who resides a few miles from Mallow. Mr. Williamson in the course of his letter contends that it was his success in the Rugby trials in 1904 that first drew attention to the productiveness of Irish seed potatoes. He also mentions that his Duchess of Cornwall seed has been a big success in the Surrey County Council trials this season, and mentions that the ratio of yield was: Irish seed, 76 lb.; Scottish seed, 30 lb.

THERE is not the slightest doubt as to the superiority of Irish seed potatoes grown in Nottinghamshire, and Professor Blackshaw, of the Midland Agricultural College, and also Mr. Heath are loud in their praises of the tubers imported from the Emerald Isle; and what is more, larger quantities are to be purchased from "Pat" next spring.

RIDICULOUSLY low prices marked the November Stilton Cheese Fair at Melton Mowbray to-day. There was a very large pitch, numbering 593½ dozen against 357½ dozen at the November fair a year ago. Buyers were scarce, and many farmers had to return home with less than half of their cheeses sold.

BEANS and barley are still be seen in stock out in the fields at Sturton-en-le-Steeple, in the north of the county. Of course the barley is ruined, but the beans are still worth leading. The district is very late, and only a fortnight back there were several fields of hay that had been in cook for over six weeks.

PRESENT KING II., the London champion Shire, has arrived safely in the Argentine, and has caused such a sensation there that cables have been received in England giving instructions for the purchase of several really good Shire mares in foal to him. As my readers are aware, he formerly belonged to Messrs. James Forshaw and Sons, of Carlton-on-Trent.

COMMODORE BARMAID, a typical Shire mare in foal to Present King II., has been sold by Mr. Samuel Arnold, of Carlton-on-Trent, near Newark, to Mr. E. N. Casares, and exported to the Argentine.

FROM what I can learn there is a great deal of interest taken in Shorthorn breeding abroad, for Mr. G. H. Elliott, of Colston Bassett estate offices, informs me that he sold a large number of his diagrams illustrating the methods of line breeding adopted by the three famous Shorthorn breeders — Thomas Bates, Richard Booth, and Amos Cruickshank. Orders have come from Ireland, Canada, the United States, the Argentine, Australia, Austria, France, Germany, and even Russia, which speaks well for the enterprise of a gentleman born and now resident in the lace county.

TRAVELLING in a railway carriage the other day I happened to meet a well-known agriculturist in Mr. John Parr, of Ruddington, who is well known in the pig-breeding world, and who at one time had a farm at Cropwell. He was speaking of the better price of grain and wool, and I ventured to ask him if he thought rents would increase in consequence. Mr. Parr, however, did not think the good prices would continue sufficiently long for landlords to increase rentals. He said he could remember the time when land around Bingham let at £2 and over an acre, and then a tithe of 10s. an acre on top of that. He admitted that some of it was exceptionally good land, but declared that very little of it now let for more than 25s. an acre. Mr. Parr recalled the time when wool made 60s. per tod, and wheat 50s. to 70s. a quarter, and spoke of the vast changes that had been brought about since that time.

FREQUENT reference has been made in the MARK LANE EXPRESS anent the advisability of adopting some system of the registration of corn samples. To-day I had a long chat with two village stationmasters, and singular to relate, both had within the past few days experienced considerable difficulty with farmers and corn merchants through consignments of grain being refused by the latter owing to the "bulk" sample not being up to that sold by the farmer.

WE all know that since the advent of November prices for several cereals have eased somewhat, and one stationmaster declared that, though he never read the corn markets, he always knew when prices were down. I demanded an explanation for this assertion, and I must admit it convinced me more than ever that some system of registration ought to be adopted—and that before long.

"SUPPOSE we take a sample of barley for instance," said the stationmaster. "On November 4, 5, and 6 a big farmer put on rail at my station 67 qr. of malting barley. On the Wednesday I sent a bulk sample to the merchant who had bought it, and following morning came a letter stating that he refused to accept delivery, and it remained in the trucks at the company's risk. Of course, the farmer also got a similar letter, and later in the day came to see me. Now I have known this farmer for many years, and can speak of him as a straightforward man. He told me he had sold the barley for 32s. per qr. from a sample taken from a sack put up in the barn, and that none of the corn had been touched since. It had been dressed and put up in bags before the sample was taken. But he also told me that barley had gone down 2s. per qr. in about a fortnight, and there the secret lay. The farmer, of course, sent his men and wagons for the corn back, and had to pay a few shillings for truck hire, while the merchant gets off scot free with no fear of being sued."

THE above is a correct version of what actually happened, for I have seen the merchant's letter refusing to accept the corn, and also know the farmer personally. I am looking forward to this question being taken up by the Lincolnshire Farmers' Union in the near future.

THE Midland Farmers' Co-operative Association (Nottingham) continues to increase its membership and usefulness, and I understand that when the balance sheet is issued in February, there will be a surprise in store for those who declare there is no good to be obtained by co-operation. The latest idea on the part of the association is to undertake to sell members' corn. All that a farmer has to do is to forward a sample on to the manager at the market or offices, with the quantity for sale and the limit price, and the rest is easy. The corn is sold, and a commission of 3d. per qr. charged for the trouble. This has already proved very convenient to some farmers who did not find it possible to personally attend the market, while the manager being at four and five markets per week knows the top price that the cereals can command, and what is more, obtains it.

ON Tuesday I was shown a number of red currants which had just been pulled from a garden on the outskirts of Nottingham, while to-day I saw several strawberries on a plant in the open. This is surely remarkable for November.

AT a meeting of the council of the Notts Agricultural Society this week it was finally decided to hold the annual show in Colwich Park on Tuesday and Wednesday, June 9 and 10 next. Mr. W. E. Burnside, of Tollerton Hall, was chosen as the president for 1908, and it was agreed to offer the sum of £1,200 in prizes. The prize schedule was discussed and judges nominated. I understand that the society sustained a loss of about £15 on the show held at Retford this year, when the weather was exceptionally showery.

EARL MANVERS, who met with such a serious accident in the hunting field a few days ago, is improving rapidly in health, though he will not be able to leave his room at Thoresby House for another two or three weeks yet.

November 21, 1907. R. K.

PRODUCE OF CROPS, 1907.

A preliminary statement has been issued by the Board of Agriculture showing the estimated total produce and yield per acre of the corn, pulse, and hay crops in Great Britain in the year 1907, with comparisons for 1906, and the average yield per acre of the ten years 1897-1906.

CROPS.		Estimated Total Produce.		Acreage.		Average Estimated Yield per Acre.		Average of the ten years.
		1907.	1906.	1907.	1906.	1907.	1906.	1897-1906

Northern Notes.

VISCOUNT DOWNE, the Lord of the Manor of Driffield, has parted the last year or two with several of his best farms that lie nearest to that town at the foot of the Yorkshire Wolds. One of these, which has been in the occupancy of the Dunning family since 1830, was sold lately to a wholesale provision merchant. Since the holding became a separate farm only three names have been associated with it, namely, a Hornby, a Smith, and two Dunnings (uncle and nephew). The farm house is in a splendid situation, and within the urban district of Driffield, with easy cartage to railway and canal. Some people have associated this farm with the late Mr. George Coates, the originator of Coates' Herd Book; but I have it on the authority of Mr. G. B. Dunning that this famous breeder of the Shorthorn Bull Patriot farmed another holding within a mile as the crow flies, and now occupied by Mr. Walter Highmoor under the same landlord. The confusion in respect of Mr. Coates' tenancy has arisen over a discrepancy in the directory, which designates both farms as "Field House."

BOTH farms will see fresh tenants installed in the spring. Besides the bull, Mr. Coates bred from the same stock, a cow for which he is said to have refused 1,000 guineas. This cow was a red and white, and copies of a now rare "print," or what looks more like a water-colour, are in the possession of several people, and are highly prized. The print is dedicated to "Richard Langley, Esq," the head of a family formerly considerable owners of land in the town and neighbourhood; and the copy I have seen is embellished beneath with the family arms. These old prints possess a historic interest which increases as the years roll by.

IN the course of conversation with a North Yorkshire landowner the other day he told me of the fine harvest his tenants had experienced, and one of them, of a particularly confiding nature, said his field had produced "too much stuff." It is seldom one hears of crops that are too large. It is quite safe to say that no harvest within living memory has been so bountiful as this year's in the East Riding. This opinion was volunteered by a valuer in a large way of business in his profession and also as an occupier of land. Instances are not wanting where the farmer was very badly hit by the weather. In these cases the crops were backward, and the fine September availed them nothing.

WE may begin to hear almost at any time of the heating of numerous stacks of corn resulting from hasty harvesting, and it is already realised that a very great deal of corn that was carted in an unfit state cannot possibly be ready for threshing till the spring.

SO far as one has been able to collect opinions, the heavy crops this year, taken in conjunction with the high prices of wheat and other cereals, have not greatly influenced farmers in regard to their sowings. A normal course will probably be followed. Because wheat is at a high price it does not follow that a greater breadth will be sown, for it is altogether enigmatical which cereals will be the best paying crop next harvest.

THE Christmas fat stock markets are beginning to occupy one's thoughts. The wet October increased the proportions of the turnip crop; but notwithstanding roots were late in providing feed, and as only three weeks separate us from the earliest of the markets patronised by butchers artificial foods will bulk more largely in the rations. Stall fed cattle of exceptional quality will be scarce this Christmas, and no surprise need be affected if the price per stone is higher than a year ago. The beef markets are nothing to boast of at present, and the trade in mutton has fallen flat, after a very good time; though to buy, stores are quite dear—a "fashionable" price is about 2 guineas per head. Some farmers have as many roots as they care to see; others are not in that fortunate position, and will not require so large a number of hogs as they can usually carry through the winter.

TRADE in pigs in the open market is about stifled—the result of the long-continued and, as many people think, oppressive orders of the Board of Agriculture, which too stringently "regulate" the movement of swine. A petition, I observe, is being got up in Lincolnshire (*vide* "Lincolnshire Notes") praying the President of the Board of Agriculture to "remove the present embargo on the markets."

I FEAR the petition will be so much waste paper. Three hundred persons further North, representative of all classes connected with farming, this year signed a similar document, all to no purpose. An M.P. presented it, and afterwards interviewed Lord Carrington. His lordship, I am told, really seemed inclined to answer the prayers, so fervently tendered, in a favourable manner; but he is bound to pay regard to the opinions of permanent officials, and whether swine fever be prevalent in a district or otherwise, there is going to be no relaxation of market restrictions; of that we may be certain—at any rate for a long time to come.

THE outlook for soft turnips and swedes in the North is much better than could have been expected. Few turnips have so far been pulled in this neighbourhood of the capital of Northumberland, where the rain has hindered carting from the land, and has also interfered with tillage work; sowing is in arrear. Grass is reduced to a minimum in the pastures, and seems to have lost its "nature." We are having a spell of typical November weather, with occasional fog, and rain which has generally fallen while the bulk of humanity has slept.

AT the Martinmas hirings, which in Durham and Northumberland differ from the Yorkshire terms, about the same wages as last year are asked. In the two northernmost counties the hands are hired for half a year, whereas in the county of "broad" acres the engagements are for twelve months. Hiring in Yorkshire goes on until well after November 23, on which date the male and female servants in the farmhouses are paid their money, and take a week's—some a ten days'—holiday. This applies to the servants who hire on again, as well as to those who are changing "spots."

OF course, it must be understood that females do not engage in the actual work of the farm in Yorkshire. They are only domestics, and few of them even do the milking. In the other counties, where the dignity of labour is perhaps better understood, females do work in the fields, though the desire for employment in this line is going out of fashion very fast. Situations as shop-girls or as dressmakers' apprentices is regarded as the more correct thing. Our girls are becoming too fine in the fingers for hard but healthy work which can be obtained in and about the farmhouse. Is not this fact to be deplored?

November 21, 1907.

Midland Notes.

MILK retailers are putting up their prices—or threatening to put them up—in Birmingham and other large centres of population in the Midlands. At present 3½d. per quart is the rule; the prospect is a rate of 4d.

THE reasons given to the purchasing public are rather interesting. In view of the increased price of cheese, it is declared, many dairy farmers are finding it more profitable to keep their milk on the farm. Simultaneously "the chocolate and condensed milk factories" are calling for much more than usual; and to make things worse "many agriculturists have given up dairy farming owing to the harassing restrictions placed upon them by local authorities." There seems to be just enough truth in these explanations or excuses to help them to pass muster with the uncritical. One doubts, however, whether farmers will think much of them. The extra amount taken at the Bournville works, for the milk chocolate of the great Cadbury firm is but an infinitesimal proportion of a great city's supply; and the farmers who have been driven out of cowkeeping by oppressive by-laws and over-zealous sanitary inspectors, though they exist, are rather difficult to find. Although the black country and ironworkers and the City middle classes have been developing a very healthy preference for English cheese, inquiry generally shows that the agriculturists who have forsaken the milk trade, with its long contracts and regular cheques, have done so because of the impossibility of getting decent terms from the retailers.

INQUIRY, in fact, seems to indicate that the retailers are feeling the effects of the spread among farmers of co-operative dealing. With the progress of such bodies as the Midland Farmers' Association, the amount of milk offering at ruinous, cut-throat prices is become less than it used to be; and autumn contracts have generally to be made at prices which, no doubt, are higher than the average of a few years ago. And naturally the public are called upon to pay the difference—plus something more.

THE one thing that is not alleged by the milk vendors is shortage in the pastures. Yet the outlook in this direction is not uniformly good. There is a fair amount of grass, but not abnormally much; and, on the other hand, much of the hay having lain long in the wet, is of doubtful quality, while purchased feeding stuffs are expensive luxuries.

IN this state of affairs the cattle feeders of our extensive grazing districts are looking forward to the Christmas trade with some anxiety. So far as can be seen at present, their chances of being able to recoup themselves for a long period of unremunerative prices are the reverse of hopeful. Still, it is pleasant to see that the trade is showing a certain tendency towards improvement as better class stock comes into the market.

THERE is some compensation in the quiet trade for sheep, but prices in this district have not advanced as they generally do at this time of year. However, close on 60s. per head—which has been paid at recent Warwickshire sales for really good mutton—means a fair commercial profit. At this rate the North-country lambs which come here to be wintered on grass and grazed next summer, pay well for their keep.

THE upshot of the Midland fruit-growers' deputation to the Board of Agriculture is awaited with some anxiety, and a statement by Mr. Willis Bund to the effect that the Board would withdraw the present order which requires the burning of mildewed gooseberry bushes, has been much discussed. As a rule the Worcestershire growers are in agreement with their fellows of Wisbech, who have already waited on Earl Carrington. Feeling that official knowledge of the mildew amounts to little or nothing, they demand a year in which to try and eradicate the disease by means of copper sulphate and liberal cutting back. "If we fail," they say, "destruction of the bushes can come afterwards." But the Order has justified itself. It has made everybody eager and anxious to do his utmost to eradicate the disease, and that is a spirit which was not observable at first when the gooseberry mildew was first discovered. Nothing was more common than to hear a grower say:—"I have had that, or something like it, in my plantation for years," and to confess that he had given no particular attention to it.

LITTLE is heard nowadays of sugar beet; the very possibility of denunciation of the anti-Bounty Convention seems to have sufficed to crush a movement which promised well for agriculture. Still, some of the enthusiasts keep on growing fine beets by way of showing what can be done. One exceptionally good result is reported by a Warwickshire rector—Rev. E. Muckleston, of Haseley, who has produced a crop averaging 1,066 grammes per root (against 424 grammes for German beet), and 16·1 per cent of sugar (against the German 15·4). These roots, in other words, would give twice as much sugar per acre as those on which the agriculturist of Germany makes a profit.

November 21, 1907.

The question of the formation of an independent agricultural party does not seem to interest the farmers of the Craven district, for at a meeting held at Skipton on Monday to specially consider the matter it was stated that only one *bonâ fide* tenant farmer was in attendance! Colonel Maude moved a resolution approving the proposal to form an independent agricultural party. The idea was, he said, to adopt the same methods of bringing pressure to bear on the Government as were adopted by the Labour or the railway groups in the House of Commons. There was some difference of opinion as to the wisdom of the step amongst those present but the resolution was carried.

The second of the Martinmas statute hirings at Thirsk took place on Monday in the Market Place, the attendance showing a considerable decline to that of the previous Monday. There was a fair attendance of masters but little hiring was done, farmers preferring to wait until to-day. A slight advance in wages was in most cases asked, farmers being backward with their work. What few contracts were made, however, were mostly at the old rates. Hinds with cottage garden and the usual allowances made from 18s. to 21s.; good managing hinds, 24s. to 27s per week. Capable farm foremen, £25 to £30; head lads and horsemen, £17 to £18 10s; farm boys, £6 to £8; plough lads, £9 to £11. Girls both for farm house and town places were as usual scarce, and good wages were obtained by likely hands. Young girls for farm houses, £7 10s. to £10 10s.; second hands, £15 to £16; head girls, £19 to £21.

IMPORTANT TO FARMERS AND POULTRY KEEPERS.

How is it your Hens are not laying as they ought?

THEY REQUIRE A LITTLE

'Garstang Tonic'

In the morning's soft food, which will keep them free from Colds, Roup, &c., and in a short time the Egg Production will be wonderfully improved.

All Poultry Keepers ought to know its value.

Ask those who have tried it!

Knowle Top, Bugsworth, Derbyshire, Nov. 12, 1907.

MR. THOMAS, DEAR SIR.—Will you please forward me per return of post a 2/6 tin of your "Garstang Tonic." I may say that I used your Tonic last year, and found it far superior to all others I had previously tried. It is an excellent egg producer. It keeps the fowls in good condition, and helps them to stand changes in the weather. Hoping to receive the tin per return,—I am, yours faithfully, (Signed) G. S. KITCHEN.

To be had from all Grocers and Chemists. Be sure you ask for Thomas's "Garstang Tonic," and don't be put off with any other. If you have any difficulty in obtaining the Powder write direct, and you shall have a tin per return.

Sold in Tins, 10d., 1/6 and 2/6. Post free, 1/1, 1/9 and 2/9.

Prepared by JOSEPH THOMAS, Chemist, GARSTANG

POULTRY.

Colony Houses in Winter.

Perhaps the most remarkable feature of the growth of the poultry industry of Great Britain is the general adoption by farmers of the colony system of housing both fowls and chickens, as well as turkeys, ducks, and geese. Not many years ago farmers were dead against keeping poultry on their farms as part of the stock, which might be allowed to run on the pastures as sheep and cows are, but now it seems to be pretty generally agreed amongst them that fowls instead of injuring pastures in any way are a decided benefit to them, and the indications that farmers of the younger generation believe in poultry as a profitable source of income are the large numbers of portable houses which are now to be seen in travelling through all parts of Great Britain. Poultry are no longer confined to small yards, nor are they left without shelter, and the great majority of progressive farmers are proud of their poultry and provide them with suitable houses, capable of being moved to every part of the farm, so that advantage can be taken of the ploughed land in winter and spring, meadow land after the hay crop has been mown, stubbles in the harvest time, and pasturage at all other times of the year. The climate of the British Islands is admirably adapted to the colony system of poultry keeping, and the only argument against the system which is worth considering is the greater labour which is involved in caring for a large number of fowls, scattered over a farm in small flocks, than would be required for the same number of fowls kept in a large continuous house and yarded. But against this there are so many points in favour of the colony house system that it is rapidly becoming the favourite system with the British farmer. Briefly enumerated, the advantages of the colony system over the yarding system are:—Consumption of considerably less food, greater egg production, very much less initial cost in providing houses, no cost for fencing, invariable good health of the fowls, and improvement to the land in the way of manuring it, and keeping it clear of noxious insects, grubs and worms.

A BLACK ORPINGTON HEN.

Winter Grouping of Houses.

The ideal method of poultry keeping for the farmer would be to house his birds in colony houses during late spring, summer, and autumn, and during the severe portions of the year to house them in substantial fixed buildings, with yards and scratching sheds attached, but there are few who care to go to the double expense of providing and keeping up two sets of houses—one for summer and the other for winter—and there are fewer still who can spare one of their large and comfortable stables, barns, or cow-houses for the winter housing of poultry. If the difficulty of the initial expense were once overcome, there is no doubt that it would pay to have a double set of houses, but for those who are not so favourably circumstanced I would recommend the following plan, which in practice I have found to work out very well. As winter approaches select a well-sheltered field, of fair size, such as will afford the number of fowls kept an adequate run for four months or so, and in a corner of this make a temporary platform or floor, consisting of large stones for a foundation, covered over by rubble, and finished off with finer gravel. Let this be of sufficient area to take all the houses, and then move them in and set them up in a group. Here the fowls will have all the advantages of a fixed building with a dry floor, which is the really important point. Most portable houses are made without floors, and wooden floors are not in any case recommended, and this is the great drawback to them for wintering.

Selection of a Winter Site.

On almost every farm some sheltered nook for wintering can be found, but the two best places are, as a rule, the rick yard and the orchard. In the rick yard, if the hay and straw is raised from the ground on stands, we have an ideal place for day shelter, and any scratching shed that can be devised will not give better results than can be got by scattering chaff or similar litter in the spaces beneath the ricks, and feeding the fowls all their whole corn in the litter. Even when the ricks rest on the ground they afford excellent shelter, and as portion of the hay and straw in the barns is used up vacant spaces are left in which fowls can be fed and can take shelter and exercise. The reason why an orchard also is a good place for winter colonising is because it is usually so well sheltered that fowls can spend all day out of doors and yet will not suffer from either wet or cold. They can be fed in the shelter of these close trees and hedges which are found in all orchards, and in these conditions the winter egg yield is likely to be satisfactory.

Scratching Sheds.

Another plan which is sometimes adopted when colony houses are moved into winter groups is to erect a temporary scratching shed near by. This ought to be done if the poultry keeper feels that there is not sufficient shelter, and the cost will not be very great. A few dozen boards with standards, rafters, and beams will make a suitable day shelter, and can be roughly erected to be taken down again when the birds leave for their summer quarters. When the farm flock consists of a large number of birds—say 400 to 500—it is not advisable to run them all together in winter, and in this case two or more groups should be made, and the poultry keeper will have an opportunity of testing the rival merits of rick-yard, orchard, and paddock as a wintering place. H. M. Cooney.

Non-Sitting Breeds for Crossing to Produce Layers.

There are a large number of poultry-keepers whose object is to produce eggs rather than table fowls, and the majority of these are people who have a very useful collection of cross-bred hens which they have selected on their merits as layers, and the mating of which is a matter of importance to them affecting the following two seasons' production.

The Houdan comes at the top of the list for mating for egg production, and this breed will undoubtedly retain its popularity on account of its splendid laying qualities, combined with the quality of its flesh. This is the only non sitting breed for which it can be claimed that the pullets are excellent layers and the cockerels really profitable as table birds, both in their pure state and when crossed with another breed or breeds. The drawback to other non-sitting breeds is their want of size and flesh on the table, and as it is, unfortunately, impossible to raise all pullets from the eggs set, and the large percentage of cockerels which invariably make their appearance have to be reckoned with, this must be considered as a distinct advantage, as, although the other non-sitting breeds are excellent layers when they are hatched from good laying strains, the cockerels reared do not as a rule fetch more than it has cost to rear them when they are disposed of for the table.

In this respect Minorcas possess an advantage over Leghorns, but there is not very much difference between them. Houdans are very largely used for crossing purposes. There are quite as many Houdan cockerels purchased for mating with hens of other breeds as there are of Buff Orpingtons, these being the two most popular breeds for crossing. It is not possible to misplace a Houdan cockerel, provided that he has been obtained from a good laying strain, because the progeny are invariably good layers and plump table birds of nice quality, and are profitable fowls. The plan of mating a pure bred male bird with hens of several breeds is one which has gained ground each year, and fortunately for poultry-keepers in general it is still largely followed.

The progeny are invariably very much better layers than those birds which are bred from non-descript cocks, and there is a distinctive look about the pullets which are hatched from a pure-bred cock, no matter how many breeds may have been in the hens. In this respect Houdans have made themselves felt, as the half-bred Houdan pullets are very pretty fowls, with small top-knots, and are splendid layers.

In keeping Houdans for stock purposes in their pure state it is advisable to trim the crests of the hens and pullets by cutting the small feathers along each side over the eyes, so that the birds have plenty of light, as they are not then subject to colds, because their eyes do not become delicate as is invariably the case if the light is excluded; and there is also the advantage of keeping the crests dry when the birds are drinking if this precaution is taken. The appearance of the birds is not spoilt by doing this, provided that the feathers are cut evenly. By adopting this precautionary measure the birds are kept healthy, and it has been due to the neglect of this that poultry-keepers have encouraged the idea that Houdans are delicate birds, whereas they are not so in reality.

It cannot be good to exclude the fresh air from the birds' eyes, or for them to have wet feathers overhanging their faces all day. This could not be done in the case of birds kept for exhibition, as it is essential then for them to have large, even crests. The quality of the flesh of the pure Houdan is exceedingly good; it is pure white, very juicy, and tender, and each year the numbers of birds of this breed which are reared prove the profitableness of the fowls, as it may always be accepted that breeds which do not possess qualities which commend themselves to the utilitarian will not be reared largely, as all the cull birds and those which are not good enough for selling as stock birds must find a market, and unless they have good laying and table qualities, or are either good layers or good table birds, this is not possible. We believe that Houdans are bred more largely for crossing purposes than for being kept in their pure state, but they are always profitable when bred from strains which have been carefully kept for egg-production.

We do not advise poultry-keepers to purchase birds for profit from exhibition strains of Houdans, as attention to their laying qualities is really necessary, more so than in some other breeds. Of the non-sitting breeds, we must claim for the Leghorn (in its several varieties) the place of

honour as the most popular breed, and one which can be kept most profitably under all circumstances These fowls are kept for laying eggs, not for the production of flesh for the table, as they certainly are not profitable in this direction. The birds are altogether too active for the accumulation of the flesh necessary in a table bird, and this is not as juicy or full of flavour as in birds of other breeds.

Leghorns are really profitable when considered from the standpoint of egg production. They have been called "natural layers," and it is an apt term, for they are very profitable for the production of an abundance of eggs. We have had a good many pure bred Leghorns which have produced 200 eggs each (and over) in twelve months, and it is not difficult to find cases of this kind when comparing notes with other poultry-keepers who have studied the laying qualities of fowls, and specially selected those which have proved themselves to be good layers for their breeding pens, and these only.

There is not much difference between the egg-producing qualities of the different varieties of Leghorns when they are bred with a view to egg-production, and not so much attention has been paid to the colouring of each feather. For the country White Leghorns are better than for the town, as their plumage appears to greater advantage in contrast to their green surroundings when kept under good natural conditions, for lovers of birds do not like to see the plumage of their stock out of condition, and it is not possible for white fowls to retain their purity of plumage when they are surrounded by chimneys, and the run is hemmed in by buildings. For such runs the black or brown variety should be selected, as these birds lay and look as well in a small place as when they have a free range in the country.

Black Leghorns are becoming very popular both for utility purposes and for exhibition, and deservedly so, as they are particularly pretty birds, and some of the finest layers it is possible to obtain. Leghorns should be kept where eggs are required and table birds are not wanted.

There are a great many people who only have sufficient room for a few fowls, but who like to have their own eggs for breakfast, and, if possible, for use in the house, yet they do not want the trouble of rearing the young ones. These should certainly go in for Leghorns in their pure state, or Houdan-Leghorns, and by purchasing a few early-hatched pullets from a good laying strain in the autumn they will make good laying birds for just two years from that time, after which they should replace their birds by another similar purchase. Non sitters are an advantage for such runs as these, as there is not then any time wasted in periods of broodiness, and the birds are very profitable, because they can be kept principally on the scraps from the house, and even if these are forthcoming they will pay well for the little trouble they give and the cost of their food.

The Buff Leghorns are not making the same headway as the other three varieties we have mentioned, and this is undoubtedly due to the fact that the utility poultry-keeper has discovered the difficulty in retaining the colour of the plumage of the birds, and to the small size of eggs which are produced. Their eggs are smaller than those laid by the other varities of Leghorns. Black Minorcas come next in point of popularity to the Leghorns, and this is undoubtedly due to the number of fine eggs laid by these birds.

There is a specially fine look about a basket of Minorca eggs. They are so pure white in the colour of shell, and they are so large that one feels when handling them that they have something really substantial. The Minorcas are not nearly as hardy as Leghorns, and they feel the changes in the weather in the winter and spring very much more than the Leghorns, and are not therefore, so well suited for runs which are at all exposed. They should be kept in sheltered runs in cold or damp weather, and then they can be made very profitable. The size of their eggs is out of proportion to their own size, and we always think there is a peculiar richness about the egg of the Minorca fowl.

Each year the Minorcas are increasing in popularity, and as the cockerels make table birds of very delicate quality, they are very much more profitable in this direction than the Leghorns, which have yellow skins and flesh, which is not at all juicy or full of flavour. Minorcas are very popular as layers and for the show pen. Blue Andalusians are equally as good layers as the Minorcas, but owing to the difficulty in getting blue birds, so many of the chickens being mismarked in the colourings of their plumage, they have not made the headway that their laying qualities should have won for them. The advantage of Houdans, Leghorns, and Minorcas is that they breed very true to colour, and are consequently very little trouble to breed.

The winter school of agriculture in connection with the Essex Education Committee, held at the County Laboratories, Chelmsford, commenced on Monday, November 18, with thirty students in attendance.

Suffolk Agricultural Society's Annual Meeting.

The annual meeting of the Suffolk Agricultural Association was held at Ipswich on the 15th inst., but prior to the meeting the council met for the purpose of receiving deputations from towns in Suffolk desirous of entertaining the association in 1908. The only deputation was from Felixstowe, and Mr. Frank W. Mason, chairman of the Felixstowe and Urban District Council, who introduced the deputation, extended a cordial invitation to the association to hold their 1908 show at Felixstowe. He thought they would agree that they could offer great facilities, for they had an excellent site, within ten minutes of the station. It was grass land, with an area of 46 acres; it was almost level, and had a dry subsoil, with a hard road on two sides of the field. It was practically square, and within sight of the sea, and he reckoned there were but few places in the county equal to it. The railway facilities at Felixstowe were exceedingly good, and although it was only a single line the G.E R. Company had an excellent system of working it. There was plenty of sleeping accommodation at Felixstowe, and there was steamboat connection with both Ipswich and Harwich—the river trip was bound to be a popular route for excursionists. There was a ferry connecting Bawdsey and district, and he thought everything could be arranged so as to practically assure success.

In reply to questions, Mr. Mason said the tenant of the land would offer it free of charge. It was properly fenced in, and there was a suitable water supply; it was the same ground the Volunteers usually had for their encampment.

The deputation having retired, the President, Sir Cuthbert Quilter, moved, and Mr. E. C. Ransome seconded that the invitation of the deputation be accepted. This was carried unanimously, and the date subsequently fixed was June 3 and 4.

On being informed of the result of the committee's deliberations, Mr. Mason said the committee could rest assured that they would do their best to take such steps that would assist them in every possible way.

The annual meeting was then held, and Sir Cuthbert Quilter explained what the committee had decided, and the decision met with general approval.

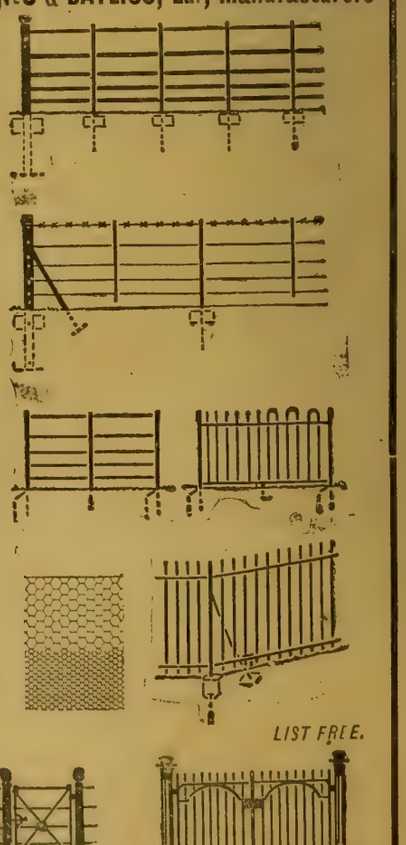
Mr. F. T. Cobbold, M.P., was unanimously elected president, whilst a vote of thanks to Sir Cuthbert Quilter for his services during the year was carried with declamation.

The balance sheet, which was adopted, showed that the receipts for the Sudbury Show were £2,693 16s. 8d.; the principal items being Sudbury Show Committee, £300; gate money, £688; prizes presented, £215; membership subscriptions, £840; entrance fees, £304. The principal items on the other side were:—Hotel expenses, £181; printing, &c., £132; shedding, £355; prizes, £1,227; the full total being £2,527 16s. 8d., thus showing a profit of £165 on last year's show.

The chairman said at the Sudbury Show in 1885 the loss was £233, leaving a balance of £487; this year, although the liabilities were £801 more, they made a profit of £166, leaving a total credit to the association of £2,317.

Mr. F. L Bland raised the question of arranging some classes in order to induce the small farmers to enter.

The chairman said that was a matter with which they were in full sympathy. It so happened that Mr. Edward Packard had offered prizes of £10 and £5 to the tenant farmer who had never won prizes at the association shows in a class for Suffolk horses. He would see that the new president and committee were acquainted with the desire expressed for adding more such classes.



A communication was read from the Royal Agricultural Society with regard to the advisability of regulations touching upon tuberculosis and other diseases in cattle being issued by the Board of Agriculture, and not by any other department. With a view to watching the interests of agriculture with regard to this question, the society asked the Suffolk Association to appoint one or two representatives to attend a meeting at the Royal Agricultural Hall on December 11. It was decided to ask Mr. Harry Fisk and Mr. G. P. Watkins to attend.

The chief statute hirings for the November term for the district of Teesdale were held at Barnard Castle on Wednesday in indifferent weather. There was not a large attendance of servants, many engagements having been made beforehand. The contracts for men were mainly for the half-year, the wages paid being at the rate of £28 to £30 a year for efficient farm men and qualified foremen. Secondary male servants obtained £22 to £25 for the better class, ploughboys, £16 to £18; and younger boys, £8 to £9. Female servants were somewhat scarce, and asked and received high wages. Dairymaids and experienced farm workers got £18 to £21; ordinary domestic servants, £15 to £16; girls, £10 to £11; and young girls, £7 to £8 for the year.

Fertilisers and Feeding Stuffs.

Economy in Manuring.

It must be recognised that farmyard manure is the best at the disposal of the farmer, and that it should be produced under the most favourable conditions possible. The lightest soils on the farm are those on which dung should be used to the greatest extent. When dung has to be kept for some time it should be stored in a dungstead with a watertight bottom to prevent loss by drainage of the valuable liquid. When dung is well made, kept compact, and not allowed to heat, it loses little of its valuable materials, but when left in heaps in the field it rapidly deteriorates. It is better to have it spread on the land as soon as possible, and if applied some time before the commencement of growth of the following crop it should not be ploughed in deeply, but kept near the surface so that its valuable soluble materials may be distributed in the soil near the surface by the passage of rain-water in the soil.

When decorticated cotton cake is fed to fattening cattle only 3·9 per cent. of the nitrogen it contains is retained in the animal body, and about 22·6 per cent. of it will pass through in the solid excrement (dung), and about 73·5 per cent. in the urine. According to Voelcker and Hall's Manurial Values of Foods (1902) decorticated cotton cake contains about 6·9 per cent. of nitrogen, which at 12s. per unit (1 per cent. of 1 ton) is = 82s. 10d. a ton for this nitrogen. Tests at Woburn have shown that from 15 to 18 per cent. of the nitrogen of the excrements may be lost while making dung in boxes under the best conditions, while there is likely to be a further loss of 15 to 18 per cent. of nitrogen during storage of the dung till it is used, or a total loss in all of from 30 to 35 per cent. of the nitrogen (R.A.S.E Journal, 1902, p. 87). If to this is added the 4 per cent. of nitrogen retained by a fattening beast, the total amount lost is still under 40 per cent. Even under the best conditions, however, of ordinary management of dung, greater losses than these must take place, and therefore only half of the total nitrogen value is allowed, or 41s. 5d. instead of 82s. 10d. per ton of cake. The full manurial value allowed for decorticated cotton cake is 15s. in addition to this for phosphates and potash (but this will not be considered now), or in all 56s. 5d. a ton.

I have put these figures before you to show that dung, if made under the best conditions, has a high direct manurial value, because of the ingredients it contains, especially when cakes and other concentrated foods are fed to the stock. In addition to this the good effects of the organic matter it contains are important. Dung from milch cows has a lower manurial value, owing to some of the valuable manurial ingredients of the food being carried off in the milk, but even in this case the nitrogen retained by the animal for milk and other purposes does not amount to 25 per cent, so that well-managed dung from well-fed milch cows is worth a great deal as a manure.

It is of the greatest importance to note the very large proportion of nitrogen that is voided in the urine, and to realise how important it is that loss of this should be prevented as much as possible. This should all be drained to the dungstead, not diluted with water from roofs or elsewhere, and utilised for watering the dung or otherwise.

With regard to artificials, the nitrogenous manures, nitrate of soda, and sulphate of ammonia were of special value for mangels, cabbages, and a few other crops. Good dung, however, would supply the nitrogen requirements of many farm crops, and these manures were not needed at all for leguminous crops, such as beans, peas, and clover.

Basic slag has a great value in doing much to supply the lime as well as the phosphatic requirements of the soil. On most soils it will probably be useful to supply the phosphates in two-thirds of this manure and one-third of superphosphate, although when the soil is rich in lime the latter is most likely to give the best results.

Potash manures were, as a rule, not wanted when dung was available, especially on the heavier classes of soils, but on poor light soils the addition of a manure of this class such as kainit or muriate of potash was of the greatest importance, especially if dung was not, or only sparingly, used.

To sum up, the farmer may considerably reduce his cost for nitrogenous manures, by careful management of dung and urine, and by the judicious growth of leguminous plants and crops as collectors of nitrogen. Basic slag is the most economical phosphatic manure for most crops on a great range of soils, especially for pasture and meadow hay, and also has a great value as a lime fertiliser. Potash manures are needed (except for a special crop like potatoes, for which more potash is necessary) on a limited range of soils—usually those of the lighter character—and even on these they may be dispensed with when plenty of good dung is available.—Market Day Lectures (Essex Education Committee).

"Utility with Research."

These words, "Utility with Research," are the motto which Mr. F. T. Shutt, Principal of the Chemistry Department of the Canadian Government Farms, claimed in an address, delivered by him to the American Chemical Society, as representative of the work of his department.

It was no vain boast, because the investigations carried out by the Chemical Department on scientific and thoroughly practical lines are well known, and have often been mentioned in these columns.

Canada is a fortunate country. Here is a quotation from the 1906 report of the Select Committee on Agriculture:—

"A careful survey of the entire field demonstrates that agriculture, the cornerstone of national wealth and power, is in a more prosperous condition in Canada than in any other country of the world, while the yet unmeasured territory of rich lands awaits settlement ready to respond bounteously to the industry and intelligence of many millions of willing hands."

At the same time, the scientific men whose duty it is to watch over the conditions of agriculture in the country, are conscious of the fact that under the present system of wheat growing the land is being slowly depleted of its fertility. In some parts of the older districts the soils have already been partially exhausted by irrational and wasteful methods, and in the course of his interesting address Mr. Shult pointed out the means which in his opinion, would have to be adopted to maintain over a series of years the crop-bearing capacity of the land.

The present system is continuous grain-growing, interspersed with fallowing, and Mr. Shutt showed by soil analyses that this involved a serious loss of fertilising constituents, and he points out the necessity of adopting less wasteful methods. "We must introduce a crop for the West as we already have for the East occasionally or, better still, systematically, as in a rotation that will keep up the store of organic matter and nitrogen."

Farmyard manure would be the ideal means of replenishing the organic constituents, but the supply is inadequate, and so Mr. Shutt says, "we fall back upon the leguminosæ, the nitrogen gatherers, Nature's soil enriches."

The fertilising value of the legumes does not lie simply and solely in the nitrogen they yield, though therein is their chief merit; the large quantity of humus-forming material they furnish, the mineral matter—potash, phosphoric acid, and lime set free in their decomposition are features the significance of which have been somewhat overlooked.

Mr. Shutt gave a table showing the large quantity of nitrogen in the various legumes, and the result of an experiment made by him. He enclosed a plot of poor sandy land and dressed it with mineral manures, superphosphate and muriate of potash at the rate respectively of 400lb. and 200 lb. per acre.

It was then sown with red clover, and during each succeeding season the growth was cut twice and the material allowed to decay on the soil. At the end of every second season the crop was turned under, the soil being stirred to the depth of about 4in., and the plot resown the following spring. The result was that in two seasons the soil was enriched by 175 lb. of nitrogen, and in five years to the extent of 308 lb. per acre.

Mr. Shutt is in the habit of telling the Canadian farmers that in the growth of red clover, which takes place after the harvesting of the cereal crop, and before the season closes there should be in the neighbourhood 100 lb. of nitrogen per acre. The ploughing under of this crop in the late autumn or the following spring, according to the nature of the next crop to be planted, is a system widely adopted with excellent results. This is the way to make use of Nature's nitrogen collectors, and to avoid the necessity of buying expensive nitrogenous fertilisers, and it is to this point that we would like to draw the attention of our readers.

Analyses of Poultry Manure.

Analyses of poultry manure are of little value, as much depends upon the age of the fowl, the breed, the kinds of foods, and other conditions. The latest estimate of the composition of poultry manure is that it contained 62·5 per cent. of water, 0·83 per cent. of lime, 2·13 per cent. of alkalis, &c., 0·65 per cent. of phosphoric acid, and nitrogen equal to 1·93 per cent. of ammonia. The feather waste contained 9·12 per cent. of water, 1·25 per cent. of lime, 2·74 per cent. of alkalis, &c., 1·4 per cent. of phosphoric acid, and nitrogen equal to 12·08 per cent. of ammonia.

Soil Inoculation.

Mr. Stead's Great Expectations.

We have just been reading in the *Review of Reviews* for this month Mr. Stead's character sketch of Professor Bottomley, which has served as a vehicle for a manifesto on the subject of soil inoculation, and we arise from the perusal with a lively sense of regret that hopes so great and aspirations so beneficent do not rest on a more solid foundation.

Mr. Stead had been interviewing Professor Bottomley, of King's College, London, and having listened to the professor's observations and assertions with regard to the wonders of soil inoculation, he became, *more suo*, so fired with enthusiasm, that he exclaimed—

> "You have discovered a method of reviving agriculture, of reclaiming waste land, and of adding millions to the value of our British soil. What are you going to do to secure to mankind the full and immediate benefit of your discovery?"

Whereupon the professor explained that, being a scientific man, he could not make a business of what he had pursued as a profession, and that he had urged the Government to take the business in hand, but had found the Board of Agriculture inert and impecunious.

That was too much for Mr. Stead's peace of mind. He stepped boldly into the breach, and determined that British agriculture should no longer languish for the want of this miracle-working wonder. He made an agreement with the professor for the sole right of supplying his nitro-cultures for the space of twelve months. In Mr. Stead's own words: "Our lawyers are now drawing up the formal legal documents securing me the exclusive right of handling the wonder-working mixture for twelve months, &c."

Mr. Stead is evidently under the impression that the nitro-cultures are a kind of good fairy, who will wave a wand over our fields, and then they will blossom as if by magic with magnificent crops.

Will Mr. Stead's great expectations be realised? We trow not.

Soil inoculation by nitro cultures is no novelty in this country.

The Mark Lane Express has reported from time to time reliable information about the result of experiments and investigations. Nitro-cultures have been offered commercially for some years, and last spring the Nitro-Culture Company, of Dublin, announced through the advertising columns of this paper that they would give £100 in gold as a prize for the best results from the use of nitro culture on clovers and vetches.

The Board of Agriculture have not been remiss in the matter; they have published in their journal particulars of the American experiments and full instructions as to the use of the substance.

Our various agricultural institutions and colleges have also made numerous experiments and published in their respective journals the results obtained, so that farmers have had plenty of opportunities of knowing all about it, and if it had been such a veritable wonder-working miracle, its cost would not have stood in the way of a big demand.

The present attitude of the best agricultural authorities towards soil inoculation was summed up by Mr. Hall, of Rothamsted, in his lecture before the members of the Society of Arts. He said:—"Attempts have already been made to raise these nitrogen-fixing bacteria artificially, particularly those associated with leguminous plants, and by introducing them into soil that was lacking or poorly supplied with them to render it capable of self-enrichment in this most natural manner. Such cultures are, in fact, sold commercially at the present time, and have in some cases been somewhat unscrupulously boomed as dispensing with the need of nitrogenous fertilisers. Undoubtedly, cases may be quoted where the use of these pure cultures of nodule-forming bacteria has been of great service, generally on newly-reclaimed soils, which have thus become for the first time capable of carrying a leguminous crop. But in old cultivated soils the organism is already present, and sufficient evidence is not forthcoming to show that the new introductions have had any effect; certainly the results obtained in the British Isles are almost wholly negative. . . . . So the picture of the farmer carrying the manure for a field in his waistcoat pocket and applying it with a hypodermic syringe is still a vision of the future."

For use in this country, soil inoculation has definite limitations; it also has its advantages, and it will, no doubt, gradually take a recognised place among other substances as a help to scientific agriculture, but exaggerated statements of its

virtues are to be deprecated. They lead to disappointment followed by depreciation.

Food of Plants and Animals.

In an interesting paper read by Mr. J. F. Mason, M.P. for Windsor, before a joint meeting of the Glasgow Agricultural Discussion Society and the Agricultural Organisation Society, he made the following interesting and suggestive remarks relative to the food of plants and animals:—

There is a great field for effecting savings in both of these. The food of animals may be said to be roughly divided into albuminoids, or nitrogenous foods, and carbohydrates. Now an animal under certain given conditions needs certain proportions of these two classes of food to meet its requirements. If the animal receives an excess of one class over the other, it will be found that that excess goes to waste. As a matter of fact, in the feeding of cattle, farmers have, by a rule of thumb practice, discovered, with a wonderful degree of success, how to get these proportions; but I venture to think that, if science were called in more than it is on this question of food mixtures, the results would be more satisfactory than they are, and that the saving to farmers' pockets might amount to a large sum. With respect to plants, they practically depend on three elements for food—nitrogen, potash, and phosphorus. Other elements enter only in small quantities, and are almost always present in sufficiency. Of these three principal foods by far the most expensive is nitrogen. If applied in the form of nitrate of soda, it costs about 8d. a lb. or £76 a ton of nitrogen. And yet nature is always surrounded by an unlimited quantity of free nitrogen, if only it could be turned to account for our purposes. The atmosphere which we breathe is composed, as to four-fifths, of nitrogen. The problem has naturally arisen as to how this unlimited store can be turned to profitable use. With ample facilities for research perhaps the problem would have been more fully solved years ago than it is to-day. Owing, however, to the individual efforts of certain scientific men, it has been ascertained that there are bacteria which have the power of fixing this nitrogen into the roots of what are called leguminous plants. So far, this has not effected a complete revolution in agriculture, and much remains to be done before the full benefit of the discovery can be realised; but I am now farming on a rotation designed to effectually extract by cereal crops the nitrogen fixed by preceding leguminous crops. We think that this bacterial action may sometimes be assisted artificially; for instance, this year a large field of lucerne in Sussex failed to give any crop, though a good "stand" of plant had been obtained. Examination showed that the lucerne plants were starving for want of the right kind of bacteria, which have now been introduced into the soil, and the result is awaited with interest. Again, in making farmyard manure from 30 to 50 per cent. of the most valuable constituent (the nitrogen) gets wasted before the dung is "made," even under the best existing practical conditions. This waste is due to bacteria of the wrong kind setting nitrogen free as gas. Equally, when the made dung is applied to the land, not 50 per cent. of the nitrogen applied comes out in the crop, even when a long period of years is considered. The rest is wasted as nitrogen gas or is locked up in forms which take a lifetime to reach the plant. The waste is due to bacteria of the wrong kind; the slow action is due to the weakness of bacteria of the right kind. When we can control the bacteria of the soil, we shall be able to double the fertilising value of so prosaic a manure as dung. These are only samples of profitable lines for research. A farmer said this year about a particular treatment of the hop crop, worked out by a scientific man now in India, that he considered it had saved him £600 this year, and added, "But don't you scientific people go about the countryside telling the other growers how it is done!"

Scientific Agriculture in Spain.

The general progressive movement in Spain is expressed by a recent Government order creating a sort of ambulating school for teaching scientific farming in the remote agricultural districts of the country. The Government order provides for a course of experimental and practical instruction to be given every year by itinerant lecturers, selected from among the agricultural engineers at the district Schools of Agriculture. In the months of January and February of each year the directors of these schools are required to report to the Department of Agriculture at Madrid, giving the programme of the lectures intended to be given during the ensuing twelve months, with an estimate of the cost, including travelling expenses and remuneration of the teachers, and transport of the agricultural machinery or appliances which it may be considered advisable to carry to those remote villages where the practical instruction is to be given.

So far only the Schools of Agriculture at Zaragoza, Jaen, Palencia, Badajoz, and Barcelona, and the two stations at Haro and Villafranca del Panades are referred to in this order, but if the movement prove a success it will no doubt be extended, and must lead to a wider use of modern farming appliances in Spain.

Do Fertilisers Injure Stock.

It is reported in "Deut. Tierärztl. Wchnschr.," that a series of feeding tests was undertaken chiefly with rabbits, sheep, and cattle, during which the experimental animals were fed with superphosphate, basic slag, and kainit. The feeding periods ranged from ten to thirty days, and the amounts of the different fertilisers were graduated to the size of the animal. The conclusion reached from these feeding experiments is that, under ordinary conditions, neither domestic nor wild animals are likely to eat a sufficient quantity of the artificial fertilisers in question to produce poisonous effects.

Prices of Fertilisers.

There is at present a brisk demand for fertilisers required, particularly for basic slag, superphosphate and potash salts, while we hear of contracts also being made for nitrate of soda and guano for spring delivery.

	£	s.	d.
Nitrate of soda	11	5	0
Sulphate of ammonia	12	0	0
Peruvian guano	according to analysis		
Superphosphate, 26 per cent.	2	10	0
,, 35 ,,	3	6	3
Pure dissolved bones	5	7	6
Bone compound, ordinary	3	8	9
Bone Meal	5	10	0
Ground hoofs, 15 per cent.	9	10	0
Fish guano, first quality, scarce & dear	7	10	0
Kainit	2	7	0
Sulphate of potash	10	0	0
Muriate of potash	9	0	6

It is said that the chemical industry of Germany, and especially the manufacture of chemical fertilisers, is increasing so rapidly that other European countries are being left behind in this respect. France, Holland, Belgium, and England are not making nearly so much progress as Germany and America.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, *in the paper.*

Potato Leaf Curl.

This disease is reported to be causing serious trouble in many parts of the country, and growers should take precautions to prevent its extension to their next potato crop. The Board of Agriculture has an article in their Journal for this month detailing the measures that should be adopted. On the subject of manuring the crop, it is said that there is no evidence that any special course of manuring can be relied upon to exert much influence in checking curl. The practice of spreading dry manure in the drills and placing the sets in direct contact with it is to be deprecated. This material does not retain moisture, and becomes like so much hay round the plants.

Manure from cowyards should be used much more extensively than it is at the present time. Its quality by analysis may not be very high, but its mechanical value is considerable, and its lack of nourishing properties can be easily made up by the addition of well-chosen chemical fertilisers.

Kainit has been found of considerable value; its caustic action is injurious to the spores of the fungus, and the potash salts in it stimulate the crop. Kainit is cheap and may be used with advantage at the rate of 7 cwts. per acre towards the end of winter.

The application of Bordeaux mixture cannot be relied upon to check curl.

Salt.

The following reasons why salt should be regularly supplied to farm stock are given by Professor A. P. Aitken, D.Sc.:—

1. Because in the blood of animals there is six or seven times more sodium than potassium, and that the composition of the blood is constant.

2. To keep animals in good health a definite amount of common salt must be assimilated.

3. The excess of potassium salts in vegetable foods causes by chemical exchange an abnormal loss of common salt. This is proved by the fact that the craving of an animal for common salt is most noticeable when the food contains a large proportion of potassium salts, such as wheat, barley, oats, potatoes, beans, and peas.

4. The addition of salt to animal food increases the appetite, promotes the repair of tissue by its searching diffusion through the body, and stimulates the rapid using up of its waste products.

5. Boussingault's experiments showed that salt increases muscular vigour and activity, and improves their general appearance and condition.

Loose Soils.

That a loose soil is protected against ordinary drought has been repeatedly proven. Being a non-conductor of heat, it acts as a mulch, keeps the soil damp, and the roots cool; whereas the hard, unploughed land is a good conductor, and affords no resistance to the access of the injurious heat of the sun. Dew in abundance is very valuable to young plants, and its formation is facilitated by stirring the soil. If any farmer will observe in the morning in his flower or kitchen garden, he will see that dew is often abundantly formed upon the loosely-cultivated beds, while it is totally absent in the hard walks, and this is just what happens on a much larger scale in the fields. Moreover, when the formation of dew is so great as to be everywhere, that upon the loose soil is absorbed and carried to the roots of the plants, while that upon the hard soil is quickly evaporated and lost.

To Produce 1 lb. Increase.

The food required to produce 1 lb. increase in live weight in fattening animals has been computed by experts to be:—

	For Ox.	For Sheep.
Linseed cake	2·5 lb. ...	2·5 lb.
Clover hay	6·0 lb. ...	3·0 lb.
Swedes	35·0 lb. ...	40·0 lb.

Pigs require about 5 lb. barley-meal to produce the same result.

To MANURE at a PROFIT
EVERY FARMER HIS OWN EXPERIMENTER.

BY

H. B. M. BUCHANAN, B.A. (Cantab.), *Author of the "COUNTRY READERS," and Joint Author of "LESSONS ON COUNTRY LIFE,"*

AND

W. A. MAY, "Mark Lane Express" Office, 3, WELLINGTON STREET, STRAND, LONDON.

"HAMPEL" MANURE DISTRIBUTOR

Can be used for sowing **Basic Slag, Superphosphates, Kainit, Ground Lime, Bones, and all kinds of Artificial Manure.**

The advantages are **Equal Distribution, Lightness of Draught, Simplicity of Construction,** thereby requiring little repairing and ensuring easy cleaning and **capability of adjustment** for sowing all kinds of manures.

The handling is very simple, no other assistance being required beyond that of the driver, and one horse will pull it with perfect ease.

No. 3 Sowing 8 ft. wide, £11
No. 4 Sowing 6½ ft. wide, £10

If with arrangement to transfer wheels from ends to sides for narrow lanes and gateways, **£1** extra.

J. & H. KEYWORTH & Co., LIVERPOOL.

WIREWORM

Robs you of your profits.

VAPORITE

Doubles them.

Soil full of wireworms and other pests must have Soil treated with VAPORITE always pays, because no harmful pest or insect can live where VAPORITE is used. It makes big crops and doubles the farmer's profits.

Send for Booklet No. 15a.

56 lb., 6s. 6d.; 112 lb., 10s.; £9 per ton.

"THE SUPREME POINT OF ECONOMY."

To Reach the Supreme Point of

ECONOMY IN FATTENING

Two Main Factors are necessary: The BULLOCK and the FEED.

As a PRACTICAL STOCK-FEEDER YOU have probably selected a first-class fattening breed. That being so,

As EXPERIENCED FARMERS, and SPECIALISTS IN FEEDING STUFFS, WE HAVE A COMMUNITY OF INTEREST WITH YOU. It is of course your desire to fatten your beasts upon the lowest possible expenditure.

THAT MEANS the time occupied must be reduced to a minimum.

THAT MEANS the Feeding Stuffs must be rapid in their results.

THAT MEANS the actual money spent must be hammered down to the bedrock limit, consistent with quality.

SILCOCK'S FATTENING CAKE,

Because it embraces these THREE PRINCIPLES, may accurately be termed "CONCRETE ECONOMY" IN FATTENING. These compounds are the product of long years of study of the Science and Practice in the Art of Cattle Fattening.

Their success is evidenced by the THOUSANDS OF SATISFIED USERS who have helped to build up the TREMENDOUS OUTPUT we are now doing.

YOU have this further DOUBLE ADVANTAGE.

WE guarantee every bag, and we protect you from contingencies by binding ourselves to pay **three times** the value of any deficiency that may be found, and we are so confident of your future experience that we merely ask you for

A TRIAL ORDER. WE SHALL ABIDE BY RESULTS.

HEAD OFFICE: **R. SILCOCK & SONS**, STANLEY HALL, UNION STREET, LIVERPOOL.

RATS!! MICE!!!

Are you troubled with them?

If so, you can easily exterminate them by using **The Pasteur Vaccine Co.'s** well-known **Rat Virus.** Rats and Mice eating bread charged with the Virus are affected by a microbic disease fatal only to the Rodents. The Virus is **Absolutely Harmless to Poultry, Dogs, &c., and Human Beings. The Rats and Mice die in the open.** Price per tube, 2/6. Large Tube, equal to 3 tubes, 5/-

Prepared by The Pasteur Vaccine Co., Ltd., Paris, New York, &c., &c.

THREE RELIABLE CALF MEALS WHICH NEVER DISAPPOINT.

"This 'Cream Equivalent' do smell beautiful, I a'most wish I were a Calf."

1. THE "LANCASTER" CALF FOOD.

13/- PER CWT.; OR, IN FOUR CWT. LOTS, 12/6 PER CWT.
Carriage paid to nearest Railway Station.

This Meal does not swell out so far as the "Milk Equivalent," but is much easier to prepare, and is recommended to those who do not personally see to proper preparation.

2. BIBBY'S "MILK EQUIVALENT."

12/6 PER CWT.; OR, IN FOUR CWT. LOTS, 12/- PER CWT.
Carriage paid to nearest Railway Station.

This Meal swells out splendidly, but needs careful preparation. It is, however, a first-class Meal, and probably the most economic in use of all the Calf Meals in the Market.

3. BIBBY'S "CREAM EQUIVALENT."

15/- PER CWT.
Carriage paid to nearest Railway Station.

Is the latest and most popular of our foods; we believe it is the nearest approach to the ideal that has yet been reached in preparations of this kind.

Our new Circular, "How to Rear Calves for the Dairy," will be sent free of cost to any applicant.

PRESERVATIVES IN CIDER AT THE BREWERS' EXHIBITION.

The analyst's report on the prize-winning samples of cider at the Brewers' Exhibition discloses a serious state of affairs. For some time past it was felt in certain quarters that the purity of much of the cider at the Agricultural Hall was not what it ought to be. We do not mean by this that the cider was not prepared from the juice of the fruit, but that it was suspected that preservatives such as salicylic acid were frequently added.

Unfortunately this has been proved to be the case, for of forty-three samples of bottled ciders analysed no fewer than eleven were found to have been doctored with salicylic acid, no doubt, for the purpose of making them keep better. These figures refer only to the bottled cider, but we believe no steps were taken in order to ensure that the cask ciders were tested for the presence of preservatives. At all events, there are no figures available which show how these came out of the test, and it is only fair to assume that these would survive the ordeal with about similar results.

The notes of the analyst which accompanies the report is not of a too reassuring character, for it says: "In all my tests I have only notified the presence of salicylic acid in those cases where the evidence was unmistakable. In certain cases the indication was very indefinite, pointing to the use of very small amounts, and these I have included among those notes as free."

This report constitutes a serious state of affairs, and it means that the amended prize list will differ considerably from that which has already been made public. The rules under which the cider is judged at the Brewers' Exhibition render it compulsory that any cider which is found to be adulterated with salicylic acid shall be disqualified.

The worst part of the affair, however, is the fact that it shows up the cider trade in an unfavourable light; for a long time past makers have been agitating for the definition of pure cider, and here at the Brewers' Exhibition it is found that, roughly speaking, 25 per cent. of the ciders have been found to have been dosed or adulterated with that objectionable preservative—salicylic acid.

IRISH SEED POTATOES.

It was at the time of the great potato boom that people began to talk seriously about planting Irish seed as a means of increasing crops, and when in trials the above gave better results than seed tubers from Scotland, the possibilities of a new industry for "Ould Oireland" were discussed. But since the boom potatoes have not been talked about quite so much, and it is quite refreshing to have the matter brought forward again by our Nottinghamshire correspondent in the issue for November 11, where some interesting figures were given to show how crops were increased in the cases mentioned through planting Irish seed.

It is generally admitted in these days that frequent changes of seed are not only desirable, but essential, and Scotland has got a well-earned reputation for the growing of seed potatoes. Now Ireland is in the field, or, at any rate, with such recommendations as the one we quote she has the chance to be, and it would be interesting to know what efforts are being made in the green isle to supply the demand in this country for seed potatoes.

When an up-to-date grower (we are not speaking here of the variety) of 40 acres of potatoes plumps for Irish seed there must be something in it.

OUR SLEEPY SOCIETIES.

III.

Hitherto we have been dealing with the efforts of those who may be considered in the light of amateurs. We now approach the work of masters and feel all too keenly our limited powers. Whole provinces of the art of securing an unsuccessful show there doubtless are, into which no pressmen has ever entered, provinces which are only to be conquered by a lifetime of study. The difficulties of the task may be imagined from the fact that no mere neglect will secure an unsuccessful show. The element of surprise combined with fine weather has ere this been known to draw a gate. No, the seeds of failure must be sown very carefully in advance.

Advertisement must by no means be eschewed. Here the amateur would certainly fail, as he would send no placards for display at railway stations, print no handbills for distribution, insert no notices in the newspapers. But in that case the visitor may blame himself for overlooking these things and hearing somehow of a big affair in the neighbourhood may actually go to it.

The perfect non-succeeder behaves very differently. To begin with, he considers what is the particular show's leading feature, and then he designs a poster illustrating some other animal. A Hunter clearing a hurdle makes a pretty picture and will do much to prevent people from going to a show of milking cattle or of sheep. Where horses are to the fore, a picture of a field showing a steam threshing machine at work has many non-merits. The handbills should resemble in print and paper those of the less reputable medicines; but the really essential way to create a general impression that the show is a paltry affair, absolutely unworthy of attention, is to send a small, cheap, and ill-spaced advertisement to the agricultural and local papers. If by refusing to go where the manager of the journal suggests the advertisement can be isolated from any fitting context the effect of injury to the show itself will be perceptibly increased! Rigid insistence on imaginary rights will do much in the country press.

Having arranged in these ways in advance the security for quiet sleep during the actual show day requires further safeguarding. The site chosen must be as far from a railway station as possible. This is *de rigueur*, and any secretary who arranged for a siding or secured fields contiguous to the line would at once be condemned as downright wide-awake. There is one trap that must be particularly avoided. Some towns have a municipal jurisdiction stretching a long way out, and have a contest over cab and even omnibus fares. This must be borne in mind, and the show-yard fixed outside the radius, so that owners of vehicles for hire can charge just what they please. The catering department at the majority of shows is already so well calculated to keep visitors away that we hardly know how to supply any further suggestion; but a strict refusal to allow re-admission on any pretence whatsoever will effectively prevent the visitor getting cheap and wholesome sustenance or beverages outside. It also has the further claim that, in case of a local resident, it will prevent him attending to any bit of business and then returning to the show.

Our unsettled climate affords many aids to the advocate of the solitary show. A complete absence of tents for shelter is invaluable for keeping people away in showery weather, and an uncovered bandstand will prevent a waiting crowd from having their natural impatience allayed by music. If the ground is soft the omission to provide any planking will often go far to repel, and a good deal of irritation may always be caused by providing minor shows of cats or dogs, or plants or water-colours, for which an additional 3d. or 6d. is charged. These things, which would add to the attendance if included in the original gate-money, can thus easily be made an annoyance. The family group may always be discouraged by no half-price for the young. Where landowners and well-to-do farmers would gladly give show passes to their agricultural employees or poorer neighbours, it will suffice simply to fail to print or provide any such passes. The good-natured man will then have to give the actual money, and thereby make the thing a dole.

We feel grieved to think that these shows come round year after year, so that the perfect sleepy secretary is recurrently aroused. As, however, he can effectively reduce attendance beforehand by means which we have indicated, and can also reduce disturbance from visitors at the actual show to a minimum, so finally he can do something further to prevent exhibitors sending again. If he "nursed" the prize moneys himself the smarter exhibitors might think him rather a sly dog, and likely to push the society where it was to his own advantage. But he can avoid this by seeing that the cheques are drawn on an account to other officials' credit, and are drawn by distinguished local patrons and honorary presidents who are mostly abroad or on a journey. If prize winners get their awards a month or two late, and yet with a most vexatious feeling that there is nobody exactly to blame, they will do as little as maybe in other years to send to that particular show; in which case, of course, there will be fewer entrance forms to file, less correspondence of all sorts, less trouble generally.

THE FARMERS' DIARY.

TUESDAY, NOVEMBER 26.—Viscount Tredegar's Show at Newport, Monmouth, first day—Frittenden Sale of Underwoods—Horbridge Sale of Underwoods—Royal Horticultural Society's Show, Vincent Sq. Machynlleth Great Annual Sheep Sale—Bromsgrove Annual Cattle Sale—Wrexham Autumn Sale of Hunters—Fairs at Ballyclare and Newtown—Sending-in Day for Lynn Fat Stock Show.

WEDNESDAY, NOVEMBER 27.—The Hop Growers' and Buyers' Conference at the Agricultural College, Wye, Kent—Viscount Tredegar's Show at Newport, second day—Preston Cheese Show, first day—Horsham Annual Horse Fair and Sale—Shottermill Farm Sale—Wrexham Autumn Sale of Ponies—Fairs at Colne, Ilminster, Newcastle-on-Tyne, Saintfield, and Basingstoke.

THURSDAY, NOVEMBER 28.—Preston Cheese Show, second day—Chippenham Show, first day—Farm Sale at Champion Court, near Sittingbourne—Wrexham Autumn Sale of Heavy Horses—Smarden Farm Sale—Newington Fruit Tree Sale—Northampton Annual Ram Sale and Fair—Harlow Horse and Cattle Sale—Chesham Cattle Sale—Rudgwick Farm Sale—Fairs at Belper, Basingstoke, Penzance, and Uttoxeter.

FRIDAY, NOVEMBER 29.—Chippenham Show second day—Cattle Sales at Warrington and Ballymena—Fairs at Ashbourne and Warrington.

SATURDAY, NOVEMBER 30.—Birmingham Fat Stock Show, first day—Hawkhurst Sale of Underwoods—Fairs at Gloucester, Pontefract, Bury St. Edmunds, and Hythe—Chesterfield Cattle Sale—Sending-in Day for the Vale of Aylesbury Fat Stock Show.

MONDAY, DECEMBER 2.—Birmingham Fat Stock Show, second day—Tonbridge Fat Stock Show, first day—York Great Horse Sale—Melton Mowbray Cheese Fair—Fairs at Chipping Norton, Lancaster, Nantwich, and Oswestry.

Notes of the Week.

Norwich was enshrouded in fog on Thursday, when the first of the fat stock shows opened.

In the hall agriculturists gathered in large numbers, and there was a capital attendance.

The show was a bit under the average as regards quality, and many of the exhibits were poor. The best, on the contrary, were good.

An objection on Thursday, which was not upheld, leads one to ask, What is a Red Poll?

The Red Polled Cattle Society may have something to say on the matter.

A big attendance at the principal shows is expected, as both horn and corn have been doing well lately, so that more farmers than usual will give themselves the pleasure of a visit to one or other of the shows.

The Birmingham Show, which takes place this week, has been held regularly for nearly sixty years.

Of course the fog has returned. It could not be absent during the days of the shows.

It is reported that turkeys are going to be cheap this Christmas. This is said to be due to the financial crisis.

The President of the United States has been trying to make things hot for the "bulls" and "bears," and turkeys seem to be suffering in consequence.

A wealthy Greek merchant has left £20,000 to the Greek Royal Agricultural Society.

A few more people have been killed during the week by motor cars. It is getting quite monotonous.

How about the legality of Christmas boxes. Can we give them outside our own circle? That is a question that is perplexing a good many people.

The following is rather a tall story from India: "My son was working in the garden when a viper glided past him A straight shot with a stone cut open the reptile, thereby restoring to freedom a frog, which hopped unhurt out of the reptile."

One of the latest fads is carrot milk for infants. At the Fruitarian Hospital babies are being fed with extract of carrots instead of extract from cows!

The total quantity of wool produced in Great Britain is estimated to be about 121,000,000 lb.

The price of wool has advanced within the last five years 100 per cent.

This is a satisfactory position. To go "wool gathering" nowadays is a profitable enterprise.

As much as £40 has been offered for a single good bat-willow tree.

Farmers with suitable soil and locality should read the article "Cricket-bat Willow" in this month's Journal of the Board of Agriculture.

A London weekly reports that hens at £200 apiece were on view at the International Poultry Show, and the editor is therefore not surprised at the present high price of eggs.

An Irish bull has been on the rampage in Dublin. It scattered a battalion of soldiers helter-skelter, and defied the whole army until shot.

"Irish bulls" are celebrated, but are usually more a subject of laughter than alarm.

Recent discussions on rural education have given a stimulus to school gardening in elementary schools.

There are now quite a number of gardens attached to elementary schools, where the youngsters get some ideas about plants and their cultivation.

This is right; it is training a child in the way it should go.

Enormous quantities of colonial and foreign fruit are now being poured into this country for Christmas consumption.

Fruit to the value of nearly £10,000,000 sterling is consumed in this country every year.

Honey is sometimes called the concentrated essence of flowers. About a million flowers are drained by the bees to make 1 lb. of honey.

"It's a shameful cruelty, and this horrible traffic ought to be stopped," said a magistrate the other day, referring to the shipment of poor old horses to the Continent for sausage making.

Farmers in America are doing so well that they are buying the motor-cars of the stockbrokers almost ruined by the financial panic.

The financiers have sown the wind and are reaping the natural harvest of the crop.

Ministers and ex-ministers have been explaining to a listening public their views.

We have read the speeches, but do not see where the advancement of agriculture from a farmer's point of view comes in.

"Small holdings" on the one side, "Preference" on the other—but how about me? the farmer may well say.

Napoleon said, "Heaven is on the side of the biggest battalions." Even so; Government is on the side of an organised body of voters.

Speaking at the eleventh annual meeting in Dublin of the council of the Irish Department of Agriculture, Mr. T. W. Russell, M.P., vice-president, said he knew little or nothing about the Irish Agricultural Organisation Society's work, but one officer of the department, who was paid £1,000 a year, devoted his time largely to looking after the expenditure of the £3,700 subsidy from the Departmental funds, "the most unbusiness-like arrangement," said Mr. Russell, "I ever came across." He criticised strongly the policy of subsidising such an organisation to enable it to compete with the taxpayers. After discussion, it was decided by forty-five votes to two to continue the subsidy for a limited number of years only, Mr. Russell saying that he did not wish to disrupt the organisation at once.

SHEEP.

Notes and Jottings.

AMONGST the information that has recently come before me in respect to the Hampshire Down breed is the result of the competition for prizes given by the Hampshire Down Sheep Society to shepherds who rear the largest percentage of lambs. Briefly, the result is that forty-six flocks competed, having an aggregate total of 21,845 ewes, and these gave an average of 11·35 per cent. of lambs, with a loss of only 1·84 per cent. of ewes.

THE only other breed society that follows this excellent practice is the Suffolk Society. Their record for the year 1907 is not yet to hand, but the record that this society has established, dating as it does from 1887, affords full proof of the notable fecundity of that particular breed.

IT has often occurred to me that similar information in respect to other breeds would be of interest and advantage to those who are interested in such breeds. It may be that the percentage of increase would not equal either of those breeds to which reference has been made; but whether this is so or not, it would certainly be to the advantage of every flockowner to know whether or not the result he obtained was equal to or in excess of the general average of the breed.

ANOTHER competition that the Hampshire Down breeders carry out through their breed society is to give prizes to the shepherds who carry their dry flocks through the season with the least loss. In this competition no less than sixty-one flocks were entered, numbering 10,256 head, and the average loss of the whole lot amounted only to 0·33 per cent., or practically one-third of a sheep per hundred. This result speaks well for the healthfulness and hardiness of the Hampshire Down breed, and fully confirms the wisdom of the Hampshire Down Council undertaking and carrying out this contest. The result gives the breed a very excellent advertisement; it calls the attention of sheep-feeders and graziers to the fact that under proper management and care there is practically no loss incurred during the feeding period of sheep of their breed. Similar information in respect to other breeds, particularly those breeds which are grazed together in large numbers, would be of great value and importance to the breed as a whole, both at home and abroad.

IN foreign and colonial countries one of the most essential points in favour of any breed of sheep is that there should be available as much evidence as possible of the healthfulness of such breeds, and one cannot get away from the fact that if such excellent results as is shown by the quotation in respect to the Hampshire Down breed becomes known in those countries that are grazing large numbers of sheep, it will certainly be to the advantage of that breed.

THE fat stock shows of the current year have commenced, and the report of the first of the three great Southern shows, *i.e.*, the Norwich, appears in this issue. The sheep exhibit there represents the best efforts of some of the leading breeders in the South of England, the Southdown, the Suffolk, the Hampshire Down, and the cross-bred being all well and typically represented. "Wonderfully good specimens of their breed," says the report, "remarkable development in comparison with that we used to see twenty-five years back." That such results are possible at the present day is satisfactory, but one sometimes questions whether or not this excessive craze for early development is being obtained by the sacrifice of other valuable properties.

SO far as regards the Southdown, it cannot be too often emphasised that the great merit of the breed is small joints, with a very small percentage of bone and offal. It is a matter of great doubt whether or not the exhibitors of Southdowns, particularly in the wether lambs classes, do not in their endeavour to secure the greatest possible development and weight, overlook the fact that by so doing they are trying to make the Southdown a bigger and coarser breed of sheep.

JUDGES, too, are responsible to a very large extent for this tendency, because their decisions have been more often than not in recent years distinctly in favour of the larger and heavier, or, as they say, the bigger lambs.

MENTION of the different classes at fat stock shows brings to the mind a question asked the other day: "What is a wether?" The reply was: "An altered male sheep." "Quite so," said the inquirer; "but when should this operation take place in order to make the animal a 'wether'?" So far as the writer's experience is concerned, there is no particular date or time fixed upon this point, for although no one can dispute the fact that male sheep which are kept entire for the first fifteen or sixteen months of their lives, and then "altered," are technically wethers, it is a point upon which some difference of opinion exists as to whether or not such sheep are really those sheep for which the prizes are offered in the wether classes at the different agricultural shows.

IT would be of interest if the opinion of breeders upon this point could be ascertained, because in the general acceptance of the term "wether" there can be no question but that it means sheep that were castrated as lambs.

PROBABLY many who read these notes will say "Why trouble about such a point, for everyone knows what a wether is." It is just because everyone knows what a wether is that it is necessary to ascertain, and if possible settle, the date or time upon which the sheep can be castrated so as to become one within the general acceptance of the term's meaning.

INFORMATION received from export buyers shows that the demand for many of the breeds of sheep is very keen at the present time, more particularly for Australasia and Chili.

THE Argentine reports in respect to the sheep sales that have been taking place during the months of September and October are certainly not at all satisfactory from the point of view of the Argentine consignors. Quite a number of high-priced sheep have reached comparatively low prices in that country, and it is very much to be feared that many of the second grade imported rams will leave a heavy loss to their importer.

WHY this state of affairs has come about is patent to all who give the matter thought. It is the result of the over-crowding of the Argentine market with more imported sheep than that market requires, particularly of the lower grades of quality.

The Welsh Mountain Ram illustrated above is the Glaurafon Cymro Goren, the animal with which the University College of North Wales won at the Royal Show at Lincoln this year the First Prize for Welsh Mountain Rams, shearling and upwards. Glaurafon Cymro Goren was born in March, 1905, sire Cymro Ieuanc, and was bred by Mr. W. Conwy Bell, Brynyffynon, Rhuddlan.

Exmoor Horn Sheep Society.

Mr. C. Birmingham presided at the annual meeting of Exmoor Horn Sheep Breeders' Society, and congratulated the members on the great success that had attended their enterprise.

Lord Poltimore was elected president for the ensuing year.

A long discussion took place as to whether the society should be represented at the Royal Show at Newcastle, and the Bath and West Show at Dorchester next year. Various suggestions were made, one being that the society should pay half the railway fares for all the exhibits.

The hon. secretary (Mr. D. J. Tapp) pointed out that a truck to Newcastle would cost quite £15, besides entrance fees; and the chairman said the finances of the society would not stand the strain this year.

Mr. Taylor said as regarded intrinsic merit, Exmoor sheep were better than the Cheviots and Black-faced variety, and the best way to get

other people to know it was to send Exmoors to the Royal Show.

It was decided not to exhibit Exmoors at the Royal Show until 1909; but the members decided to exhibit at the Bath and West Show next year, provided prizes were given for registered sheep. The secretary of the Bath and West Society wrote that his council were willing to encourage the breeding of Exmoors as much as possible.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended November 16, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (8,411), 5,748; sheep and lambs (1,905), —; horses (249), 277.

Fresh meat:—Beef (125,710 cwts.), 63,236; mutton (32,282), 40,767; pork (12,078), 12,340.

Salted or preserved meat:—Bacon (95,439 cwt.), 98,957; beef (5,997), 3,812; hams (11,705), 22,946; pork (4,061), 4,906; meat (12,765), fresh, 11,170, salted, 1,551; meat, preserved (4,247), 7,902.

Dairy produce and substitutes:—Butter (66,312 cwt.), 58,516; margarine (24,503), 14,614; cheese (63,236), 40,815; milk, fresh in cans or drums (—), —; cream (98), 94; milk, condensed (15,880), 17,618; milk, preserved, other kinds (314), 226.

Eggs (great hundreds):—(426,093), 400,125; poultry (value £6,201), £6,028; game (value £2,444), £4,110; rabbits, dead (not tinned), (30,714 cwt.), 8,976; lard (37,814 cwt.), 46,187.

Corn, grain, meal, and flour:—Wheat (2,159,200 cwt.), 1,801,100; wheat meal and flour (255,600), 186,200; barley (744,000), 693,800; oats (209,000), 272,400; peas (44 090), 60,190; beans (10,520), 27,290; maize or Indian corn (643,800), 1,547,700.

Fruit (raw):—Apples (156,737 cwt.), 181,759; grapes (36,244 cwt.), 48,448; pears (6,435 cwt.), 6,536; plums (795 cwt.), 186.

Hay (3,625 tons), 1,269; straw (1,180 tons), 586; moss litter (1,608 tons), 1,868; hops (7,867 cwt.), 6,663; locust beans (12,840 cwt.), 588.

Vegetables, Raw:—Onions (182,789 bushels), 160,217; potatoes, (40,757 cwt.), 370,762; tomatoes, (11,811 cwt.), 18,430.

The second hirings at Carlisle were held in unfavourable weather, but notwithstanding the crowd of servants and masters in the Market Place was considerable. Wages were a little easier than last week, and were as follows:—Best men, £14 to £15; lads able to plough, £10 to £12; younger, £5 to £6; girls and women, £6 to £10 and £11.

HORSES.

What is a Pure Breed?—The Characteristics of a Pure Breed?—Registration Rules—The Result of Eight Crosses—Motor Accidents—The Inference—Lord Montagu of Beaulieu—What Came of the Greys?

What is a Pure Breed?

SOME years ago Mr. G. E. Lascelles, of Sion Hill, near Thirsk, a fine judge of a horse and a man of considerable experience in horse breeding, said in a letter to the writer that in his opinion there were only two pure breeds of horses—viz., the Thoroughbred and the Cart horse; and only one Stud Book that was thoroughly reliable—viz., the General Stud Book. I cannot place my hand on Mr. Lascelles' letter, so cannot quote him verbatim; but this is practically what he said. Then we have a saying "as thoroughbred as Eclipse," and straightway the late Joseph Osborne points out that Eclipse was not a Thoroughbred horse at all, for he was a mixture of Eastern and English blood. So the question presents itself for answer, What is a pure breed?

The Hunter Gelding Goldmint 2nd was foaled in 1901, and bred by Mr. J. H. Stokes, Nether House, Great Bowden, Market Harborough, who exhibited it at the Royal Show at Lincoln this year, where it won First Prize in the Class for Hunter Mares or Geldings foaled in or before 1903, up to more than 13 stones 7 lbs. and not more than 15 stones; and Reserve and Highly Commended awards in the Novice Class for Hunter Mares or Geldings foaled in or before 1902, up to from 12 stones to 14 stones.

The Characteristics of a Pure Breed.

PERHAPS it would be as well to ask what we expect from a so called pure breed of horses. In the first place, we want fixity of type, and in the second place we look for prepotency in the sires, which perhaps, after all, is only another way of putting the same thing. Now one thing is certain, and that is that the prepotency of a horse depends in great measure—indeed, it may be said to depend altogether—on his ancestry. If, from one generation to another for many generations, horses of pure blood and of similar make to himself have been his ancestors he may fairly be expected to transmit their good qualities to his descendants. In this sense of the word then Thoroughbreds and the old Cleveland Bays, of which there are still a few left, and cart horses are the only pure breeds of all our English breeds of horses. Note here that at present I have nothing to say about ponies.

Registration Rules.

THE mere arbitrary rules of stud book registration and the calling of a breed by a certain name does not by any means constitute a pure breed, and an interesting question on breeding is how many top crosses in breeding are necessary to make a horse prepotent in the same sense as a Thoroughbred or an Arab is prepotent? In other words, how many generations are necessary to work the alloy out? It is held by some experienced men that after six generations the peculiar characteristics of ancestors are not transmitted. It is a question upon which it is very difficult to generalise, for the very good reason that we have not plenty of data to go upon. We are groping in the dark all the time. For people do not make accurate notes of the characteristics of their horses, and it is questionable whether the evidence that is procurable in any other way is of any value. Perhaps one might be not far from the mark if one said that eight generations of careful breeding on recognised lines are sufficient to stamp a breed as a pure one. But even here, if some of the horses or mares in the middle of the pedigree were cross bred, disappointment would be sure to ensue every now and again. With eight generations of carefully selected crosses we might have a fairly good foundation on which to set a pure breed.

The Result of Eight Crosses.

BUT even if we were to succeed in making a pure breed—that is, a breed possessing the same characteristics and breeding true to type; if our plan of eight carefully-selected top crosses were adopted, what would be the result? Why, we should have something very like what we have got already, only in all probability not quite so good. For instance, if we breed the eight top crosses of Thoroughbred blood on a Cleveland or hunting mare with the object of producing a Hunter breed we should have a horse of the Thoroughbred type, but not quite so good. I have seen several of the so-called half-bred Hunter sires—I may say that I have seen all the best of them, and these can only be distinguised from the Thoroughbred by the stain in the pedigree. And a stain in the pedigree, I take it, is no recommendation in itself, though by the way some people write and talk it would seem to be one. So far as I can see, no crossing of crossbred horses has ever resulted in a pure breed. It may be said that the Hackney is a pure breed, and the Yorkshire Coach horse lays claim to the same distinction. But what are the facts of the case? With the Yorkshire Coach horse recourse has constantly to be had to one or

other of the foundation breeds to maintain size and type, and Hackneys do not breed to type with the certainty that could be desired, as is evidenced by the undersized and somewhat weedy but fashionably-bred ones that flood the repositories at certain times of the year.

Motor Accidents.

ANYONE connected with horse-breeding, however remotely, must take an interest in the statistics which have just been issued by Mr. L. H. Barnes, the secretary of the Highways Protection League, an association which should be supported by all who wish to see the British ratepayer have reasonable enjoyment of the roads, for the maintenance of which he pays. A fairly good idea may be formed of the danger of motor conveyances as they are used by the figures Mr. Barnes gives. First taking the 'buses, there were 2,964 licensed in London in 1906, and in accidents caused by them fourteen people were killed and 420 were injured. During the same year the 783 licensed motor 'buses killed twenty-five people and injured 824 So that practically one horse 'bus in seven was responsible for an injury, while there were sixty-six more people injured than there were vehicles. Then taking the four-wheeled cabs, of which there were 3,844 licensed, we find that there were 237 injuries caused by them, of which five were fatal, whilst the ninety-six motor cabs have a record of twenty-three injuries, none of which were fatal. As Mr. Barnes puts it, it takes sixteen cabs and only four motor cars to cause an injury.

The Inference.

WHEN one sees the proportion of injuries put down in plain figures it is appalling, yet the proportion is not greater than I expected, and I have very little hesitation in saying, from what I have seen of motor driving out of London, that the proportion of accidents is similar in the country. However that may go, as there are no means of getting at reliable figures, and the London ones are quite sufficient to prove that present legislation is not adequate to keep motor drivers within reasonable bounds. In London, where the traffic is so carefully regulated, and where the policeman is nearly ubiquitous, such a state of things should make even motorists themselves take pause and show some consideration for the safety of others.

Lord Montagu of Beaulieu.

WHETHER it will, however, is a matter which is certainly questionable, especially if we are to judge from the letter written by Lord Montagu of Beaulieu. Lord Montagu says Mr. Barnes' figures are unfair, inasmuch as the mileage covered by the motor vehicles is much greater than that covered by horse-drawn conveyances. Granting that Lord Montagu's figures are correct, we still have the horse-drawn 'buses covering 11,681 miles more per day than the motor 'buses, which are responsible for 415 more injuries, only a trifle short of twice as many. Lord Montagu says the motor cab will cover five or six times as much ground as the horse cab, but there is really no way of getting at the figures. Nor does it very much matter, for after all, his argument only puts in other words what all but prejudiced people say, and that is that the motor traffic as at present conducted is a danger to the public, and that the pace of motor vehicles is too great.

What Came of the Greys?

THOSE who have carefully studied the pedigrees of Yorkshire Coach horses do not need to be told of the many grey thoroughbred horses whose names are found in the old pedigrees. Young Camillus and Delpini are names which at once occur to the memory. At a much later date there were grey Coach horses, one of which was named Monarch or Young Monarch. There was also, I think, a Coach horse named Duncan Gray, but I am speaking from memory and cannot be sure of his history. There was, of course, a Thoroughbred of that name, but he flourished very early in the nineteenth century. Monarch belonged to Mr. Stamper, and was a white horse, very shapely and full of quality, and of typical Coach horse character. Naturally with so many grey horses in the pedigrees, greys would be foaled from time to time, notwithstanding the prepotency of the old Cleveland Bay foundation. And the question that cannot help occurring to anyone who looks through the Coach Horse Stud Book is what became of those greys? For need I say that in the stud book no mention is made of them? I remember a grey Coaching mare winning in the Cleveland Bay brood mare class at Whitby many years ago, and the judge's decision was upheld on appeal, some technical omission in the conditions enabling her to take the prize. But greys were never heard of for many years before the stud book days, and though claims were made for chesnuts, there was never one made for the admission of a grey. But there were several greys bred previous to stud book days, Mr. Stamper himself breeding several very high class animals of that colour. Now Mr. Stamper had a fine connection in Russia; the grey Coach horses commended themselves to Russian Royalty, and the descendants of Young Monarch and other Coach horses that were grey in colour went to improve the Orloff trotter. This is certainly one of the cases in which both the country that imports and the country that exports are benefited, for we have no room for grey Coach horses in England.

THE LOOKER ON.

Next Year's Hackney Horse Show.

The first of the schedules for the Spring Horse Shows of 1908 has just been issued. The Hackney Horse Society has published the list of prizes to be offered at its twenty-fourth annual London Show, to be held in the Agricultural Hall, Islington, on March 3, 4, 5, and 6 next, and we see that the prize money has been increased to £1,915.

The society calls attention to the fact that as a consequence of the enlargement of the Agricultural Hall, the ring will be increased to 200 ft. by 77 ft., the stabling will provide accommodation for 700 horses, the grand stand will be much more extensive, and arrangements will be made for the covered standing of vehicles in the driving competitions. Under these improved circumstances the show should increase in popularity, not only with the exhibitors; but also with the general public, more especially as one of the best military bands has been engaged to play in the afternoons.

In no less than twenty classes have additional prizes been added, and several quite new classes have been instituted. A barren brood mare class will provide for mares debarred from competition in the in-foal classes, and two classes and a championship will cater for Tandems, any age, over and under 15 hands.

A new regulation as to the veterinary examination of the harness horses will, it is expected, enable exhibitors to make a much larger display of representative Hackneys in harness than has formerly been the case, as in many instances horses which have been sound for all harness purposes have been *hors concours* when subjected to the same stringent examination as the stallions and mares in hand.

More especially has this been the case in the pair classes, where a slight blemish in one of the horses has caused the rejection of an otherwise meritorious pair. Needless to say the same stringent examination for the breeding classes will be adhered to, as this is universally conceded to be of paramount importance.

The arrangements to encourage private sale will again be in force, and a feature will once more be made of inviting foreign breeders to attend the show.

Entries will close on January 20, 1908, and with the usual late fee on January 27. All particulars, copies of the schedule, entry forms, &c., can be obtained of the Hackney Horse Society at its offices, 12, Hanover Square, W.

Mr. William Everall's next sale of store cattle is to be held in Shrewsbury Smithfield on Friday next, the 29th inst., when he will offer about 1,000 cattle of all breeds and ages. A large proportion of the cattle are threequarter fat, and include a good number of Angus, Shorthorn, and Hereford bullocks and heifers, one, two, and three years old. As this is his last store stock sale of the year a large attendance of buyers is expected. The sale will commence at 11.30.

The death at the early age of thirty-five years of Mr. S. Hugh Rowlandson, of Newton Morrell (from a short attack of pneumonia) has deprived the North Riding of one of its well-known and rising agriculturists, whose Oxford and Wensleydale rams have been much sought after. A small but choice herd of Shorthorns was in course of formation, several additions having recently been purchased. He was secretary to the Middleton Tyas Agricultural Show, and also a rural district councillor. The funeral was attended by a large company of agriculturists from a wide area, thus testifying to the deceased's popularity.

It has been decided that the Monmouthshire tribute to Viscount Tredegar, for which between five and six thousand subscribers contributed £3,500, in recognition of his lordship's services to the county, of which he is lord lieutenant, and as an expression of the affection in which he is held, shall take the form of a portrait by Hugh Riviere, R.A., a replica to be hung in the council chamber of the county council at Newport, a silver-gilt cup bearing the Tredegar arms, and an album containing the names of the subscribers. Any balance remaining his lordship will hand back to be invested in a trust fund, the income of which is to be divided among the various hospitals of the county. The presentation will be made at a luncheon at Newport on December 17.

MORANT, EDWARD J.—Pedigree Large White Pigs, best strains. Boars and Gilts always for sale at all prices. Breeds kept on separate farms.—Apply, Mr. Cecil Sutton, The Estate Office, Brokenhurst, Hants.

NOTTINGHAM CORPORATION, STOKE FARM. Herd of Large White Pigs. The oldest and largest Herd in Notts County. Over 100 Breeding Sows kept. Upwards of 600 to select from. Boars and Gilts at moderate prices. Inspection invited.—Apply ARTHUR A. AVIS, Stoke Bardolph, Nottingham.

OWTRAM, HERBERT H., Newland Herd Pedigree Large White Yorkshires, winners many prizes, Champion Cup and Medal; Boars, Gilts, in-pig Sows for sale—FARM BAILIFF, Newland Hall, Bay Horse Station, Lancaster.

PETERBORO' HERD OF PEDIGREE WHITE PIGS.

This old-established and well-known Herd has exceeded all previous records during show season of 1906, and in competition at all leading shows.

1906 record: 86 prizes and honours, with 79 exhibits.

222 prizes won in 1903-4, -5, -6, including 29 champion cups and medals.

Boars and Gilts from choicest blood in England for Sale.—All communications to Owner, T. HENSON, Eastgate, Peterboro'.

SHELBOURNE HERD OF PEDIGREE LARGE WHITE YORKSHIRES.—All registered parents of prize-winning early-maturing strains. Youngsters from £1 1s. Send for Guide to Pig-Keeping (free).—HERDSMAN, Mount Cottage Farm, Shirley, Birmingham.

SPALDING HERD of Pedigree Large Whites, young stock and in-pig Gilts for Sale. All bred from great winners.—ALFRED W. WHITE, "Hillegom," Spalding.

THE NEWNHAM HALL HERD of Large and Middle White Yorkshire Pigs is one of the largest and oldest herds of pure-bred pigs in the United Kingdom Prices moderate. Inspection invited.—NEVILLE J. HINE, Newnham Hall, Baldock, Herts.

THE WATFORD HERD of Large White Yorkshire Pedigree Pigs of the choicest breeding. 100 to choose from. Correspondence invited. Grand young breeding stock always on Sale.—Apply R. AYRE, Bushey Lodge Farm, Watford, Herts (15 miles from London).

WALTON HERD of Pedigree PIGS, owned by Sir Gilbert Greenall, Bart., Walton Hall, Warrington. Large and Middle White Yorkshires unsurpassed for purity of breed, size and general excellence, as proved by the numerous Championship and Class Prizes won at all the leading shows. A choice selection of Boars and Sows for sale; stock carefully shipped.—Apply to Mr. W. BAINBRIDGE, Walton House, Warrington.

THE WORSLEY HERD OF PEDIGREE LARGE WHITE PIGS,

the property of the
EARL OF ELLESMERE.

This herd, during the years 1902, 1903, 1904, 1905, has won, whenever it exhibited at the Royal, Bath and West, Highland, and Royal Lancashire Shows, more 1st prizes than all the other exhibitors combined. BOARS, SOWS AND GILTS of all ages (for breeding) at FARMERS' PRICES. SPECIALITY AT PRESENT, YOUNG BOARS READY FOR IMMEDIATE SERVICE.

Pedigrees and full particulars sent on application to Mr. STUART HEATON, Worsley, Manchester.

MIDDLE WHITES.

CASTLECROFT HERD OF PEDIGREE MIDDLE WHITE PIGS.—A fine selection of grand young Boars and Sows are now on sale. They are true to type and bred from prize winners.—Write for full details to THE BAILIFF, Castlecroft Farm, Wolverhampton.

DEWHIRST, A., Ryecroft Farm, Dudley Hill, Bradford. Pedigree Large and Middle White Pigs also a few Berkshires of the choicest breeding. The following prizes have been won in 1902 by pigs bred by myself: 2 champion prizes for the best pig in the show, 86 firsts, 25 seconds, and 6 thirds, with numerous reserves and V.H.C. Send 2 stamps for Illustrated Book.

PAGET, LEOPOLD C., Harewood, Leeds.—Herd of Registered Pedigree Middle White Yorkshire Pigs. Young Boars and Gilts of the best quality and breeding for sale at moderate prices.

PEDIGREE MIDDLE WHITES.—Choice breeding, quality, early maturity. Station: Bingham, G.N.R.—Henry Smith, jun., Cropwell Butler, Nottingham.

THE CATTON HERD of Prize-winning MIDDLE WHITE PIGS, property of J. E. Breeze, Edingale, Tamworth. Stock Boar Castlecroft Mikado, 1st Park Royal, 1st Bath and West. Gelts and Boars on Sale. Prices moderate.—Apply BAILIFF, Raddle Farm, Edingale, Tamworth.

LARGE BLACKS.

BANNISTER, T., Limehurst, Haywards Heath, Sussex (mile from Station, one hour from London). Pedigree Large Black Pigs of the best strains of blood, noted or their docility and for the production of a large proportion of lean meat. Good selection of Boars, unrelated Gilts, and in-pig Sows for Sale at reasonable prices.

CATTON HERD OF PRIZE-WINNING LARGE BLACK PIGS.—Stock Boar Trevisquite Excelsior 1427, 1st Devon County, 2nd and Reserve Champion Royal Show, 1906; pigs kept in hardy natural condition; gelts and boars always on sale.—Apply, J. E. Breeze, Edingale, Tamworth. Stations: Croxall, 2½ miles (M.R.); Airewas, 3½ miles (L.N.W.).

PIGS—*continued.*

LARGE BLACKS—*continued.*

HASKETON CHAMPION PRIZE HERD OF LARGE BLACK PIGS.—This herd has won the Royal championship three out of four times, and is the only herd having won the breed challenge cup. Record: 47 firsts, 37 seconds, 11 thirds, 126 prize-winning cards; the herd this year being the winners of 14 firsts, 6 seconds, 2 thirds, championship and silver cup in five shows. Gelts and Boars at moderate prices consistent with quality. Exportation a speciality.—Apply, C. F. MARRINER, Hasketon, Woodbridge, Suffolk.

PEDIGREE LARGE BLACKS.—Select Herd-bred from choice Prize Winners. Young Boars and Gilts for sale, moderate prices.—H. J. CLARKE, The Slade, Roughley, Sutton Coldfield.

WHEN Breeding, breed from the best Pedigree Large Black Prize-winning Pigs. TREVEGLOS HOPEFUL II., winner of First prizes and R.A.S.E. Silver Challenge Cup, 1907, beating all other Cup winners; also 1st Prize Bath and West, Newport; 1st Royal Counties, Maidenhead; 1st Royal Cornwall, Liskeard; 1st Devon County, Bideford; also 1st prize at the Royal Show, Lincoln, for Boar and Reserve for Champion prize. Boars and Sows for Sale of the above strain at moderate prices.—Apply to JOHN WARNE, Treveglos Farm, St. Mabyn, R.S.O., Cornwall.

BERKSHIRES.

BEHRENS, CAPTAIN, Swinton Grange, Malton, Yorkshire. Pure-bred Berkshire Boars and Gilts usually for sale, bred from prize-winners and the most noted blood.—Apply, Bailiff, Home Farm.

BERNERS, C. H., Woolverstone Park.—Pedigree Berkshire BOARS and Gelts, from noted prize-winners, for sale.—Apply to Hon. Louis Johnstone, Estate Office, Woolverstone, Ipswich.

BERTODANO, C. E. de.—Herds of Pedigree Berkshire and Middle White Pigs, most noted strains. Choice Gelts for sale.—Kerton, Cowbridge House Farm, Malmesbury, Wilts.

BEVAN, C., Mapledurham, Reading.—Pedigree Berkshire Pigs, pure-bred Boars and Gilts, of all ages and at moderate prices.

BLYTH, AUDLEY, Tilbrook Hall, Kimbolton, Hunts.—Berkshire Pigs, all ages, including descendants of Champion Ethel 7105. Moderate prices.

CARNARVON, the Earl of.—Prize winning Pedigree Herd. BOARS and GELTS, eligible Herd Book. Prices moderate.—Apply W. T. HALL, Highclere Farm, Newbury.

CORY, CLIFFORD J., M.P., LLANTARNAM ABBEY, MONMOUTHSHIRE.—Pedigree Boars and Gelts.

CRIBB, ARTHUR LEWIS, Well End Lodge, Shenley, Barnet, Breeder of PEDIGREE BERKSHIRE PIGS. Young stock from noted strains, and eligible for Herd Book, for sale at moderate prices.

READING CORPORATION.—150 Pedigree Berkshire Pigs, leading prize-winning strains, from son of Champion Mikado 10433 and prize-winner Domino 11323; inspection invited.—Apply, Mr. T. Chettle, Manor Farm, Reading, Berks.

STALL PITTS HERD OF PEDIGREE BERKSHIRES. One of the Oldest Herds. Unsurpassed for true character, size, and quality. Choice selection of Boars and Sows on offer at moderate prices.—J. LAWRENCE, Stall Pitts, Shrivenham, Berks.

TAMWORTHS.

PEDIGREE TAMWORTHS, the property of C. HOWARD TAYLOR, Middlewood Hall; a few good young Boars and Gilts for sale.—Apply, Hampole Priory, Doncaster.

BORROWFIELD & COLSTON HERDS.

The property of R. MILLINGTON-KNOWLES
Colston Bassett Hall, Notts.

LARGE WHITE YORKSHIRES.

The following First Prizes, Championships, and Medals have been obtained by pigs **BRED** in these Herds in 1907:

1st and Champion, Gold Medal, R.A.S.E., Lincoln.
1st & Champion, President's Medal, Highland, Edinburgh.
1st Welsh National, Aberystwyth.
1st Bath and West Newport; 1st Royal Counties,
1st Nottingham; 1st Suffolk; 1st Norfolk.
1st Derby.
1st Hereford and Worcester; Special Prize Lincoln Agricultural Society; 1st Great Yorkshire; 1st Newark.

A number of additional Firsts and other Prizes have also been gained at the above Shows.

At the St. Louis Exposition, U.S.A., in 1904, the Champion Boar, and the Grand Champion of the Exposition were bred at Colston Bassett.

The Foreign and Home trade has largely increased during 1907.—GILBERT H. ELLIOT, Estate Office, Colston Bassett, Notts.

For Sale.

PRIZE BRED POLLED ANGUS COWS, BULLS, and HEIFERS.

Finest Strains. Inspection Invited.

GEORGE HOYLES,
Skidby Manor, near Hull.

GEORGE HOYLES
SKIDBY MANOR, HULL.

Breeder of Pure Lincoln Long Wool Sheep.
Lustrous Fleeces. Good Constitutions.
SUITABLE FOR HOME AND ABROAD. STOCK FOR SALE.

CATTLE.

Compensation for Tuberculous Cattle.

A meeting of the Somerset Dairy Farmers' Association was held at Highbridge on Monday afternoon to discuss the question of tuberculosis as affecting farmers' interest Mr. W. J. Ruscombe Poole presided over a large attendance, and explained that the meeting was called in consequence of the butchers combining to extract a guarantee from farmers that all meat sold was sound. The farmers intended to petition the Government in order that compensation should be paid to them in cases where meat was condemned as being unfit for human food, because it was impossible to tell that cattle, &c., were affected with tuberculosis until killed and opened. If the Government would grant them two thirds compensation of the value of the cattle the farmers could secure the other third by mutual insurance

After considerable discussion, the following resolution was passed:—"That the secretary be requested to circularise the various kindred societies in England inviting joint action, and suggesting that a meeting of delegates be organised in London to discuss the matter, and that a copy of the memorial be sent to the county council of Somerset with a request that they will consider this question, and take such action as they think fit to further the matter."

The following tables show the results for this year, and the average prices for the past half-dozen years:—

SHORTHORNS, 1904.

	Average.	Total.
779 Bulls	£51 16 4	£39,889 12 0
124 Cows	34 16 4	4,317 11 0

Sale of Store Stock at Shrewsbury.

At Mr. W. Everall's store stock sale in Shrewsbury Cattle Market on the 15th inst., 1,023 cattle of all breeds and ages were offered, and a satisfactory clearance was effected, though prices were no higher than recorded last sale.

The Irish cattle comprised a splendid lot, most conspicuous amongst them being the Hereford-Shorthorn cross bullocks, which were sent by Messrs. W. J. Walpole, R. Smith, P. Webb, all these cattle being readily sold and made top prices. Lord Sligo sent thirty-three Angus cross bullocks which made £13, or 32s. per cwt. Mr. W. J. Walpole's seventeen Hereford crosses made £14 12s. 6d. up to 32s. 6d. Mr. R. Smith's sixty-two Hereford-Shorthorn crosses made from £16 down to £12 10s., from 31s. per cwt. Messrs. Murphy's thirty-four Shorthorns made up to £15 Mr. P. Webb's twenty-five Hereford cross bullocks made up to £13 17s. 6d.—31s. per cwt. In addition to these lots Mr. O'Connell showed thirty Angus bullocks and heifers, Mr. A. C. Smith Polled Shorthorn yearlings, Mr. H. Jones seventy-two Shorthorn and Hereford heifers and bullocks.

Amongst the English entries the principal consignors were:—Mr. Evans, Shawbury, Hereford bullocks made £16—33s. per cwt; Mr. Jones, Hurst, thirteen Hereford bullocks, £12; Mr. Evans, seventeen Herefords, up to £12 5s.—33s. per cwt.; Mr. Edwards, Seaton, Shorthorn yearlings, £10; Mr. Griffiths, Weston, Shorthorn yearlings, £9 10s. Other prices were:—Herefords, £14, £13, £11 17s. 6d., down to £9; crossbreds, £11 17s. 6d., £11 5s., £10 15s. to £9 5s.

The Lincolnshire Red Shorthorn Heifer Burton C. Star VII., sire Royalty, dam Burton C. Star V., won a First Prize, by inspection, at the recent London Dairy Show, in the Class for Shorthorn Heifers not exceeding three years old. She was bred and exhibited by Mr. John Evens, Burton, Lincoln, and her age at time of exhibition was 2 years and 8 months.

Results of Shorthorn and Aberdeen-Angus Sales in Scotland.

Following usual fashion, the *Banffshire Journal* now that the sales are over, gives a summary of the results of Shorthorn and Aberdeen-Angus sales in Scotland during the present year:—Of both breeds there were sold 2,461, and the average price was £34 10s. 5d., or a reduction of £7 10s. 9d. per head as compared with the average made by 2,228 head of cattle in 1906. The reduction is wholly accounted for by the decline in the value of Shorthorn cattle, although an average of £47 7s. 2d. for 1,274 of this breed, despite a drop in the average price in the course of a single year of £16 3s. 3d., shows that the year has been a very remunerative one for the breeders in Scotland of this variety. All classes of Shorthorn cattle have contributed to the decline in prices, the average for bulls being £11 less, the average for cows £12 less, the average for two-year-old heifers £22 less, the average for yearling heifers £29 less, and the average for heifer calves £22 less.

Aberdeen-Angus cattle, on the other hand, show a slight increase in value, and that, too, in face of an increase of over 200 head of cattle sold at the year's sales as compared with last year, and of only a very limited demand from abroad. Though the average increase only represents some eight shillings, the results of the year's transactions must be regarded as fairly satisfactory, especially in view of the two circumstances which we have just noted.

Sale of Miss Alice de Rothschild's Fat Stock.

The annual sale of Shorthorns, Jerseys and Polled-Angus cattle, together with sheep, belonging to Miss Alice de Rothschild, took place on Thursday at the Home Farm, Waddesdon, and, as usual, was a successful one, there being a large company of buyers, and some capital prices were realised, 103 sheep totalling £256 14s., eighty-three cows £1,861, and five bulls £116 10s., or a total of £2,234 4s.

The sale commenced with the sheep, the lots offered consisting of some fine fat Oxfordshire Down ewes. The highest price was paid by Mr. J. Boddington (Cuddington), who bought a pen of five for 60s. each; Mr. R. Alden (Oxford) took four pens at 55s. 6d., 54s. 6d. (2), and 49s. each; Mr. Jarrett (Rickmansworth) five at 53s. 6d. Mr. Archer was the largest purchaser, securing ten lots of five each at prices ranging from 51s. to 42s. per head; Mr. F. Smith (Aylesbury) three lots of five at 51s., 40s 6d., and 36s. 6d.; Mr. H. Fuller (Shabbington) one at 44s. 6d. Four grand Oxfordshire Down show wethers sold particularly well, being purchased by Mr. C. Ing, Haddenham, £4 1s. and £4; Mr. Almond, Stoke Poges, £3 15s.; and Mr. F. Smith, Aylesbury, £3 14s. Two Oxfordshire ram lambs were bought by Mr. T. Keinch, Cuddington, for £2 16s. and £2 3s.

An adjournment was then made to the cattle ring, the first lots being some choice Polled-Angus oxen. Mr. F. North, London, gave the highest price, £29 15s., Mr. Tavendale, Welshpool, coming next with £29 5s. Other prices for these animals ranged from £23 15s. to £21 5s. The highest price given for a heifer of the same breed was £21 15s., by Mr. Wyatt, Bath, who also bought a prize Polled-Angus heifer for £27. The Shorthorns were a nice lot, the highest price being paid by Mr. C. Stevens, High Wycombe, £29; the next highest, £28, went to Mr. F. Turrill, Oxford, and others ranged from £27 to £17. Jersey oxen were next offered and sold up to £23 15s., given by Mr. Cust, London, others ranged from £20 to £13 15s. Jersey cows sold well, Mr. Plater giving £20 for one, while others made from £19 15s. to £16 15s. Five Shorthorn bulls completed the disposal, and these sold as follows:—Mr. J. B. Stevens, Marlborough, £30 for Waddesdon Scarlet; Mr. Bunker, Stanbridge, £18 10s. for Waddesdon Red Oriel; Mr. Cox, Winchendon, £24 10s. for Waddesdon St. Julien; Mr. E. Bury, Worminghall, £29 10s. for Waddesdon Baritone; and Mr. J. Goss, Westcott, £14 for Waddesdon Arbitration.

Root Growing in the States.

The publication of two bulletins by the Agricultural Department of Cornell University during the last twelve months on roots for stock feeding may be taken as one of the signs of the transition state of American agriculture.

Hitherto, roots for live stock have been almost entirely neglected in the United States, but it is probable that as the ranges get divided into small farms they will come gradually into use. Where maize is not grown extensively they are particularly needed, and it has always been a wonder to British stock-keepers that they have not come into common use in the North Atlantic States.

The bulletins describe the different varieties of roots and the methods of cultivating them. Some of the leading varieties of English mangels, swedes, common turnips, and other roots were used in the experiments.

The manuring as a rule was not at all high, and this probably accounts for the many poor specimens depicted in the illustrations from photographs. Some fair yields, however, were obtained.

At the annual meeting of the East Kent Agricultural Society the following resolution was unanimously carried:—"That in order that the society may be placed on a firmer financial basis, it is resolved that members of the council be asked to become guarantors against loss for a sum not less than £2 2s. each." As regards the result of the past year's working there was a balance in hand of £73 10s. 10d. The question of the arrangement for the venue of the next annual show was deferred.

The Devon County Agricultural Association will be holding its annual exhibition in May next at Plymouth, and last week a meeting of the sites committee of the association was held at Plymouth. A visit was made to the site at Mount Gold, Plymouth, which had been suggested as suitable for the purposes of the show. The county committee were impressed with its suitability, and decided to recommend it to the Devon County Association for adoption. None of the other suggested sites were visited, as it is believed that at Mount Gold meets all requirements.

Lincolnshire Notes.

THE argument for the registration of corn samples is being strongly demonstrated just now. The fall in the price of wheat has been the signal for the refusal of quite a number of consignments as not according to sample. Such disputes, we are assured, seldom, if ever, arise on a rising market. Another and stronger appeal is being made to the Farmers' Union to take up the matter.

THE movement for the establishment of the sugar-beet industry in Lincolnshire received another stimulus last week. A number of farmers inspected with the deepest interest at Spalding Corn Exchange a quantity of sugar-beet roots shown by Messrs. W. S. White and Co, the well-known Lincoln merchants. These roots, an excellent sample, were grown by Mr. W. Pickworth in Whaplode Fen, and the seed was supplied by Messrs. Morgan and Sons, of Germany. Mr. Morgan, the head of the firm, is so firmly convinced of the future success of the industry in England that when the Sleaford project was mooted he offered to take £1,000 worth of shares if a company were formed. The experimental plots in the district have yielded the most satisfactory results, and once more the question of the sugar beet industry is looming into favourable consideration. Whether the farmers of Lincolnshire will have the courage of their convictions has yet to be seen.

IT was a most interesting conference which met on Thursday in the Central Hall, Lincoln, to discuss the Small Holdings and Allotments Acts. The member for Lincoln was in the chair, and an address on the possibilities of the Act was given by Mr. R. Winfrey, M.P. The debate which followed was a very instructive one, and a large number of members of local authorities and agricultural bodies carried away an amount of most valuable information.

THE conference was very representative and entirely non-political, and its general tone was sympathetic. Mr. Perks made several criticisms, and he described the operations of the Act as a speculation and an experiment, but these terms were repudiated by Mr. C. R. Buxton, chairman of the Co-operative Small Holders' Association. The practical note was sounded by Mr. Embleton Fox, chairman of the Lindsey County Council, who pointed to several difficulties in administration which occurred to him. But he met them courageously. County councils he said exist to overcome difficulties, and he promised that, so far as his authority was concerned, they would tackle the problem in a benevolent spirit. There was not a single dissonant note, and the conference has uttered the happiest augury for the success of small holdings in Lincolnshire.

THE Lincolnshire Farmers' Union had a busy day on Friday. The Central Chamber of Agriculture's proposals for the formation of an agricultural party to send direct representatives to Parliament, and to maintain its activities by a central fund, promises to arouse some controversy. In the last resource such a party will certainly have to be established. But the question arises, whether that last resource has been reached, still more whether the occasion is ripe for the promotion of such a vast organisation.

THE Farmers' Union inclines to the policy of permeation. So long as it can impress its programme upon would-be members, it believes it is doing all that can reasonably be done to advance the best interests of agriculture. That is distinctly my view. With the prospect of shorter Parliaments, the pledges of candidates will take on a new significance, and I believe that more can be done by a vigorous campaign in every constituency than will ever be accomplished by the promotion of a few candidates.

THE aggregate amount realised at the seventh annual sale of registered Lincolnshire Red Shorthorns under the auspices of the Alford Bull Fair Committee constituted a record; and the average price is considerably higher than when the same number of bulls were sold. The following table gives some interesting particulars showing the progress of the fair:—

Year.	Bulls offered.	Sold.	Average price. Gns.
1901	76	56	15½
1902	84	56	20
1903	127	95	16½
1904	160	120	19
1905	—	86	21½
1906	114	104	24
1907	134	120	21½

This table is very eloquent of the increasing popularity of the Lincoln Red Shorthorn.

AN interesting letter correcting a statement in the *Daily News* appeared in that paper on Tuesday. Miss Lena Wallis, the daughter of a large Lincolnshire farmer, was reported as having said at a conference of Liberal women that it was a remarkable thing that labourers earning 14s a week brought up families of fourteen children. Miss Wallis explains that she did not speak on the subject at all, and would most emphatically have repudiated any such statement. In the Lincolnshire Wolds she says labourers get 15s. a week, which with harvesting, &c., brings their wages up to 18s. or 19s. On the other hand, rents are low and the labourer has many perquisites, the value of which cannot be reckoned in money. His lot is hard enough at the present time, but nothing is gained by making him live on impossibilities.

LINCOLNSHIRE FARMERS' UNION.

CENTRAL COMMITTEE.

A meeting of the Central Committee of the Lincolnshire Farmers' Union was held at Lincoln on Friday, when Mr. Colin Campbell, who was in the chair, stated he had requested the secretary to write to Earl Carrington to see if he would attend their dinner. A letter had been received stating that the Earl appreciated the invitation sent to him, and adding that he would have great pleasure in attending their annual dinner and meeting on January 31.

Tuberculosis in Cattle.

In connection with the Royal Agricultural Society of England, a letter was read from Lord Northbrook concerning tuberculosis in cattle. The latter implied that a meeting of the council of the society held on Wednesday last the following recommendation was unanimously adopted:—"In the event of promotion of legislation dealing with the question of tuberculosis and other diseases of cattle, the council is of opinion that any regulations dealing with this question should be issued by the Board of Agriculture, and not by any other department. The council also decided that a committee be formed to communicate with other societies for the purpose of watching the interests of agriculture with a view to possible legislation with reference to the tuberculosis question. The Union were requested to appoint one or two gentlemen to attend a meeting to be held at the Royal Agricultural Hall, Islington, on December 11.

The chairman characterised the question as a very important one, and was of opinion they ought to be represented. The good thing about this was that the R.A.S.E. was a society absolutely without suspicion as far as any political views went. When they took a thing up it was taken up in order to benefit the farmer and the butcher.

Mr. Harrison stated with reference to their own market at Lincoln that it had been much injured owing to the attitude of the butchers, who demanded the payment of an indemnity fee.

It was decided that the Union be represented by the chairman and Messrs. Harrison, and G. A. Bellwood.

An Agricultural Party.

The question of a proposed agricultural party in the House of Commons came up. It appeared that the movement had been taken up by the Organisation Committee of the Central Chamber of Agriculture.

Mr. Harrison stated that he was of the opinion that it was in their very best interests to have a Parliamentary party of their own. Hitherto they had had no real claim on anyone. If they were not able to get many members at first, they would in the course of time be able to gather more, and in the end get a very strong party in the House.

Mr. Robinson: I scarcely know all that is implied by an agricultural party.

Mr. Blanshard said they might get one or two members to run under their auspices, but should not they get the members interested in agriculture in the House to form an agricultural party, and then add to them?

The chairman said the Central Chamber of Agriculture recommended to be done something which they had already done, namely, to bring pressure on the local members, and they should be formed into an agricultural party, and called together, no matter what their opinions might be, and get them to look on agricultural questions as non-party ones. That was what they directly recommended. They also said there was another alternative, viz., to have members sent by them and representing them directly. Their opinion was that representation would be very costly, and would upset the existing state of things. He thought that the first thing they recommended was the best for the present. That was what that Union had thought from the start, and now these other people throughout the country were coming exactly to what they had been working for. If that Union was to come to an end that day they would not have lived in vain. His idea was that if this thing went on which they had advocated, there would be a sort of joint board representative of the various classes of people interested in land, and to talk over other things of common interest.

Mr. Robinson said at the present they went to their Parliamentary representatives and asked them if they were in favour of certain measures. If they had Parliamentary representatives of their own they could break away, whereas now if a member was pledged to certain measures he could not get away from it. It was of more advantage to go on the lines they had been doing than go on lines which they would have no control of.

Mr. Morley supported Mr. Robinson, and said it would be all right so long as they went for men who went for measures they wanted.

Mr. Howard said the Union had put new life into agriculture. Each generation wanted new ideas.

Mr. Rawding said the knowledge Mr. Lupton, M.P. for Sleaford, had gained of agriculture was very small, and if he had been a farmer eighteen months he would have learned a great deal more.

It was eventually resolved to let the matter rest for the present, and if the Central Chamber of Agriculture approached them again they would consider it.

Road Grazing.

Mr. Powell brought up the question of road grazing. He said Mr. Embleton Fox had described road grazing cattle as an intolerable nuisance. If it were not for this road grazing many small farmers and cottagers such as those at Wellinggore and Navenby would scarcely be able to keep any cattle. Continuing, the speaker said Mr. Fox had also spoken of the tenters being away from the cattle, and he (the speaker) thought they as farmers must remedy that. He thought it was for them to see they sent suitable men on district councils and county councils to see their roads were not taken from them. He proposed a resolution to the effect that the General Purposes Committee in discussing the motor traffic resolution should pay special attention to the interests of farmers regarding cattle grazing on the roadside.

Mr. Harrison seconded, and Mr. Rawding supported.

Mr. Robinson: I do not know why we want a resolution. The county councils and district councils have nothing to do with it.

Mr. Morley: The county councils have a nasty little way of making by-laws at times.

The resolution was carried.

Railway Rates.

Mr. Glew mentioned a long delay at the station at which his teams were kept, and the delegates were instructed to ventilate the matter at the conference to be held in London.

BRIGG BRANCH.

There was only a poor attendance at the annual meeting of the Brigg branch of the Lincolnshire Farmers' Union, held on Thursday. Mr. Taylor, Sturton, who was unanimously re-elected chairman, said the meetings at Brigg were about the worst attended of any of the branches of the Union, and he hoped there would be an increased attendance in the future.

Mr. Ford, Redbourne, was chosen vice-chairman, and Mr. Dodds, Elsham, re-elected secretary.

With reference to the motor traffic, Mr. Morris, Kirmington, said there was no doubt it required regulating as the cost of the maintenance of the highways was continually increasing.

Mr. Ford, Redbourne, said motorists should contribute more towards the cost of the upkeep of the road, and any increase in the cost of the license should go towards local taxation. The secretary pointed out that the increase in the cost of the maintenance of the Lincolnshire roads was about £2,000. He thought motor cars should be taxed according to their horse power.

The chairman said the faster the cars were driven the more wear and tear there was upon the roads. Also the dust nuisance from which they suffered was greatly increased. A resolution was ultimately passed that the Brigg branch suggested that motorists should be compelled to pay for licences according to the horse power of their cars, and the increased revenue should be devoted to the maintenance of the highways, and also that the police should be more vigilant as to the excessive speed at which motor cars were driven.

The Insurance Question

was also discussed, and Mr. Ford thought if agriculturists insured against fire accidents, and through the Farmers' Union, the premium would not be so much as insurance through a company. It would also tend to increase the membership of the Union to start such a scheme of insurance.

Members of the local branches would have to become guarantors in case there was a call upon the Union. Mr. Ford proposed a resolution that the Union should establish a scheme of insurance.

The chairman, in seconding, said the members of the Union would be shareholders in the suggested scheme, and at the commencement would have to give a guarantee. The motion was carried unanimously.

MEETING AT NORTH HYKEHAM.

A meeting in connection with the Lincolnshire Farmers' Union was held at North Hykeham on the 15th inst. Mr. Wm. Bradshaw presided, and in opening, spoke of the objects of the Farmers' Union, which he felt sure would command the sympathy of all present.

Mr. E. W. Howard reviewed the programme of the Union in his usual racy style, and had an enthusiastic reception. He contended that no body of men had done more to lift agriculture than the Farmers' Union.

The secretary (Mr. H. W. Palmer) referred to the excellent work done by the Union since the last meeting at Hykeham twelve months ago, and instanced the help that had been given to members in the nature of legal aid and advice, which went far to illustrate the direct benefits conferred on those who belonged to the Union.

One especial feature of the meeting was that before it concluded everyone present had paid his subscription.

The usual votes of thanks concluded a successful gathering.

The Fate of the Glasgow Agricultural Society.

The adjourned extraordinary general meeting of Glasgow and West of Scotland Agricultural Society, in connection with a proposal to go into liquidation, was held at Glasgow on Wednesday. Mr. W. E. Gilmour, president, was in the chair, and he explained that the last meeting was continued in order to give Colonel M'Kenzie, Edinbarnet, Duntocher, an opportunity of communicating with the debenture holders, with a view to getting them to waive their claims to interest until the society got into funds. He asked Colonel M'Kenzie to report.

Colonel M'Kenzie stated that he was sorry to say that he was disappointed with the reception that his proposal had met with from a few of the debenture holders. The great bulk of them had very readily signed the agreement to waive their claim for interest past and present, and leave it to the directors to pay from time to time such interest as the funds of the society would allow, but there were a few who had not seen their way to sign. One debenture holder wrote that he would not sign any document, another said he did not see his way to agree, but would postpone for five years. There were a number of others, the total amount being £1,600, who had not yet formally given him in writing an agreement to postpone their claims.

He thought those gentlemen would have seen from the circular sent to them that it was in their own interest to agree to the proposal, because it seemed to him very clear that if the society could not get clear of the £1,200 arrears of interest hanging over it, which it had not sufficient funds to meet, it simply could not evade going into liquidation. That would mean total loss of the principal sum of the debentures and a very large loss of the interest. In these circumstances it seemed to him that it would be very much better to save the chance of redeeming the principal sum and getting some interest than to lose nearly the whole thing, as they were bound to do under liquidation.

If they fully understood the situation, and took up the attitude of saying they would not sign, then he said it was a very shabby, dog-in-the-manger policy. His hope was that they did not appreciate the situation quite fully. He thought it would be wise, seeing such a large number of debenture holders had agreed to the proposal, that the meeting should be adjourned a little further, so that they might ask those gentlemen to consider carefully the advisability, for their own sakes as well as for that of the society, of agreeing to the proposal.

The chairman said it would be a pity if the society went into liquidation for a matter of £1,600. It would also be very unfair that those holding the £1,600 should get payment in full and the remaining debenture-holders nothing. He thought Colonel M'Kenzie's proposal was a very fair one, and he moved, and it was unanimously agreed to, that the meeting be adjourned till December 18, which was the date of the annual meeting of the society.

The balance-sheet presented at the annual meeting of the Melton Mowbray District Horse Show Society showed receipts amounting to £560 1s. 6d., and the expenditure £539 12s. 2d., there thus being a profit on the year's working of £28 9s. 4d.

Course of the Markets.

London.

"To morrow and to-morrow and to-morrow, creeps in this petty pace from day to day." We are all the time looking for something better that to-morrow may bring us, and we are all the time being disappointed. Another week has passed, and I regret to say that I have no good news for my country friends. Indeed, the position of our market appears to become rather worse than better. It is true that a little business is passing, but the bids are lower, and holders are more willing to accept them, thus losses increase and remuneration seems to have vanished out of sight. I hear of hands being discharged for want of employment in the Borough warehouses, of merchants declaring that it would be almost advantageous for them to close their offices for a period, and I know, from personal observation, that factors are weary with waiting for inquiries that do not arrive. Such a condition of affairs at this period of the season is almost without precedent, and it follows naturally that values are gradually but certainly being reduced, and are now at such a low point as should create demand if consumers were in need of our produce. But here is the question, which it is most difficult, if not impossible to answer, Do the brewers want our hops? If we are to judge by the slow demand we have hitherto met with, we may conclude that they can almost do without us, at least for the present. We might reasonably suppose that stocks held by brewers, however large they may have been, should be materially lessened, and perhaps almost exhausted by this time, but when we find that the present very low currency does not tempt them to operate, we are compelled to decide that they are waiting the further development of events, which are as yet dormant or concealed in the mind of the Government. We can hardly be surprised at this reticence when we recall the loud talk about licensing legislation that is promised for next session. What direction it will take we cannot tell; the air is full of rumours, but it appears to be accepted that the interests of the brewing industry will be seriously attacked. Therefore it is reasonable that our customers should pause before committing themselves to greater obligations than they can by any means avoid. It is this disturbing uncertainty that is, I believe, the main cause of our troubles of to-day, and I fear that we shall be obliged to wait for some time for the dawn of the to morrow that may release us from our perplexity.

Nuremberg.

This market seems to be gradually losing its earlier firmness, the demand for export having become weaker, and purchases by native consumers having materially lessened. Stocks are increasing, the arrivals for the week ending November 19, being 3,100 bales and the sales for the same week amounting only to 1,900 bales. The results are seen in the reduction of quotations by some shillings, especially for low and medium qualities. Even the better sorts that have hitherto held their values are offered at lower prices, holders being willing to make concessions in order to induce business. The present tendency favours continued dulness, with some probability of further reduction of prices.

Brussels.

The Belgian markets are wanting in life. The brewery demand is fairly steady, but the volume of business is very limited. The export trade is quiet, and although prices remain at the same nominal point as previously reported, there is an under current of pressure to sell, indicating the probability of lower quotations in the near future.

The imports of hops into Belgium during September last were 2,376 cwt., of which the greater part came from Germany, the arrivals from England only amounting to 53 cwt. Belgian exports for the same month were 1,352 cwt., our English market having received nearly two-thirds of this quantity, the bulk of the remainder going to France.

America.

My most recent letters from the West confirm previous information. I am told that "the hop market, which is already in a very weak condition, has received a further blow by the financial crisis through which we are now passing. The money market is so tight that there is absolutely no buying, and, on the other hand, the country banks and others who have made loans on hop crops, are calling for their money and demanding immediate sales by farmers. This, of course, is having a demoralising effect, with a consequent lowering of values on all sides. Hops can be purchased to-day at lower prices than we have ever known since we have been in business. There certainly has never been a time in Washington when good hops could be purchased in October as low as 5 cents, and considerable business has been done here recently at this price. The market in Oregon is a little higher, having been supported at a certain firmness by English buying, but now there are no more export orders there, and the market has flattened out, and there are indications that it will soon be on a parity with ours." It is stated that Durst and others are agitating for the consignment of 50,000 or 75,000 bales to London, and that the United States of America can easily spare 100,000 bales and still have plenty left for home requirements. Already some considerable quantities have been shipped, and further consignments are being arranged for from Oregon, which will be shipped as soon as the financial situation clears up a little.

The prospects are certainly not promising for the future of our Borough market.

Drying and Curing.

(Concluded from page 627.)

Sulphuring.

Dr. Stockberger points out that the practice of burning sulphur in the kiln during the drying process is permissible, chiefly as it is a response to the demands of the market for the pale yellowish colour. Many dealers are guided in their estimate of value more by colour than by other more essential qualities, and are frequently inclined to rate unsulphured hops as inferior, while sulphured hops of the same growth are classed as choice. It is, however, probable that a moderate application of sulphur is useful in destroying any micro-organisms that may be able to survive the heat of the kiln, and thus the keeping qualities are improved. Some experts assert that the use of sulphur accelerates drying, but this advantage requires further proof. From 2 lb. to 6 lb. of sulphur per 100 lb. of green hops is the usual proportion, and it is most essential that only refined sulphur of guaranteed purity should be used, as the fumes arising from the unrefined or crude sorts will contaminate the hops and injure their brewing quality.

Treatment in the Cooling Room.

A very important part of the successful curing of hops is the handling they receive in the cooling room. Being spread out on the floor, they lose their heat and absorb moisture from the air. The stems are usually not so dry as the other parts of the cones, and during this sweating process the moisture is equalised and the hops become tough and pliable. The best-informed growers recognise that other important changes occur which materially affect the quality of the product. A finer and more pleasing aroma, as well as a more attractive physical appearance is said to be developed, provided the process is carefully watched, and the hops prevented from becoming heated or too moist. Under ordinary circumstances these two evils are avoided by loosening up the hops in the usual way. If taken in time slack dried hops may be brought out and thus practically freed from their sour, musty smell. Great care and good judgment are necessary at this period for proper handling, and more attention given to this phase of hop curing will certainly result in improved qualities.

Yield of Crops.

The paper we are examining gives some figures that may be interesting when the question of American competition is considered. It is shown that from 1879 to 1899 the average production per acre in the States mentioned was as follows:—

New York	577 lb.
Oregon	982 ,,
California	1,379 ,,
Washington	1,410 ,,

Dr. Stockberger adds that in favourable seasons, on the better soils, the yield will usually be much larger. In California, an acre may produce 1,800 to 2,400 lb.; in Washington, 1,200 to 2,000 lb.; in Oregon, 1,000 to 1,600 lb.; and in New York, 800 to 1,500 lb.

The annual estimates of the production of hops in the United States show a steady and substantial increase during the past six years, the figures quoted being as follows:—

1901.	1902.	1903.	1904.	1905.	1906.
cwt.	cwt.	cwt.	cwt.	cwt.	cwt.
346,732	348,200	395,490	438,600	495,850	586,200

The increase during the above period is thus seen to be nearly 70 per cent.

Types of Kilns.

The kilns in use in the U.S.A. are described and illustrated by Dr. Stockberger, but without the drawings it would be almost useless for me to attempt to give the details. I gather that the use of the air blast kiln is advocated in preference to those with only natural draught. I note also that there is no mention of drying hops by means

of open fires, all American kilns being provided with closed stoves, the air passing through the hops, being heated by contact with pipes, so that, whatever may be the actual plan of the kiln, there is no possibility in any case of the products of combustion contaminating the hops on the drying floor.

In thus concluding my extracts from this interesting paper, which comprises many other important points concerning climate, soil, cultivation, and marketing, it only remains for me to refer briefly to the lessons we may learn from the information provided.

Our English Methods.

It would appear that our predecessors in the industry were not quite so ignorant of the correct principles of curing hops as some of us moderns are inclined to consider them. The "cockle" oast was in common use in former times, and, imperfect as was its construction, it had at least the merit of avoiding the risks and dangers of the open furnaces which subsequently came into general use. But its action was too slow to meet modern requirements; two loads of hops must be dried in the same time as the "cockle" could dry one load, and the advantages of the older system were therefore set aside in favour of the quicker dispatch of the business, accomplished by the more rapid transmission of heat from open fires. To-day we are again changing our views. Assisted by engineering science, we are finding out that it is possible to hasten the drying process by means of forced draught, with the additional gains of an increased volume of air at low temperature, and absolute purity of the air which is the vehicle for removing the moisture. This is being effected in various ways. We have in one system elaborate batteries of comparatively small pipes heated by burning fuel, through which batteries the air is drawn by a powerful fan, and by the same means is propelled through the hops. Another, and to my mind a better system, is that which employs a battery of steam heated pipes for raising the temperature of the air forced through it by a powerful fan. Such systems are most effective, but the initial cost is heavy and beyond the pocket of the average grower. The necessities of the time have aroused inventors, who have succeeded in accomplishing equal efficiency at much lighter outlay. Without any bias in favour of either, I can mention with satisfaction the arrangements introduced and patented both by Mr. Joyce, of Hereford, and Mr. Shew, of Ledbury. These differ in details of construction, and naturally each inventor claims precedence. Speaking candidly, both systems are excellent, and both attain the objects indicated by Dr. Stockberger, when he points out what is necessary for the proper management of hops in the kiln. The moderate cost at which either of these systems can be installed brings them within reach of every English planter, and the approval they have already secured from so many expert growers encourages me to look for the speedy extinction of all open fires, and the early conversion of our older kilns to these more advanced and more perfect systems.

Our industry is seriously threatened by the world's competition, that becomes keener every season. English growers have fought the battle bravely for many years, but the time has now arrived when they must look carefully at every point of their position. The cost of production, the quality of their produce, and the best means of lowering the former and improving the latter, these claim attention to-day. I am confident that when the necessities of the case are fully realised, our people will be found equal to the occasion, and will demonstrate, as they always have, their true character by keeping their place at the top.

Hop Conference at Wye.

The conference of hop growers will be held here on November 27, at 11.15 a.m., when a large attendance of growers is expected. The agenda will include:—11.15, "The Influence of Fertilisation on the 'Growing out' of Hops," Messrs. E. S. Salmos and Arthur Amos; 2 30, "Arsenic in Hops," Mr. M. J. R. Dunstan and Dr. Goodwin; "Eelworms," Mr. F. V. Theobald; followed by discussion.

The annual hirings at Darlington took place on Monday, when servants seeking situations were not so numerous as in some former years, most of the engagements being made beforehand. The hiring of men was more for half a year than formerly, being at the rate of £28 to £30 per year for the best men and foremen; secondary, £23 to £24; strong youths for ploughboys, £16 to £18; younger boys, £8 to £9. Female servants were rather scarce and commanded high wages. Dairymaids and experienced farm workers were £18 to £21; ordinary servants, £15 to £16; girls, £10 to £11; young girls, £7 to £8 for the year.

FARM.

Gloucester Root Competitions.

The West Gloucester Farmers' Club in 1904 started a root competition which has grown in popularity each year, for whereas in the first year the entries were only nineteen, this year they numbered sixty-four, and Mr. E. K. Morgan, of Slymbridge, who officiated as judge reports most favourably of the roots entered. In his report now issued he says:—

The whole of the entries are very commendable. Mr. G. H. Jones, of Badminton, who takes the first prize for swedes in the "Hill District," has a grand lot of roots, heavy, with quality, and very growing, cultivations excellent. The same exhibitor also takes the prize for turnips. Mr. Harry Butler, Badminton, wins the mangold prize with good quality roots. Mr. Henry Nicholls, Iron Acton, the chief winner in the Vale, has the best lot of roots I would wish to walk through, his mangolds, swedes and turnips having a remarkable average. They are not only heavy, but the quality cultivations, and management are undeniable. Mr. Jeffery Matthews's (Winterbourne) roots are of very choice quality, very growing, and the cultivations, together with management, are superbly done. Mr. Henry Matthews, of Winterbourne, richly deserves the society's mangold prize with a heavy piece, well cultivated; the same competitor also has some useful swedes. Messrs. Henry Bridgman (Downend), T. Meredith (Iron Acton), John Rymer (Hambrook), and F. Biss (Almondsbury) deserves mentioning for the care and judgment they evidently have used in growing such excellent root crops. In concluding my report, I would like to make one suggestion for future competitions—that all roots should be grown on land which has produced a white straw crop the previous year.

Forestry in Ireland.

The inquiries in Ireland as to tree planting and felling operations instituted in 1890, and continued in the fifteen following years, were repeated in 1906. According to the returns, during the year ended June 30, 1906, 1,013 acres were planted with trees, 378 acres more than the extent planted in the preceding year.

The number of trees felled, both for clearance and for thinning plantations, amounted in 1906 to 883,732. The area returned as cleared is 1,045 acres. It may be noted from Irish statistics just published that while there would appear to have been an increase of 3,565 acres under woods and plantations, the statistics of planting and felling show a decrease of thirty-two acres.

There is thus a discrepancy in the figures, but, as has been pointed out in previous reports, considerable difficulties exist in ascertaining the area under woods and plantations from a very large number of persons, many of whom are imperfectly acquainted with the acreage under timber on their holdings.

Of the trees felled, 407,149 were used for "propping," which appears to have been the chief purpose to which the timber of almost all descriptions was applied.

The numbers applied to the principal specified uses comprise also:—25,788 trees for sleepers, 99,363 for paling, 17,330 for fuel, 23,337 for furniture and building purposes, 3,045 for carts, wagons, &c., 3,870 for clog soles, 1,295 for shipbuilding, 750 for telegraph and telephone poles, 1,900 for soap boxes, 1,895 for butter and egg boxes, 1,648 for street paving, &c., 1,260 for railway carriage, 1,000 for tramways, and 1,000 for charcoal.

Webb and Sons' Root Competition.

The awards in the annual competition for the valuable prizes offered by Webb and Sons, the King's seedsmen, Wordsley, Stourbridge, for root crops grown from their seeds and with the aid of their special manure, have just been made by the judges, viz.:—Mr. H. W. Woods, "Ivydene," St. Anns-on-Sea, Lancashire; Mr. J. Myatt, Lynn House, near Walsall, Staffordshire; Mr. W. L. Anson, Iverley, Stourbridge, Worcestershire; and the following is a copy of their awards:—

District 1.—Five acres of Webbs' swede, open to the counties of Salop, Stafford, Montgomery, Warwick, and Leicester. First prize, £15 15s., Mr. William Humphreys, Evenall, Oswestry, Salop, 49 tons 12 cwt. 3 qr. 12 lb. per acre; second prize, £10 10s., Mrs. T. J. Major Adderley Lees, Market Drayton, 49 ton 11 cwt. 1 qr. 20 lb. per acre. Three acres of Webbs' mangold. First prize, £10 10s., Mr. Septimus Timmis, Charnes Old Hall, Eccleshall, Staffordshire, 58 tons 4 cwt. 1 qr. 4 lb. per acre; second prize, £5 5s., Mr. W. H. O. Lander, Day House, Wellington, Salop, 57 tons 12 cwt. 3 qr. 12 lb. per acre.

District 2.—Five acres of Webbs' swede, open to the counties of Hereford, Monmouth, Brecon, Glamorgan, Carmarthen, and Pembroke. First prize, £15 15s., Mr. William Emerson, Swelden Farm, Cyntwell, Cardiff, 46 tons 7 cwt. 0 qr. 16 lb. per acre; second prize, £5 5s., Mr. W. Hier Evans, Rudyr Court, Llandaff, Cardiff, 40 tons 17 cwt. 0 qr. 6 lb. per acre. Two acres of Webbs' mangold. Prize, £10 10s., Mr. J. J. Corbishley, Eccleswall Court, Ross, Hereford, 65 tons 11 cwt. 1 qr. 20 lb. per acre.

District 3.—Five acres of Webbs' swede, open to the counties of Oxon, Northampton, Berks, Bucks, Wilts, Hants, Surrey, Worcester, and Gloucester. First prize, £15 15s., Mr. George Bonnor, Hill Top, Rochford, Tenbury, 46 tons 4 cwt. 1 qr. 4 lb. per acre; second prize, £5 5s., Marquis of Downshire, Easthampstead Park, Wokingham, Berks, 34 tons 17 cwt. 0 qr. 16 lb. per acre. Three acres of Webbs' mangold, open to the counties of Oxon, Northampton, Berks, Bucks, Wilts, Hants, Surrey, and Worcester. Prize, £10 10s., Mr. Alfred Brown, Hill Farm, Southampton, 79 tons 12 cwt. 3 qr. 12 lb. per acre.

District 4.—Two acres of Webbs' mangold, open to the county of Gloucester. Prize, £5 5s., Mr. H. W. S. Gist, Manor House, Alston, Tewkesbury, 47 tons 10 cwt. per acre.

District 5.—Five acres of Webbs' swede, open to the county of York. First prize, £10 10s, Mr. J. W. Earle, Kirkbridge, Aldbro', Darlington, 27 tons 19 cwt. 1 qr. 4 lb per acre; second prize, £5 5s., E. W. Stanyforth, Esq., Kirk Hammerton Hall, York, 27 tons 8 cwt. 2 qr. 8 lb. per acre. Three acres of Webbs' mangold. Prize £10 10s., E. W. Stanyforth, Kirk Hammerton Hall, York, 36 tons per acre.

District 6.—Five acres of Webbs' swede, open to the counties of Norfolk and Suffolk. Prize £10 10s., Exors. of the late S. Nightingale, Esq., Thurne, Great Yarmouth, 26 tons 2 cwt. 3 qr. 12 lb. per acre. Three acres of Webbs' mangold. Prize, £10 10s., Mr. J. Love, Walcot, Stalham, Norfolk, 39 tons 6 cwt. 1 qr. 20 lb. per acre.

District 7.—Five acres of Webbs' swede, open to the counties of Bedford, Cambridge, Cornwall, Cumberland, Cheshire, Derby, Devon, Dorset, Durham, Essex, Herts, Huntingdon, Kent, Lancaster, Lincoln, Middlesex, Northumberland, Notts, Rutland, Somerset, Sussex, Westmoreland, Cardigan, Carnarvon, Denbigh, Flint, Merioneth, and Radnor. First prize, £15 15s., Mr. T. W. Turnbull, Wark-on-Tweed, Coldstream, N B, 36 tons 14 cwt, 1 qr. 4 lb. per acre; second prize, £5 5s., Mr. S. S. Raingill, the Grange, Ringway, Altrincham. 36 tons 4 cwt. 1 qr. 4 lb. per acre. Two acres of Webbs' mangold. Prize, £10 10s., Mr. A. Wright, Royals Wood, Nantwich, Cheshire, 61 tons 4 cwt. 1 qr. 4 lb. per acre.

District 8.—Five acres of Webbs' swede, open to the counties of Roxburgh, Haddington, Berwick, Edinburgh, and Linlithgow. First prize, £10 10s., Mr. James Cook, Arniston, Gorebridge, Edinburgh, 35 tons per acre; second prize, £5 5s., Mr. William Gemmill, Greendykes, Macmerry, 32 tons 12 cwt. 3 qrs. 12 lb. per acre.

District 9.—Five acres of Webbs' swede, open to the county of Perth. First prize, £10 10s., Earl of Mansfield, Balboughty, Perth, 36 tons 7 cwt. 0 qrs. 16 lbs. per acre; second prize, £5 5s, Mr. C. A. Murray, Taymount, Stanley, 34 tons 14 cwt. 1 qr. 4 lb. per acre.

District 10.—Five acres of Webbs' swede, open to the counties of Forfar, Fife, and Kinross First prize, £10 10s., Mr. James Law, Spencerfield, Inver Keithing, 35 tons per acre; second prize, £5 5s., Mr. Thomas Walker, Kilmaron, Cupar, 33 tons 18 cwt 2 qr. 8 lb. per acre.

District 11.—Five acre, of Webbs' swedes, open to the counties of Aberdeen, Banff, Kincardine, Inverness, Moray, and Elgin. Prize £10 10s, Duke of Richmond and Gordon, K.G., Gordon Castle, Fochabers, 37 tons 11 cwt. 1 qr. 20 lb. per acre.

District 12.—Five acres of Webb's swede, open to the counties of Dumfries, Kirkcudbright and Wigtown. Prize £10 10s., Mr. William McCaig, Low Balcray, Whithorn, N.B., 35 tons 8 cwt. 2 qr. 8 lb. per acre.

District 13.—Five acres of Webbs' swede, open to the counties of Stirling Dumbarton, and Clackmannan. Prize £5 5s, Mr. James Todd, Blackdub, Bridge of Allan, 23 tons per acre.

District 14.—Three acres of Webbs' swede, open to the county of Ayr. Prize, £10 10s., Mr. John Mair, Balterson Mains, Maybole, and Mr. T. B. Wright, Cairwell, Girvan (equal), 36 tons 1 cwt. 1 qr. 20 lb. per acre.

District 15.—Five acres of Webbs' swede, open to the counties of Peebles and Lanark. Prize, £5 5s, Mr. George Findlater, Jerviswood Mains, Lanark, 36 tons 10 cwt. per acre. Five acres of Webbs' yellow turnips. Prize, £5 5s., Mr. James Struthers, Anston, Dunsyre, Carstairs, 33 tons 11 cwt. 1 qr. 20 lb. per acre.

District 16.—Five acres of Webbs' swede, open to the counties of Sutherland and Caithness. Prize £5 5s, Mr. J. D. Cameron, Kirkton, Golspie, 30 tons per acre. Five acres of Webbs', yellow turnips. Prize £5 5s., Mr. Magnus McKenzie, Westfield, Thurso, 32 tons 15 cwt. 2 qr. 24 lb.

LIST OF
FARMING, LIVE STOCK REARING, POULTRY & GARDENING BOOKS

Obtainable by post only from 3, Wellington Street, Strand, London.

Postage on Books where not stated, 3d to 5d., balance returned.

NOTE.—All Orders must be accompanied by Remittance sufficient to cover Carriage or Postage. For easy Reference, please quote the Number of Book when Ordering.

UTILITY BOOKS.

Price 6d. each net; post free 7d.

Each book of the series is written by a practical man. In almost every case the writer makes the whole or a material part of his living from the subject of which he treats. Therefore the directions are plain and are based on accurate knowledge.

No. 1.—Out-Door Carpentry. By S. Walter Newcomb.—Deals with useful, as well as decorative structures—with plans, sketches, and details for doors, gates, stiles, fences, seats, summer-houses, dog-kennels, chicken coops, window-boxes, greenhouses, &c. Designs of some fifty subjects. D.

No. 2.—Gardens and Grounds: How to Lay Out and Arrange. By T. W. Sanders, F.L.S., F.R.H.S., &c.—Suggestions for laying out, planting, and improving the small plot, or the country grounds of several acres. The best aspects and positions, considering appearance with economy of space, labour and expense. With plans and sketches

No. 3.—Heating and Ventilation of Houses. By C. F. Townsend, F.C.S.—Intended to enable anyone, in any house, to secure full supply of fresh air without chilling draughts. Economy and existing conditions are first considerations.

No. 4.—Utility Fowl Houses and Appliances. By H. Francklin.—With about forty measured drawings and plans, and with concise instructions, not only for home construction, but for guidance in purchasing for the fowl-yard. Treats of ventilation, site, aspect, &c., of houses; the laying out of large and small runs, construction of nest boxes, coops, &c.

No. 5.—Utility Fowl Feeding and Management. By H. Francklin.—The requirements of fowls from birth to maturity, feeding stuffs, and how to use them for feeding of chickens, hens for summer and winter laying, and for the fattening of surplus stock, The management of fowls in large or small numbers, the selection of breeding stock, the management of the sitting hen, the keeping of accounts, and many other factors in successful poultry farming.

No. 6.—Utility Fowls: Their Selection, Improvement and Diseases. By H. Francklin.—The breeds most suitable for confinement or a free range; crossing, and the improvement of mongrel stock. Turkeys, guinea fowl and water fowl are spoken of.

No. 7.—Incubating and Rearing Utility Fowls. By H. Francklin.—Water-tank and non-moisture incubators; brooders and brooder-houses, with hints, instructions, and precautions for the hatching and rearing of fowls for profit.

Utility Fowls. Nos. 4, 5, 6, and 7 together, bound in handsome cloth, price 2s. 6d. net; postage 3d. The best guide for the poultry keeper; and an excellent present for a beginner.

No. 8.—Propagating Plants: By Seeds, Cuttings, Layers, Grafts, Buds, &c. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Propagation of all classes of plants, by many methods, with lists of those suitable for the various treatments, hints on the preparation of seed beds, &c. Many illustrations.

No. 9.—Hardy Perennials. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh. Illustrations and plans from the Author's Sketches. All information necessary for selecting hardy perennials and for arranging borders, wild gardens, water gardens, &c.

No. 10.—Utility Rabbits. By a practical Rabbit Farmer.—Simple enough for the boy who keeps but one or two rabbits, yet sufficiently thorough for the man who wishes to make a living from a trade which is almost entirely in foreign hands.

No. 11.—Cold Greenhouses and Frames. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—How to secure foliage and bloom through the whole year. Lists of most useful plants, with brief description and cultural directions.

No. 12.—Carnations, Pinks and Picotees. By E. Hasler Potter, F.R.H.S.—Simple and sufficient directions for raising pinks, selfs, bizarres, flakes, fancies, picotees, winter flokering, malmaison, and marguerite carnations from seeds, cuttings, or layers, and for their culture for exhibition flowers, cut blooms, &c.

No. 13.—Spring Gardening. By H. Francklin.—Deals with the aspects of out-door Spring gardening; wild woodland, border walks, edgings, bulbs in grass and under trees, flowers in orchards, bog gardens, rooteries, walls, arches, bedding, house decoration, &c.

No 14.—Hardy Fruits. By E. Hasler Potter, F.R.H.S.—Full instructions for growing all British fruits.—Propagation, culture, manuring, watering, training, pruning, gathering the fruit, and storing. With diagrams of garden arrangements, forms of trees, &c.; also recipes for cures for pests and diseases.

No. 15.—Keeping a Dog. By A. Nicol Simpson, F.Z.S.—Written clearly and concisely, for the keeper of one or two dogs as pets, companions, or guardians of the yard.

No. 16.—Rose-Growing. By D. Grant McIver, A.R.H.S.—The whole elementary art and practice of rose-growing, for garden glory, for cut blooms, or for perfect exhibition specimens. Preparation of ground, site and aspect, when and how to plant, propagation, roses in the greenhouse, roses for exhibition, lists of varieties, and a complete, concise rosarian's calendar.

No. 17.—Chrysanthemums. By E. Hasler Potter, F.R.H.S.—Directions for treating the principal varieties of chrysanthemums, annual or perennial, indoors or out-of-doors, for pleasure, profit, or show. With special suggestions for the town man who can only give attention at night and morning.

No. 18.—Bulb Culture. By D. Grant McIver, A.R.H.S.—Directions for growing all kinds of bulbs under glass and out-of-doors. Also for many tuberous (&c.) rooted plants which are familiarly called "bulbs." Lists and illustrations.

No. 19.—The Vegetable Garden Calendar. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Gives, in twelve openings, graphic charts of the vegetable garden for each month. Each chart shows at a glance what crops should be in the ground, what should be yielding produce, what proportion of space should be occupied by each, and what operations should be in hand. Many illustrations.

No. 20.—Goats for Profit. By a practical Goat and Rabbit Farmer. Selection and purchase, housing (with working plans), breeding and the treatment of young kids, feeding, grooming, milking, uses of the milk, making of butter and cheese, killing and dressing kids, training goats to harness, treatment of their diseases, etc.

No. 21.—Garden Operations. By Wm. F. Rowles.—Digging, trenching, preparing for seed, sowing, thinning, planting, ridging, earthing, hoeing, weed-killing, staking, protecting, harvesting, tools and make-shifts, water-supply, watering, lawn-making, mowing, rolling, making paths and beds, and many other operations. The how, the when, and the why clearly explained.

No. 22.—Pruning, Training, and Trimming Trees and Shrubs. By D. Grant McIver, A.R.H.S.—Explains and illustrates the whole art of using knife and shears in a garden. D.

Price 6d. each net; post free, 7d.

Nos. 16 to 21 also in cloth, price 1s. each, net: post free, 1/2

No. 23.—To Manure at a Profit.
Every Farmer his own Experimenter. By H. B. M. Buchanan, B.A. (Cantab), Author of the "Country Readers," and joint Author of "Lessons on Country Life," and J. J. Willis, Superintendent of the Rothamsted Field Experiments. L.

No. 24.—Profitable Hobbies. By H. Snowden Ward. Gives advice on the cultivation of hobbies, and how to turn them to profitable account. The book is illustrated throughout, and deals with such subjects as wood-carving, photography, collecting, grangerising, drawing and designing, marquetrie staining, metal working, glass blowing, art enamelling, stone-cutting and polishing, the keeping of pets, etc., etc.

THE FARM.

LARGE BLACK PIG SOCIETY.

President:
The Right Hon. the EARL OF ONSLOW, G.C.M.G.

THE ANNUAL GENERAL MEETING of MEMBERS will be held at the Great Northern Hotel, King's Cross Station, London, N., on WEDNESDAY, DECEMBER 11, 1907, at 2.30 p.m., to receive Report from the Council and Statement of Accounts for the year ending June 30, 1907, to elect Officers and Members of the Council for the ensuing year, and to transact any other necessary business.

JAMES P. HENDERSON,
Secretary, *pro tem.*

LEGAL NOTICE.

In the High Court of Justice,
Chancery Division,
Mr. Justice PICTON.
In the matter of
THE AVONVALE BREAD COMPANY, LIMITED, EVESHAM.

THE Receiver and Manager, appointed by the Chancery Court, is desirous of disposing of the business carried on by the above Company, as a going concern.

The Freehold property is situate in the centre of the Vale of Evesham, and close to the Midland and Great Western Railways, and on the banks of the river, which is navigable to Gloucester, and contains in the whole an area of about 3a. 1r. 2p., comprising Mill Buildings, large Four-Storey Building known as "The Factory," connected with the Mill by covered girder bridge and a substantial Dwelling House known as the "Mill House," with good garden, which is let at a nominal rental of £30. Also Foreman's Cottage and Offices, and a productive Orchard known as "The Island."

The Machinery consists of a 5 (Bag) Plant (4 bus.) on Simon's System, with Wheat Cleaning Machinery, Wheat Washer, &c., driven by two Turbines ("Simon's Action"), Provender Plant, consisting of two Pairs Stones with necessary adjuncts driven by a large undershot Wheel, one high and low pressure Condensing Steam Engine (18in. Cylinder), Electric Lighting Plant, &c.

Being situated in the centre of a Feeding District there is a large local demand at full prices for offals, horse corn and provender, &c., which is of considerable benefit to the Company.

Fishing rights connected with the River (Avon), of about one mile in extent, are let at a nominal rent of £6 10s. per annum.

There is ample accommodation for a considerable increase of Plant.

The Stock in Trade can be purchased at a valuation.

Goodwill includes all books and papers, together with valuable connection acquired by the Company.

Further particulars and cards to view can be obtained from Messrs. GEOFFREY NEW & ODGERS, Solicitors, Evesham; or the Receiver and Manager, Mr. H. J. PEART; of Messrs. SHARP, PARSONS & Co., Chartered Accountants, 120, Colmore Row, Birmingham.

SHIPPING.

TRY DANIEL GILES for Farm Carts, Waggons, Lurries, &c. Best Workmanship only. — Station Street, Bromsgrove.

"PITTSBURGH PERFECT."—Electrically Welded Fences. Made only from well galvanized steel wire. Suitable for field, park, and garden. The strongest, cheapest, and most elegant wire fences in the world. —THOS. PAGE, Bottesford, Nottingham.

GALVANISED Iron Mangers from 5s. each. Write for prices of stable fittings. — T. CHARLES, 10, Albert Embankment, London, S.E.

JOHN PRIEST & SON, Ltd., Castle Iron Works, Bristol.

Wire Netting.—Best Galvanised. Reduced prices per roll of 50 yds. 3 in. mesh, 2 ft., 4s.; 3 ft., 5s. 5d.; 4 ft., 7s. 2d.; 2 in. mesh, 2 ft., 5s. 1d.; 3 ft., 6s. 10½.; 4 ft., 9s. 2d.; 1 in. mesh, 2 ft., 8s. 5d.; 3 ft., 12s.; 4 ft., 16s. BEST GALVANISED SHEEP NETTING.—50 yard rolls, 3 ft. wide, 4 in. mesh, and centre strand, strong, 9s. 2d.; medium, 8s. 2d. per 50 yard roll. Strong Stakes, 6s. per dozen. Carriage paid on lots, netting or stakes, 7½ value.

Iron and Steel Hurdles, Fences, Gates.—Excellent quality; 6 ft. hurdles, 4 rails, 33s. per doz.; 5 bars, 36s. Steel fencing wire, 11s. per cwt.; galvanised wire strand, 16s. 6d. cwt.; galvanised barbed wire, 14s. cwt., 590 yards. Challenge field gates, 9 ft. by 4 ft., 22s. each. Carriage paid on six gates. Strong sheep fencing, five steel wires, and iron posts, 8d. per yard.

Splendid Galvanised Roofing.—Perfect quality; 5 ft., 1s. 5d.; 6 ft., 1s. 8½d.; 7 ft., 2s.; 8 ft., 2s. 3½d.; 9 ft., 2s. 8d.; 10 ft., 3s. Ridging, 2½d. per ft. Wire Nails, 11s. cwt Roofing Felt, 3s. 200 sq. feet.

Galvanised Cisterns, corrugated steel, 30 gals., 9s; 50 gals., 13s. 3d.; 100 gals., 21s. Corn Bins; Sheep, Pig, and Cattle Troughs at very low prices. Lists free.

J. PRIEST & SON Ltd., Castle Iron Works, Victoria Road, Bristol.

MISCELLANEOUS.

POTATO BAGS, Second-hand, to hold one cwt, 3d. each.—FIRMIN & Co., Handford Works, Ipswich.

BASIC SLAG. — Phosphates and fineness guaranteed. Write us to-day for pamphlet and special quotation. Autumn and spring delivery.—CANNOCK AGRICULTURAL Co., LTD., Cannock, Staffs.

LAITA.—The best Milk Substitute for Calves and best results. Popular prices, 12s. 6d. per cwt., carriage paid. Send 12s. 6d. for sample bag to—R. J. NELL & Co., LTD., Spiced Food Mills, Louth, Lincs.

RATS! RATS!!—A Truro Farmer writes:—"After using a 1/- Pot of HARRISON'S 'RELIABLE' RAT POISON, I picked up 150 dead rats." Equally good for Rats, Mice, or Moles. Dogs or cats won't touch it. Price 6d., 1s., 2s. 3d., 3s. 8d. Postage 2d.—M. L. HARRISON, Chemist, Broad Street, Reading.

BASIC SLAG, all grades.—Kainit, Supers., Boiled and Dissolved Bones, etc. State quantities required and station, when prices, analyses, etc., will be sent by return of post.—CLEMENT SWAFFIELD, Derby.

POWDER for DESTROYING LICE in CATTLE and HORSES, and FLEAS and LICE in DOGS and POULTRY. Sure remedy; simply sprinkled on, no washing; quite harmless, 1s. per lb., over 3 lbs. post free. E. RUMSEY & CO., Rhuddallt Fawr, Carnarvon.

MEDICUS NON-BLISTERING OIL for Spavins, Splints, Sprains, Rheumatism, Swollen Joints, and all Lameness in horse and cattle. Use it and have a sound stud. Well recommended. Pint tins, post free, 4s. each. — WADDELL, Carnarvon Street, Glasgow.

BASIC SLAG, highest quality; guaranteed analysis 42 per cent. phosphates, 85 per cent. fine meal.—For full particulars and prices of this and other fertilizers apply THE SILICATE Co., LTD., Hemel Hempstead.

ACCOUNTS.—Books writtenup and balanced. Balance-sheets prepared. Audits conducted. Moderate terms.—HAROLD SKEATS, F.C.I.S., 36, Leadenhall Bldgs., Gracechurch St., E.C.

LIME for the Land; good, cheap.—ALFRED BISHOP, Brockham, Betchworth, Surrey.

SACKS.—Sound, clean, once used, 280 lbs., 6½d.; 224 lbs., 5½d.; 140 lbs., 3d. each. Carriage paid on 50 lots. Special Pig Meal, 12s., 240 lbs. Send for sample.—G. T. MURRAY, Green Lane, Stoneycroft, Liverpool.

BLACK Waterproof Dressing for Oilskins, Capes, Covers. Durable. Will not crack, stick or peel. Post free, 1s. 3d.; Quarts, 3s.—VIX OIL "E" COMPANY, 10, Basinghall Street, London.

VESICO SUDORIFIC is the most famous remedy in the world for curing Splint, Spavin, Ringbone, Sidebone, Capped Hock and Elbow, Curb, Windgall, Tumours, Strained Sinews, and Strengthening Legs of Horses without blemish or needing rest. Price 2s. 6d. to 5s., of chemists, or post free.—GREGORY & Co., Temple, Bristol.

GALVANIZED FEEDING APPLIANCES.—Low prices. Illustrated catalogues free.—DAVID & Co., Dept. E, Taff Vale Iron Works, Cardiff.

OIL ENGINES.—Cundall's Patent Engines are the simplest to work. Sole Makers, CUNDALL, SONS & Co., LTD., Shipley, Yorks.

NO RATS SEEN since using DANYSZ VIRUS six months ago; see testimonials; single tubes 2s. 6d., three tubes 5s. Post free from DANYSZ VIRUS, LTD., Box N, 52, Leadenhall Street, London, E.C. Harmless to other animals.

SHEEP HAY CAGES for Sale; well made, from last season's wood; ready for delivery at once; £1 per doz. on rail Cosham, Havant, Petersfield.—Apply E. A. EDNEY, Five Heads Farm, Horndean, Hants.

T. SCHOLEY, Eastnor, Ledbury.—Patent Fastener for Hunting and other Gates, Doors, etc.

RHEUMATISM SPEEDILY CURED.—Mr. BARING GOULD, Eastnor Grove, Leamington, Leamington Spa, very strongly recommends Wonderful, Cheap Rheumatism Cure. FREE Information for addressed envelope.

MISCELLANEOUS.

FOR SALE.—Fencing Wire, new, all gauges, 8s. cwt., £7 per ton. —Ross Works, Berkshand Street, Bradford.

WATERPROOF COVERS and Handsewn Sacks for farm and estate use. Enquiries solicited.—FIRMIN & Co., Ipswich.

ABSORBINE (YOUNG'S)

Cures Strained Puffy Ankles, Lymphangitis, Bruises and Swellings, Lameness, and allays Pain quickly without Blistering, removing the hair, or laying the horse up. Pleasant to use. 8s. 3d. per bottle, delivered, with full directions. Book 5-C free.

ABSORBINE, JR., for mankind, 4s. 6d. bottle. Cures Strains, Gout, Varicose Veins, Varicocele, Hydrocele, Prostatitis, kills pain. W. F. YOUNG, P.D.F., Springfield, Mass., U.S.A. Sole Agents for United Kingdom: THO. CHRISTY & Co., 4, Old Swan Lane, London, E.C.

FOOT-ROT.

STRAWSON'S
CELEBRATED
FOOT-ROT OINTMENT.
Effectual—Speedy—Permanent.
Used by the chief Ram Breeders and Flock Masters in the Kingdom.
RECOMMENDS ITSELF. TRY IT.
May be had through any Chemist; or will be sent post free at the rate of 1s. per tin, 20s. per case of two dozen tins (not less than a case at the latter rate), by the Sole Proprietor, **G. STRAWSON, Chemist, Bishop's Castle.**

"MARK LANE EXPRESS" STAND AT THE CATTLE SHOW.

The "Mark Lane Express" Stand at the Smithfield Show next week will be No. 104 in the Main Gallery, where we shall be pleased to see all our friends and readers visiting the Show.

THE BROOK.

Overstocking in Markets. WHAT a pity it is that we have no means of ascertaining direct from cows themselves when they are suffering pain through being overstocked with milk. It would save a good deal of argument, and magistrates who have cases of overstocking brought before them would find matters very much simplified. As it is, there is no wonder that magistrates, who perhaps do not know very much about it themselves, are somewhat at a loss to know how to decide in face of such a diversity of expert opinion. The farmer who takes his cow into market with calf at foot to sell naturally wants the animal to present as good a bag as possible, but we will give him credit for not wishing to put her to unnecessary pain. On the other hand, there is the inspector belonging to the Society for the Prevention of Cruelty to Animals on the alert for cases of overstocking, and he is only doing his duty by taking action in a flagrant case. The difficulty arises when experts on one side contend that the cow was not overstocked and experts on the other give evidence in the opposite direction. The only individual who really knows is the cow, and her word cannot be taken, hence the difficulty. The obvious course is for farmers to avoid any risks of a charge, and for officials not to be over-zealous, and to be quite sure of a case before prosecuting.

Cutting Noses to Spite Faces. IN a recent issue of the MARK LANE EXPRESS there was an extraordinary picture, showing a wheat stack that has stood for nearly thirty years untouched, the alleged reason being that the owner made a vow that he would not sell the grain under a certain price, which it has never attained, nor should we think there is much likelihood of it now. The story, by the way, reminds one somewhat of that told by the immortal Sam Weller about the man who did everything on principle, even to the eating of an enormous quantity of crumpets and then blowing his brains out, but is it not a clear case of cutting one's nose to spite one's face? No individual is one whit the better off through the corn standing in the stack for nearly thirty years, and if the owner was determined not to sell the grain below a certain price, it would have been better to have given it away to his poorer neighbours, because this would have benefited somebody. This, of course, is a flagrant case, but others might be given of farmers who have cut their noses, so to speak, and have been the losers through sticking to one line, simply because they were used to it, instead of conforming to changed ideas and modern requirements. Farmers, in fact, like other people, must set out to supply what people want at current prices, and refusal to conform with this rule is merely cutting one's nose to spite the face.

Winter. SO long as the weather keeps mild and open in the closing months of the year, we feel that the winter is creeping on, and the season when we may expect severity is gradually growing shorter. In fact, if we can see Christmas over without anything very bad, we feel that we have not done amiss; but such is not the case in all parts this year, for while writing we have reports before us telling of wintry conditions in the Midlands and the North, with heavy falls of snow, though in some places the last remnants of the belated harvest are not yet gathered in. Surely this year will go down to posterity with a strange record as regards peculiar weather conditions and sudden changes, but snow in November is not the kind of thing to cheer the farmer. It means serious inroads into the fodder stacks, and what would be more welcome is a spell of dry, breezy days so that the seasonable operations on arable land which are retarded on account of the prolonged wet could be got on with. When the ground is covered with snow, however, work is necessarily stopped, and these conditions prevailing in November mean the possibility of a long winter.

The Labourer's Vote. AGRICULTURAL politics are dealt with in another column, and we merely draw attention here to a matter that appears to be in danger of being overlooked in the Parliamentary considerations of the future—*i.e.*, the power of the labourer's vote. It went a long way towards putting the present party into power, as it will with other parties in the future, for though the labourer may not, by his demeanour, appear to concern himself with party politics, he realises his privilege at election times and does not fail to exercise it. In the farming world to-day there is a strong feeling as to the desirability of having an agricultural party in the House of Commons to look after the interests of the ancient industry. Quite right; but in making calculations it would be well not to forget that farmers alone do not represent agriculture. In short, there is the labourer's vote to be considered; he will have his demands to make, and some of them may not be quite in accordance with the views of farmers; but, nevertheless, the possibility of an agricultural party in Parliament rests largely with the labouring fraternity.

Practical Education. TO us it seems an unfortunate thing that many agricultural societies pay little or no attention to the educational side of the industry, and yet they have such fine opportunities. We readily admit that a society which exists merely for the sake of holding an annual show and promoting competitions does good, but it might do more in the way of educating the rising generation of farmers in matters connected with their calling. As an example we would mention the Berkeley Hunt Society, in Gloucestershire, which makes a strong point of looking after the education of its junior members, both practically and theoretically. The teaching is done at weekly classes arranged for the purpose,

and practical examinations in such important work as ploughing, thatching, &c., are held. Good prizes are offered as inducements for the young men to join the classes and enter for the examinations, and at the last annual show a new feature was introduced in the shape of a cattle-judging competition, in which a number of young fellows demonstrated their ability in this direction. The value of practical education of this kind can hardly be over estimated as it is a means of equipping farmers of the future with knowledge that must be useful to them.

Artificial Manures in Small Quantities.

THERE are no two opinions to-day about the value of artificial manures, and up-to-date farmers realise that they must use these valuable aids to fertility if they would get the best results. As yet, however, it is the man who farms on a large and medium scale who uses the most artificial manure, and this perhaps because he can buy on the most favourable terms. In fact he enjoys certain privileges through being a wholesale purchaser, but the small proprietor and the allotment holder is not so well off. He is not averse to the use of artificials because he sees their value on the farms around him, but in many country districts there is a difficulty in obtaining artificial manures in small quantities and at reasonable prices. Some we know get their little bits through neighbouring farmers, but these are isolated cases, and if the above difficulty were removed artificials would be more extensively used on cabbage gardens, allotments, and small holdings than is the case at present.

The Shooting Season.

IT is in the two last months of the year that most of the covert shooting is done, and, despite the fact that it has been a poor season for pheasants, big bags are reported from estates where game is strictly preserved. In what way are farmers interested in the shooting operations of their landlords? In the first place because farmers have sporting blood in their veins, and can hardly help themselves, and secondly, farmers play their own part in the preservation of the game that is killed. This, by the way, is by no means an unimportant part if the relations between landlord and tenant, where game is concerned, are as they should be, and the former should see that the farmers on his estate are treated with consideration. We know several estates, by the way, on which even the largest farmers take part in the beating on big shooting days, and are pleased to do it, because the landlord in each case is one of the right type, and a short time after the big days are over the farmers receive invitations—not to beat, but to shoot this time, and good sport is provided for them. Even where this is not done a small present of game from the landlord after a big battue is greatly appreciated by a tenant, and he takes it as a little recompense for what he has done towards the preservation of the same.

Agricultural Politics.

BY A LOBBYIST.

Not Protection, but Penalty.

I am grateful to Mr. W. J. Malden and Mr. Percy C. Reid for their exceedingly interesting and able reflections on my comments upon Mr. Balfour's Birmingham speech. May I say that, I fear, both correspondents—though Mr. Reid in a lesser degree — have misapprehended my position. I was not, and am not now, arguing the issue of Protection *versus* Free Trade. My demand was and is that, if we insist on a policy of Protection, the British farmer should not alone be selected for penalty. And I aver that under the new economy this would inevitably be the case. A sop has to be given to Cerberus. The colonists have to be offered a *quid pro quo*. They are told, "Give a preference over the foreigner to English industrialism in your markets, and you shall have a preference for your produce in the English markets." Their produce is the fruit of the earth—it is entirely agricultural. Hence in order to secure a more assured trade for general industrialism a rival to the British farmer is to be encouraged—nay, bribed—to secure the British markets. And that rival does not conceal his intention. I have hitherto left out of consideration the Australian farmer; I have dealt only with the Canadian farmer. The statecraft of the Dominion makes no secret of its intention. "Our fertility," it says, "is so remarkable that we can supply the whole of the food necessities of the British people, and under the policy of Colonial preference we should do it." Where would the British farmer come in? Now, Mr. Malden, is this Protection—is this the Protection which the British farmer (I admit the majority of the British farmers are Protectionists) has assiduously demanded? When the British farmer speaks of tariff reform does he mean a reform by which a tariff consideration shall be given to every calling but his own, and that in his case the tariff consideration shall be given to his Colonial rival, already so well placed in regard to rent, rates, and railway charges that he enters into the competition field blessed with a considerable and favourable handicap? Is this Protection? It is nothing of the sort. It is Penalty in the interest of other trades.

* * *

Is the Farmer to be Sacrificed?

Now, Mr. Malden, do not, I beg of you, urge that we should receive an advantage in the shape of a rebuked foreign competition that the Canadian competitor would be no more than is at this moment the general foreign competition. First of all, let me reiterate, this is not the view of Canadian statecraft. That statecraft indulges in the vision of entirely usurping our markets; and that vision harmonises with the prospective development of the great reaches of the Far West. More significant than all is Mr. Balfour's distinct, clear, and emphatic declarations that the duties on the foreign competitor *must be small*, "that they shall *not augment the proportion paid by the working man*," and that they "*shall not touch raw material*."—Apart from the fact that the working man (whose proportion is *not* to be augmented) is far and away the largest consumer of food products in these islands, here we have definitely indicated that not only is the foreigner *not* to be seriously rebuked, but that even much of that which enters into competition with the British farmer is not to be taxed at all. For heaven's sake, don't propound to me the old problem "when is raw material not raw material?" It is at such a juncture as foolish an interrogation as that which puzzled the old schoolists—how many angels could dance upon the point of a needle? We all know that much of what we produce—ask the confectioner, the cheesemonger, and the baker—is raw material, and that no subtlety of interpretation can get rid of this fact. Here, then, we have the one supreme deduction: Whilst one phase of the competition which the British farmer has to meet is to be encouraged—nay, bribed—to enter the markets which should be his, the other phase of the competition is *not* to be seriously rebuked. Again I come back to my question—is this Protection? It is not. Colonial preference, under the conditions suggested, means a possibly advantaged urban trade at *the direct expense of the British farmer*. The British farmer is not only to be exempted from the operation of the new scheme—he is to be sacrificed.

* * *

Protection All Round.

Protection if you will; but let it be Protection all round. Is this Protection all round? Is this—forgive the damnable iteration—Protection for the British farmer? There is no concealment of the fact—and here I turn to Mr. Percy Reid's excellently logical letter—that the new economy may heighten the cost of living and necessarily compel a rise in wages. If it heighten the cost of living the sequel of a heavier wages bill is, in view of the present-day organised power of labour, inevitable. Whether there would be a consequent rise in rent is, I will suggest, problematical. We will even assume that landlords, in their characteristic patriotism, would be willing to abandon their righteous share in the increased prosperity of the nation, and be ready to welcome increased demands on their own purse without taking the only step possible to them to increase its contents. Does Mr. Malden indulge in the hope that, appreciating all this, the Canadian Government would refrain from seeking to realise its own confessed ambition, the capture of our produce markets? When Mr. Chamberlain first propounded his new evangel, he expressed the belief that the Colonies would adopt the attitude of patriotic renunciation and actually refuse, even within their own borders, to set up industries likely to compete with British industries. This idea was at once derided and rejected by no less a personage in the Imperial fabric than Sir Wilfred Laurier. Canada, he declared in effect, was going to put no limit to its own internal industrial development. We must therefore be under no illusions on this point. Canada will—as will every one of the Australian colonies—play for her own hand. True, there may be permeating the whole colonial policy the filial desire for closer and more intimate practical relations with the Motherland; but you cannot eliminate from relations between colonies and the parent country—after all, a very different thing to the personal relations between daughter and mother—the principle of self. Again I ask, Is the new policy, under the circumstances, really Protection for the farmer? It may be Protection for the urban trades; but for the farmer it is immolation. Protection if you will; but Protection all round.

* * *

Where will the Farmer Come In?

Let me illustrate the temper of the colonies by the action of the Australian Commonwealth. Under the new preferential policy adopted by that body certain of the duties against British goods have been raised from 15 and 25 to 35 and 40 per cent. True, there is a heavier duty against the foreigner; but these duties are sufficient to keep out British goods. I pray I may not be described as munching the remainder-biscuit of a played-out yesterday. Undeniably Cobdenism was inspired by the anxiety to benefit the towns, and that, as a consequence, the agrarian interest for awhile seriously suffered. The Manchester school was the school of urban capitalism—a stern, personal school, moved ever and anon by gusts of humanitarian sentiment. I am now anxious that agriculture shall not be again sacrificed to the desire of urbanism. And the one outstanding fact of the situation is that the bait offered to the colonists for resorting in an increasing degree to the factories of the towns is that they themselves shall find a moderated competition, or rather no competition, in the produce-markets of Great Britain, and thus be enabled to dump their own products in an assured and profitable mart. Where in this transaction does the British farmer come in? Where will he come in even if there be, as Mr. Malden suggests, a graduated tariff under which the colonies will be moderately afflicted and the foreigner greatly afflicted? And, after all, Mr. Malden must remember that Mr. Balfour has declared that, not only must the duties not touch raw material, but that they *must be small*. Wherein with small duties shall we find a field for serious differentiation?

SMITHFIELD CATTLE SHOW,
ISLINGTON,
December 9 to 13, 1907.
The "Mark Lane Express"
STAND WILL BE
No. 104 (MAIN GALLERY, USUAL POSITION).

The report of the committee of the Berkeley Hunt Agricultural Society for 1907 should afford the members interesting reading, for it is a record of success. Favoured with splendid weather and a record entry, the show on August Bank Holiday was a conspicuous success. With the increased contributions of several members of the Hunt, and a splendid membership of over 500, the prize list was further extended, a total of £759 being paid, and increase of £58, and although the receipts on the show day did not reach last year's record, a satisfactory profit of nearly £20 has been made on the year. The expenses are slightly under £350, and it is worthy of note that the whole of the subscriptions, donations, and entry fees are returned in prizes, with a few pounds in addition. The other work of the Society has also been attended with conspicuous success, and it is to be hoped that the society will continue to prosper and thus be able to increase the good work it is already doing.

BIRMINGHAM FAT STOCK SHOW.

BIRMINGHAM Fat Cattle Show opened on Saturday in the Bingley Hall, this being the 59th of the series. Weather conditions in the Midlands were not at all favourable, as a thick fog impeded traffic and delayed the train service. The Bingley Hall itself wore its accustomed aspect, but it was generally the impression that the quality of the cattle was not up to the standard of many previous years; the sheep, however, were exceptionally good.

From impressions formed on Saturday there is every probability of another success being added to the annals of the Great Midland Fat Stock Show, and there should be large attendances of the public during the week.

CHAMPIONSHIPS.

The awarding of the championships this year was rather more complicated than usual, and the leading trophies were somewhat divided. The breeders' champion prize, offered for the best animal in classes 1 to 24, was awarded Sir J. R. G. Cotterell's first prize aged Hereford, which carried off the Elkington Challenge Cup, the reserve for both honours was Miss A. de Rothschild's first prize crossbred steer under two years old. Messrs. Webb's Challenge Cup was also allotted to the Hereford and the reserve as in the preceding cases. The Thorley Challenge Cup was awarded to Mr. Peter Dunn's first prize Shorthorn steer, which in this instance beat Sir J. R. G. Cotterell's Hereford, which was reserve.

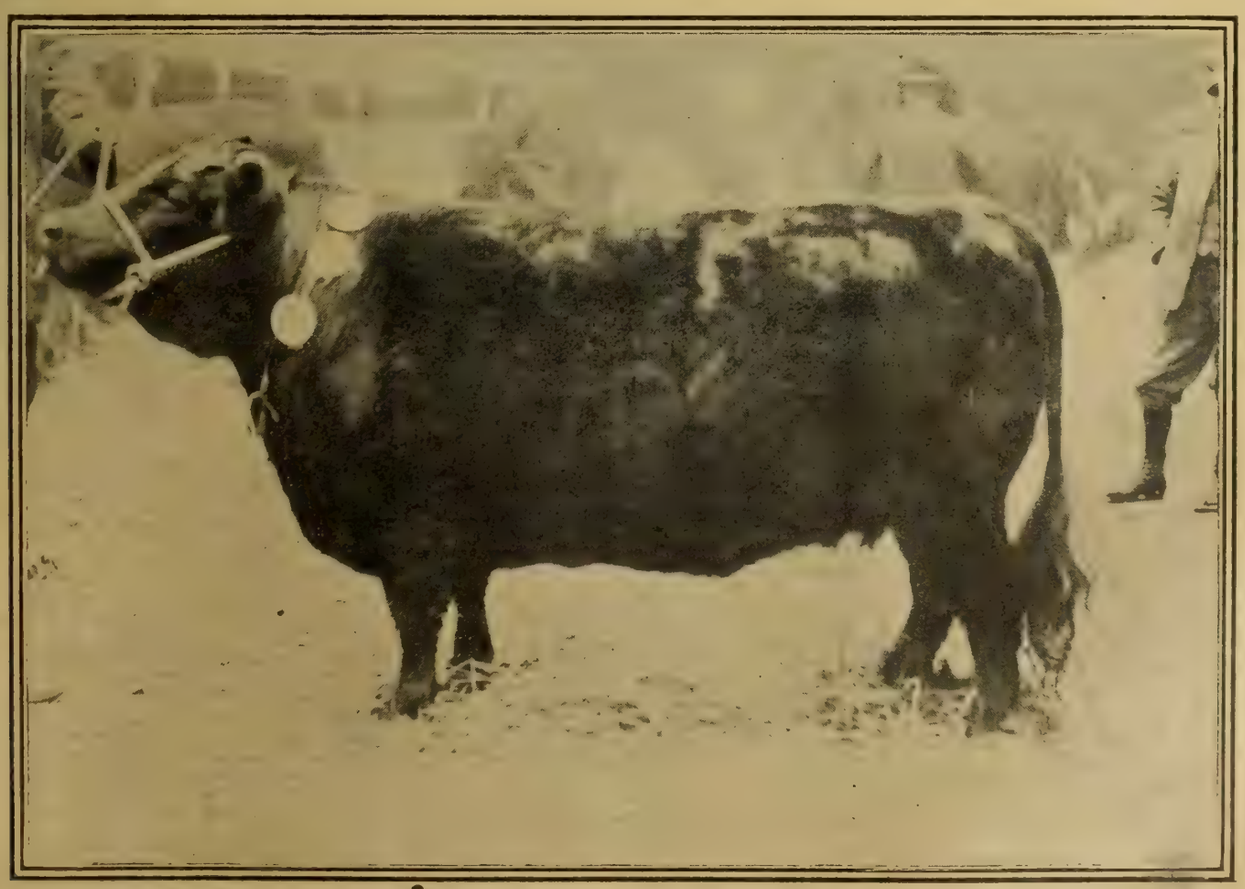
The *Birmingham Daily Post* Challenge Cup for best animal in the cattle classes not exceeding two years old was awarded to Miss Alice de Rothschild's steer, and the reserve to Mr. Phipp's first prize Hereford junior steer. Messrs Shorthouse's special prize for the heaviest beast in the show was awarded to a Shorthorn of Mr. J. G. Parsons', which gave the substantial record of 22 cwt. 3 qr.

Altogether the championships gave general satisfaction, though the announcements in one or two instances came as a surprise.

CATTLE.

Herefords.

The Whitefaced breed from Herefordshire were wonderfully well represented in each of their classes. Exceeding two year and not exceeding three-year-olds there were no less than ten entries, the first prize by common consent going to Sir J. R. G. Cotterell, Bart., for a steer by Rameses out of Sylph. This steer is no less remarkable for his weight than he is for his beautiful quality, symmetry, and finish. On the scales he pulls up the beam at 17 cwt. 1 qr. 23 lb. at two years seven months, and his handling is of the very best. He has laid this flesh on so very evenly and well, and was an easy winner of the Hereford breed cup, as well as other of the champion honours. Sir R. P. Cooper followed for the second place with another steer scaling over 17 cwt., bred by Mr. H. F. Russell and sired by Soudan. He is a capital ribbed bullock, famous top, loin, shoulders, well covered and well packed in his hindquarters. He looks like making a famous bullock dead. H.M. the King secured the third prize with a very good bullock by Fire King out of Rosita. He, too, is of admirable quality, with a famous covering of roasting beef. Mr. R. L. Batchelore was reserved with a bullock scaling 18 cwt. 1 qr. 1 lb. H.c. cards were allotted to Mr. W. H. Cook, and c cards to Mr. Peter Coates and Mr. Richard Bright.



Steers not exceeding two years were a very pretty class, displaying more muscular flesh than we are accustomed to see. The first prize in these went to Mr. R. Phillips for a well-brought-out symmetrical steer by Locarno, he records well on the scales, being 13 cwt. 3 qr. 8 lb., and in addition to his first prize was reserve for the Hereford Breed Cup. Mr. James Edwards provided a much bigger beast for the second prize in a son of Carbineer, that pulled up the beam at 15 cwt. 1 qr. 7 lb, capital fleshed one, but none too well covered at present on the fore ribs. A second entry of Mr. Phillips's, of very good stamp carried off the third prize, and a second entry of Mr. James Edwards was reserve. Minor honours were very liberally bestowed, the Earl of Coventry and Mr. W. H. Cook, as well as another entry of Mr. Edwards, being honoured with hc cards, whilst Mr. T. S. Minton was also commended.

Hereford cows or heifers were four in number, and a very good class. His Majesty the King was placed first with Prudence by Fire King out of Peoney; she records 15 cwt. on the scales, and is very heavily fleshed on the best part. Mr. W. B. Tudge followed for the second place with Princess Beatrice by All Fours, a big, well-ribbed heifer, with immense wealth of flesh and a great length and scope about her; she pulls the beam up at 17 cwt. 3 qr. 25 lb. The Hon. F. G. Wynn was placed third with a very good quality heifer, rather younger and lighter; and Mr. Peter Coates' Mary, a daughter of the famous Endale, was reserved.

Shorthorns.

Once again we have to write the Shorthorn section as very weak, and there is no doubt so long as the splendid home and foreign demand for the breed continues, the same complaint will have to be made from time to time. It is a very good thing for our stock breeders, and for the country in general, that this state of things has continued so long. It has helped much in maintaining the standard of agriculture generally in the British Islands, and has immensely improved the quality of stocks of Shorthorns in tenant farmers' hands, who, had it not been for the higher prices and excitement obtaining at our large breeding stock shows and sales would probably have been content to drag on in the old grooves. However, there is no doubt whatever as to the extreme foreign demand being accountable for the limited entry of the red, white, and roan in our great Christmas shows.

The section for the breed commences with the class for steers exceeding two and not exceeding three years of age. Five competitors only were catalogued, the winner turning up in Gentleman John, exhibited by that famous Yorkshire feeder, Mr. Peter Dunn, and bred by Mr. John Ross at Millcraig, Alness; he was sired by that capital getter Ajax out of Lissie by Champion and at two years and about nine months, turns the scales at 16 cwt 1 qr. 27 lb. he also wins the Shorthorn breed cup, and one or two higher honours that will be referred to later on. Though rather of the small type in general appearance and not a great eye filler at first sight, he stands picking to pieces well and is full of quality, he is well covered on the top and shoulders and his hindquarters are neat, whilst he stands on very short legs and is well filled along his border line. The second prize steer is quite an extraordinary

Dexter Heifer Danesfield Marjorie, winner of Special Prize for Best Beast in the Small Cattle Classes, and First Prize for a Small Cattle Heifer over 18 months and not above three years old, at the Norwich Fat Stock Show. Bred by Mr. J. Lee, Munro Lodge, Littlewick, near Maidenhead, and exhibited by Mr. R. W. Hudson, Danesfield, Great Marlow, Bucks. Its sire was Littlewick Jem, dam La Mancha Marjorie; age 2 years 7 months 2 weeks 3 days; weight 8 cwt. 3 qr. 21 lb.

good one. This is a son of the great sire Beauty's Pride out of Rolleston Duchess; he was bred by his owner, Sir Oswald Mosley, who now exhibits him, he is well brought out, and is a steer of great scale and full of good flesh as well as shapely, and handles firmly. He should prove a good one in the block, and, as he pulls up the beam at 18 cwt. 1 qr. 22 lbs. at two years and nine months old, he has done remarkably well. This steer was reserved for the Shorthorn Breed Cup. The Earl of Durham came in third with a steer by Alphonso, short legged and with a well covered fore end, he is considerably lighter in weight than either of the preceding steers. The Earl of Powis provided a weighty-good steer for the reserve in a red and white by Aldsworth Pioneer, this steer has a famous back and loin.

Steers, not exceeding two-years-old, were also but five in number, and were headed by a particularly attractive white from the Royal farms. Symmetry and quality are well exemplified in this one, and he promises well for another year; he was sired by Royal Chieftain out of Proud Missie 2nd, and at a year and ten months weighs 12 cwt. 3 qr. 15 lb. The second prize steer, also a white one, is of Messrs. Garne and Sons' breeding, by Village Beau out of Jewel Case. He is somewhat heavier than the first-prize steer, and is well put together, with a deal of good flesh and quality. Sir Oswald Mosley provided the third prize winner in another white, a son of Beauty's Bride out of Complex. He is an extremely neat, pretty steer, showing good breeding and the best of quality, but in his class he seemed a little outdone in growth. The reserve card fell to the lot of Viscount Tredegar for a steer by Emperor of Oxford 12th. He scales well for age, and is a straight-backed, level steer. Smaller still was the female class, only four of this sex being catalogued. Mr. H. S. Leon's heifer, so successful in the summer shows and first in her class at Norwich the other day, had a very easy win of the first honour; she is very wealthy of flesh, and it is laid on evenly, whilst her breed, character, and symmetry are very good too, and she could not be better finished; she was bred by her owner and sired by Uppermill Challenger out of Silver Moon; her scale record at Birmingham being 16 cwt. 0 qr. 18 lb. at just under the age limit. The second prize was accorded to H.M. the King for Eva by Royal Chieftain, a big grown heifer, but she did not record well on the scales, though she carries plenty of flesh. Sir Oswald Mosley carried off third honour with Selina of Eden, a seven years old red by Leonidas.

Devons

The Red Rubies were remarkable for their evenness of merit rather than for any especially outstanding exhibit. This state of affairs has been very observable in connection with the breed in recent years, as at the time perfectly symmetrical models of the true North Devon have been gradually replaced by a larger and hitherto somewhat coarser animal; this is, however, being moulded into the one-time characteristic shape. There is one thing the Devons have not lost in the process, that is the justly celebrated sirloin and the rich rounds. In the older steer class there was a very keen competition, indeed, between Mr. J. J. Cridlan's Model, which was exhibited last year by its breeder Mr. T. S. Morgan, Whimple, Devon. It is a lovely quality steer, with good sirloin, and butts with depth, and well finished forward. In this respect it furnished the referee with the main point for giving the class prize in its favour. Second to it was Lord Rosebery's steer, bred by Mr. Thomas Yeo, Loxhore, Barnstaple. It is a very level steer, with a grand back and loin, a trifle light forward, but so compactly fed as hardly to show the weight carried. It is the keenest competition amongst the Devons for years past, and a reversal of the judgment at Smithfield should occasion no surprise whatever. These two were undoubtedly the plums of the Red Ruby section; the reserve went to Mr. T. S. Morgan's Whimple Favourite, a level deep steer hardly so weighty as the others, or so good in the butts; Mr. Morgan was also highly commended with Fashion, one of Mr. Robert Cook's breeding; this one was somewhat slack and drooped. Lord Rosebery was also highly commended with a very useful steer bred by Mr. W. Southcombe, Whitehall, South Molton; it was not quite so good at the end as some of the others, but had a rare sirloin. His Majesty the King's steer was also highly commended; one of Ben Galtoncett's get was rather weak over the shoulders, and somewhat lumpy. Mr. W. D. Sanders' Barum was also highly commended; it is a big steer, somewhat leggy. There was not such a large entry for young steers. Here Lord Rosebery had a fine youngster, bred by Mr. Joseph, Yendell, South Molton, as first. It was very fleshy, level, and with a nice head. The runner-up was His Majesty the King's steer, the most typical North Devon in the classes—too small, as compared with the first, but so pretty. The reserve went to Mr. T. S. Morgan's Whimple Model 2nd, a very pretty steer, but hardly size enough to win. Highly commended went to Mr. T. S. Morgan's Marsh Mallow, a large growing steer, somewhat plain. There was only a pair of Devon females; here Mr. T. S. Morgan had a walk over with Ruby; she had quality, with great depth and scale. The second award went to a very fleshy heifer that did not show herself so well at the ends as at the summer show, His Majesty the King's Carolina. Mr. J. J. Cridlan secured the breed cup with Model, the Earl of Rosebery's young steer being reserve for the same.

Aberdeen-Angus.

Quality was more in evidence than were the numbers in the Angus classes, which are usually rather weak at Midland exhibitions.

Steers exceeding two and not exceeding three years old brought out three competitors, Mr. E. P. Alexander taking the first honour with a rather young and light steer, though full of quality and handling well. He is of Ballindalloch blood on the sire's side. Mr. James McWilliam came in second with a very weighty bullock by Alick of Aberlour, which pulled the beam up at 18 cwt 1 qr. 5 lb. Mr. J. J. Cridlan's Black Chief, which was reserve, is also a weighty and capitally-fleshed bullock. The class for steers not exceeding two years old was not especially strong, yet it contained the reserve animal for the Scotch breed cup, Mr. R. W. Hudson's Danesfield Waterman. He was first in his class and reserve for championship at Norwich the other day. A steer of most faultless proportions and the highest quality of ripeness, he was sired by Danesfield Jester, and records 12 cwt. 3 qr. on the scales. Mr. James McWilliam was awarded second prize for Harry, a somewhat lighter but neat steer; and two sappy, good steers of Mr. J. J. Cridlan's were reserve and highly commended respectively.

The female class of this section brought out one of the leading animals of the show in the shape of Mr. J. J. Cridlan's Elegance of Maisemore. This most beautiful heifer won first in her class at Norwich, where she was also awarded the female championship, as well as the championship of the entire show; she was bred by her owner, and sired by Aachen out of Elegance of Preston. She is full of style, roasting beef, and quality, and at two years and ten months records 14 cwt. 3 qr. 5 lb. on the scales. At Birmingham, in addition to her first prize, she carried off the breed cup as the best Scot. The only other entry in this class was a rather small heifer of Mr. F. J. Stanhope's, which, however, was accounted good enough to be given the second prize.

Galloways.

There were only three entries of this breed, and Mr. R. W. Hudson's Danesfield Challenger had a very easy run for the first prize. He was first in the mixed breed class at Norwich, and is a bullock of beautiful shape and quality, with also a very satisfactory scale record, being 16 cwt. 21 lb. He was bred by Mr. John Agnew in the north. Sir John Swinburne carried off the second prize with a very useful but much lighter bullock. Mr. Alfred Palmer was reserve for a still smaller one.

West Highland.

There was a total of ten entries of these, which gave an excellent account of themselves, showing the best of breeding and shape, with admirable uniformity of quality. Sir Reginald Cathcart carried off the first prize and reserve number, being beaten for the second prize by the Earl of Durham. These bullocks were exceedingly ripe and scaled about 18 cwt. each. The three females were very beautiful animals, these were shown by the Earl of Durham and Sir John Swinburne, and were awarded in the order written.

Welsh.

These cattle were not so numerous as we have sometimes seen them, but their quality has seldom if ever been better. The Coed Coch Trustees exhibited an extraordinary bullock that won in the class for aged steers, massive to a degree, short legged, and covered with a wealth of first-rate flesh, he pulled up the beam at 18 cwt. 1 qr. 7 lb. He was bred by Mr. Henry Jones in the Island of Anglesea He was also awarded the extra prize as best bullock in the mixed classes. Another very good bullock from the same herd also carried off the second prize. Mr. R. M. Greaves was reserve. Steers not exceeding two years old were a small class, but the winner, shown by the Hon. F. G. Wynn, is very symmetrical and a good fleshed one, his weight, too, is very satisfactory, being 14 cwt. 2 qr. 5 lb Mr. Robert Hughes won second with a smaller but neat steer; Mr. R. M. Greaves was reserve and highly commended. The best of the females was the Hon. F. G. Wynn's Lady Glyn, a very symmetrical and heavily fleshed heifer with a scale record of 14 cwt. 18 lb. The Coed Coch Trustees were second, and Mr. Robert Hughes reserve.

The butchers' classes were of the usual mixed and varied quality. In the heavy-weight class the judges appeared to select a good many of the biggest cattle, Angus and Shorthorn crosses apparently being the greatest favourites. The winners were Mr. A. B. Dryburgh with a bullock weighing 17 cwt. 19 lb. Colonel the Hon. F. C. Morgan, with one scaling 16 cwt. 3 qr. 17 lb., and the Duke of Sutherland's, which pulled up the beam at 16 cwt. 1 qr. 17 lb. The winners in the light weight class were Mr. R. W. Hudson's with 10 cwt. 1 qr. 5 lb. to his credit, the Duchess of Newcastle's with a weight of 9 cwt. 3 qr. 17 lb. and Mr. R. Ratcliffe's scaling 12 cwt. 3 qr. 4 lb.

SHEEP.

This year there was a very even display of sheep, much more so, in fact, than for years past. In the Southdown classes for wethers the Exors. of the late Colonel McCalmont were first with deep, well-finished sheep, grand in the loin with nicely-fleshed legs. His Majesty the King was second; his were very matching, but they did not show the weight of the others. Another pen from the Royal Farm was not matching. Mrs. Montefiore had a fine pen, two of the three being especially good. But it was in the lamb class where the Southdowns were at their best. Here the Royal Farms were to the fore. There was no gainsaying the genuine merits of the leading pen. The Duke of Devonshire had a lot of quality in his second prize pen, but they did not touch over the shoulder as the others did; third went to Colonel McCalmont's Exors. These three pens were as even as different breeders' pens well could be. There was disappointment at the size of the Shropshire class, but it evidently pays better to export than to convert into mutton. Sir Richard P. Cooper was first with a splendid pen, level with nice wool, and the right sort of meat beneath. The second prize lot of Mr. A. S. Berry was heavier, but not so evenly done. The lamb class was represented by two pens only. Sir Richard Cooper was first with weighty lambs that moved out well. Mrs. W. F. Inge's second prize could have done with a little more finish.

The Oxfordshires turned out in stronger numbers, Mr. James Harlick sustaining his breeding career in the summer yards. His pen handled remarkably well, and they had nice wool. Mr. James P. Hobbs was second; his sheep were shown unadorned and somewhat long in the wool. Miss Alice de Rothschild's were shown coloured. In the lamb class there was another good entry, Mr. James Harlick being here again quite easily to the fore, Mr. John Hazell's second lot not being quite so matching. It was a pity that Mr. W. H. Lovell's pens, the weightier of the lot, were not quite even, else they should have been higher up.

The Hampshires made a small entry of fat wethers, there being only a quartette of pens. Mr. James Flower was an easy winner here; they had good shoulders, fine backs, and excellent legs. The seconds of Mr. Buxton were smaller, and one of them stood slack. A very useful pen of Sir William G. Pearce's was reserved. The lamb class was decidedly the best of the two here. Mr. Buxton's left very little to be desired as regards breed and finish; they were weighty and evenly fleshed, but they had a very close run with Mr. Flower's two pens. Mr. Sam Darling had a most creditable pen as reserve. All the rest of the exhibits were mentioned. The cross-bred classes have become to be regarded as a monopoly for Mr. Thomas Rush; this year he came in as usual with his Oxford Hampshire cross, Mr. W. T. Barnely was second with a remarkably useful butcher's pen of the Ryeland breed. It is a pity that this breed is not more widely known; anyway they seemed to constitute the nicest mutton in this class, though they weighed 2 cwt. lighter, the reserve went to the same exhibitors and nearly as good. In the female class Mr. Thomas Rush took first with his nicely finished pen in the lamb class; they were very even. Mr. W. H. Lovell's Oxford or cross Oxford and Hampshire were big, but not so evenly modelled, third went to a much lighter pen of Hampshire Southdown crosses sent by Mrs. Montefiore. It might have been expected that this class would have filled better. This year the Cooper Challenge Cup went to Mr. Buxton's Hampshire lambs, Colonel McCalmont's Southdown wethers was reserve for the same.

PIGS.

It is many years, if ever before, such a splendid lot of butchers' pigs were seen in Bingley Hall. There was a partial absence of those extremely fed ones. In the Berkshires not exceeding nine months the entries were very small indeed. The Duchess of Devonshire was first with a level even pair, with nicely turned hams, Mr. J. A. Fricker being second with rather more sizable pigs, but not so well furnished. In the older section there were four entries only. Here the breed was seen at its best. Mr. Alfred Brown Southampton was first and reserve champion with a very lengthy deep pig with plenty of bloom; second to them was Mr. J. A. Fricker's pair, very nice on top with deep sides, but not so good on their legs. Mr. N. Benjafield's reserves were well bred, but they lacked bloom; the other mention was taken by the Duchess of Devonshire.

The Tamworths made exceptional classes; they were nearly perfect in colour and quality, in fact, there was rather more of the latter than has been previously observed in the rank and file apart from the leaders. In the younger class first went to Mr. J. Pitts' pair, very lengthy with good

hams, but a trifle narrow across the loins. Mr. Fowler was second; his pair might have shown improvement behind the shoulder. Mr. D. W. Philip was third with pigs that showed length and quality, his reserve pen not being a pair by any means.

In the older class the breed was seen at its best. Mr. Philip again took the lead with nice lengthy pigs, Mr. Ibbotson's second prize having the best of backs, but a trifle short; he was also reserved. A highly commended card went to Mr. D. W. Philip for a nice pen as to breeding, but not forward enough.

The Large Whites made the show: the classes were well filled, and did not overtail. Mr. John Riddell was first with a grand pair, long, well up and straight backs with good heads. Mr. John Neverson was second, his pigs were very mighty. The Earl of Ellesmere's third looked more like winning in the pen than out of it, but they were a trifle weak over the hams. Mr. P. Baker's reserves needed a little more maturity. There was a splendid class in the older section. Here the Earl of Ellesmere's herd was represented at its best, there was no gainsaying their positions as champions, they were grand in length and quality, deep in the sides; in fact, ideal baconers. Mr. Arthur Hiscock's were level and useful, but not quite so well furnished in the hams. Messrs. Green's third were not a pair else they would have been higher, one was longer. A useful pen of Mr. F. Dodd took the reserve; all the other exhibits in this class were noticed.

The Middle and Small Whites were lumped together, but none of the latter were visible. The Middles showed quality in every pen. Mr. C. H. Palethorpe was a good name to associate with the first position, his pigs were level, even, with capital heads. Mr. James H. Ikin's were level and even, with depth, but not quite so blooming. Mr. Alfred Brown took third with fine, heavy pigs, that slacked a bit whilst standing. Mr. N. Benjafield was reserved here also. In the older class Mr. Arthur Hiscock won with strong, deep pigs, but they would have hard lines had Mr. Fricker's seconds been so good as a pair as one of them would have been as a single. Mr. A. C. Twentyman was a good third. Messrs. Green's had length and weight. It was a good class. The class for any other pure or cross bred brought out the usual asssembly of mixtures Mr. J. A. Fricker took first with a middlewhite Berkshire cross, the result was lengthy, deep-level pigs. Mr. N. Benjafield was second with a large black and small black cross sire, dam small white, this resulted in massive pure white pigs. Mr. W. E. Shuker's thirds, large white and black Devons, rendered his otherwise excellent pigs a trifle heavy forward. Mr. R. R Rothwell's large black-large white cross was reserved, the double crossbreds did not come out so well as the first crosses. There were twenty-seven entries in the butchers' class, Mr. N. Benjafield taking first here with a lengthy, firm-handling pig. Miss Ida Chamberlain secured her first agricultural victory with a fine pair of Tamworths, long, deep, and good quality, the reserve went to a pair of Mr. Arthur Hiscock's Berkshires. This year there were less comments made as to the placings than for many years past, and it was got over in capital time.

CORN.

The galleries as usual provided accommodation for a good show of corn, roots and other necessities for feeding animals and farming products. There were sixty-three entries of corn, which made a good show, but as at all other exhibitions this year they showed traces of the trying season through which we have passed. Mr. Preece, of Shrewsbury, won in the malting barley class from Mr. S. Champion, the commended winner at the Brewers' Exhibition, and commended went to the late Colonel McCalmont, and an he to Mr. L. J. Smith, of Newent, Gloucestershire.

The two classes for wheat produced a fair entry in the white class, first prize was won by Mr. F. A. Horwood, of Maidenhead, and second money to Mr. F. A. Smith, of Steventon. Mr. F. J. Folley got a he for a sample grown in Buckinghamshire, and a c went to Mr. F. A. Horwood. In the red class Mr. Horwood won from Mr. T. H. Phelps, and a he was given to the sample of Mr. W. Purser.

There were two large and good classes of oats, and here a Gloucestershire sample was the best, Mr. L. J. Smith winning, with Mr. W. Dicken, of Shifnal, in the second place, other cards going to Mr. E. F. Bellamy and Mr. J. R. West. For black oats, Mr. T. Frith and Mr. C. Harrison secured the money prizes in the order named, and Mr. Horwood and Mr. Shakeshaft the minor awards.

Beans and peas were only small classes, but the samples were excellent. Mr. D. H. Wells won with a Warwickshire—first for beans—with Mr. J. H. R. Horwood second, these being the only competitors. Peas found Mr F. A. Horwood to the front, with Mr. J. H. R. Horwood second, and a reserve card going to Mr. J. W. Parrott, who farms in Berkshire.

ROOTS.

There was a nice collection of roots, and, considering the season, the specimens were excellent. They were all on the small side, but what they lacked in proportions they made up in feeding value.

Class 1.—A silver cup, value 6 guineas, offered by Messrs. Proctor and Ryland. Collection: Long mangold wurzel, globe mangold wurzel, and swedes—six roots of each to be shown for this prize alone.—1, Mr. J. Bowden, Sherfield, Basingstoke; r, Mr. John Perry, Oswaldkirk, York.

Class 2.—Webb's mammoth long red mangold (new and improved selection).—1, Mr. Alfred Franklin, Worminghall, Thame, Oxon; r, Mr. Leonard J. Smith, Newent, Glos.

Class 3. Webb's mangolds—namely, New Champion Yellow Globe, Yellow Intermediate or Yellow-fleshed Tankard: 1, Leonard J. Smith, Newent, Glos.; r, Alfred Franklin, Worminghall, Thame, Oxon.; hc, Mr. John Perry, The Grange, Oswaldkirk, York; Frank Hargreaves, Gamlingay, Cambs.

Class 4.—Long mangold wurzel.—1, Lady Wantage, Lockinge House, Wantage; 2, Mr. P. Le Feuvre, Morville House, St. Owen's, Jersey; r, Mr. P. Le Feuvre, Morville House, St. Owens, Jersey; hc, Borough of Reigate, Reigate, Surrey, Mr. Alfred Franklin, Worminghall, Thame, Oxon: c, Mr. T. Chettle, Manor Farm, Reading, Mr. Ernest F. Bellamy, The Moat, Newent, Glos.

Class 5.—Globe and intermediate varieties of Mangold Wurzel: 1, Mr. Thomas Simpson, Plumbley, Knutsford; 2, Mr. James Smith, Town Hall, Buckingham; r, Borough of Reigate, Reigate, Surrey; hc, Mr. T. Chettle, Manor Farm, Reading; Mr. P. Le Feuvre, St. Owens, Jersey (3); c, Mr. James Smith, Buckingham.

Class 6.—Kohl Rabi: 1, Mr. T. Chettle, Reading; Mrs. Dring, Little Island, Cork; r, Walthamstow Urban District Council, Walthamstow; hc, Mr. John Perry, Oswaldkirk, York.

Class 7.—Swedes, Webb and Sons': 1, Mr. Charles Edington, Bladon, Woodstock; r, Mr. G. H. Morris, Severn Stoke, Worcester.

Class 8.—Swedes of any Variety: 1, Mr. George Bonner Hill Top, Tenbury; 2, Mr. G. H. Morris, Severn Stoke, Worcester; r, Mr. Leonard J. Smith, Newent, Gloucestershire; hc, Mr. H. Bulford, Water Eaton, near Oxford; Mr. J. H Wilkinson, Saughall Massie, near Birkenhead; Mr. Charles Edgington, Bladon, Woodstock; Mr. Ernest F. Bellamy, The Moat, Nowent, Glos.; Mr. J. Shakeshaft, Lymm, Warrington.

Class 9.—Common Turnips, White flesh: 1, Mr. W. Watts, Sheep Court, Bonvilstone, Cardiff; 2, Mrs. Dring, Little Island, Cork; r, the Earl of Dartmouth, Patshull Farm, Wolverhampton; hc, the Duke of Portland, Norton Cuckney, Mansfield (2).

Class 10.—Common turnips, yellow flesh: 1, Mr. Jas. Cook, Arniston, Gorebridge, N.B.; 2, Mr. John Gerrard, Upper Inglston, Keith Hall, Inverurie, N.B.; r, Mrs. Dring, Little Island Cork; hc, Mr James Cook and Mr. John Gerrard.

Class 11.—Carrots, White Belgian: 1, Mrs. Dring, Little Island, Cork; 2 and r, Mr. Alfred Franklin, Worminghall, Thame, Oxon.

Class 12.—Carrots, any other variety: 1, Mrs. Dring, Little Island, Cork; 2 and r, Mr. Alfred Franklin, Worminghall, Thame, Oxon.

Class 13. Ox Cabbage: 1, The Lady Wantage, Lockinge House, Wantage; 2, Mrs. McIntosh, Havering Park, Romford.

POTATOES.

There was only a smallish entry of potatoes, the total numbering thirty-nine, but competition was keen in the majority of classes.

Class 14.—Twelve varieties, distinct: 1, Mr. J W. Needham, Wildsworth, Gainsborough, Lincs; 2, Mr. Thomas Bannister, Malthouse Farm, Marston Green, Birmingham; 3, Mr. Benjamin Parker, Scotforth, Lancaster.

Class 15.—Six varieties, distinct: 1, Mr. Thos. Bannister, Marston Green, Birmingham; 2, Mr. J. W. Needham, Wildsworth, Gainsborough, Lincs; 3, Mr. Benjamin Parker, Scotforth, Lancaster.

Class 16.—Four varieties, distinct, two white and two coloured (of each 12 tubers): 1, Mr. Thomas Bannister, Marston Green, Birmingham.

Class 17.—Four varieties, distinct, most suitable for field or farm culture (of each twelve tubers): 1 and 2, Mr. J. W. Needham, Wildsworth, Gainsborough, Lincolnshire; 3, Mr. Thomas Bannister, Malthouse Farm, Marston Green, Birmingham

Class 18.—Two varieties, distinct, long or kidney shaped (of each twelve tubers): 1, Mr. Thomas Bannister, Marston Green, Birmingham; 2, Mr. Benjamin Parker, Scotforth, Lancaster; 3, Mr. J. W. Needham, Gainsborough, Lincs.

Class 19.—Two varieties, distinct, round (of each twelve tubers): 1, Mr. Thomas Bannister, Marston Green, Birmingham; 2, Mr. Benjamin Parker, Scotforth, Lancaster.

Class 20.—One variety, long or kidney shaped (twelve tubers): 1, Mr. Thoms Bannister, Marston Green. Birmingham; 2, Mr. J. W. Needham, Wildsworth, Gainsborough, Lincs.

Class 21.—One variety, round (twelve tubers): 1, Mr. J. W. Needham, Wildsworth, Gainsborough, Lincs.; 2, Mr. Thomas Bannister, Marston Green, Birmingham.

Class 22.—The most handsome dish, any variety (twelve tubers): 1 and 2, Mr. Thomas Bannister, Marston Green, Birmingham.

Class 23.—The best new variety, not yet offered in commerce (twelve tubers): 1, Mr. Thomas Bannister, Marston Green, Birmingham; 2, Duke of Portland, Norton Cuckney, Mansfield.

CHAMPION AND SPECIAL PRIZES.

CATTLE.

Breeders' Champion Prize of £25 for the best animal.—Sir J. R. G. Cotterell's Hereford steer; r, Miss A. de Rothschild's crossbred steer Waddesdon Starlight.

Elkington Challenge Cup, for the best animal the property of the exhibitor since January 1 last.—Sir J. R. G. Cotterell's Hereford steer; r, Miss A. de Rothschild's Waddesdon Starlight.

Thorley Challenge Cup for the best animal.—Mr. Peter Dunn's Shorthorn steer Gentleman John; r, Sir John Cotterell's Hereford steer.

Webb's Challenge Cup, for the best animal bred by exhibitor.—Sir J. R. G. Cotterell's Hereford steer; r, Miss Alice de Rothschild's Waddesdon Starlight.

Birmingham Daily Post Cup, for the best animal under two years old.—Miss A. De Rothschild's Waddesdon Starlight: r, Mr. R. Phipps's Hereford Steer Favourite.

Maisemore Park Challenge Cup for the best Aberdeen-Angus.—Mr. J. J. Cridlan's heifer Elegance of Maisemore; r, Mr. R. W. Hudson's steer Danesfield Waterman.

The heaviest beast in the Show.—Mr. W. H. Parson's crossbred (22 cwt. 3 qr. 0 lb.).

Best Hereford.—Sir J. R. G. Cotterell's steer; r, Mr. R. Phipps's Favourite

Best Shorthorn.—Mr. Peter Dunn's steer Gentleman John; r, Sir Oswald Mosley's steer.

Best Devon.—Mr. J. J. Cridlan's steer Model; r, Lord Rosebery's steer.

Best Scot.—Mr. J. J. Cridlan's Elegance of Maisemore; r, Mr. R. W. Hudson's Danesfield Waterman.

Best Welsh.—The Coed Coch Trustees' steer Pedr; r, Hon. F. G. Wynn's steer Glyn Commodore.

Best Crossbred.—Miss A. de Rothschild's steer Waddesdon Starlight; r, Miss Rothschild's heifer Waddesdon Silvio.

SHEEP.

Cooper Challenge Cup for the best pen of sheep.—Mr. T. F. Buxton's Hampshire lambs; r, Exors. of Colonel McCalmont, Southdown wethers.

Best pen of Shropshires.—Sir R. P. Cooper's wethers.

Best pen of Cross-breds.—Mr. T. Rush's lambs.

Heaviest pen of lambs.—Mr. T. Rush (6 cwt. 1 qr. 3 lb.).

PIGS.

Best pen of pigs.—The Earl of Ellesmere's Large Whites; r, Mr. Alfred Brown's Berkshires.

JUDGES.

CATTLE.

Herefords, Devons, Welsh, Kerries, and Extra Stock.—Mr. F. W. Shuker, Scorrier, Cornwall; Mr. J. H. Yeomans, Withington, Hereford.

Shorthorns, Scots, and Crosses.—Mr. W. S. Ferguson, Pictstonhill, Perth, N.B.; Mr. H. W. Woods, Ivydene, St. Andrew's Road, St. Anne's-on-Sea.

SHEEP.

Mr. A. Bradburne, Streethay House, near Lichfield; Mr. Cary Coles, Manor House, Winterbourne Stoke, Salisbury; G. F. Hempson, Estate Office, Gatton Park, Reigate.

PIGS.

Mr. T. S. Minton, Montford, Shrewsbury.

CORN.

Mr. Frank B. Ludlow, Holt Street, Birmingham; Mr. J. Edwin Mitchell, Cape Hill, Birmingham.

ROOTS.

Mr. John Myatt, Lynn House, near Walsall; Mr. Thomas Palmer, Hampton Lodge, Warwick.

POTATOES.

Mr. W. Halliday, Patshull Gardens, Wolverhampton.

Tinker, winner of Second Prize in the Class for Irish-bred Ox or Steer not exceeding three years old fed in Norfolk, and the Special Prize for the Best Beast exhibited by a Norfolk farmer, at the Norwich Fat Stock Show. Exhibited by Mr. W. A. Starling, Lingwood, Norwich.

Edgworth Agricultural Society.

Anyone attending the annual dinner of the Edgworth and District Agricultural Society for the first time would be in doubt as to whether he had not by some mistake got into the wrong place and was participating in a hunt dinner, for ever since the institution of the dinner a meet of the Holcombe Hunt at Turton Hall has been held on the same day as the dinner, and after the joys of the runs the gentlemen of the hunt put in an appearance at the dinner, and such a show of scarlet at an agricultural society's dinner it would be difficult to find elsewhere. There is the utmost cordiality and good friendship between members of the hunt and the farmers of the district, and the dinner is an event worth travelling a long way for. Of course, there are the usual toasts and speeches, but controversial subjects are left alone as much as possible, so that nothing but goodwill marks the proceedings, the enjoyment of which is considerably added to by the music and songs interspersed throughout the toast list. That the members of both the hunt and the society can join in a hearty song was proved at this year's dinner, notably in the chorus of "Do ye ken John Peel?" and "The Farmer's Boy," another combination of hunting and farming which is the predominating feature of the dinner, and one wishes that the example was copied extensively in other parts of the country.

With so many speakers and lack of space to give all we must confine our report to a few of the outstanding remarks. First of all Sir Lees Knowles, M.P., the popular president of the society, who was in the chair, gave the loyal toasts and subsequently "The Clergy," whilst he had to respond to the "Naval and Military Forces," and in doing so remarked that it was a remarkable coincidence that Lord Stanley, who occupied the chair last year, and he who now presided should have been brought side by side as the chairman of the two Territorial Associations for West and East Lancashire. He added that they were called upon in the eastern division to form a military division composed of 20,000 men and 7,600 horses, and he hoped the pounds, shillings, and pence for the latter would flow through the association of East Lancashire into the pockets of the farmers of the division.

Mr. J. R. Barlow proposed what might be called the toast of the evening, viz, "Success to the Edgworth Agricultural Society," and in doing so made some interesting suggestions. For instance, he asked the committee of the society if there was anything they could do in the way of getting efficient, technical, and scientific help for the farmers of the district that it had not done already. He knew that the County Council and the Board of Agriculture was doing a great deal. The latter authority had never had a more zealous president than the Earl of Carrington.

Sir Lees Knowles said he agreed with Mr. Barlow as to the importance of agricultural societies practically encouraging good farming. The Royal did that, and a tenant of his at Glazebury had the honour of taking one of the Royal prizes some years ago. What was done on a large scale their society could do on a smaller, and the suggestion was one worthy of their consideration.

The society's popular vice-chairman, in responding to the toast of the officers and committee, asked permission to say a few words in reply to Mr. J. R. Barlow's splendid speech that evening. He as a practical dairy farmer had of late kept a very strict account of his thirty head of dairy cattle, and he was sorry to say that owing to the great advance in the price of provender and the great reduction in the price of beef he found he had a loss of 1½d. per cow per week, nothing being recorded for the cost of keep, &c., for his two horses and two men. His milk was sold at 3d. per quart.

Mr. W. S. Nuttall also spoke on this matter, telling how a young married couple he knew trying farming when provender was 25 per cent. below the present prices. The couple were determined to keep a correct record of every penny spent or received, and after doing so for three years, the balance being on the wrong side every year, it was a question with them whether to give up farming or to try a year without keeping accounts. The consequences are that they are still farming. The mistake they made when keeping accounts was in their making a charge for wages the same as they would have earned if working at a mill.

Mr. A. F. Greenheagh, Bolton, in proposing the toast of "The Trade of Bolton and District," said that knowing as he did that the cotton, iron, and coal industries were all good he had felt doubtful about the farming industries being good until he heard Mr. Barlow's speech. Since then they had heard a most practical speech from Mr. Horner, after which he now came to the conclusion that tenant farmers would be delighted to change places with cotton manufacturers. He thought dairy farmers were very foolish in keeping on supplying milk at 3d. per quart.

Other toasts followed, and a most enjoyable evening was brought to a close in the usual manner.

CORRESPONDENCE.

Fruit Spraying.

SIR,—We have received reports from all parts of the country expressing the greatest interest in the coloured supplement which you have just issued, and in a large number of cases it appears that our correspondents were unable to obtain from the bookstalls the issue containing it.

We should be glad to know if you would be disposed to re issue the supplement at an early date, with an explanation that the matter has created so much interest that the first issue was quite inadequate to supply the demand for it.

If this suggestion commends itself to you, we shall be pleased to supply the necessary number of plates.

We shall be glad to hear from you by return on this matter.—Yours, &c,

WILLIAM COOPER AND NEPHEWS.

Chemical Works, Berkhamsted,
November 26, 1907.

[*** The above letter from Messrs. Cooper and Nephews bears testimony to the interest evoked by our coloured supplement showing the ravages of apple scab and the advantages of winter spraying. We have a few of the coloured plates yet in hand, and shall be pleased to send a copy post free to any of our readers on receipt of a post card stating they would like to have same.—ED.]

SIR,—The publication by the MARK LANE EXPRESS of photographs from actual fruit in my orchard from sprayed and unsprayed fruit trees, showing the results of my experiments last year with the V1 Fluid, has brought such a flood of letters that it is impossible for me to reply to them all personally.

I hope my fellow fruitgrowers will pardon me if I ask them to excuse a personal reply, and to take this announcement in substitution.

The benefits of the V1 Fluid were simply marvellous. The trees sprayed with it were clean, free from insect pests and from all mosses and lichens, the foliage was beautiful, and fruit as perfect as I can ever expect to grow it, while on the unsprayed trees the condition both of the foliage and the fruit was so inferior that one could hardly believe the fruit was grown in the same orchard.

I am quite sure that the V1 and V2 Fluid manufactured by Messrs. Cooper, of Berkhamsted, are a very long way ahead of anything which has ever before been introduced to the fruitgrower.—Yours, &c., W. EDMONDS.

Rede Court Farm, Strood, Rochester,
November 26, 1907.

Profit from Wheat Growing.

SIR,—In my opinion your correspondent of November 7, "Son of the Soil," has given a very fair detailed account of the balance-sheet of an acre of wheat grown by him, the only difference between his account and that of "A. J. R." being, the former values his straw at spending price, thus allowing for the requirements of the land, and the latter at market value, thereby impoverishing the same. He seems to have an exceptionally good market to realise 65s. to 70s. per ton, and to make as much as £15 per acre with wheat at 30s per qr. sounds like a very large order, for he must have had an enormous crop of both.

It would be interesting to know how often "A J. R." could do this on the same acre of ground, and the balance-sheet that this would entail, otherwise this would be calculated to mislead, and no wonder some landlords, who would think this practical, should seek to rise rents.—Yours, &c., GLOUCESTERSHIRE.

November 21, 1901.

Tariff Reform and Agricultural Interests.

SIR,—I have read Mr. Percival C. Reid's letter in your issue of November 25, and, without any desire to enter into a long controversy on the subject, I can only say, first, Heaven help the farmers of this country if they know so little about Mr. Chamberlain's and Mr. Balfour's Tariff Reform proposals as Mr. Reid apparently knows. It is disappointing, to say the least of it, to read such a letter as that alluded to.—Yours, &c.,

J. L. GREEN, Secretary.

Rural Labourers' League,
November 27, 1907.

SIR,—In reference to the discussion in your paper on Tariff Reform and the Agricultural Interest, may I ask for space for the following remarks:—Farmers, that is those who are dependent on the land they till for a living, must be practical. Now as practical men we are dependent on the weather conditions as to the time and way we carry out our farming operations. No practical farmer carries hay when it is raining. Now in the same way it seems that we are dependent on the will of the majority in these islands as to the conditions under which our products compete with products from abroad. As practical men we must recognise the fact that the majority of the people desire free trade conditions, and are likely to continue to desire them. Therefore I think we are unpractical if we allow ourselves to be fooled by tales of what might happen if we had protection. I largely agree with "Lobbyist" as to any benefit that is likely to accrue to the British agriculturist from Colonial preference. Do not let us be fooled by that either.

I am inclined to think that the cry that our British soil will not pay for cultivation is fallacious. The demand for land for small holdings may soon prove that there are sufficient people anxious and willing to till our soil. And that being so, we may be sure that the fact will not escape the notice of those who are opposed to any duties on food stuffs, and will still further incline the people to the view, already largely held, that many of the owners of the land do not want it cultivated, but want it for a game preserve and private pleasure park, and that cultivators, whether farmers or labourers, are a nuisance. But in the words of Kipling:—

"Will your kept cock pheasant keep you?
He is master of many a shire."

In conclusion, I should like to urge farmers to stand up for their own trade, and first to insist that their raw material, the land, shall, like other raw materials, not be taxed; and second, that all land withheld from use for pleasure purposes be taxed to its full productive value, which would bring land into the market for agricultural use and largely increase the productive power and trade of these islands.—Yours, &c.,

ARTHUR E. CHAPMAN.

St. Ives Farm, Hartfield, Sussex,
November 27, 1907.

SIR,—Mr. Reid relates in yours of November 25 the grounds on which he changed from being a Tariff Reformer to a Free Trader; to me they do not seem to be so convincing as they appear to have been to him. I think he may have overestimated what the "extra cost of living, extra demand for rent, and extra wages for his labourers" would be. As what may be his in an unknown future, it is perhaps better to deal with the known past. The past fifteen years gives a good opportunity as to what has actually occurred, as during that period wheat has gone up 100 per cent. or more. Mr. Reid sees trouble with only a 10 per cent. rise. Has he asked himself what the trouble has been to himself during this short period whilst wheat has risen ten times 10 per cent. Having told us by what means he arrived at the fact that he would be £100 better on his sales side under Tariff Reform, will he kindly tell us how he arrived at the conclusion that he was going to be a loser in the long run; at present he has only told us that he got there.

I would suggest a table as follows, showing us how the price of wheat has influenced his actual outgoings in rent and labour, whilst wheat has more than doubled in price—

	Price of wheat.	Rent of land per acre.	Labourers' wages per week
1893			
1900			
1907			

I think if Mr. Reid makes a very great difference in his outgoings he will have done differently to most others. However, if Mr. Reid will give his actual figures, and if others interested will give their actual figures, I think that it will be seen that there is not such a very big sum to be dealt with. Remember that sum will be arrived at on 100 per cent. increase and will have to be divided by ten to bring it to the 10 per cent. which produced fear in Mr. Reid's mind. One expects a material rise in wages during the shortage of labour during the South African War period. Personally, I think wages should, as far as possible, bear relationship to the rise in price.

I hold that Mr. Reid misguages the situation when he urges that after it is decided what duty will be placed on the several articles of farm produce, "let every farmer take his last year's accounts and add to the value of his sales the amount of duty which they would bear if imported, and to the amount of his purchases a similar duty, and he will clearly see to what extent he will be better off, &c." If that is all that he sees in it, it is not surprising, particularly if he be a stock raiser on a large scale, that he wants to remain as he is; but he overlooks the enhanced value of his animals. I take it that a Tariff Reform means an all round adjustment, in which meat would not come in free, and therefore farm stock would be dearer. Surely this implies a profit which is not shown in the basis of calculation on

"last year's accounts" or prices, upon which Mr. Reid would have us sum up the question, and that it is wrong to that extent or in ratio to it.—Yours, &c, W. J. MALDEN.

Where is the Flail Still in Use?

SIR,—The flail is used in this part of Essex for threshing beans. I generally have one going during the winter months, and on wet days two or three.—Yours, &c, G. HOCK.

The Poplar, Stebbing, Chelmsford,
November 26, 1907.

SIR,—I have recently given up a holding upon which the flail was in use until I rented it five years ago; and I saw it in use only last week upon another farm in this district.—Yours, &c.,

Uckfield, Sussex, J. W. HURST.
November 26, 1907.

DAIRY.

Preston Cheese Fair.

Some unusually high prices for Lancashire cheese were realised at the annual Christmas Cheese Show and Fair held at Preston last week. The pitch consisted of 183 lots, comprising 2,828 cheeses, an increase of 35 lots, and 583 cheeses compared with the corresponding fair of last year.

The dairy which secured Lord Derby's championship prize for Mr. G. Whitaker, Kirkland Hall, Garstang, brought spirited competition, ultimately changing hands at 100s per cwt., the second prize cheese of Messrs. Williamson and Sons, Mowbreck Hall, realising 87s 6d.; and the third prize lot of Mr. John Bee, of Goosnargh, finding a purchaser at 76s.

In the class for occupiers of farms not exceeding 80 acres, Mr. H. Almond, who held the premier position, sold his cheese at 90s. per cwt.; the second prize lot of Mr. Sudell, Solwick, making 80s., and the third prize lot of Mr. L. Bailey, Lea, 75s.

The 12 lb. cheese of Mr. L. Bailey, who secured the first card, sold at the rate of 120s. per cwt., or just 1s. per lb., while Mr. G. Whitaker's second prize fetched at the rate of 100s. per cwt.

Other competitive cheese made 70s. to 73s. 6d. The prices for the usual fair cheeses ranged from 67s. 6d. to 70s. per cwt.

Chester Cheese Fair.

At Chester Cheese Fair on Wednesday there was a pitch of about 60 tons, and a fair attendance of buyers. Some of the finest lots, for which there was medium inquiry, made 68s. to 72s., one or two special dairies going above that price. Medium lots made 62s. to 65s., and lower grades 58s.

Market Drayton Cheese Fair.

The last of the present year's cheese fairs at Market Drayton was held in the Town Hall on Thursday, when there was a pitch of about 26 tons, this being considerably larger than anticipated. There was a large company of buyers present, and very satisfactory prices were realised. Best qualities of cheese made from 67s. to 70s., and medium grades from 60s. to 67s. per cwt.

Peterborough Agricultural Society.

The annual meeting of the Peterborough Agricultural Society was held on Wednesday, when Mr. James Hornsby, J.P., of Laxton Park, Stamford, was unanimously elected president of the society for the ensuing year.

The council in their report congratulated the members on the better conditions prevailing in the agricultural interest. The price of wheat at the present moment was about 10s. per qr. better than it was this time last year. This, with the help of the good harvest that had been experienced in this district this year, enabled farmers to feel that their staple crop had once more been grown at a profit. The better yields of other crops, the clean bill of health amongst live stock (except for ever present swine fever), and with somewhat better prices for all kinds of meat, had also helped to brighten the outlook in the farming world.

The council reviewed the various branches of work carried out by the society during the year, and expressed regret at the loss the society had sustained by the death of Lord Chesham, who was president of the society in 1894, and thanked the retiring president, Mr. G. C. W. Fitzwilliam.

Mr. Swallow's financial statement showed the total receipts on the year to have been £2,823 13s., as against £3,060 6s. 6d. in 1906. The summer show registered a decrease of £256 18s. 5d, due to the wet. The payments for the year amounted to £2,946 3s. 11d., against £3,070 3s. in 1906. The balance of payments in excess of receipts was £122 10s. 3d. A vote of condolence was ordered to be forwarded to Lady Chesham.

Hop Growers' Conference at Wye College.

A large number of planters from nearly all our districts attended the conference held in the gymnasium of the college on Wednesday last, which was presided over by E. Lister-Kay, Esq., of Godmersham. About 120 gentlemen accepted the invitations of the governors, and of these the great majority was present. The proceedings were opened at 11.15 by a brief speech by the chairman, who ruled that all reference to politics or any other matters outside the subjects named in the agenda should be avoided.

The Value of the Male Hop.

Mr. E. S. Salmon, of the College staff, then read his paper "On the value of the Male Hop." Careful investigations had been made into the causes which hindered the complete development of the cones, or their fully growing out. They were constructed of petals, divided into bracts and bracteoles, in the proportion of two of the latter to one of the former, the bracts being sterile and the bracteoles carrying seeds at their bases. There must be a sufficient number of petals to complete a properly developed cone, otherwise it was undersized, as was seen in small Belgian hops which, with twenty-two petals, only attained the length of three-quarters of an inch. There were, of course, other sources of weakness of growth, such as weather conditions, but excluding those, it was found that frequently, when sufficient petals were produced, the growing out of the cones was not satisfactory. Their full perfection only seemed to be attained when seeds were duly developed.

To accomplish that result the flowers must be fertilised by the pollen of the male plant, which must not be confounded with lupulin, that valuable product being only found in the female flower or burr. The pollen was usually carried by the wind to the burr, and by their observation they had been enabled to establish two facts:—

1. That if no pollen came into contact with the female flower, there were no seeds, and no perfect growth.

2. That the more complete the fertilisation, the larger the production of seeds and the more perfect the development of the cones.

Those conclusions had been proved by the enclosure in paper bags of certain branches of burr, so that no pollen could be communicated to them, and it had also been observed that fertilised burr made rapid progress, and that the critical stage of the growth was thus rapidly passed, and the safety of the crop more certainly secured. The risks of mould, to which the plant in this transition period was more liable, were also lessened. With more seeds, larger, stronger hops and a heavier crop resulted.

By quantitative analysis it had been ascertained that the length of the cones and the number of seed contents were proportionate to each other; thus while a cone of only three-quarters of an inch in length contained only four seeds, one measuring one and a quarter inch would contain twelve to fourteen seeds. Further investigation showed that the number of bracteoles and the number of seeds corresponded in a greater or less degree. Cones having sixteen bracteoles, and without seeds, measured only five-tenths of an inch, and similar cones having nine to twelve seeds had grown out to nearly one and a quarter inch. Similar results were found in other cones in which the number of bracteoles ranged from twenty to thirty-six bracteoles, the lengths of the cones and their seed contents increased in due proportion, until they arrived at nearly two inches of length and twenty to twenty-five seeds. Such was the evidence they had found with respect to Golding hops, but it was also seen that in the case of Fuggles the absence of seeds did not appear so important, as they grew out fully with a much smaller proportion of seeds.

In the College garden during last season the plants appeared to be healthy, and in July there was a good show of bine and burr, but the hops only grew out in two parts of the ground, which were in close proximity to two male plants. The prevalent winds prevented the general distribution of pollen, except to the plants in the immediate neighbourhood of the males. The results were marked, the fertilised burr growing out well, the unfertilised giving very poor results. They had measured one-seventh of an acre in each part of the garden, the results showing that the fertilised portion had produced a crop equal to nearly 9 cwt. per acre, the unfertilised portion being only productive to the extent of under 5 cwt. per acre.

As to the selling value of the seeded and unseeded hops, the former had been priced by a Borough factor at 84s. to 95s., and the latter at 54s. to 70s., so that they were able to calculate that fertilisation and seed development had added value to their product at £24 10s. per acre.

It had been urged upon English growers that they should follow the example of their Bavarian competitors and grow their hops without seeds, and thus increase their brewing qualities and consequently their market value. That was impossible, unless English growers adopted similar sorts of hops to those grown in Bavaria, where the cones contained as many as forty-four bracteoles in contrast with the average English hops containing twenty-seven or twenty-eight. The larger number in German hops were more closely packed within the smaller cones, and were more favourable for the production of lupulin, seeds being more or less unnecessary to the perfection of the cones.

Mr. Salmon quoted the opinions of various European and American authorities on the comparative value to the brewer of seeded and seedless hops, and concluded by observing that although they did not advise growers to aim at increasing the quantity of seeds, they certainly recommended the continuance of fertilisation by the influence of the male plant, as it was distinctly advantageous to all concerned that hops should be fully grown out, and that could only be accomplished when seeds were present.

The paper was copiously illustrated by lantern slides, which rendered the instructive details comprehensible to the audience, and added much interest to Mr. Salmon's lucid discourse.

Discussion upon the subject followed, in which Lieutenant-Colonel Honeyball and several other planters took part, the general consensus of opinion, summed up by the chairman, confirming the views of Mr. Salmon that seeded hops were desirable.

Mr. Arthur Amos, a former student at the College, and now on the staff, then read a paper on

The Raising of New Varieties of Hops.

in which he urged the necessity of the study of the matter of growing seedlings by scientific selection. He pointed out that during many years only two new sorts had been introduced, and those had resulted from accidental circumstances. Only one of those had survived the test of time. The Fuggle hop, named after its first grower, had proved its vigour and hardiness, giving large cones with little seed. That was an example they well might follow. The advantage of such selection and experiments had been seen in the sugar-cane industry in the West Indies, also in America in melon growing, and at home in the improvement of potatoes.

They had not yet succeeded in tracing the actual quality of the male hop plants, therefore in crossing breeds they were not certain as to the ultimate results. That was a matter that required further investigation, and the attention of the College was being given to it. But observation and selection, and experimental growth were open to all, and he trusted they would not lose any opportunity of improving their crops both by personal attention, and by availing themselves of the resources of the College which were freely placed at their disposal.

Arsenic in Hops.

After a brief discussion the conference was adjourned for luncheon, which was served in the grand mediæval refectory of the ancient monastery.

The renewed session was opened at 2.30 by the principal of the College, Mr. M. J. R. Dunstan, M.A., reading his paper on "Arsenic in Hops," prefacing his remarks on the subject in its practical aspect by observing that he had been exercised in mind by the receipt of letters from growers recommending him to abstain from any reference to the matter. After full consideration, he had concluded that, as much misconception existed, it was advisable to remove it by dealing with the question openly, and he would then propose to leave it to the conference to decide whether his paper should be made public or be limited to their discussion within those walls.

The arsenic scare, Mr. Dunstan reminded his audience, originated in Lancashire a few years back, and was caused by the discovery that many persons who were habitual consumers of beer were seriously affected in certain districts, and several deaths resulted. A Royal Commission was appointed to inquire into the circumstances, and the evil was traced distinctly to the sugar used by certain brewers, which, upon analysis, was found to be dangerously charged with arsenic. The glucose supplied to the brewery had been manufactured with sulphuric acid, extracted from pyrites instead of brimstone, and it resulted in the communication of three-quarters of a grain of arsenic to each gallon of beer, whereas one-

twentieth of a grain per gallon was dangerous. The Royal Commission extenden their inquiries into other materials used in beer, and the presence of arsenic was also traced to malt that had been dried with gas coke, the fumes from which deposited arsenic in some quantity upon the malt. No suspicion was then attached to hops, which were pronounced practically free from any contamination.

Perhaps it was not generally known that arsenic is the most widely diffused of any of Nature's elements. It is found in all food in minute proportions, and therefore appeared to be necessary to both animal and vegetable life. It existed in all soils, but the amount taken up by plants from the soil was negligible. Manures did not increase the supply to the plant, and there was no risk of communication of arsenic to hops from that source. Neither was there any possibility of contamination by any material used in washing hops for the destruction of blight or mould. It might, therefore, be safely accepted that green hops when picked were practically free from any trace of arsenic.

It was only in the oast that any danger could be found. Therein arose the possibility of contamination, especially when open fires were used, if the fuel was not very carefully tested. The purest anthracite coal was practically free from danger, as it did not contain more than a negligible trace of any deleterious constituent. But growers must remember that as arsenical pyrites is not equally distributed in coal, analyses, unless conducted with extreme care, were sometimes deceptive. There were, therefore, some risks in the exposure of hops to the products of the combustion of all fuel. As the passage of those products through the hops did not enhance their value, it appeared desirable that it should be avoided if possible. But the cost of installation of pure hot air systems stood in the way of their universal adoption. Old cockle oasts had their advantages in that respect, and there were fans, and other modern inventions, by means of which growers could avoid any shadow of risk of contamination of their products.

He (Mr. Dunstan) considered that it was almost impossible to completely avoid all risk with open fires. The crux of the matter was in the fuel and in the condensation of the fumes during their passage through the hops. Lime had been recommended to be mixed with the coal, and while there was a possibility that the lime would neutralise the arsenious acid, it would be difficult to maintain sufficient heat with such a mixture.

Another scheme that had been suggested was the hanging of a screen over the fire to intercept and catch the dangerous fumes, but that was hardly practicable. They had found that the dust collected on the beams of the oast after the drying was very rich in arsenic, therefore he advised careful cleansing of the oast periodically, also lime washing of the interior, and especially the avoidance of the too common practice of sweeping the hair cloth and putting the sweepings into the last pocket.

The analysis of hops for arsenic was most difficult and delicate, and harassing to the grower, inasmuch as different samples from the same pocket might easily show very various results. Mr. Dunstan, assisted by Dr. Goodwin, explained the process of analysis, by which it was seen that the results were determined by sight alone, the quantities being so minute as to be beyond the test of the balance. A substance containing a known quantity of arsenic is first tested, the staining of a small glass tube being adopted as the standard of comparison. The material to be analysed is then put through the same process, and the proportion of arsenic present is determined by comparing the density of its stain with that of the standard. It is thus clear that there is ample room for doubt when these tests are subject to the unaided human eye, and that it must be almost impossible to pronounce with any degree of certainty when the readings denote such minute fractions of a grain.

Mr. Dunstan therefore made clear to his audience the reason why analysts frequently differ in their pronouncements, and proceeded to urge that the present standard of purity (the 100th of a grain per lb.) is too minute for practical purposes. He observed that such a small quantity with the use of 2 oz. of hops per gallon of beer meant that each gallon of beer would only contain the 1600th of a grain of arsenic, and such an infinitesimal proportion could not harm a human being even if he consumed 20 gallons of beer per day for many days in succession.

Therefore it might be concluded that any danger arising from arsenic communicated by hops to beer was absolutely impossible, and might be dismissed as absurd. If the health authorities still considered that a standard of purity was necessary the recommendation of Mr. Lawrence Briant, the eminent expert in such matters, might be adopted. He advised that the fiftieth of a grain was practicable, and sufficiently protective, at the same time urging care in the selection of fuel, and the regular cleansing of the kilns.

At the conclusion of the Principal's address the chairman put to the conference the question of publication or privacy, the former being voted by a substantial majority.

During the short discussion that followed, the opinion was generally expressed that the alarm that had been raised was entirely baseless, and that it was probably more a question of trade than of the public health. The thanks of the industry were, however, due to the College for ventilating the subject so openly and exhaustively.

Mr. Theobald's paper on

Eel Worms in Hops

was read, being illustrated by some drawings enlarged from the microscopic examination of these tiny pests. The professor's description of their life history and habits was most lucid and interesting, but being entirely technical, it is more than difficult to translate it into plain print without the assistance of the drawings. I must therefore reluctantly leave the subject, with the remark that the details given could not fail to be serviceable to the growers who listened to the paper with close attention.

I have had the pleasure of attending all the conferences that have been held at Wye since the College was opened, and think I may safely say that I have not been present at one that was better arranged or more instructive than that we have been considering to-day.

The conference closed with the usual vote of thanks to the chairman, which he fully deserved, and a refreshing cup of tea in the room of assembly.

Sir J. R. G. Cotterell (Lord Lieutenant of the county) presided over a meeting of the Herefordshire Chamber of Agriculture on Wednesday, when the chief topic of discussion was the Small Holdings and Allotments Act of 1907. Sir James Rankin said nothing would please him more than to see a great number of small holders, but it would be a very sorry measure to put upon small holdings persons who were in no way qualified to work them. Every care should be exercised in the method of selection. Mr. Bulmer replied that character, experience, and capital were essential, otherwise the results would be disastrous. Captain Percy Clive said farmers need not be afraid of their best fields being seized. Agricultural labourers in the past—years ago—had perhaps the best hope of advancement in life of almost any class. The wages of an agricultural labourer now, however, were practically a fixed sum, and there was little chance of promotion.

Questions and Answers.

FARMING.

Seaweed.—Would you give me your opinion of the value of seaweed as a manure for vegetable garden? The garden in question is a good loam. I have available plenty of stable manure, and could get the seaweed for the leading. When would be the most suitable time to apply it and how to apply it?—R. H.

ANSWER: Seaweed is an excellent fertiliser, especially for crops of a maritime nature, such as cabbages, potatoes, seakale, celery, etc. Make a good big heap, mixing some sand or light soil with it, if possible, and let it lie for about three months, when it will have become nicely decayed, and may be worked in the ground in the same manner as manure.

Fattening a Cow.—Will you kindly give me advice on fattening a cow for the butcher? she is a stripper, calved last April, ten years coming spring, medium size. I think she must be a kind of Shorthorn breed, giving about eight quarts of milk per day; in good condition to be milking. I have plenty of cabbages, turnips, oats, and beans, oat and bean straw, which I can chaff and mix with the meals; also good hay. I could buy either linseed or cottoncake. This is my first attempt at fattening, and would be very grateful for your valuable advice on what quantities of each to give and how often to feed per day. My idea is she will milk and fatten together, but I know it will take longer time. Thanking you for past answers to my queries, and for particulars in this case.—SMALL FARMER.

ANSWER: You may give your cow about two bushels of cut turnips, or an equal weight of cabbages, per day, and if you have an abundance of such food you may give 2½ bushels per day. Sell your oats and beans, and give the cow about 5 lbs. of good linseed cake per day, or give 2½ lbs. linseed cake and 2½ lbs. cotton cake. Let her have as much long hay as she can eat, if you have plenty of it; if not, give her about 10 lbs. per day and also let her have as much oat straw and bean straw as she will eat. She will not eat much straw if she is allowed as much hay as she will take, but you might give straw in the morning and hay in the evening. I doubt whether it will pay you to chaff your oat straw, but if you are short of hay, you may chaff some oat straw, and give as much of it mixed with the oilcake as she will clean up.

VETERINARY.

Husk in Heifers.—I have some heifers, [illegible] months old, Shorthorns, in good condition which are troubled with husk, but not badly as yet. Would you kindly tell me how to treat them? Until this last fortnight they have been pastured in a low lying meadow, close to a river. I mowed the grass for hay, but they were in good keep. I have now moved them to higher ground, and give them each about 4 lbs. of cotton cake every day.—J. S.

ANSWER: It is a step in the right direction to move heifers suffering from "husk" out of meadows that are low-lying and close to a river, where they will have contracted the disease, to higher and drier ground, but it would have been better to have brought them under cover, or at least to have made arrangements for their lying in at night. It is a good plan, too, to give "husking" calves and lambs dry food, but I doubt if 4 lbs. of cotton cake is quite the best form for it to take, and, personally, I should much prefer in these circumstances to provide linseed cake. The importance of dry food and shelter, and their superiority over medicine, in the treatment of husk is generally acknowledged. If you think the heifers want medicine, give to each animal a drench of: Oil of turpentine, 1 oz.; tincture of assafœtida, ½ oz.; oil of cloves, 10 drops; linseed oil, ½ pint. If necessary, repeat in a week, but provide linseed, or corn and hay, in preference to such big doses of cotton cake, and endeavour to make arrangements for sheltering during the night, and keep the animals in until the sun has dried the grass in the morning.—M.R.C.V.S.

Pony with Worms.—I have a pony infested with worms similar to those enclosed. I have been giving him sulphate of iron daily, with quassia injections, but I find he still harbours the pests. I have previously had two packets of powders from the vet. to no purpose. Could you advise as to treatment, and oblige.—G. T.

ANSWER: The parasites sent for identification are specimens of the common "whip" worm of the horse, Oxyuris curvula. It is called the "whip" worm on account of its long, thin tail—like the lash of a whip—but by some it is known as the "maw" worm. A favourite habitat is the rectum, and it is often seen projecting from the anus, to the margin of which it clings. It is credited with causing local irritation, and no doubt it does so, and gives rise to those troublesome cases of rubbing the tail, of which we get so many complaints. We are not at all sure that we can suggest any improvement on your treatment, which is usually practised in such cases, especially the employment of injections of infusion of quassia. Enemas of turpentine, and big clysters of salt and water, are sometimes employed, but we do not find them any more effective than quassia and soap, &c.—M.C.V.S.

Pony Going Lame.—My six-year-old pony has lately developed lameness, in near fore leg chiefly. He was worked fairly hard during the summer, during which time his staple diet was old oats; but this last six weeks work was light, and, for a change, not being able to get old oats locally, have been giving him maize germ meal, half a peck a day in two feeds, mixed with good hay chaff (damped mid-day) and rack up feed long hay and carrots whole. The lameness has developed since change of food, and have been told the maize is sending fever into his feet: they certainly feel warmer above the hoofs than I think they should. Will you please say whether maize does this, and give some advice for future feeding and treatment?—H. E. A.

ANSWER: When anything happens to a horse in the shape of lameness, swelling of the legs, or disease of the skin after maize has been introduced into the diet, it is pretty sure to be attributed to the change of food, and yet it is an undoubted fact that there are thousands of horses in this country whose regular food is maize and beans instead of oats, and who are perfectly healthy. There is nothing to show that the pony suffers from fever in the feet, or that the maize meal has anything to do with the lameness. It is not at all impossible, if the pony is examined by a veterinary surgeon (which is the best thing to be done), that the lameness will be found to be due to navicular disease.—M.R.C.V.S.

Trouble with Heifer (V. L.).—Of your two questions the last is by far the easiest to answer, because "what would be best to do?" is obvious, while "what is the disease?" is doubtful. Many cases of vaginal discharge depend on tumours, which may be of a fatty, epithelial, or cancerous character, and vaginal tumours varying in size from a marble to a goose's egg are not uncommon in cattle. Yours may be a case of this kind; but, on the other hand, the trouble may be chronic inversion of the vagina, in which the lining membrane of the organ has become indurated, and perhaps ulcerated. Chronic inversion of the vagina, showing as a red tumour hanging from the vulval opening, and especially prominent during the passing of urine or when the animal is recumbent, is often mistaken by the owner for a morbid growth. It would, in the absence of a minutely detailed description of the lesion, be impossible to determine its exact character without a personal examination. In any case your course is clear, and what would be "best to do" is to call in the local veterinary surgeon and get him to examine the heifer with a view to determining the character of the lesion. The case is clearly not one in which you can do anything for yourself, whether it is a tumour or prolapse of the vagina, because a tumour will need to be removed, or the everted vagina replaced, and the passage antiseptically treated.

LEGAL.

Farm Agreement.—"Inquirer" desires to know if, when a person has an agreement on taking a farm, he ought not to possess a copy of the agreement. "I have," he says, "been told that the landlord only should have a copy."

ANSWER: The landlord would have an original, and the tenant might have a counterpart in the case of a lease, and in the case of an agreement a copy. The whole question is one of arrangement. No doubt you could have a copy now if you paid for it. "Inquirer" should have stipulated for a copy when he took the farm.

Freehold Property.—My wife owns a freeh 11 house and land, and our children are all girls. If my wife died without making a will, could her brother claim it?—S. F.

ANSWER: If the house and land is freehold, her brother could not claim it. The children (girls) would be entitled to it as co-heiresses. But why does not your wife make a will? There can surely be no objection on her part to take this step. She, as the property is her separate estate, can do so.

POULTRY.

Worms in Fowls.—I should be very glad of your advice re Minorca fowl. Its comb is very blue, appetite ravenous, yet very weak, and to-day I noticed some of its droppings, and it appeared as if alive with tiny worms, but could not distinguish them with the naked eye. READER.

ANSWER: This bird appears to be suffering from intestinal worms, and we should advise you to give it a complete fast of twenty four hours and then mix into a crumbly paste a teaspoonful of roup powder, and a small quantity (say two tablespoonfuls) of middlings with a few drops of water and feed to the bird, and then an hour afterwards give it a good feed of hot soft food. This will cause the worms to pass, as the roup powder kills them. A dose of castor oil the next day is advisable. You would do well to see that the grit you are giving your birds is both hard and sharp.

Northern Notes.

A COUNTY councillor informed me this week that he had received four personal applications for small holdings. This was in Yorkshire. He is a member of a county allotments committee, and is of opinion that a genuine demand for holdings of various sizes exists. He would like to see the country dotted over with more dwellings, which he thinks would relieve the monotony of the bare landscape in some of our bleak districts.

THE one great difficulty in regard to the extension of cultivation on a small scale is the lack of quick transit and housing accommodation.

SMALL holdings will be wanted in villages where the small tradesman has leisure upon his hands and sufficient buildings behind his shop—as most of them have—where he can stall his cows, stable a horse, and rear his corn and haystack.

THE tendency of late years has been for landowners to encourage their tenants with sufficient capital to take a group of farms, or to make two farms into one. Instances are not uncommon of big farm houses that are used only by the hinds, and perhaps only half the house is furnished. Where two families lived on the proceeds of cultivation there is only one now. If the balance can be restored, so much the better; but still better if the farms are split up and more houses built. This would bring more people on to the land, and stem the tide of emigration to Canada.

A SMALL holder has had a letter from a friend in Canada, who had sufficient money to have set up at home, but because he could not get the land he went out, and after many hardships in land hunting he pitched his tent twenty miles from the nearest place where he could buy a pennyworth of yeast. That emigrant wrote back: "If you know anyone that wants to come out, if they have a crust at home, tell them to stay." This experience coincides with another that has come under the writer's personal notice. A man of fine physique sold out his small stock and booked for Canada, and after a good look round he did not fancy the country. He has returned a wiser but much poorer man. He could have done well—was, in fact, prosperous—at home.

HOW can small holdings pay? This is a query one sometimes hears. Well, I heard a practical man say he had grown £10 worth of produce on a third of an acre; another, an owner of a few acres of market garden land, said he could produce on a square yard sufficient strawberries to cover the value of the square, and then have the runners remaining as a further asset. That high rents are charged for small holdings is a matter of notoriety. Some of these go up to over £3 per acre. A North Yorkshire tenant for his 30-acre farm pays £120 a year in rent and rates. Such a figure seems almost like a fairy tale; but the holder of this precious bit of soil makes a very comfortable living out of it. He had remarkable crops this year. He should have every year, to keep things going.

DO you know of a good farm to let? There is an outcry for farms of 200 to 400 acres, and the inquirers do not meet with anything satisfactory. Grass farms and mixed farms are run after by people other than practical men, and the warnings issued from time to time in the agricultural Press are highly necessary. Now that farming is profitable, retired tradesmen think a nice homestead surrounded by land and the fields studded with cattle, sheep, and horses, will be a lucrative investment. Alas! how many have come to grief with such folly.

WITH the exception of one very hard frost this week, which attacked the out-of door pumps, the weather has favoured the root crops, and the late sown ones have improved wonderfully. The open weather has been to the advantage of farmers, who have saved considerably in fodder. The earliest snowfall was on Tuesday. We were hoping to be clear of snow till after Christmas, for the winter seems to have got a good start when we are thus fortunate. The land is very sodden, and makes turnip-pulling an unpleasant occupation. Some good crops are to be seen, and a good crop of roots invariably bespeaks a liberal return in the following crop of corn.

THE Driffield hirings are, perhaps, the most important of all the "statutes," as they are called in Yorkshire, and there is no diminution in their popularity as compared with this year of grace and the year 1857. A report is before us of the same hirings held fifty years ago, and it bears a strong family likeness to those which appear in the papers to-day. We have still the "cheap Jacks," "quack" doctors, and ballad singers, though probably the latter were much more musical in the last century. The modern innovations are the steam horses and the motor cars, the latter being steam driven on a switchback arrangement, and are proving a great attraction at the fairs all over Yorkshire.

THE fairs this week were attended by all classes of agriculturists in great numbers, and hiring was everywhere brisk. Farmers were assisted by their foremen in making a selection of hands to complete their staffs. Young hands were most in request, as there are serious arrears of ploughing to be overtaken, some farmers having as much as three weeks of plough work to do.

IN some parts of the Northern counties the amount of edible grass in the pastures is astonishing, and the cattle are doing well; they get a relishing and stimulating bite with the addition of a few turnips scattered in the fields, in addition to their ration of dry food. Mutton prices are hardening. At Hull, some "culls" sent by a Leicester breeder who is showing at Smithfield, sold for 77s. apiece. Feeders are not anticipating any fancy prices for fat cattle at the Christmas markets, except for the most prominent of the prize-takers.

November 29, 1907.

Nottinghamshire Notes.

MICHAELMAS statute hirings were held in front of the Nottingham Exchange on Wednesday, when there was a fair attendance of both farmers and labourers. The wages offered and accepted were on the whole slightly below last year's rates. Ploughboys obtained from £9 to £14; second waggoners, £14 to £18: and head waggoners up to £25. Where milking was one of the specified duties both men and boys obtained fully £2 per year more money than they otherwise would have done. Very few female servants were about, and young girls who sought fresh situations asked and obtained higher wages.

LORD BELPER is taking a keen interest in the question of small holdings, and as he is one of our local landlords and chairman of the Notts County Council, supporters of the new Act about to come into force are elated at his activity in the matter. I notice his lordship was chairman at a meeting of the County Councils Associations held in the Guildhall, Westminster on Wednesday, where it was stated by Lord Carrington that a Bill consolidating the Small Holdings Act to the Allotments Act was being prepared.

WE already possess a large number of small holdings in various parts of the county, more especially near the lace city, where there is such a good demand for milk. But I am told that the rents in many instances are excessively high, working out at about 50s. an acre. County Councillors H. Heath and J. T. Farr are working assiduously just now making inquiries as to where a demand actually exists for small holdings, and I am told that they will have much of interest to report at the next meeting of the county council.

SIR SAMUEL JOHNSON, the town clerk of Nottingham, will recommend at the next meeting of the city council that the Small Holdings and Allotments Act should be referred to the Estates Committee to exercise the powers conferred on the council, but that the committee should report its proceedings to the council, and shall not purchase and lease land for the purposes of the Act without the approval of the council.

MUCH good work can be done by village schoolmasters towards creating interest in agriculture among their pupils. I have often been surprised to find in village schools so little attention is devoted to the main industry of rural districts, especially when half of the boys in the school were to gain their livelihood as sons of the soil.

HOWEVER, the county of Notts possesses an enthusiastic amateur gardener as schoolmaster at Sturton-en-le-Steeple, not far from Gainsborough. For some time he has done the youth of the district yeoman service by instructing and giving them practical lessons in the art of growing garden produce and the cultivation of various flowers.

TWICE each week he conducts open-air classes (weather permitting) on a plot of land adjoining the schoolhouse, and gives demonstrations on planting, sowing, treatment of soil, bedding out, &c. The lads take a keen interest in this new form of education, and several of them have attained such a stage of efficiency that they are capable at the age of fourteen and fifteen to look after a garden plot or an allotment with much more skill and far greater success than many of their parents.

EDUCATION of this description is greatly to be preferred in agricultural districts to the learning of algebra and latin. What I have often urged in the public Press is that boys in country districts, where five out of six are intended for farmers or workmen on farms, should be instructed how to measure land, the value and constituents of fertilisers and feeding stuffs, and how to use joinery and other tools for rough work. In towns and cities instruction is given to boys and girls which will be of service to them in the staple industry of the district, chiefly at evening continuation schools. Why cannot something of this sort be done in villages?

ON Saturday last I had a long and interesting chat with Mr. Ralph Cowing, who is steward for Sir Charles Seely, Bart., on his farms at Arnold and Sheerwood. Mr. Cowing confessed that he scarcely dare think of what would happen regarding the supply of farm labourers when the old men died off. "There are plenty of young men on farms," continued Mr. Cowing, "but they are no good at their work. They think they know how to do everything on a farm they are put to." Such a statement from a practical man like Mr. Cowing, who looks after seven farms, is worthy of consideration by our educationalists.

VERY heavy rains have fallen in this district during the present week, and a large quantity of land near the River Trent is flooded. Wheat sowing has been stopped for the present, but where it was got in early there appears to be a good plant. I am afraid that this deluge will prevent many farmers from sowing as much wheat as they had intended, and it is questionable if a larger acreage will be devoted to this cereal in Nottinghamshire than was the case last year.

WE are threatened with a plague of rats in this part of the country, for I am told it is many years since there were so many of these destructive rodents. The wet weather of the past summer has been greatly in their favour, and now that the homesteads are full of stacks the rats have quickly left the fields and drains. Several farmers have remarked to me as to the large number of rats seen in the stacks on threshing days, and I am afraid that long before spring arrives they will have done a great deal of damage unless got rid of in the meantime.

I HAVE this week been over the large farm owned and occupied by Mr. R. Millington Knowles, at Colston Bassett, and hope to give a few particulars of what I saw in next week's issue of the MARK LANE EXPRESS. The farm is nearly 1,000 acres in extent, and is so managed that the balance-sheet at the end of the year always shows a substantial profit, which speaks well for the capable management of Mr. G. H. Elliot, who is the steward for Mr. Knowles.

INTERESTING particulars are to hand relative to the career of Mr. J. A. S. Best, of Aliwal North, Cape Colony, who is a farmer. Born in Nottingham in 1834, Mr. Best was first apprenticed in the lace city to a mechanic. This scarcely suited his tastes, so he joined the army and took part in the Crimean War, and later in the Indian Mutiny. In 1859 he went to South Africa and settled down in Cape Colony as a farmer and threshing machine owner. He travelled with these machines all over the then Orange Free State, threshing the grain of the Boer farmers.

HIS training of how to handle the rifle came in useful, for he took part in all the native wars, and also the last Boer War, although he was in his sixty-sixth year when the latter broke out. His knowledge of the country was of great service, and he held several important positions under General Brabant. Four of his sons also went through the campaign from start to finish, and met with no serious disaster.

MR. BEST'S record, so far as his domestic life is concerned, is rather unique. He has been married twice, and only last year his second wife presented him with his thirty-first child! What is more, two of the old veteran's sons are now grandfathers. Mr. Best is maternal uncle of Mr. W. S. Allen, who resides at Newark-on-Trent, and naturally we are all proud of possessing so worthy a man claiming Notts as the county of his birth.

November 29, 1907. R. K.

A little Colman's Mustard given to hens in their morning food will make them lay more eggs.

(*See "The Field," Feb. 6, 1906.*)

This is a recent discovery of a gamekeeper who announced it in the paper above-mentioned, and was tried last winter by many poultry raisers with surprising results.

One teaspoonful of Colman's Mustard to every six fowls, mixed in the dry meal prior to the water being added, is the most convenient method of giving this invaluable tonic.

The best Mustard for the purpose is, of course,

Colman's

POULTRY.

Utility Poultry Club's Four Months Laying Competition.

The results of the laying during the first month (twenty-eight days) of the four months laying competition have now come to hand. This competition is under the management of Miss Galbraith, at The Folly, Bagshot, Surrey, and began on October 21. A pen consists of four pure-bred pullets.

The manager reports that the weather has been very bad. The first ten days there were heavy storms every day, and subsequently there has been almost continuous fog. On only five days has any sunshine been recorded. The birds are in good health, but a large number of them are moulting.

Below are given the official records :—

Order.	No. of Pens.	Breed.	Total Eggs.	Pts.	Remarks.
1	3	Black Leghorns ..	19	110	1 laying.
2	1	White Orpingtons	20	100	2 laying.
3	5	Buff Orpingtons ..	17	93	1 laying, 1 moulting.
4	19	White Leghorns ..	17	90	2 laying, 2 moulting.
5	17	White Wyandottes	14	77	1 laying.
6	16	Buff Orpingtons ..	13	70	1 laying.
7	10	White Wyandottes	12	66	2 laying.
8	22	White Wyandottes	10	51	2 laying.
9	9	Buff Orpingtons ..	7	39	1 laying.
10	20	Barred Rocks	7	36	1 laying.
11	24	Buff Orpingtons ..	6	32	1 laying.
12	15	White Wyandottes	5	25	1 laying.
13	13	White Leghorns ..	4	19	1 laying, 2 moulting.
14	18	Silver Wyandottes	3	15	1 laying, 1 moulting.

Eggs 2 oz. in weight, score 6 points; eggs $1\frac{3}{4}$ oz. in weight, score 5 points; eggs under $1\frac{3}{4}$ oz. in weight, score 4 points. Shell-less eggs are disqualified. The remaining ten pens have not laid an egg. Of these the following birds are moulting:—In pen 4, White Wyandottes, two; in pen 7, White Wyandottes, four; in pen 8, Barred Plymouth Rocks, one; in pen 11, Silver Wyandottes, one.

Experiments in Housing and Feeding of Poultry.

In connection with the experiments now being conducted by University College, Reading, on the college poultry farm, Theale, re'ating to (1) the colony house system of poultry-keeping, and (2) the hopper method of feeding, we beg to present records for the third quarter. Full particulars as to arrangements, feeding, &c., were given in the first report published in May last, and the details of the second three months were issued in August. These will be reprinted when the complete record is issued.

Experiment No. 1.—Colony System of Housing.

The third period was from July 16 to October 15, and for fifty Buff Orpingtons—namely, two cocks and forty-eight hens. As in the previous quarter, owing to the plentiful supply of grass and natural food, the grain, mangolds, and green bone were omitted, and the birds had only dry mash provided, kept constantly before them in hoppers. The albuminoid ratio of the food is 1 : 3·4, and the cost is 9s. per cwt.

Of the food thus supplied the total weight consumed was 889 lb. (7 cwt. 3. qr. 21 lb.), as against 1,827 lb. (of which 484 lb. were mangolds) in the first quarter, and 1,211 lb. in the second quarter. This reduction is partly explainable by an arrangement adopted to prevent waste. It was found that a considerable quantity of dry mash was scattered upon the ground. By the adoption of a box below the hopper trough the scattered food is caught, and in this way the saving is nearly 25 per cent.—a very important consideration. The total cost of food for the three months is £3 11s. 6d., as against £6 10s. in the first quarter, and £4 14s. 8d. in the second three months. This works out at 1s. 5·16d. per bird for the entire quarter, or 9·33d. per diem for the fifty birds, or 1·32d. per bird per week—rates which may alter our ideas as to the cost of hopper feeding, the full effect of which is yet not fully seen, as the change was only made on August 29.

The egg production fell off considerably—as might be expected from the season of the year, so many of the birds commencing to moult—and was as follows :—

July (16 days)	188 eggs.
August (31 days).....	173 ,,
September (30 days)	24 ,,
October (15 days)	10 ,,
Total.....	395 eggs

The highest number of eggs produced on any one day in July was eighteen, and the lowest six; in August, highest fourteen, lowest two; in September, highest four—on seventeen days no eggs laid; in October, highest three, and on eight days no eggs laid. The average production of eggs for the three months was 8·23, divided as follows :—July (sixteen days), 3·92; August (thirty-one days), 3·6; September (thirty days), 0·5; October (fifteen days), 0·21.

Experiment No. 2.—Hopper v. Ordinary Feeding.

As previously stated, in this experiment one lot each of White Wyandottes (I.) and Buff Orpingtons (II.) are fed on the hopper system, and one lot each of White Wyandottes (III.) and Buff Orpingtons (IV.) are fed in the ordinary manner on soft food and grain in litter. Particulars of the food supplied were given in the first quarterly report. As grass was so abundant no roots were given, and in Lots I. and II. all grain was omitted as in the previous quarter. The dry mash for Lots I. and II. was the same as in experiment No. 1; while the soft food given to Lots III. and IV. had an albuminoid ratio of 1 : 4·6, and cost 7s. 6d. per cwt. This experiment extended from June 1 to August 31. The box additions to hoppers were supplied on August 19.

During the three months ending August 31, although the cost in respect to hopper feeding is considerably reduced from the previous quarters, it is still nearly 33 per cent. greater than where ordinary food was supplied. The ordinary fed hens produced fourteen eggs more in the three months; the White Wyandottes laid thirty-two eggs more than the Buff Orpingtons. The fertility was greater in the White Wyandottes by 0·88 per cent., and the hatching percentage in the Buff Orpington eggs was greater by 1·67 per cent. than in the White Wyandottes. The percentage of fertility was greater in eggs from the hopper fed birds by 6·51 per cent., and the percentage of hatching was greater in eggs from the ordinary fed birds.

E. AND W. BROWN.

A private catalogue of the first-class herd of pure-bred Shorthorn cattle belonging to Mr. T. Holford, of Castle Hill, Buckland Newton, Dorchester, shows that the herd now consists of thirty-three cows and heifers and three bulls, all of which have good blood in their veins, tracing back as they do to many well-known animals.

Fertilisers and Feeding Stuffs.

Basic Slag—Low and High Grades.

Every buyer of basic slag receives offers of different grades, and has to use his judgment as to their respective merits and suitability for his purpose.

The Armstrong College authorities made a trial, with the object of comparing the results on hay of low and high grade, applied to two plots for the three years 1904, 1905, and 1906, of dressings of—

1. Basic slag (low grade) 400 lb. (50 lb. phosphoric acid) and 100 lb. muriate of potash.

2. Basic slag (high grade) 224 lb. (50 lb. phosphoric acid) and the same quantity of potash.

The yields of hay are recorded as—

	1904.	1905.	1906.
	cwt.	cwt.	cwt.
1.	20	15¾	29¾
2.	19½	14½	28¼

The cost of the two applications would be practically the same, and it will be noticed that the low grade slag produced results slightly better than the higher grade.

In order to ascertain the reason for this result, we may with advantage look at the percentages of the important constituents in the two grades.

	Low grade per cent.	High grade per cent.
Total phosphate of lime	27·50	44·92
Phosphate soluble in 2 per cent. citric acid solution	21·91	31·45
Percentage of phosphoric acid soluble in citric acid solution	79·62	69·90
Total lime	38·02	46·81
Lime soluble in 2 per cent. citric acid	32·50	31·68
Free lime	20·63	14·62
Fineness of grinding	85	83

It will be noticed that the lower grade has the higher percentage of soluble phosphate, and also that the amount of lime in the lower grade is considerably more. To these two advantages may be attributed the better results produced by the low grade, and it seems to show that in buying basic slag farmers should attach more importance to the quantity of phosphate of lime soluble in the recognised citric acid solution than to the total quantity of phosphate of lime.

In the case before us the lower grade was relatively the better quality, but in other cases the higher grade may be relatively higher. Buyers should consider offers on their merits, without allowing themselves to be prejudiced beforehand against one or the other grade.

Another point to be noticed in the quality of the two slags is that the lower grade gave the better results in spite of the fact that its grinding was not so good, being 85 against 88 per cent. in the higher grade. This confirms still more strongly that the most important thing in slag is the solubility in citric acid.

Protection of Seed against Rooks.

Where these birds exist in large numbers they are a source of serious injury to cereal crops, although, on the other hand, they are very useful in exterminating insect pests.

In a comparison made of the calculated season's operations of a number of rooks it was estimated, while they were destructive to the extent of some 42,000 grains, they compensated for this injury by killing at least 43,000 insects harmful to agriculture, and the scientific man who made this calculation came to the conclusion that "the extermination of rooks is under no circumstances justifiable, for it is clearly proved that they destroy most pests harmful to crops, including those which are with difficulty reached by artificial means."

It may be remarked that what the writer of that passage protests against is "extermination," and in so far most of us will agree with him, while we remain of the opinion that we can sometimes have too much of a good thing, and in cases where the birds are numerous a judicious thinning of them can be recommended.

At the same time measures should be adopted to protect the seed from the depredations of the birds.

The Board of Agriculture suggest treating the seed with a solution composed of 2½ oz. of coal tar and 2½ oz. of petroleum mixed with one quart of water per bushel of seed, or, it is said that treating the seed with coal tar at the rate of 1 quart of tar to 1 qr. of wheat is a successful means of protecting grain against rooks.

As a scarecrow, it has been observed that cutting up a dead rook and putting the pieces about the field deters the birds from pitching on it much more than putting whole birds on the ground.

It is reported that large orders have been sent to South America from India for nitrate of soda for use on the cotton fields.

Comparative Effect of Nitrate of Soda and Sulphate of Ammonia.

For some years a number of experiments have been conducted at various experimental stations in Germany to test the relative fertilising efficacy of nitrate of soda and sulphate of ammonia. The results are discussed in an article in the Journal of the German National Agricultural Society.

At Darmstadt, as the result of thirty-four series of tests, comprising 1,800 separate experments, it was proved that, putting the efficacy of nitrate of soda at 100, the corresponding value of ammonia as nitrogen was 94, or that it was necessary to apply 106 units nitrogen in the form of ammonia to get equal results to 100 units nitrogen in nitrate of soda.

This was the result arrived at scientifically, but in field practice the difference between the relative efficacy of the two fertilisers was found to be still greater and the average effect in ordinary farming seemed to be that while 60 parts out of every 100 parts nitrogen in nitrate of soda was taken up by the crop, not more than 45 parts of the nitrogen as ammonia in sulphate of ammonia was so utilised.

In order to obtain an extra yield of 5 bushels of wheat it may be considered necessary to apply ¾ cwt. of nitrate of soda, and according to the results obtained in the various trials the same quantity of sulphate of ammonia would have to be employed.

Why does the ammonia in sulphate of ammonia exercise on the crops a less relative effect? The chief reason would seem to be that part of the ammonia in the course of its conversion in the soil into nitrogen is lost by evaporation. It would appear also that when sulphate of ammonia is applied to heavy clay soils, a small portion of the ammonia enters into combination in the soil of such a character that it becomes not available as plant food for some time. This point requires further elucidation, and experiments are being made to throw light upon it.

How should nitrate of soda and sulphate of ammonia be applied so as to obtain the best results? On this subject the results obtained have led to the following recommendations :—

Oats.—Sulphate of ammonia should be applied in one dose at time of sowing. Nitrate of soda should also be broadcasted at time of sowing, if only 1½ cwt. per acre is applied; if a larger quantity, then half at time of sowing and half about four weeks later.

Barley.—When the application of sulphate of ammonia or nitrate of soda is small, as it generally should be for this crop, say about 1 cwt. per acre, it should be applied at the time of sowing. If, for any reason, larger quantities are applied, half at time of sowing and half about four weeks later.

Wheat.—Autumn-sown wheat should not receive applications of artificial nitrogen unless the land is very poor, and then only about 1 cwt. to the acre. In spring the dressing should be, as a rule, about 1½ cwt. nitrate of soda to the acre in one application. Larger quantities should be applied in two dressings.

Potatoes.—The nitrogen should be applied in one dose at time of planting, or, if the soil is very light, in two dressings, the first at time of sowing and the second when the plants are hoed for the first time.

Roots should receive the nitrogen at the time of sowing, except when the soil is very light, when it should be applied in two dressings, half at time of planting and half at first hoeing.

The operation of top dressing with nitrogen salts should take place in dry weather, when rain may be expected, and midday after the dew has dried off, so that the salt does not stick to the leaves. Both nitrate of soda and sulphate of ammonia give better results if they are ground fine before application and mixed with sand or dry earth, so that the distribution may be more even. If sulphate of ammonia is applied to land rich in lime, or which has been recently limed, it should be quickly ploughed or harrowed in, otherwise loss of nitrogen will arise through the formation of volatile carbonate of ammonia.

What effect have nitrogen salts on the quality of the crop product?

On this point there is a mass of statistics and reports, and the following conclusion may be drawn. Applications of nitrogen increase to a small extent the percentage of nitrogenous substance in grain, roots, and potatoes. A similar, though still smaller effort has been noted in the straw and leaves of the crops. But other factors, such as soil, weather, climate variety, have far more influence in this respect than small applications of nitrogen.

How much nitrogen does the soil yield to the crops?

On an average the surface soil to a depth of 10 in. is calculated to contain about 2,900 lb. per acre, and the crops—root crops included—are calculated to extract 46 lb. per acre per year. Thus it may be estimated that out of every 100 parts nitrogen in the soil 1·57 parts are extracted per year and per acre by the crops on an average.

Manures for Pastures.

Tested by Live-Weight Increase.

For the period of nine years from 1897 to 1905 a set of experiments, arranged by Dr. Somerville, was conducted at Cockle Park by the Northumberland County Council with the object of testing the effects of manurial and other treatment of the land, as shown by the live-weight increase of mutton grown on the different plots during a specified number of weeks each season.

The soil is described as a poor clay and clay loam throughout, practically lying on a subsoil of poor yellow boulder clay. It was under cultivation, and grew wheat crops frequently till about forty years ago, since when it has been lying under pasture, which was poor and peaty, and worth only about 2s. 6d. per acre.

The series of experiments after the ninth year was considered as complete, and the results may be regarded as forming a valuable guide for the treatment of similar old pastures throughout the country.

The following table gives a brief summary of the results, calculated out per acre :—

Plot.	Treatment and cost for nine seasons.	Average of nine years. Cost during nine seasons.	Live-weight increase per sheep over untreated plot.	Annual gain or loss.
		s. d.		s. d.
1	Decorticated cotton cake, total 597 lb., fed on plot. (Four seasons).	116 0	69¾	profit 8 11
2	Common lime, 4 tons .... (1897 and 1903).	100 0	12¾	loss 7 3
3	Basic slag, 10 cwt ..... (1907).	23 6	79¾	profit 22 3
4	Basic slag, 5 cwt. 1897, 5 cwt. 1900.	23 6	66	profit 18 0
5	Superphosphate, 7 cwt. 1897, 7 cwt. 1900 (28 per cent).	36 0	57	profit 13 9
6	Untreated throughout....	—	—	—
7	Superphosphate, as plot 5, and sulphate potash 100 lb. (1897, 1899, 1903.)	62 0	67	profit 13 8
8	Superphosphate as plot 5 and ground lime 10 cwt. (1897, 1899, 1903).	70 0	79¼	profit 17 0
9	Superphosphate as plot 5, and sulphur ammonia, 84 lb. (1897, 1899, 1900, 1903).	75 0	54	profit 8 7
10	Dissolved bones, 6 cwt. .. (1897, 1900).	66 0	61¼	profit 11 11

Mineral Fertilisers.

The enhanced prices and possible scarcity in the future of mineral plant food, especially of phosphate of lime and high-class feeding stuffs, are beginning to attract more attention among the agricultural societies.

It is remarked that their use is increasing at a rapid rate from year to year, and there is a feeling of anxiety that the supplies, especially of phosphoric acid, may not always be sufficient, an event which would certainly arise if by any unforeseen circumstance the imports of concentrated feeding stuffs should be interrupted. Through the medium of concentrated cattle foods large quantities of both phosphoric acid and potash are restored to the soil.

As regards potash salts the position seems satisfactory, because the mines in Germany can supply all requirements for many years, but with phosphate of lime it is somewhat different. During recent years the imports of raw phosphate from different parts of the world have barely sufficed to meet the ever-growing demand for superphosphate, and the supplies of basic slag, important as they are, may fall short of the requirements of agriculture. The purchases of slag through one important agricultural society in Germany have increased during the last ten years from 37,000 tons to 83,000 tons, and will continue to grow.

It is recognised that in order to improve the quality and quantity of the crops more mineral manures will be used every year, and in view of the facts commented upon above, it is suggested that each individual farmer should more carefully study the requirements of his soil and crops, so as not to waste any plant food, and to get the very best results from their use.

Nitrate of Soda and its Competitors.

The annual meetings of nitrate of soda companies are pleasant functions at the present time, and very different from what they were some years ago when the price of nitrate was below the cost of production and shipment.

The dividends for the year are most satisfactory for the shareholders, and the prospects for the coming season, if not quite so rosy, are fairly good.

Sir Robert Harvey presided on the 26th ult. at the ordinary general meeting of the Lagunas Syndicate (Limited), and congratulated the shareholders upon the satisfactory position that the company enjoyed and the increased profits that it had made during the past year compared with the previous one. Their oficina had manufactured the full amount of nitrate allowed the company as its quota under the combination. He had received from a shareholder the following communication:—"I suggest that the chairman, when speaking of future prospects, should deal with the allegations in a trade paper as to large accumulations of stock in Chili. Also that he might express an opinion as regards the alleged production of nitrogen in Sweden from the atmosphere, stated to be able to compete on favourable terms with the natural deposits in Chili." His reply to that was that the accumulation of stocks of nitrate in Chili was to be attributed to the want of sufficient shipping to export the nitrate. As to the other point, it was a matter which had been inquired into very particularly by the Permanent Nitrate Committee in London, and he could assure the shareholders that they had no cause to fear this Swedish product as a serious competitor to nitrate. In a very short time the nitrogen produced from the atmosphere turned into water again. It became quite deliquescent in the course of a few weeks, and therefore need not be seriously considered as affecting them. With respect to the new nitrate grounds that the company possessed, they had not yet had to work them. Their cost was £81,000, which was provided for out of the working capital of the company, and from that they had now written off a sum of £64,000. He had every reason to be satisfied with the position and prospects of both the nitrate industry and their own company, and expressed the belief that the directors would be able to present a very satisfactory balance-sheet for the current year. Mr. Collier expressed the hope that if the directors were to pay an interim dividend next year it would be accompanied by an interim report of the position, as twelve months was a long time to wait for news in a nitrate company. The chairman said that the directors saw no need to issue an interim report, which was not customary, but all information desired would be given at the office on application. The report was adopted.

Phosphatic Enrichment of the Soil.

With reference to the remarks in our issue of October 21 on "Storing up Phosphoric Acid in the Soil," we have since come across a report, published in the Journal of the Chamber of Agriculture for Silesia, which bears on the same subject. It is the report of Mr. von Prittwitz on the result of experiments carried out by him during the years 1905-1907, with the view of ascertaining how far increased applications of phosphate would be profitable.

All the fields on the farm on which the experiments were carried out received the customary annual dressing per acre of 3¼ cwt. basic slag and 3¼ cwt. kainit, supplemented by moderate dressings of nitrate of soda if the crop required nitrogen. In 1905 two plots, each measuring 6¼ acres, received an extra application of 3¼ cwt. basic slag per acre, which in that year increased the crop of sugar-beet by 1 ton 10 cwt, and the crop of potatoes by 11 cwt 1 qr. In order to ascertain whether an enrichment of the soil with phosphoric acid in the following year would also prove profitable, the experiments were continued on the same plots in 1906 and 1007. The sugar-beet was followed by flax in 1906 and by rye in 1907, the potatoes by oats in 1906 and by rye in 1907. The three years' results are recorded in detail in a table, which may be summarised as follows:—

The experiments were made in two fields, No. 1 land No. 2, and on two plots in eah field:—

Field No. 1.

		Profit due to additional supply of phosphate.
1905.....	Sugar-beet	19s. 6d.
1906.....	Flax .....loss	8s. 0d.
1907.....	Rye .....profit	16s. 9d.

Thus the total profit for the three years owing to extra supply of phosphate was 28s. 3d.

Field No. 2.

		Profit due to additional supply of phosphate.
1905.....	Potatoes	8s. 10d.
1906.....	Oats	8s. 0d.
1907.....	Rye	50s. 6d.

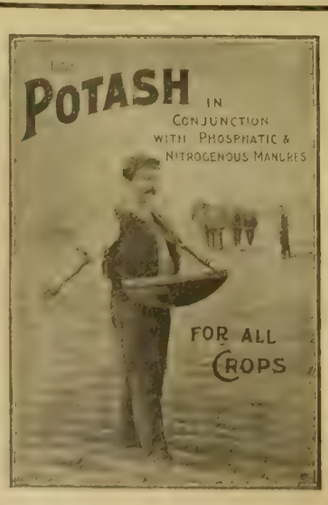
Thus for the three years £3 7s. 4d. per acre.

Prices of Fertilisers.

The fertiliser market is now very quiet, as the autumn season being over the demand is now limited to basic slag and kainit. After the turn of the year it is anticipated that orders will be booked freely; a big season is expected, and prices are generally very firm.

	£ s. d.
Nitrate of soda	11 5 0
Sulphate of ammonia	12 0 0
Peruvian guano	according to analysis
Superphosphate, 26 per cent.	2 10 0
,, 35 ,,	3 6 3
Pure dissolved bones	5 7 6
Bone compound, ordinary	3 8 9
Bone Meal	5 10 0
Ground hoofs, 15 per cent.	9 10 0
Fish guano, first quality, scarce & dear	7 10 0
Kainit	2 7 0
Sulphate of potash	10 0 0
Muriate of potash	9 0 6

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, *in the paper.*



USEFUL INFORMATION FOR FARMERS WHEN BUYING.

Approximate Unit Cost of Fertilising Constituents.

It is necessary for guidance in the economical use of fertilisers, and especially in the purchase of Complete and Special Manures, that the relative unit cost of the principal fertilising constituents should be studied: the subjoined table affords information on the subject. By multiplying the guaranteed minimum percentages of a fertiliser by the unit costs given in the table, the buyer will get a good idea of the commercial value of any chemical manure offered to him. The unit values are subject to variations from time to time, and in this respect we shall endeavour to keep the table up to date besides which, buyers living in remote districts may have to pay a little more for heavier cost of delivery. If credit is required, this will also add to the cost.

	Peruvian Guano.			Nitrate of Soda.	Sulphate of Ammonia.	Bone Meal.	Superphosphate.	Basic Slag.	Bone Compounds.	Special Manures.	Kainit.	Sulphate of Potash.	Muriate of Potash.
	Raw or Equalised.	Phosphatic.	Dissolved (soluble).										
Ammonia, organic as in Guano and Bones	s. d. 17 6	s. d. 12 6	s. d. 15 0	s. d. —	s. d. —	s. d. 12 6	s. d. —	s. d. —	s. d. 15 0	s. d. 15 0	s. d. —	s. d. —	s. d. —
,, in Sulphate of Ammonia ...	—	—	—	—	10 6	—	—	—	—	12 6	—	—	—
,, calculated from Nitrogen in Nitrate of Soda ...	—	—	—	13 0	—	—	—	—	—	—	—	—	—
Phosphate soluble in water	—	—	2 0	—	—	—	2 0	—	2 0	2 0	—	—	—
,, assimilable...	1 6	1 2	1 3	—	—	1 2	—	—	1 3	1 3	—	—	—
,, insoluble	—	—	—	—	—	—	—	1 3	—	—	—	—	—
Potash (pure)	4 0	4 0	4 0	—	—	—	—	—	—	4 0	3 10	4 0	3 10

N.B.—The above table is based on the commercial cost of the fertilising constituents. Agricultural value is not always synonymous with the commercial cost, and every farmer must exercise his judgment, while considering the cost, which fertiliser may be expected to give the most profitable return on his soil and for his crops. This is the cheapest manure for him.

THREE RELIABLE CALF MEALS WHICH NEVER DISAPPOINT.

"This 'Cream Equivalent' do smell beautiful, I a'most wish I were a Calf."

1. THE "LANCASTER" CALF FOOD.

13/- PER CWT.; OR, IN FOUR CWT. LOTS, 12/6 PER CWT.
Carriage paid to nearest Railway Station.

This Meal does not swell out so far as the "Milk Equivalent," but is much easier to prepare, and is recommended to those who do not personally see to proper preparation.

2. BIBBY'S "MILK EQUIVALENT."

12/6 PER CWT.; OR, IN FOUR CWT. LOTS, 12/- PER CWT.
Carriage paid to nearest Railway Station.

This Meal swells out splendidly, but needs careful preparation. It is, however, a first-class Meal, and probably the most economic in use of all the Calf Meals in the Market.

3. BIBBY'S "CREAM EQUIVALENT."

15/- PER CWT.
Carriage paid to nearest Railway Station.

Is the latest and most popular of our foods; we believe it is the nearest approach to the ideal that has yet been reached in preparations of this kind.

Our new Circular, "How to Rear Calves for the Dairy," will be sent free of cost to any applicant.

Sole Manufacturers:—

J. BIBBY & SONS,

Exchange Chambers,

LIVERPOOL.

ALLIANCE ASSURANCE COMPANY, LTD.

HEAD OFFICE:
Bartholomew Lane, London, E.C.

ACCUMULATED FUNDS, £16,000,000.

CHAIRMAN:
Right Hon. LORD ROTHSCHILD, G.C.V.O.

The operations of the Company extend to the following, among other branches of Insurance:—

LIFE. FIRE. MARINE.

Workmen's Compensation (including Clerks, Shop Assistants, Domestic, Agricultural and Estate Servants).
Personal Accident and Disease.
Third Party Risks.
Burglary and Theft.
Fidelity Guarantee.
Annuities.
Leasehold and Capital Redemption Policies.

The terms and conditions of Insurance for all classes of risks are favourable to the Insured.

The Directors invite proposals for Loans on, or the purchase of Reversions & Life Interests.

Prospectus and Proposal Forms may be had on application to any of the Company's Offices or Agents.

Advertisements, Subscriptions, and business communications should be addressed to THE PUBLISHER, "Mark Lane Express," 3, Wellington Street, Strand, London, W.C.

FAT STOCK SHOWS.

We naturally begin to think of Christmas when the fat stock shows open, and now that they have commenced—Norwich leading the way—much interest will be absorbed in these gatherings for the next few weeks. There are the great shows like Smithfield and Birmingham which we have a habit of associating, through long experience, with gloom and semi-darkness, fog, slush, and discomfort, but none of these adverse conditions have the power to damp the enthusiastic spirit that prevails at a big fat stock show.

At these big events one sees the cream of Christmas beef, and as loyal Britons we feel proud that there is none equal to it in the world, but there are other shows besides those of the Birmingham and Smithfield order, for of late years it has become the custom for almost every local Christmas market to be also a fat stock show, and the prizes offered at these gatherings by auctioneers and patrons of agriculture in the district are keenly competed for by local cattle-feeders. It is not too much to say that these competitions have been, and are, the means of improving local Christmas markets, both in the way of getting better stock and attracting buyers.

Healthy competition is always good, and it is well that the farmers who cannot aspire to the greater events should have a chance of winning honours at local shows.

MILK PRICES.

The rise in milk prices, referred to in our Midland Notes of last week, is the cause of a very pretty little triangular controversy between dealers, farmers, and the aggrieved consuming public. One dealer's letter to a Birmingham evening paper is interesting by reason of its unusal frankness; he says:—

"I am one of those who are paying 8¾d. per gallon for milk. I charge my customer who has to deliver it 9½d; he sells it at 3½d. per quart. I am satisfied, so is he. I have been circularised by a dairymen's association of which I was once a prominent member, asking me if I will raise my price to 10½d. to the milkman and 4d. to the retail customer. I have replied promptly, No! It is nothing in the world but gross imposition to attempt to raise the price. In a word, the reason milk is scarce in some places is because they will not pay a fair price for it. I have plenty, and if I wanted more my sender would buy more cows at once, and if he asked me the other farthing I would pay it, because I know it would be worth my while. If they raise the price to 4d. per quart this means a rise of 4d. per gallon since September 29, and the farmer will not benefit one farthing! I once got up at a meeting called to raise the price of milk, and suggested that we should give our senders half the benefit, but I was ostracised by all my fellow-members, so I promptly resigned my membership."

Milch cows nowadays are not cheap in local markets, so in one respect this letter may be over-sanguine. Meanwhile, the secretary to the "Birmingham and District Dairymen's Association"—a retailers' concern—explains that farmers "secured an advance last winter, given voluntarily in many cases by milk dealers," and that the supply under autumn contracts has fallen off "through being excessive in the summer months." Having overloaded the market in summer producers, it seems, have now left the poor dealers in the lurch, so that the latter have to buy "large supplies at enhanced prices from creameries without any compensation from those farmers who are vending inadequate quantities."

In other words, the supplies are enough to go round, but the large creameries have cornered them—and the retail trade is aggrieved because the farmers are not suffering the loss.

At Selby hirings on Monday there was a good attendance, and though in some cases engagements were made at a slight reduction on last year, the wages, generally speaking, were the same as in 1906. Young lads obtained £8 to £11, third hands £13 to £16, good seconders £18 to £22, and farm foremen £27 to £30 per annum. Female servants were difficult to obtain, and where business was transacted young girls secured £9 to £12, and ordinary domestics £15 to £18, and some £20, while other hands asked from £24 to higher figures.

Notes of the Week.

The first touch of winter came in the course of last week in the shape of sharp night frosts, with snow in some parts of the country.

The change in the weather was accompanied by a freak of Nature's forces in Kent. A whirlwind swept over the eastern part of the county and did much damage.

Many of our readers who have dined at the historic Crosby Hall in Bishopsgate Street, London, will regret that the efforts to save it from the operations of the housebreaker have failed.

The Kaiser has been doing some spade work in Hampshire. It is not reported that he took off his coat and rolled up his Imperial shirt sleeves, but he took off his gloves, planted a tree, and shovelled the soil in with a spade.

"There is some strange and admirable power in our soil and climate which puts a stronger fibre and a more enduring stamp of excellence into the live stock bred in our islands than are found in the same breed and species in any other part of the world," says the *Times*.

Hurrah for Old England, roast beef and plum pudding!

"Little and good" is a saying which is applicable to roots as well as to other things This comes to mind when our eye rests upon the large specimens exhibited at the shows.

The percentage of dry substance in a crop of roots is the real factor of its feeding value.

In the 14th century the wage of haymakers was 1d. per day, and reapers in August got 3d. per day. But at that period a fat ox could be bought for 16s, and a gallon of beer cost only 1d.

This country imported from Canada last year nearly 10,000 tons of butter, valued at more than £980,000.

So the recent export of butter from Ireland to Toronto comes as a surprise. It may indicate that the Canadian butter competition in our markets will rapidly diminish.

The project to make separate main roads for the use of motors will be welcomed; of course, motorists must bear all the cost.

Those playful leviathans of the road, motor cars, have been on the rampage in North London during the week.

In one district they succeeded during the foggy weather in knocking down three different garden walls, tearing up the lawn and nearly dashing into the houses.

The Germans are great smokers, and grow most of their own tobacco. There are 40,000 acres devoted to the cultivation of the fragrant leaf.

It is a small holders' crop, requiring a lot of attention. About 35,000 small farmers are occupied with tobacco cultivation.

Farmers' logic according to *Punch*:—

First Farmer: And wot do 'ee give yur pigs?

Second Farmer: Oh, I gies 'em plenty o' straw.

First Farmer: Ah, but 'ow do 'ee goo on when it's a bad year for straw?

Second Farmer: Well, when it's a bad year for straw, and there ain't much straw about, well, there ye be!

First Farmer: Ay, that's right enough.

Second Farmer: But when it's a good year for straw, and there's plenty of straw about, well, there ye be agen!

First Farmer: Ay, that's right enough, that is!

Note for vegetarians!

"When the lion eats an antelope he is only devouring glorified grass."

Says Dr. Andrew Wilson.

Weight-guessing competitions at agricultural shows are quite fashionable. They help to educate the eye and appeal to what is called the gambling instinct of mankind.

"Who was Potiphar?" was the question asked by a Sunday-school teacher, and the answer surprised her: "This is a kind of potted meat which his brother gave in exchange for his birthright"

The largest horse in the world is said by Americans to be Nebraska Queen, a mare on a breeding farm at Falls City.

Are wool prices going to mark a fresh advance or show a tendency to decline?

This question will be answered by the result of the important Colonial wool sales to be held in London during this week and next. Nearly 130,000 bales will be put up for sale.

A prompt reply:—

"The Scotch," says Mr. Wilson, of the Department of Agriculture, "are certainly a witty people. Now there was a visitor in the little town of Aughnacloy who, on looking about, saw no children, but only grown men and women. He wondered at this, and, finally, meeting a weazened old man on the street, inquired, 'How often are children born in this town?'

"'Only once,' the man replied, as he proceeded on his way."

THE FARMERS' DIARY.

TUESDAY, DECEMBER 3.—Birmingham Fat Stock Show, third day—Tonbridge Fat Stock Show, second day—Cattle Fairs at Stockport, Ipswich, and Lynn—Cowbridge Fat Stock Show—York Fat Stock Show, first day—Maidstone Horse Sale

WEDNESDAY, DECEMBER 4.—Birmingham Fat Stock Show, fourth day—York Fat Stock Show, second day—Redhill Show, first day—Wadhurst Fat Stock Show, first day—Helston Great Fair—Manley's Special Horse Sale, Crewe—Edinburgh Fat Stock Show, first day—Special Sale at Folkestone of Horses.

THURSDAY, DECEMBER 5.—York Fat Stock Show, third day—Redhill Show, second day—Bungay Fair—Birmingham Fat Stock Show, last day—Edinburgh Fat Stock Show, second day—Manley's Special Sale of Heavy Horses, Crewe—Wadhurst Fat Stock Show, second day—Great Sale of Store Cattle, Dublin—Agricultural and Poultry Sale at Okehurst, first day.

FRIDAY, DECEMBER 6.—Sale of Dairy Cows at Preston—Rothenfield Farm Sale—Agricultural and Poultry Sale at Okehurst, second day—Agricultural Fairs at Bodmin, Coleford, Northwich, Newark, and Skipton.

SATURDAY, DECEMBER 7.—Fairs at Leigh, Wells, Derby, and Clitheroe—Shingleton Farm, Eastry: Special Sale.

MONDAY, DECEMBER 9.—Smithfield Show opens at Islington—Fairs at Reigate, Ross, and Bradford—Lynn Fat Stock Show—Pembroke Fat Stock Show—Farmers' Club Annual Meeting, 6 p.m.; Mr. Mansell on "The Value of Live Stock," at the Whitehall Rooms, Hotel Metropole—Farmers' Club House Dinner, 8 p.m., No. 2, Whitehall Court.

An Agricultural Party.

The proposed formation of an Independent Agricultural Party forms the chief topic of discussion at the meetings of agricultural societies, &c, now being held, and, as was only to be expected, there is a variety of opinions on the subject.

Sir Alexander Acland-Hood, Chief Opposition Whip, who is president of the West Somerset Farmers' Club, was unable to attend a meeting of that association held at Taunton on the 23rd ult., to consider the subject mentioned above, but he wrote:—"I think the main reason why agriculture has not hitherto received all the attention in Parliament that it should do is because we agriculturists have never yet agreed on a united policy for the welfare of our industry. Till we all unite on common ground for the benefit of all concerned in the industry—owners, tenants, labourers, and the tradesmen and artisans in our rural districts whose interests are so bound up in the welfare of agriculture—I do not think our voice will be heard as it might be. I am not sure that if we combined in this way we should not carry more weight in Parliament than could be done by a small group of plucky agricultural members."

After discussion, the club decided heartily to support the proposal of the Organisation Committee of the Central Chamber of Agriculture, and the members pledged themselves to a levy of one shilling per member and to collect any other obtainable subscriptions for the proposed central fund for the formation of an independent agricultural party. It was also suggested that in a division where the prominent vote was Liberal a candidate acceptable to the Liberals should be chosen, and conversely in the case of a Conservative constituency. The club further decided to urge on the Central Chamber the necessity of using all its influence in bringing those members of Parliament who represented agricultural constituencies into line, apart from party politics, on all questions entirely affecting the interests of agriculture.

A number of speakers at the last meeting of the Tunbridge Wells Farmers' Club deplored the lack of unity among farmers even on broad principles, and it was urged that they must have some great question on which all would combine before the establishment of a party could successfully be tackled. The essential need of a party cry was also advanced. Tribute was paid to the work done for agriculture by local M.P.'s, and Mr. G. L. Courthope wrote stating that his greatest desire was to see agriculture properly represented. Farmers' clubs and agricultural associations, he suggested, should make it known that they would support candidates whose chief interest lay in agriculture.

The Wadhurst Farmers' Club have passed a resolution in favour of forming a separate Agricultural Party; they, however, realise the importance, in the first place, of forming a thoroughly representative organisation, including all classes interested in agriculture.

Lord Barnard presided at a meeting of the Darlington Chamber of Agriculture on Monday to consider the suggestions of the Central Chamber of Agriculture towards the formation of an Agricultural Parliamentary Party, and in the course of a speech remarked that he thought an attempt to form an Agricultural Party was bound to end in failure. Even if it did not end in failure it would be practically useless. Parliament was charged with the interests of the United Kingdom and of the Empire, and not with the interests of a section of the community. He moved, and the resolution was adopted, "that while every step should be taken to impress upon Parliament and the Government the views of those interested in agriculture, the Chamber was of opinion that the formation of an Agricultural Party is not practicable or advisable; and further expressing the opinion that every encouragement should be given to farmers' clubs and other organisations."

The members of the Cirencester Chamber of Agriculture have unanimously adopted the following resolution:—"That this Chamber, while concurring in the opinion that the representation of the agricultural interest in Parliament should be made more effective, is not in favour of the formation of an independent political Agricultural Party; and considers that the remedy is to be found—at all events for the present—in strengthening and consolidating existing agricultural organisations, and by the formation of others in unorganised districts."

On Tuesday the East Suffolk Chamber of Agriculture considered the subject at some length, and a resolution to the effect that an Independent Agricultural Party is absolutely necessary was lost by only one vote.

Mr. Ulric Stanley presiding at a meeting of the North Cotswold Farmers' Association at Campden on Wednesday evening, said if farmers had been enthusiastic and energetic, and supported the proposals of the Central Chamber as they ought to have done, they would not have asked for an Agricultural Party in Parliament. He complained of the apathy of members of that association. There was a certain class of farmers who would quickly take up anything new, but whose interest quickly subsided.

Mr. S. Stanley spoke in favour of an Agricultural Party in Parliament, and said he had always had to choose between a Tory and a Radical. Often the questions concerned wars and other matters he was not interested in—things that did not affect him. He had to choose between two evils, and vote for one or the other. He hoped he should have the opportunity of voting for a representative of agriculture. He moved, and it was unanimously carried, "That it is the opinion of this association that the time has arrived when agriculture should be represented in Parliament irrespective of parties."

Mr. G. Lane Fox, M.P., speaking at the annual dinner of the Sherburn Agricultural Society on Thursday, said he did not think an Agricultural Party in the House of Commons would be of any use to agriculturists, owing to the expense of electioneering in rural districts, though no doubt it was a disadvantage to farmers to be represented by men who had no practical knowledge of farming.

At the Newcastle Stones Fair, on Wednesday, the quality of the store cattle shown was good, especially for three-year-olds, but trade was slow. Irish three-year-olds made from £12 15s. to £16s.; two-year-olds, £11 15s. to £13 5s.; yearlings, £6 to £10; English two-year-olds, £11 to £15. There were very few yearlings, and prices ranged from £8 to £11 10s. Very little trade was done in the horses, and there were not so many animals as was expected. Prices ranged from £10 to £50.

Open Produce Stakes for Shorthorns and Jerseys.

Breeders of Shorthorns and Jerseys are reminded that the entries for the first half of the open produce stakes of 10s. each, arranged by the Tunbridge Wells and South-Eastern Counties Agricultural Society, close on the 31st inst.

The stakes, it may be recalled, are for cows or heifers to be entered and their produce to be shown at the society's 1909 show. The stakes will be divided as follows—between the produce of the entered cows or heifers which shall be born :—

1st half, between January 1 and June 30, 1908, inclusive, and the entry for this half of the stakes, as already stated, closes on December 31.

2nd half, between July 1 and December 31, 1908, inclusive, and the entry for this half closes on March 31, 1909.

If there are sufficient entries bulls and heifers will not compete against each other, and separate classification will be provided for each sex. The money will be divided *pro rata* between the two sexes, less the entrance fee when shown, and will be awarded to the absolutely best of either sex.

Separate stakes are provided for the two breeds —Shorthorn and Jerseys—and the conditions and rules are as follow :—

Any number of cows or heifers, the property of the same owner, may be entered for the stake.

Cows or heifers shall only be eligible for entry in respect to produce, to be born between the above-mentioned dates. Entries may be made at any time before the closing of the stake.

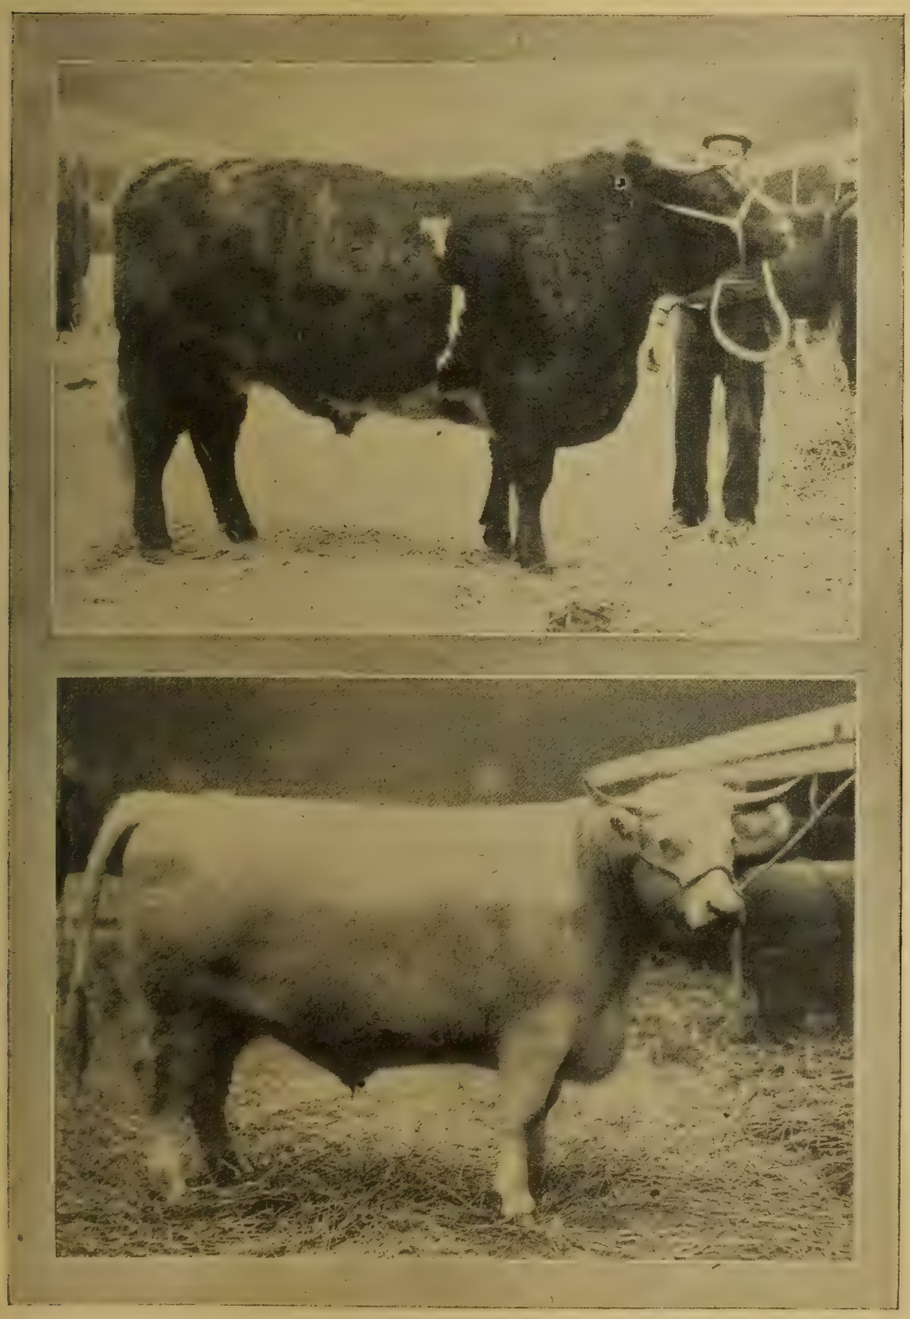
One entry shall only cover one calf.

Within six weeks from the birth of the calf of any cow or heifer entered for the stake, the owner shall forward to the secretary of the Tunbridge Wells and South-Eastern Counties Agricultural Society, a certificate, signed by himself and one witness, stating the date of birth, exact markings, sex, with name (and number if entered) of the dam and sire—but the acceptance of such description shall be left to the discretion of the council or their representatives, and every owner must prove the correctness of his entry to the satisfaction of the council, if called upon to do so.

Entrance fee, 10s , to be paid on entering the cow or heifer, the only liability in case of forfeit ; the remaining £1 to become due and to be paid if and when the owner accepts by nominating for the stake, the date for which will be in 1909, and announced.

A calf is eligible to compete under one subscription, provided that, if the breeder shall have sold or otherwise parted from it, no other person shall accept by nominating for the stakes, unless he also pay £1 for such acceptance, and forward to the secretary a certificate from the late owner, properly identifying, with exact markings and colour, to the satisfaction of the secretary or the council, the produce in question.

Notice of and nominating the produce for competition will be sent at the proper time to all who have entered cows or heifers, and when the acceptances have come in the premiums or prizes (cash) will be allocated in the two divisions by the representatives of the Tunbridge Wells and South-Eastern Counties Agricultural Society and the Shorthorn Herd Book Society, and should there be any difference of opinion on the subject between them, the final decision would be left to the president of the Tunbridge Wells and South-Eastern Counties Agricultural Society of 1907.



If a cow or heifer entered for the stake be sold or otherwise parted with before the calf is born the new owner shall forward to the secretary a certificate of the fact, signed by the late owner, and shall in all respects comply with the rules hereinbefore set out.

Anyone failing to comply with the above rules respecting certificates may be refused permission to accept for and nominate the produce for the stakes.

All matters of doubt or dispute arising under these rules and conditions, or otherwise, respecting the stake, shall be settled by the council of the Tunbridge Wells and South-Eastern Counties Agricultural Society, or whoever they may appoint, and their decision shall be final.

Any of the produce shown for this stake will be able to compete also in their respective classes at the show for which they are eligible, by paying the usual fee for such class or classes, and it will therefore be seen that an animal could carry away a considerable amount in money and prizes, and these stakes must very materially add to the value and importance of the animals entered.

All applications should be made to Mr. W. Roper, secretary, Tunbridge Wells and South-Eastern Counties Agricultural Society, Kentish Buildings, Tunbridge Wells, from whom all particulars can be obtained.

H.M. THE KING'S FIRST PRIZE SHORTHORN STEERS AT THE NORWICH FAT STOCK SHOW.

1. The winner in the Class for Steer of Any Breed, bred and fed in Norfolk, above two years and not over three years old. Sire Traveller, dam Constance ; age 2 years 9 months 1 week 5 days ; weight 18 cwt. 0 qr. 9 lb.
2. The winner of the Special Prize for the Best Beast in the Show bred and fed in Norfolk, and First in the Class for Shorthorn Steers over two years and not above three years old. Sire Royal Carlisle, dam Squall ; age 2 years 8 months 3 weeks 4 days ; weight 15 cwt. 2 qr. 19 lb.

Transactions in Store Stock.

(*Reported to the Department of Agriculture and Technical Instruction for Ireland.*)

At Kell's Fair, co. Meath, held on November 26, there was a very small supply of cattle ; demand good, polled bullocks selling better than in recent fairs. Yearlings, 1st class, £8 10s. to £9 ; 2nd class, £7 7s. 6d. to £7 10s. ; two-year-olds, 1st class, £12 to £131 5s. ; 2nd class, £10 to £12 ; three-year-old, 1st class, £14 10s. to £16 ; 2nd class, £12 5s. to £13 10s. ; Springers, 1st class, £15 to £16 15s. ; 2nd class, £12 15s.

The second hirings at Driffield took place on Monday and were largely attended, and a goodly number of transactions took place. Foremen obtained £26 to £30, shepherds £24 to £28, waggoners £18 to £24, beastmen £16 to £23, third lads £12 to £17, and young lads £7 to £12 per year. Female servants were scarce. Cooks £20 to £22, housemaids and generals £16 to £18, kitchen girls £12 to £16, and nursemaids £10 to £12.

At Thirsk hirings on Monday there was a decided improvement in the attendance from the previous Monday. Owing to the fact that farmers are backward with their work a slight advance in wages was in most cases asked, but by far the greater part of the contracts which were made were at the old rates. In many instances employers had waited until to-day before hiring, and consequently a good deal of business was done. Female labour was as usual scarce, and the supply did not equal the demand, and good wages were obtained by likely hands. Hinds, with cottage, garden, and the usual allowances, made from 18s. to 21s., and good managing hinds, 24s. to 27s. per week. Capable farm foremen, £25 to £30 ; plough lads, £9 to £11 ; farm boys, £6 to £8 ; head lads and horsemen, £17 to £18 10s. ; cooks for town places, £18 10s. to £23 ; general servants, £13 to £15 ; housemaids and chambermaids, £11 10s. to £15 ; nurse girls, £8 10s. to £11 ; young girls for farm houses, £7 10s. to £10 10s. ; second hands, £15 to £16 ; head girls, £19 to £21.

Notes and Jottings.

AN English breeder who is visiting New Zealand has furnished some interesting details in connection with his impressions upon the flocks he has seen in that Colony. First and foremost stands the grand quality of the wool grown there, and from what one can gather from the letters seen, it is evident that the breeders in those Colonies have given the wool a great deal of attention. They have, indeed, by selection and care, improved the uniformity of their fleeces to a remarkable degree, with the result that their fleeces when offered for sale realised a higher average price than would be the case if they were not of that uniformity of type and character.

TO write upon wool at this time when the indications of the market show a decline in the prices made is not so pleasing as it would be if the prices were rising. However, it occurs to the writer, after perusing the letters mentioned in the previous paragraph, that it would be of general benefit if it were possible to induce the British wool growers to devote more attention to the fleece than they have done in the immediate past.

ONE matter is quite clear—*i.e.*, that the better the quality of the wool the more even its staple and character, the better the price it realises in the wholesale market, and the larger the demand.

THE other day in Kent some four or five flockmasters met together to inspect a flock of sheep. At the luncheon the subject of the price of wool was discussed. Said one: "I cannot see how it is managed, but I know for a fact that a certain lot of wool—a small lot, indifferent in quality, and not approaching the cleanliness, &c., of another lot grown side by side, made exactly the same price. What I want to know is why this should be." This is a position one has discussed time after time, and, unfortunately, it is a general one, and it must and will remain so until the time arrives when the middleman or the collector, if one may so term him, of the local growths of wool is done away with, and the whole of the wool sent to be sold at one or other of the great wool markets, where each clip would then be sold at its true value.

DURING the past week or so flockmasters have been much troubled by the continuous rainy weather. Those who are folding find it most awkward, particularly on the heavier land, to keep their sheep in the fold. Such sheep are not doing their best; it is only natural that this should be the case, for no animal can do well and thrive when penned up on wet clay or mud. It is against the practice, and many experienced flockmasters deprecate doing so, but one cannot help thinking it would, in the long run, be to the advantage of both the owner and the sheep if in extremely wet weather, such sheep were removed to dry land, or even pastures.

ANOTHER danger, and one that is very apparent to those who move amongst flocks and sheep, is that foot rot will become very prevalent unless we have a change from the present wet weather. Several cases have recently come under the writer's notice in which flocks are becoming generally infected with it.

IT was told the writer the other day, when he called attention to the fact that the majority of sheep in a certain flock were lame, "Well, we always have it at this time of the year." This may be so, but if it be so, it points clearly to the fact that that flock is not under proper management and control. No flockmaster can prevent his sheep breaking down lame at some time or the other, but every flockmaster can, if he takes due precaution, prevent his flock becoming infected with it.

IT is most difficult to make flock owners and shepherds also realise the fact that a lame sheep neglected means a lame flock in the course of a very short time.

FLOCKS that have been under proper control and management are rarely, if ever, found to contain many lame sheep. Why is this? It is simply because those who are in control no sooner see a lame sheep than that sheep is taken out, isolated, and cured, before being allowed to run again with the flock.

WITHOUT discussing the question as to whether or not foot-rot or any other kind of lameness is contagious, one can say, without fear of contradiction, that once allow any lame sheep to run about with the flock the lameness very soon spreads amongst many others.

THE absence of sale reports from the Argentine at this period of the year indicates, and confirms, too, the fact that the sales being held in that country are not giving any remarkable series of prices. In fact, the information conveyed by the reports seen in the Argentine papers all indicate that the stud ram market in Buenos Ayres, particularly of the Lincoln sheep, is over supplied.

THE more thoughtful British breeders will not be surprised at this condition of affairs. In fact, it is what many of them have been anticipating for some considerable time past. That this should be so is a matter of regret. Not only does it mean that those who have exported sheep there will get little or nothing for their trouble, but it lowers the standard rate of price for sometime afterwards, and the effect of a slump in the trade, such as has been taking place in that market during the past two months, will take sometime to be forgotten, and materially affect the prices next season.

ON the other hand we note that the New Zealand breeders and those in Australia also have been selling their home bred rams at very satisfactory prices. In New Zealand the trade has been exceptionally good, and the effect of this has been that the New Zealand demand for British stud sheep, notably of the Romney Marsh breed, which has been good all this season, is continuing so right through until the present time, and from information with which we have been favoured we are able to state that several important consignments of sheep have recently left this country for New Zealand.

THE English flockmaster has great need to keep a watchful eye upon his fellow breeders in New Zealand, for these are making great efforts to secure a footing in the Argentine market. They claim that they can supply the Argentine market with typical specimens of the British breeds of sheep at a much lower rate, and more suitable for that country than the home breeder.

NO one will question that they are able to supply them at a lower rate, but it is evident that the lower rate will only purchase sheep from flocks which are in need of renovating and strengthening by the importation of stud sheep from Great Britain.

THIS is shown by the fact that New Zealand breeders themselves have been during the past year larger purchasers of British stud sheep than has been the case for many years past, and it needs no great amount of thought to prove to the Argentine importer that it must be cheaper and better for him to import direct from the fountain head than to do it through the New Zealand flock, which has to go for its stud sires to the same source.

LINCOLN breeders will note with satisfaction that Mr. F. Miller's champion ram at the Lincoln Royal Show has been sold privately to one of the leading Argentine estancieros, Mr. J. B. Iraizoz. It would be interesting to know the price at which this ram has been sold. Doubtless a high price, for the ram to him at the Royal Show realised, as our readers know, 900 guineas at Mr. Dudding's sale last July.

At a well attended meeting of the Wadhurst Farmers' Club—a body embracing a large district engaged in the hop industry in East Sussex—the following resolution was unanimously adopted:—"The members of the Wadhurst Farmers' Club, in view of the large amount of capital invested, and the large number of persons—both in country and town—employed, directly or indirectly, with the growing of hops in Kent and other hop growing counties, do earnestly press upon the Government to impose a duty of 40s. per cwt. on all foreign hops landed in this country. They especially desire to point out that the free importation of hops is causing ruin to the growers of hops in England, and driving whole families from the hop districts into the towns or to the workhouses; whereas, if a duty on foreign hops were imposed, it would bring prosperity to the hop districts, and take many of the unemployed from congested centres, and no one would suffer, as there is plenty of land in England to grow all the hops our brewers require."

Notes and Jottings.

Size.

THE modern idea of horse-breeding, or, to be accurate, one great object of modern horse breeders is size. The question which never seems to have been thoroughly thrashed out, or which, at all events, is practically ignored by modern theorists is, how far size in itself is an advantage. Of course, in horses for draught size and weight are essential, but when we come to lighter breeds it is, at any rate, open to argument whether increased size, by which in the first place I mean increased weight, is worth what it costs us. Experience has shown us that in increasing the height of light breeds we frequently—too frequently—sacrifice characteristics which are of much greater importance. Height often means legginess, which in itself is a sign of weakness, and it is a fact that big, fine horses are more liable to go wrong in the wind than smaller and more compact horses. There is an old saying that a "good big one is better than a good little one," and the truth of such a saying seems self-evident on the face of it. But, like many sayings and proverbs, it will scarcely bear strict examination. An old huntsman once said in my presence that "a good big horse might be better than a good little one till he tried; but that in his experience it was the comparatively little horses that stood their work best, and came home most cheerfully after a hard day."

The Happy Medium.

OF course, a little horse would be no use for a 15 stone man in a flying country. He would never get over the fences. But a medium sized horse will in nine cases out of ten carry a heavy weight better than the tall 16 hands 2 in. or 16 hands 3 in. horse which is so fashionable. Some twenty years ago a writer of wide experience gave it as his opinion that a weight-carrying Hunter increased in value till he got to 16 hands, and that his value decreased after he passed that standard. There is a great deal of sense in the remark, though, like all generalisations, it is open to exception. But I think that if we were to adopt 16 hands as the standard to aim at, we should find that our weight-carrying Hunters would be more serviceable than they are at present. Speaking from my own experience, which has been a pretty wide one, the horses which I remember as the best have, with one exception, been under rather than over 16 hands, and perhaps the best and hardest was a well-bred horse that was just short of 15 hands 3 in. I have had horses perhaps that went as brilliantly in a fast forty minutes—one in particular, and he standing 16 hands 1½ in. might perhaps be considered better for the time. But when it came to a really hard day, and one hard day after another, the little one was the better horse of the two. When I bought him he was nine years old, and though all the clever people said he was not up to my weight, he carried me for nine seasons an average of nearly three days a fortnight, and I never saw him sick or sorry.

Bone.

GOOD bone is, of course, necessary. If a horse has not good bone he is of little use. But opinions differ as to what good bone is. Big bone is by no means always good bone, and frequently in the endeavour to get big bone we sacrifice something which is of much greater importance. Writing in the *Sportsman* the other day a man who has lived all his life amongst horses, and whose experience is not confined to England, emphasises this fact in words which cannot be too strongly impressed upon breeders: "A horse with 9 in. of bone has not necessarily better bone than a horse with only 8 in. It is the quality and texture of the bone, not the inches, that count. In my humble opinion, the bones hold a very lowly position compared with the rest of the animal organisation; they are the frame or skeleton on which are laid the marvellously delicate machinery of tendons, muscles, and nerves. It is this delicate machinery which turns trainers' hair grey." If this opinion were acted on by breeders we should have fewer moderate horses. The horse mentioned above had only 7¾ in. of bone, but his sinew was like whipcord. His breakdown when eighteen years old was

caused from over-jumping himself, getting into the rut on a cart road with his forelegs and cutting his sinew. If it had not been for this accident he would have lasted another two seasons well.

American Opinion.

OUR American cousins do not attach so much importance to bone as we do, and some of the horses which they sent over to Olympia last year were sadly deficient. From our standpoint—indeed, even from the standpoint of those who have not the prevalent somewhat exaggerated opinions on the merits of big bone—the American horsemen carry their theory to the other extreme. But at the same time it must be pointed out that the Americans are a thoroughly practical people, and they do not keep their horses to look at.

Forcing.

THE shortcomings of our Hunter stock also owe much to the pernicious system of early forcing for the show ring, of which many instances have just come to my notice during my travels round the country during the last few weeks. I have seen a lot of young horses that were much talked about and written about in the early part of the year. On referring to notes made about them then I find that there is only one that has fulfilled the promise they showed. One horse in particular I noticed and was disappointed with. He is a yearling, and is quite as big as he ought to be at three years old. Another, a three-year-old, looked to be fully 16 hands 1 in , and several three-year-olds I have seen were over 16 hands. I was asked whether I did not think 15 hands 3 in. the maximum height for a three-year-old, and I certainly think it quite high enough. One gentleman as we looked over a lot of two-year-olds made the remark that one could pick a road team out from them, and with an exception, or perhaps two, a road team would have been easier selected than a Hunter found. Mind, I do not say we are all wrong, but I must insist that we are running into considerable danger by the undue importance we attach to height and the early forcing for shows.

The Hackney Horse Society's Prize Schedule.

THE prize schedule of the Hackney Horse Society is the first of the great London show schedules that has been issued. As has been the case many times, it shows considerable development, and the amount given in prizes has been largely increased. Additional prizes have been offered in no fewer than twenty classes, which is a move in the right direction, and of more importance than the addition of new classes, for at a show of such importance additional prizes in each class bring an increase of entries. Men like to take something in the shape of a prize when their horses are fourth or fifth in a big class, and I might respectfully suggest that if the money which is given in new classes had been used to augment the prizes in the other classes it would have been more judiciously spent, and would have been attended with better results to the show. For there were quite as many classes last spring as could be judged in the four days, and how next year's programme with its three new classes and four new competitions for medals, cups, &c., is going to be got through is a puzzle. Last March several classes were judged by artificial light, which means that they were judged in the dark. It was quite impossible to see the horses at all from the stands, and how the judges could see the horses is a wonder.

By Electric Light.

IT is sincerely to be hoped that we shall not have an "evening sitting" after the fashion of Olympia. That was bad enough in all conscience, but it would be much worse at the Agricultural Hall. In the first place the hall is not so well lighted, nor are the seats so placed as spectators can see to the greatest advantage when the hall is lighted. But more important still, the Hackney Horse Society's Show is above all things a breeder's show. Everything shown is, or should be, shown from the breeder's standpoint, and judging breeding classes in semi-darkness will not appeal to the exhibitors of Hackneys. I have heard many protests against this, and several men have said they would not show again if their horses have to be judged in the dark. Of course these threats may be taken for what they are worth. Men threaten a long time before they carry their threats into execution. But common justice demands that valuable breeding animals should be judged in daylight. It is unfair not only to the exhibitors but to the public and to the judges if they are judged in the dark.

Soundness.

THERE is a change in the conditions as to veterinary examinations, and in the harness classes little irregularities which would disqualify a stallion or brood mare are to be looked over—that is to say, that a gelding or mare in harness will not be disqualified for a small "trade mark:" At the same time, it is to be hoped that there will not be two standards of soundness set up. By which I mean that I hope horses with spavins or curbs, even if they go sound, or horses unsound in their wind, will not be allowed to take prizes in the harness classes.

THE LOOKER-ON.

The Polo Pony Stallion Spanish Hero was Champion at both the Royal Show at Lincoln and the Polo and Riding Pony Society's Show this year. It was foaled in 1898, sire Kilwarlin, dam Spanish Maiden, and was bred by Mr. J. G. Mosenthal, but is the property of Mr. S. Mumford, Stud Farm, Moreton Morrell, Warwick.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended November 23, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (11,577), 8,945; sheep and lambs (995), 2,711; horses (187), 190.

Fresh meat:—Beef (57,083 cwts.), 85,549; mutton (50,197), 61,668; pork (14,722), 11,927.

Salted or preserved meat:—Bacon (90,984 cwt.), 97,503; beef (1,904), 1,740; hams (13,946), 23,130; pork (2,993), 4,446; meat (10,873), fresh, 11,835, salted, 1,078; meat, preserved (1,342), 10,750.

Dairy produce and substitutes:—Butter (68,205 cwt.), 69,856; margarine (27,368), 16,694; cheese (43,462), 39,590; milk, cream (60), 62; milk, condensed (13,209), 17,174; milk, preserved, other kinds (257), 260.

Eggs (great hundreds):—(372,423), 394,717; poultry (value £8,612), £5,371; game (value £5,268), £3,879; rabbits, dead (not tinned), (7,698 cwt.), 18,711; lard (32,232 cwt.), 47,800.

Corn, grain, meal, and flour:—Wheat (1,743,200 cwt.), 2,178,200; wheat, meal and flour (296,100), 308,500; barley (445,900), 785,800; oats (443,700), 245,000; peas (26,670), 71,130; beans (7,890), 7,000; maize or Indian corn (723,000), 987,600.

Fruit (raw):—Apples (196,081 cwt.), 235,901; grapes (16,280 cwt.), 36,215; pears (6,825 cwt.), 5,818; plums (397 cwt.), 394.

Hay (2,077 tons), 1,444; straw (511 tons), 1,645; moss litter (1,917 tons), 1,577; hops (9,577 cwt.), 8,666; locust beans (— cwt.), 5,246.

Vegetables, Raw:—Onions (231,612 bushels), 160,581; potatoes, (51,959 cwt.), 368,070; tomatoes, (9,052 cwt), 19,784.

Whirlwind in Kent.—Extraordinary damage was done in East Kent on Monday by a violent whirlwind, which wrecked farms at Sholden and Deal, three men being badly injured by the wreckage. The centre of the disturbance appears to have been at Sholden, about ten miles from Deal, where the effect of the whirlwind is of the most surprising and extensive character. At Wellard's farm practically everything was levelled by the terrific force of the wind. A massive slated barn was smashed up as if it were of cardboard, huge sections of corrugated iron forming the roofs of farm buildings were found in fields quite half a mile away from the buildings from which they were stripped, the stacks were demolished, and straw and hay from them carried as far as a mile and a-half from the farm, whilst two farm labourers at work were caught beneath heavy wreckage from the farm buildings and pinned down, one of the men being badly hurt.

The special hirings at Market Weighton on Wednesday were well attended. Female servants were in demand, young girls obtaining £9 to £12; general domestics, £14 to £19; young lads, £6 to £9; third lads, £10 to £12; waggoners, £15 to £18; and foremen, £25 to £29 for the year.

SHOWS.

Smithfield Show: Details.

The annual exhibition of this ancient Club will be held at the Royal Agricultural Hall, Islington, on December 9 and four following days, Mr. James Hornsby, Laxton Park, Stamford, being the president for the year. A most satisfactory entry of stock has been received for this, the 109th show of the Club.

The entries, which include exhibits from all the principal feeders in the United Kingdom, comprise 281 head of cattle, 158 pens of sheep, and 150 pens of pigs. Prizes amounting to £4,113 are offered, including the magnificent Challenge Cups presented by his Majesty the King, for cattle; H.R.H. the Prince of Wales, K.G., for sheep; and H.R.H. Prince Christian of Schleswig-Holstein, K.G., for pigs, the winners of which also receive the Club's gold medal. For these handsome prizes all the best animals in the three kingdoms compete, the champions from Norwich, Birmingham, and Edinburgh meeting in friendly rivalry at this show.

The champion beast may win £260 and the King's Challenge Cup, the champion pen of sheep £110 and the Prince of Wales's Challenge Cup, and the champion pen of pigs £70 and the Prince Christian's Challenge Cup. The carcase competition at this show, and for which separate entries are made, is as popular as ever, the entries comprising thirty-three cattle, sixty-five sheep, and thirty-four pigs. These animals are exhibited alive on Monday, and their carcases on the Wednesday of the show. In addition to the prizes offered by the club, valuable challenge cups are offered by the Butchers' Company of London in each section of this competition, the holders of which also receive the club's silver medals. In the table poultry section 220 entries have been received for prizes amounting to upwards of £120.

The implement department of the show will be larger than usual. For some years there has been a demand for increased accommodation for several of the exhibitors held at the Royal Agricultural Hall, and in consequence the company have at very great expense acquired additional property adjoining, and built upon it a capacious hall measuring 234 ft. by 152 ft., which will be used for the first time by the Smithfield Club. This new addition will be named the Gilbey Hall, after the chairman of the company, Sir Walter Gilbey, Bart. This hall which can be entered from Barford Street, or the Great Hall, will be a most valuable adjunct to the various exhibitions which are so successfully carried out here, and being self-contained can be used independently from the remaining part of the premises.

In this new hall in addition to a large collection of agricultural machinery, will be found exhibits of leather belting, tarpaulins, and waterproof goods, which with the usual varied and complete collections of steam-engines, road locomotives and agricultural machinery, roots, seeds, feeding-stuffs, veterinary medicines, and appliances exhibited in the Great Hall, King Edward's Hall, and in the galleries, form a complete museum of the requirements of agriculturists.

Lord Tredegar's Show.

The annual show promoted by Lord Tredegar took place at Newport on Tuesday and Wednesday last, and the popularity of the fixture was strikingly shown by the good attendance on the first day despite the most wretched weather which prevailed. On the second day, however, the climatic conditions were much more favourable, and another large company of visitors put in an appearance. The entries of Shorthorn and Hereford cattle were generally considered superior to those of former years, while the Shire horses and Hunters, as well as the pig, sheep, and poultry classes were quite up to the usual high standard, and the show was altogether one of the best of the long series.

The judging of the championship honours for cattle was watched with great interest, the competition between the Herefords and Shorthorns being particularly keen. The contest for the Corporation of Newport Plate for bulls in the end lay between the claims of Mr. R. R. Rothwell's roan, Lord Brilliant, which so well won the Shorthorn young bull class, and Mr. P. Coats's old Hereford bull winner, Endale, the decision being in favour of the younger competitor. The Shorthorn entry which led in the cow in-calf or in-milk class, also from the herd of Mr. R. R. Rothwell, defeated Mr. A. E. Hughes's Hereford yearling heifer, Leinster plum. So, whilst like last year both championships fell to the Shorthorns, it was a more remarkable achievement this year, seeing that both of the champions were shown by one exhibitor, Mr. R. R. Rothwell, Moss Farm, Much Hoole, Preston.

There was a very nice show of sheep. In the Shortwool sheep Mr. H. Bridgman, Cleve Hill Farm, Downend, showed a splendid pen of three shearling rams, aged 1 year and 10 months, defeating even such a notable exhibitor as Sir A. Henderson, Bart., of Buscot Park, Berks. The class for ram lambs was, however, headed by the baronet, the reserve being Mr. J. Matthews, of Winterbourne, who, however, held first prize for his three fat wether lambs. Pigs, though not particularly numerous, were of high quality, as will be imagined when it is stated that the prize-winners included Mr. J. Jefferson, Chester, and Earl Manvers.

The horses were judged in the large ring on the second day. There were twenty-one classes, and the entries numbered 144, as compared with 114 last year. Lord Winterstoke and Sir P. A. Muntz had entered cart mares in foal, but did not exhibit. The Keynsham Stud Company (Monmouth) won premier honours with Dunsmore Patriarch. The two-year old cart colts were small, but Mr. H. Oakley's Dewstow Rex was easily the best. The cart mares in foal were decidedly the best class in this section. Raby Violet, the property of Mr. J. B. Brooks, of Bromsgrove, Worcester, was a decidedly well-developed animal, but was closely followed by Mr. P. Coats's Duchess of York. The two-year-old cart fillies were of exceptional quality, and Lord Winterstoke took the prize with Rickford Ladybird. Mr. W. J. Tatem, of St. Fagans, Cardiff, gained the awards in the hack class with Penylau Perfection, and in the three-year-old colt for hunting purposes with Penylau Docker. The brood mares were fully up to the average Mr. A. M. Pilliner's Miss Tattersall took first honours, whilst Red Hat, owned by Viscount Tredegar, added yet another to his long list of successes.

Chippenham.

The Chippenham Agricultural Association's seventy-second annual exhibition was held last week, and it was satisfactory to find a marked increase in the cattle classes and keen competition in all but the sheep classes, which, as usual, were somewhat weakly represented. The entries, numbering 497, were:—Cattle, 73; sheep, 5; horses, 16; pigs, 18; cheese, 27; butter, 25; poultry, 332. The quality all round was good, and the display creditable to both the society and exhibitors.

Woodbridge Horse Show.

The Woodbridge Horse Show Society met on Thursday afternoon, under the presidency of the Marquis of Graham, to revise the prize schedule for the annual show, to be held on Easter Monday. With reference to the Suffolk classes, considerable discussion took place as to the retention of the yearling class. Mr. R. Eaton White considered it was best not to show at that age, and proposed that the class should be deleted. This was seconded by Mr. Peter Hay, who said it was detrimental to the animals, as they were often fatted up for the show ring, and afterwards suffered from the effects of it. The motion, however, was lost by a large majority, and it was eventually resolved that the Suffolk and Shire classes should remain as last year, with the same prize-money.

The only alteration in the Hunter and Hackney classes was that the class for best Hunter that has been regularly hunted with an established pack of hounds in the county of Suffolk should be open, and not confined to the county. It was also decided that the entry fee in the Hackney classes should be reduced from 15s. to 10s.

SHOW GOSSIP.

The fourteenth annual Doncaster Christmas Fat Stock Show will be held in the Cattle Market, Doncaster, on Tuesday, the 17th inst., and the prize list has now been issued. It consists of twenty-three classes, ten for cattle, eight for sheep, and five for pigs, the class prizes ranging up to £5, while there are some champion cups for each section. Entries close on Tuesday, December 10, with the secretary, Mr. F. H. Chafer, 9, Market Place, Doncaster, from whom prize lists and entry forms can be obtained.

A meeting was recently held at Kidderminster Town Hall to take steps for preparing for the visit of the Herefordshire and Worcestershire Agricultural Society's show to Kidderminster next year. The Mayor (Mr. Rowland Hill), who presided, remarked that in 1893 the Herefordshire Society held its show at Kidderminster. It was from the circumstances of the show being held there that the idea, which was afterwards carried out, of the two societies amalgamating originated. The same land at Blakebrook as was used for the last show would again be available. A large committee was appointed, representative of the district which Kidderminster serves as a market town, and also including all the members of the Kidderminster Town Council.

AUCTION SALES.

Auctioneers will favour us by sending in their advertisements as early in the week as possible.

Charges for announcements under this heading Six Shillings an inch.

By Messrs. IRELAND.

Norwich, Norfolk.—Ireland's Norwich Hill Auction Mart (established 50 years). Every Saturday. Fat Bullocks and Sheep, Store Sheep. Special Spring and Autumn Store Cattle Sales.

MESSRS. IRELAND solicit consignments for these important weekly sales; best market value assured.

Cattle consigned to Ireland's, Norwich, will be properly fed and carefully attended to.

All cattle weighed upon entry to the sale ring if desired. Full particulars to be sent to—

IRELAND'S, Auctioneers.
Norwich, Norfolk.

By THE FARMERS' AUCTION CO., LTD.

LARGE AND IMPORTANT CHRISTMAS SALES.

The attention of Butchers and Dealers is respectfully directed to the following highly important Christmas Fat Stock Sales, to be conducted at

PENRITH AUCTION MARKET,
on the London and North-Western Rly. Main Line, and 18 miles south of Carlisle,

BY

THE FARMERS' AUCTION COMPANY, LTD. (with which is amalgamated Messrs. THORNBORROW & Co.)

THURSDAY, DECEMBER 12, 1907.

Great Christmas Prize Show and Sale of towards 6,000 Sheep and Lambs of exceptionally good quality, comprising a grand collection of Grey-faced, Cheviot, and Blackfaced Shearlings and Ewes, also large and choice consignments of Tup Hoggs.

Judging at 9 o'clock. Sale at 10 prompt.

FRIDAY, DECEMBER 13, 1907.

Great Christmas Prize Show and Sale of towards 500 head of prime Fat Cattle, including large and choice entries of Shorthorn and Crossbred Steers and Heifers, also Bulls and young Cows.

Judging at 9. Sale at 10 prompt.

MONDAY, DECEMBER 16, 1907.

Great Christmas Prize Show and Sale of towards 450 Fat Pigs and Veal Calves. Large and select consignments of well-fed young Porkers, heavy Pigs, and young Sows of excellent quality will be forward.

Judging at 9.30. Sale at 10 o'clock.

Catalogues of the above Sales will be ready five days previous to day of Sale, and may be had on application to—

GEO. LONGRIGG,
Secretary.

By Messrs. C. B. HILLIARD & SON.

Peremptory Sale by Order of the Mortgagee.

TO ENGINEERS, MANUFACTURERS, CORN MERCHANTS, MILLERS, AND OTHERS REQUIRING CHEAP WATER CARRIAGE.

LITTLE BADDOW AND BOREHAM, ESSEX.
Midway between Chelmsford and Maldon, and about 2¼ miles from Hatfield Peverel Station, G.E.R.

WITH IMMEDIATE POSSESSION.

G. B. HILLIARD AND SON will SELL by AUCTION, at the CORN EXCHANGE, CHELMSFORD, on FRIDAY, DECEMBER 20, 1907, at Four o'clock,

THE VALUABLE
FREEHOLD MERCANTILE PREMISES, known as
LITTLE BADDOW MILL.

Abutting upon the Chelmer and Blackwater Navigation Canal, in the above Parishes, and including a commodious building fitted with

TWO CRUSHING MILLS.

A 30-H.P. UP-TO-DATE TURBINE (installed by Messrs. Armfield & Co., of Ringwood).

A PATENT GERMAN ARC CANDLE KILN, with two iron furnaces and brick chimney shaft.

A four-stall stable and two horse boxes, granary or warehouse, inclosed yard, cowshed, and TWO PIECES OF GRASS LAND.

Particulars and Conditions of Sale may be obtained of Messrs. TATHAM and LOUSADA, Solicitors, 16, Old Broad Street, London, E.C.; of Messrs. HAMPTON and SONS, 2 and 3, Cockspur Street, London, S.W.; and of the AUCTIONEERS, Chelmsford (Telephone No. 17), and 3, Pinners Court, Old Broad Street, London, E.C.

HORSES.

SHIRES.

BLAGDON SHIRE HORSE STUD. (Established 1879). Proprietor, CLEMENT KEEVIL, Billington, Leighton Buzzard, Beds. (late of Blagdon, Malden, Surrey). High-class animals for sale of all ages and both sexes; also massive sound Stallions to let for the season.

CONCHAR, JOHN, Wylde Green, Birmingham. Breeder of High-class SHIRES and HACKNEYS. Several have been successful in the showyard. Colts and Fillies by the leading Stallions of the day.

CROSS, J. L., Catthorpe Towers, Rugby. Shire Stallions, Mares, &c. Also Red Shorthorn Bulls from milking strains, and Oxford Down Sheep.—Apply F. CAMPBELL, Catthorpe, Rugby.

GRIFFIN, F. W., Boro' Fen, Peterboro'. Shire Stallions, Mares, and Fillies for sale, in natural condition; 40 pedigree mares kept for breeding; every facility to foreign buyers.

JACKSON, R. NEWTON, Blackbrooke, Pontrilas, Hereford. Stud Horses: Lockinge Lord of Misrule and Lockinge Bonny Lad, both by Lockinge Forester, full brother to Lockinge Forest King. Colts and Fillies for Sale.

JOHNSON, WALTER, Hatfield, Doncaster. Stud Horse, Lambton King 16757; Stallions for hire; weighty young Stallions, Mares, and Fillies on Sale.

MUNTZ, FREDERICK ERNEST, Umberslade, Hockley Heath, Warwickshire. Shire Stallions, Mares, Fillies, prize-winners.—Particulars from Mr. JOHN T. B. HARTLEY, Estate Office.

MUNTZ, Sir P. ALBERT, M.P., Dunsmore, Rugby. — SHIRE-BRED STALLIONS, COLTS, MARES and FILLIES. About a hundred of all ages. Prize-winners London and other leading shows. Also high-class Shropshire SHEEP, winners first prize at Royal Agricultural, 1886, second in 1887, and first in 1888.—Apply THOMAS EWART, Dunsmore.

NOTTINGHAM CORPORATION, STOKE FARM.—Shire Stallions, Mares, Fillies, and Geldings of fashionable breeding, including prize-winners, on Sale. Inspection invited. Visitors met.—Address A. AVIS, Stoke Bardolph, Nottingham.

PEARSON, E. E., Brickendonbury, Hertford. Shire Stallions, Mares and Stock for service and sale; prize winners. Stations: Hertford, Great Eastern and Great Northern.—Apply Estate Office, Brickendonbury, Hertford.

ROWELL, JOHN, Bury, Huntingdon. Breeder Shires and Hackneys; Stallions for sale, hire, or service at home; mares and fillies for sale.

WHITEHEAD, Robert, Fashionably bred mares and fillies in natural condition on Sale. Stallions, Bodenham King 17177, Whitestone Prince Alfred 22930.—Apply J. M. JOHNSTONE, Hargate Hall, Buxton. Station, and telegrams, Millers Dale.

HACKNEYS, &c.

BENSON, ALFRED, Upper Gatton Park, Merstham, Surrey. Hackney Stallions: Copper King 7764, reserve champion, London Hackney Shows, 1905 and 1906; yearling Colts and Fillies by Copper King and other well-known Stallions for sale. For particulars, pedigrees, &c., apply to T. Hyett.

SOCIETIES.

Scottish Chamber of Agriculture.

A meeting of directors of the Scottish Chamber of Agriculture will be held at 5, St. Andrew Square, Edinburgh, on Wednesday next the 4th inst, at 10.30 a.m, the business being as follows:—

1. Motion by Mr. W. Bell: "Remit to a committee to draw up and submit a report to the directors for the purpose of showing the feasibility and advantages of dealing with the small holdings question in Scotland on a purchase basis."

2. Letter from the secretary of the Rural Labourers' League regarding Mr. Jesse Collins's purchase of land bill, &c.

3. Report by chairman's committee regarding (*a*) agricultural education in rural schools; (*b*) proposal that district societies should have right to elect directors; (*c*) railway rates on perishables, including rabbits.

4 Admission of new members.

5. Any other competent business.

Royal Lancashire.

The annual meeting of the Royal Lancashire Agricultural Society was held at the Guildhall, Preston, on Wednesday, Mr. H. L. Storey, of Lancaster, presiding, in the absence, through indisposition, of Mr. John White.

The Mayor of Preston having extended a welcome to the society,

The chairman said the society owed much to Bolton for the warmth of the welcome extended to the society last summer. A local fund of £2,457 was amassed, and in addition to a free site, with gas and water laid on without charge, the very handsome sum of £2,252 was contributed towards the prize list and general expenses of the show. This was a handsome contribution to the funds of the society, and the general balance in its favour now stood at £15,202, as compared with £12,101 at the corresponding date last year. In December the hon. life vice-president membership of the society would be conferred on the Mayor of Bolton, Alderman T. B. Tong, J P., and Mr. C. E. Linaker, F.S.I., the latter having for twenty-eight consecutive years undertaken the arduous work connected with the annual exhibitions as chief steward of the finance department. The transfer of the offices from the Miller Arcade to the society's new headquarters, Derby House, Winckley Square, Preston, had now been accomplished, and all business would be transacted there in a fortnight's time. For the first time for many years his Majesty was an exhibitor at the Bolton show, and they hoped that in the future he would be a regular exhibitor at their annual shows.

Mr. Hale, in moving the adoption of the report, said that on no previous occasion had it been so highly satisfactory, though the reports had generally been of a pleasing nature. This was due in a large degree to the fact that a few years ago the council decided to erect its own showground and take the catering into its own hands, the latter having proved beneficial not only to the society but to the public at large. A more important factor, however, was the friendly feeling which existed between the great towns of Lancashire and the agriculturists. It was all very well to say that agriculturists could do without the town, and that agricultural societies could be a success without the multitude. The towns, thanks to the foreign productions, might no doubt be able to do without agriculturists, but agriculturists could not do without the towns and so long as this friendly feeling was fostered between town and country the society would prove as successful in the future as in the past.

The council would do its best in the future to further the interests of farmers generally, and he called the attention of pure agriculturists to the surprising fact that of the present membership 1,500 only three hundred were agriculturists or farmers. Therefore they owed a debt of gratitude to the members not connected with agriculture for the support accorded to the society. At the present moment there were in Lancashire something like 20,000 agriculturists farming 20 acres and over, and he impressed on them the necessity of the agricultural members interesting themselves in the work of the society, and of stirring up their neighbours and impressing on them the great benefits which accrued from the society.

Mr. Philip Park seconded, and the report was adopted.

The dates of next year's show at Manchester were fixed for July 30 and 31 and August 1 and 3, the latter being Bank Holiday.

On the motion of Mr. Kenworthy, the Right Hon. the Earl of Egerton was unanimously elected president for the ensuing year.

The secretary (Mr. Bohne) read a letter from the president elect accepting the honour and thanking the council. Mr. Kenworthy said Manchester was situated in close proximity to Cheshire, and they could not have a better president.

Shropshire and West Midland.

It was stated at the annual meeting of the Shropshire and West Midland Agricultural Society that despite the extremely bad weather experienced for their last show, there resulted a profit of £70, which, under the circumstances, was eminently satisfactory.

Mr. Darby, of Little Ness, was unanimously elected president for the ensuing year, and in acknowledging the honour, said he believed he had been on the council of the society from its beginning; he had always taken a great interest in it, and he trusted that during his year of office the society would prosper, and with an addition of new members still further strengthen its position.

The mayor of Shrewsbury (Mr. Scoltock Hughes) was elected vice-president; Major Lloyd was with acclamation re elected hon. director, whilst Mr. Whitfield was unanimously re-elected secretary, it being agreed that in him they had a secretary who not only knew his work, but did it.

Mr. Whitfield, in reply, said he was optimistic in regard to the prospects of the society, although in the past he had had much to contend with in the matter of bad weather—it had rained at seven out of his nine shows. Still, he hoped the financial results would improve, and with that end in view he would ask that each individual member should take up the work of getting others to join—he had had in that way no less than thirty nominations last week.

Mr. Highway Jones moved a vote of thanks to Mr. Thomas Corbett for his services as vice-president during the past year. They all, he said, knew Mr. Corbett's invaluable services to the society from its beginning in 1875. Throughout its whole career, Mr. Corbett had done his utmost to make it a success, not only by his own large donations, but by his work for some years as managing director and in other ways. During the past year, owing to the absence of the president, Mr. Corbett had presided at their meetings, and by his kindness and courtesy had proved himself an able chairman.

Mr. H. C Austin seconded the motion, which was carried.

Mr. Corbett, in replying, said it had, owing to the absence of the president, been his lot to occupy the proud position of president without being elected to it, that, he thought, had seldom fallen to the lot of any of the vice-presidents of the society.

At the close a number of votes of thanks were passed, amongst them one to the county council for its grant of £25 for dairy work.

Cheshire.

Sir Gilbert Greenall presided over the annual meeting of the Cheshire Agricultural Society on Tuesday, when a membership of 416 was reported, and a balance in hand of £119, or £54 more than last year.

On the motion of Mr. J. R Newton, Mr. Harry Barnston, J P., of Crewe Hill, Farndon, was unanimously elected president for the ensuing year, and it was decided to hold next year's show on the last Wednesday in August.

Mr. Rowe Morris, Chester, raised the question of holding a two-days' show in 1909, and after discussion the executive committee, on the proposition of Mr. W. H. Denson, was instructed to consider the question.

Glasgow Hiring Fair.—The first of the November half-yearly hiring markets for farm servants at Glasgow took place on Wednesday, and was largely attended. There was a good supply of ploughmen, but the better class women servants were scarce. Wages ruled as follows:—First-class house women, £11 to £12 per half-year; dairy-women, £10 to £11; ploughmen £17 to £18; and married men, 20s. to 22s. per week.

An interesting case to both farmers and cyclists was decided in the Birmingham County Court on Tuesday. Thomas Hewey Warren claimed £3 for damage to a bicycle caused by a farmer's horse, which was being driven with others to pasture, turning across a country road in front of him and causing a smash. Two farm servants were walking behind, and it was urged for the plaintiff that they were guilty of negligence in not leading the horses or having them under control. The registrar, to whom the case had been referred by consent, said it was common knowledge that horses working on a farm were frequently to be seen going along country roads without halters, either unattended or attended by men following. Cyclists who liked to ride by at ordinary speed, did so in safety, except in rare instances, and this was one of them. In the present case, if the cyclist had slackened speed he would have been able to dismount. Judgment was given for defendant.

Lincolnshire Notes.

IT may be vile weather so far as the towns are concerned, but they are finding it very useful on the farm. Good progress is being made all round, and the late harvest with its arrears of work are almost forgotten. The drilling of wheat proceeds apace, whilst the conditions of the root crops promise a fair average of winter keeping.

THE Spalding district has obtained little enough favour from the powers that are in regard to the swine fever restrictions. The existing state of swine fever in the locality, says the Board of Agriculture, would not justify them in withdrawing, or even in modifying the Order. This, apparently, is the prime reason:—They are advised by their veterinary officers that breeding swine are more likely than perhaps any other class of swine to be the means of spreading swine fever, for the reason that whereas young swine usually reveal clinical symptoms of the disease at an early stage and die from it, these older animals do not.

IT may be true but it will take a stronger reason to convince Spaldonians who are suffering from the effects of the restrictions, and who are getting very dissatisfied with their continuance. However, some modification of the regulations has been obtained from the Holland County Council. Under the conditions of the Board of Agriculture's interdict the Cattle Diseases Executive Committee have power to licence the markets under certain conditions for the sale of both fat and store pigs. When the order came into force, the committee, ever loyal, decided to authorise only the sale of fat pigs for slaughter, and the markets were kept closed absolutely as against store pigs, but the continued strain has been too much. The committee has now decided to license the markets for store pigs also.

INTERNAL differences have somewhat weakened the force of the Lincolnshire Hay Dealers' Association. The chairman, Mr. W. C. J. Bullen, Newark, and the secretary, Mr. Brown, of Raskington, have fallen out, and the matter culminated in a critical meeting held on Friday, at which Mr. Bullen resigned. Mr. Brown complained that Mr. Bullen had held him up to ridicule in the press, and whilst entering into the merits of the difference between them, there was some justice in his allegation. Mr. Bullen certainly very severely chaffed the association in a letter to the press. He accused the secretary of "running the show himself," and the association, through its secretary, of trying to puff itself out to the size of a larger and better organisation. Mr. Bullen's complaint is that the association is trying to settle its dispute with the railway companies single-handed, instead of combining with the stronger organisations in the big fight with the railway companies, and he threatened to resign his position if the policy were persisted.

MR. BROWN took prompt steps to assert himself. He called a meeting of the association, at which he complained of the action of the chairman in writing to the press The upshot was that Mr. Bullen resigned his chairmanship, and he was replaced by Mr. G. H. Walker, of Lincoln. The action of the secretary was apparently justified by the subsequent proceedings, for the new chairman stated that the representatives of the railway company had met the committee in the pleasantest possible manner, and that the companies are willing to consider any reasonable suggestions from the trade. The committee formulated the proposals. The association is hopeful of an early settlement.

LORD WILLOUGHBY D'ERESBY, the member for the Horncastle division, also makes his contribution to the discussion on small holdings. His criticism of the Act is that the £200,000 a year which is allowed to the county councils will be "thrown away in travelling expenses, and preliminary expenses to officials, and would not help the small holder at all." His suggestion is that £2,000 be granted yearly to each of the fifty county councils to start small holdings straight off. This he thinks would do far more good than all the Bill put together.

THE will of one of the wealthier Lincolnshire farmers has just been proved. Mr. Tom Bletcher, of Owston Hall, who died on May 20, at the age of forty-three left estate of the gross value of £16,888, his net personalty being £13,572.

A FEW weeks ago I made reference in this column to the death of Mr. Coates Sharpley, of Kelstern Hall, near Louth, who was the largest farmer in England. I understand that two or three of his farms are to be offered for sale by auction next spring, and that the whole of his holdings are to be given up during next year.

November 29, 1907.

LINCOLNSHIRE FARMERS' UNION.

STAMFORD BRANCH.

The annual meeting of the Stamford Branch of the Lincolnshire Farmers' Union was held on the 22nd ult. (Mr. J. Thurlby presiding), and was very largely attended.

The first business was the election of officers, and, Mr. Thurlby having vacated the chair, Mr. Mawby was appointed in his place *pro tem.* The last named said they all knew the able manner in which Mr. Thurlby had carried out his duties, and he had no hesitation in saying he would do the same in the future. He had great pleasure in proposing his re-election.

Mr. Mountain seconded.

Mr. Thurlby said he thanked the proposer and seconder for the kind expressions and the members for the way they had received the motion, but he felt they should elect someone who would be able to give more attention to the meetings of the Executive Committee. It was unfortunate that the Executive Committee usually met the same day as the market was held at Stamford, and living on the south side of the county where they had not the best of railway accommodation, he found he was unable to devote the time to the meetings he should do.

The meeting, however, declined to accept this plea, and Mr. Thurlby said if they were satisfied with his small services he should be pleased to act again. He thanked the members for their co-operation in dealing with matters of interest to the farmers, and expressed a hope that in future he would always have their support. They had a good working branch capable of doing something for the benefit of their industry, and it was to their advantage to keep the organisation up to its proper standard.

Mr. J. Woolhouse was re-elected vice-chairman, Mr. John Turner hon. secretary, and Messrs. G. H. Hudson and W. Pick (Collyweston) assistant secretaries. Mr. William Tyler (Preston) was appointed an additional assistant secretary. The old committee was re-elected, and the names of Messrs. Nidd and Robinson added.

Damage by Motors.

The question of motor traffic and the roads came under discussion, and Mr. Robinson, who said he farmed near the Great North Road, complained that motorists had run over his stock while being taken along the road. His sheep had been killed, and he had not received a halfpenny compensation. On one occasion a motor car ran over a valuable sheep dog. In the car were two gentlemen riding in front and two ladies behind. He hailed them, and the ladies looked round, but no further notice was taken. There were many things he could mention for which he had cause for serious complaint. He could not trust anything to be taken on the road unless he went himself. It was not safe for spirited horses to be on the road. Only a short time ago a motor car, running at a fast speed, ran into a trap coming round cross-roads. The motorist pretended to be very indignant, and shouted to the farmer, "You farmers only wake up once a week." The trap was badly damaged and the occupants had a miraculous escape. The owner sent in a bill to the motorist, but the latter replied by sending in a bill for £50 for damage to his motor, demanding a check by the next post. The farmer's solicitor, however, put the motorist into court, and he soon climbed down and paid.

Mr. Lawrence said it seemed that fines did no good. The only thing to do was to send the offenders to gaol. They appeared to think the roads belonged to them.

Mr. Briggs remarked that these people who used the roads in this way should be made to pay; instead of that those who occupied land on each side had to suffer.

The chairman said he was sure they all sympathised with Mr. Robinson. The farmers were in no way friendly disposed to motor traffic, but he was afraid it had come to stay. The only thing they could do was to protect the farmers as much as possible. A Bill which was about to be introduced to Parliament proposed that cars should be taxed according to the horse power, and that appeared to be the only way motorists could be made to pay. The damage to the main roads was a very serious matter, and instead of reconsolidating these roads once in ten years, they had now to be seen to once in every four or five years.

Mr. Clark said if they were going to tax motor cars on their horse-power, there was one thing he should like to see enforced, namely, that maintenance and taxation should be linked together. At the present time all the taxes went to the Imperial Exchequer. What they wanted to do was to make the maintenance of main roads a national charge. He moved that the local representatives in Parliament be requested to support the Bill which would shortly come before the House of Commons dealing with motor traffic, and that they be asked to make some effort towards creating a national charge for the maintenance of main roads.

Mr. Robinson seconded, and the motion was carried unanimously.

The Organisation Committee of the Central Chamber wrote asking the branch to consider a proposal to form an independent agricultural Parliamentary party; and after discussion the matter was deferred to the next meeting.

To increase the Membership.

Mr. Mawby spoke upon the need of some special effort being made to increase the membership of the Union, and contended that farmers should join without having to be badgered about it on every market day. They were in a unique position in Stamford, and they should have one of the best branches in the kingdom. He suggested meetings should be held in the villages once a fortnight during the winter. The membership had not increased to the extent he wished, and he could not understand why there were so many farmers apathetic to their own interests. It was to their own advantage to join the Union.

The chairman explained that the secretary of the Union was arranging to form a branch either at Oakham or Uppingham

Mr. Lilley said his experience was the same as Mr. Mawby's; there seemed to be a lot of indifference among the farmers. He did not think that the Union went the right way to work to get members.

It was ultimately resolved to ask the secretary of the Union to convene a meeting to be held at Uppingham or Oakham at an early date.

The chairman invoked the members to do their best to make the branch stronger. The other day he asked a gentleman why he did not attend their meetings, and he replied, "Fiscal reform is what we need." He (the chairman) looked at him and said, "Can you give me the policy or programme?" Whether they were to have fiscal reform or not, whatever their position might be, when it was introduced it was necessary they should be thoroughly organised or else they might get left out in the cold. At present they did not know on what lines the readjustment of taxation would be taken, and when the proper time came to discuss the matter, it was to their interests they should speak as one collective body.

The secretary announced that the branch had now sufficient members to elect an extra *ex officio* member of the Executive Council. The meeting thereupon appointed Mr. R. Mawby.

Mr. Clark suggested that the Central Committee should be moveable, and meetings should be held at Grantham and Stamford. It was an injustice to expect them to go to Lincoln for every meeting.

The members of the Executive Committee promised to call the attention of the Central Committee to this suggestion.

A MEETING AT EAGLE.

A large and enthusiastic meeting in connection with the Union was held in the Village Hall, Eagle, on Wedne day, Mr. G. Bartholomew in the chair, and a good number of subscriptions were received. Mr. M. Sheldon, who was first called upon by the chairman, said he was one of the original nine who started the Union, and he was amazed at the progress that had been made. Mr. Henry Rawding spoke at some length, his remarks on the organisation being well received.

The secretary (Mr. H. W. Palmer) instanced the direct and indirect benefits conferred by the Union, which already far more than justified its existence. Mr. W. T. Brown and the vicar of Eagle (Rev. C. H. Kirk, M.A.), also spoke in support of the Union's programme, and a vote of thanks to Mr. W. B. Fenton for organising the meeting, concluded the proceedings.

BOURNE BRANCH.

At the annual meeting of the Bourne branch of the Union the following officers were elected:—Chairman, Mr. A. Saul; vice-chairman, Mr. T. C. Ellis; hon. secretary, Mr. J. Whattoff; assistant secretaries, Messrs. T. Rickard and F. Caswell. Messrs. J. S. Mills, C. Wilson, and G. Franks were added to the committee.

Mr. J. Thurlby commented upon the useful work that the Union had already performed, and stated that its object was to assist the farmer in every way.

Mr. A. Saul emphasised the excellent work that the Union was doing, and at the same time urged that motorists ought to pay a fair share towards the cost of the maintenance of the roads.

Mr. Palmer, the secretary of the Union, commented on the benefits that had already accrued to the farmers through the influence of the Union and said that the membership was largely increasing every year. He suggested that the branch should adopt the system in vogue in the Grantham district, viz., to go into the villages and enrol members on the spot. He mentioned that the Union was preparing a scheme of insurance to present to the general meeting in January, whereby the members, as well as the Union as a body, would obtain a substantial benefit.

MOLASSINE MEAL AS FOOD.

On account of the wonderful effects of **MOLASSINE MEAL** on stock, farmers are apt to regard it as a condiment, but they should remember that it takes the place of an equal weight of Grain or Cake, and that the price per ton is much less than either, especially as prices during the current season are likely to rule very high for all kinds of feeding stuffs. It will, therefore, be a great advantage to farmers to use **MOLASSINE MEAL** instead of Barley Meal, Pea Meal, Maize Meal, &c.

GREAT ECONOMY

being effected in the Feeding Account of the Consumer by its regular use.

Sold by all Corn Merchants, and

UTILITY BOOKS.

Price 6d. each net; post free 7d.

Each book of the series is written by a practical man. In almost every case the writer makes the whole or a material part of his living from the subject of which he treats. Therefore the directions are plain and are based on accurate knowledge.

No. 1.—Out-Door Carpentry. By S. Walter Newcomb.—Deals with useful, as well as decorative structures—with plans, sketches, and details for doors, gates, stiles, fences, seats, summer-houses, dog-kennels, chicken coops, window-boxes, greenhouses, &c. Designs of some fifty subjects. D.

No. 2.—Gardens and Grounds: How to Lay Out and Arrange. By T. W. Sanders, F.L.S., F.R.H.S., &c.—Suggestions for laying out, planting, and improving the small plot, or the country grounds of several acres. The best aspects and positions, considering appearance with economy of space, labour and expense. With plans and sketches.

No. 3.—Heating and Ventilation of Houses. By C. F. Townsend, F.C.S.—Intended to enable anyone, in any house, to secure full supply of fresh air without chilling draughts. Economy and existing conditions are first considerations.

No. 4.—Utility Fowl Houses and Appliances. By H. Francklin.—With about forty measured drawings and plans, and with concise instructions, not only for home construction, but for guidance in purchasing for the fowl-yard. Treats of ventilation, site, aspect, &c., of houses; the laying out of large and small runs, construction of nest boxes, coops, &c.

No. 5.—Utility Fowl Feeding and Management. By H. Francklin.—The requirements of fowls from birth to maturity, feeding stuffs, and how to use them for feeding of chickens, hens for summer and winter laying, and for the fattening of surplus stock. The management of fowls in large or small numbers, the selection of breeding stock, the management of the sitting hen, the keeping of accounts, and many other factors in successful poultry farming.

No. 6.—Utility Fowls: Their Selection, Improvement and Diseases. By H. Francklin.—The breeds most suitable for confinement or a free range; crossing, and the improvement of mongrel stock. Turkeys, guinea fowl and water fowl are spoken of.

No. 7.—Incubating and Rearing Utility Fowls. By H. Francklin.—Water-tank and non-moisture incubators; brooders and brooder-houses, with hints, instructions, and precautions for the hatching and rearing of fowls for profit.

Utility Fowls. Nos. 4, 5, 6, and 7 together, bound in handsome cloth, price 2s. 6d. net; postage 3d. The best guide for the poultry keeper; and an excellent present for a beginner.

No. 8.—Propagating Plants: By Seeds, Cuttings, Layers, Grafts, Buds, &c. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Propagation of all classes of plants, by many methods, with lists of those suitable for the various treatments, hints on the preparation of seed beds, &c. Many illustrations.

No. 9.—Hardy Perennials. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh. Illustrations and plans from the Author's Sketches. All information necessary for selecting hardy perennials and for arranging borders, wild gardens, water gardens, &c.

No. 10.—Utility Rabbits. By a practical Rabbit Farmer.—Simple enough for the boy who keeps but one or two rabbits, yet sufficiently thorough for the man who wishes to make a living from a trade which is almost entirely in foreign hands.

No. 11.—Cold Greenhouses and Frames. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—How to secure foliage and bloom through the whole year. Lists of most useful plants, with brief description and cultural directions.

No. 12—Carnations, Pinks and Picotees. By E. Hasler Potter, F.R.H.S.—Simple and sufficient directions for raising pinks, selfs, bizarres, flakes, fancies, picotees, winter flowering, malmaison, and marguerite carnations from seeds, cuttings, or layers, and for their culture for exhibition flowers, cut blooms, &c.

No. 13.—Spring Gardening. By H. Francklin.—Deals with the aspects of out-door Spring gardening; wild woodland, border walks, edgings, bulbs in grass and under trees, flowers in orchards, log gardens, rockeries, walls, arches, bedding, house decoration, &c.

No. 14—Hardy Fruits. By E. Hasler Potter, F.R.H.S.—Full instructions for growing all British fruits. Propagation, culture, manuring, watering, training, pruning, gathering the fruit, and storing. With diagrams of garden arrangements, forms of trees, &c.; also recipes for cures for pests and diseases.

No. 15.—Keeping a Dog. By A. Nicol Simpson, F.Z.S.—Written clearly and concisely, for the keeper of one or two dogs as pets, companions, or guardians of the yard.

No. 16.—Rose-Growing. By D. Grant McIver, A.R.H.S.—The whole elementary art and practice of rose-growing, for garden glory, for cut blooms, or for perfect exhibition specimens. Preparation of ground, site and aspect, when and how to plant, propagation, roses in the greenhouse, roses for exhibition, lists of varieties, and a complete, concise rosarian's calendar.

No. 17.—Chrysanthemums. By E. Hasler Potter, F.R.H.S.—Directions for treating the principal varieties of chrysanthemums, annual or perennial, indoors or out-of-doors, for pleasure, profit, or show. With special suggestions for the town man who can only give attention at night and morning.

No. 18.—Bulb Culture. By D. Grant McIver, A.R.H.S.—Directions for growing all kinds of bulbs under glass and out-of-doors. Also for many tuberous (&c.) rooted plants which are familiarly called "bulbs." Lists and illustrations.

No. 19.—The Vegetable Garden Calendar. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Gives, in twelve openings, graphic charts of the vegetable garden for each month. Each chart shows at a glance what crops should be in the ground, what should be yielding produce, what proportion of space should be occupied by each, and what operations should be in hand. Many illustrations.

No. 20.—Goats for Profit. By a practical Goat and Rabbit Farmer. Selection and purchase, housing (with working plans), breeding and the treatment of young kids, feeding, grooming, milking, uses of the milk, making of butter and cheese, killing and dressing kids, training goats to harness, treatment of their diseases, etc.

No. 21.—Garden Operations. By Wm. F. Rowles.—Digging, trenching, preparing for seed, sowing, thinning, planting, ridging, earthing, hoeing, weed-killing, staking, protecting, harvesting, tools and make-shifts, water-supply, watering, lawn-making, mowing, rolling, making paths and beds, and many other operations. The how, the when, and the why clearly explained.

No. 22.—Pruning, Training and Trimming Trees and Shrubs. By D. Grant McIver, A.R.H.S.—Explains and illustrates the whole art of using knife and shears in a garden. D.

Price 6d. each net; post free, 7d.

Nos. 16 to 21 also in cloth, price 1s. each, net: post free, 1/2

No. 23.—To Manure at a Profit.
Every Farmer his own Experimenter. By H. B. M. Buchanan, B.A. (Cantab), Author of "Country Readers," and joint Author of "Lessons on Country Life," and J. J. Willis, Superintendent of the Rothamsted Field Experiments. L.

No. 24—Profitable Hobbies. By H. Snowden Ward. Gives advice on the cultivation of hobbies, and how to turn them to profitable account. The book is illustrated throughout, and deals with such subjects as wood-carving, photography, collecting, grangerising, drawing and designing, marquetrie staining, metal working, glass blowing, art enamelling, stone-cutting and polishing, the keeping of pets, etc., etc.

THE FARM.

No. 44.—The Agricultural Annual and "Mark Lane Express" Almanac.

LAMBING & CALVING REMEDIES

THE GASEOUS FLUID.

Cures Prostration in Cows and Ewes.
Cures Low Condition, Debility, and Hoven.
Cures Scour, Colic or Gripes, and Diarrhœa.
Cures Coughs, Colds, and Loss of Appetite.
Price 1/9 per bottle; 20/- per doz.

THE RED DRENCH.

For Cleansing after Lambing and Calving.
For Hide Bound, Red Water and Yellows.
For Chills, Fever, and Loss of Cud.
For Preventing Milk Fever and Quarter Ill.
Price 3/6 per doz. (Ewes); 13/- per doz. (Cows).

This chest contains every essential for the saving of life at the critical period of LAMBING and CALVING; it can be arranged for cows only, or ewes only, or both.

PRICE COMPLETE, £3 3 0; Half Size, 30/-.

THE CHEMICAL EXTRACT

For Anointing after Calving and Lambing.
For Straining and Preventing Gangrene.
For all Sores, Wounds, and Swollen Udders.
For Sore Throats, Strains and Rheumatism.
Price 2/6, 3/6, and 7/- per bottle.

THE GASEODYNE.

Used as Laudanum for *Deadening Pain.*
For Severe Diarrhœa and Influenza.
For *Severe* Pains during Parturition.
For Inflammatory Colic and Lung Disorders.
Price 3/6 per bottle.

ROYAL ANIMAL MEDICINE MANUFACTORY, 22, DORSET ST., LONDON, W.

Seasonable Topics.

"MARK LANE EXPRESS" STAND AT THE CATTLE SHOW.

The "Mark Lane Express" Stand at the Smithfield Show this week is at No. 104 in the Main Gallery, where we shall be pleased to see all our friends and readers visiting the Show.

The Waning Year.

WE are now well into December, Christmas is in sight, fat stock forms a topic of general conversation wherever farmers congregate, and 1907 is drawing to its end. The season, by the way, seems determined to keep up its reputation for moisture to the finish, as we are getting little else but rain and slush, and cultural operations, particularly on stiff land, drag along very slowly. Some farmers are happy in the satisfaction that they have got all their autumn sowing done, but these individuals are in the minority, and a good deal of wheat that is all ready for the ground will not make the acquaintance of Mother Earth before 1908. The prophecies of those who foretold that wheat would reach 50s. per qr. before Christmas are not fulfilled, and, on the other hand, the movement of late has had a downward tendency. December is usually a dull month in point of weather, but what we should like to see now, in view of Christmas trade, is a few weeks of bright, crisp weather. Butchers and poulterers, above all other people, will doubtless re-echo this wish.

Pig and Stye Competitions.

WE have before us some particulars regarding a local competition which, we think, is worthy of favourable comment. It gives an account of prizes being offered in a village district for the best pigs, and also for the cleanest and best-kept styes. It is needless for us to add how much competitions have done to arouse interest and bring about improvements in many branches of agriculture, and we are glad to see a case in which cottagers are being encouraged to improve their methods of pig keeping. A pig, by the way, means something to the rural cottager, and may be treated as a profitable institution, as it helps to pay the rent, provides the household with bacon, and makes manure for the garden and allotment. It is questionable, however, whether due attention, generally speaking, is paid to keeping the best and most profitable kinds of pigs, and so far as styes are concerned there is room for a good deal of improvement. Competitions of the kind referred to should do something to bring about the improvement by encouraging cottagers to take a pride in the pig and see that the conditions under which it is kept are clean and comfortable, for piggie gives the best returns to its owner when these matters receive proper attention. Village horticultural societies give prizes for the best-kept gardens, and in some cases the cleanest cottages. There is a chance for another departure—establish classes for pigs and pig-styes.

Precocious Plants.

HOW little one has to do sometimes to become famous, and what is true about men in this respect may also be applied to plants. A strawberry plant or a raspberry cane which offers a few ripe (need we add tasteless?) fruits in late November is a sufficiently novel occurrence for the fact to be recorded in the daily press; and sometimes at the bottom of a column dealing with important affairs of state one's eyes fall on a little paragraph telling of some precocious primrose or other plant that is growing in some out-of-the-way spot, and has thought well to do a little blossoming out of season. We hardly remember an autumn, by the way, when this kind of thing has not happened, and we have got so used to the facts being made known in the public Press that we look for them, amongst the regular events of the year. Of course, we are not writing in any spirit of complaint, but it is curious how many people, when they come across little out-of-the common events like a plant blooming out of season, seem seized with a desire to let the whole world know of it.

Potato Leaf Curl.

THIS peculiar disease in potatoes has slowly and gradually but surely spread itself all over the country until now there are few districts where it is not known and few growers who are not puzzled over it, for it really is a puzzling matter. It is also a serious one, and we do not exaggerate in saying that this year we have seen acres of potatoes, both in fields, gardens, and allotments that would never pay for the trouble of digging on account of the leaf curl trouble. The Board of Agriculture publishes a leaflet about it, and in a recent issue we made reference to an article on the subject in the Board's journal, but no literature we have seen yet does much to help growers in this difficulty. So far as our experience goes the best preventive is to plant Scotch or Irish seed, and by doing this we have had little trouble with leaf curl, but in saving seed from a previous crop, particularly in case of early varieties, risks are always taken. In 1906 we grew an early potato for the first time, and were so pleased with it that we decided to try it again. We saved seed, which was wintered and planted in good condition; but, alas! not one plant in ten developed and produced a crop. There were the weakly stems and curled leaves and the seed tubers in the ground, which were decayed. A clear case of leaf curl, but it is very puzzling, and a discussion in these columns might throw some light on the cause and prevention of the trouble.

Rats.

SO far as we know farmers of every generation have been troubled with rats, and though we try to believe that every living creature serves some useful purpose in the world, it is hard to realise it where rats are concerned. It is characteristic of human nature to experience a feeling of repulsion when in the presence of a live rat, and you are seized with an intense desire to kill it. But in spite of persecution rats, like the poor, are always with us, and they defy all efforts made to exterminate them. In short, the struggle with rats is a fight without a finish, because it must always go on. Let the farmer who has rats on his place (and who has not?) relax his efforts, and he can keep nothing, but by persistency he can keep the population of rodents within reasonable bounds, and fortify the places where he stores his grain and feeding-stuffs, and thus keep the enemy at bay. Professional rat-catchers and poisoners reduce the rat population, but they do not obliterate—and, of course, if they did their occupation would be gone—and useful institutions which help to keep down the rodents are the rat and sparrow clubs which exist in some villages. In fact we think that if there were more of these clubs working with the one object we should hear less about the damage done by the repulsive rodents.

High Hedges and Motor Traffic.

THE untimely death of Sir Henry Colvile through his motor cycle colliding with a motor car has revived the discussion as to the desirability of high hedges near to cross roads being lowered, so as to enable travellers to get a better view of approaching traffic, and naturally opinions are varied on the point. The coroner at the inquest on Sir Henry Colvile saw no reason for reducing the height of hedges, and expressed the view that accidents occurred through people driving or riding carelessly without thought as to the possibility of meeting with anything. There is logic in this, and of course the point was never raised before the introduction of motor cars. With the increase of motor traffic on the roads, the matter will doubtless have to be dealt with; but the point at present is whether local authorities have power to lop trees and lower hedges that merely obstruct the view at cross and side roads. To cut trees and hedges that exclude sun and wind from the roads to the damage of the same is another matter; but, whatever is done, accidents are sure to happen if people will travel round corners at an excessive rate of speed.

Asparagus Land.

ADVOCATES of small holdings, when discussing their possibilities, point to this or that crop which may be grown to profit by the small holder of the future. Just so; but we would point out that Nature will not be dictated to, and because a crop flourishes in one district and is profitable, it does not follow that it will do the same in another. The thing is, let Nature indicate the district in which any particular crop will flourish, and then push its culture in that locality. As a case in point, we have asparagus; and in many places where beds are formed to provide "grass" for household purposes what preparation, nursing, and coddling are required to effect this purpose. Yet in travelling on the north borders of Gloucestershire and through the Evesham district of Worcester one sees asparagus flourishing under field cultivation and asking for no special care such as it needs in the average garden. And where asparagus grows well it is profitable, perhaps as profitable as any crop that is grown, and in the district referred to there are possibilities for greater development, but to attempt the culture of this crop on Worcestershire lines outside the area which is naturally adapted to it would spell ruin.

Gateways on Farms.

ONE needs strong boots and protective leggings in getting about farm land at this time of the year, but to pass safely through some of the gateways one should be furnished with something in the shape of a portable bridge. By a curious arrangement of affairs gateways are often fixed in low places where the water cannot get away, and there being no made road underneath, the cattle passing backwards and forwards plough up the ground until it becomes a veritable quagmire of mud. Of course, one looks for wet and dirt on a farm at this time of the year, but in many cases the condition of roads at gateways where animal traffic is frequent might be improved by carting rough stones, brick ends, gas lime, and other waste material, and effecting the dual purpose of raising the road in the middle and getting a firm foundation for traffic.

Tidy Farmers and Otherwise.

TIDINESS is a faculty which some farmers do not possess. This does not necessarily imply that they are bad farmers, for, on the other hand, they may be good cultivators, get the most out of the land and make the farm pay, but they have little or no personal pride in the homestead and its surroundings. In short, these men are untidy, and they will tell you that they have no time to look after the garden and keep the bit of front lawn in order, with the result that the immediate surroundings of the homestead presents an uncared-for and rough appearance. The evidence of no time might stand good if the tidy farmer did not exist, the man, by the way, who cultivates as well or better, and takes a personal pride in the neat appearance of his stackyard, farmstead, garden, and general surroundings. It is altogether a question of habit and character, and the fact remains that the man who possesses the bump of tidiness can generally manage to keep the immediate surroundings of the homestead presentable without the rest of the farm in any way being the sufferer.

Agricultural Politics.

BY A LOBBYIST.

Of course, no reply is necessary from me to Mr. W. J. Malden in the Free Trade controversy. I am in the position of being little more than an interloper—a poor enough part, in all sooth. However, I may be allowed to remind Mr. Malden of one fact. The argument as I initiated it is not whether Free Trade is a wise policy. The question is whether the Chamberlainite policy is calculated to benefit agriculture. If we invoke a considerable colonial competition without seriously rebuking our foreign rival—and never forget that Mr. Balfour has declared not merely for a small import duty against the foreigner, but for the smallest of all possible duties on the necessities of the workers; that is, on the foreign products which enter into competition with ourselves in the markets of the United Kingdom—how will the British farmer advantage? Putting the natural patriotic instinct which throbs in the heart of each one of us aside, what does it matter to the British farmer whether the competition which kills him is of colonial origin or of foreign origin? Will it reconcile him to his fate to be told that his doom has been a great influence in cementing the Imperial fabric? The colonist does not disguise his anxiety. "I desire," quoths he, "to capture the British mart, and to supply from my own illimitable fertility and inexhaustible natural resources the markets of Great Britain." He does not pretend any affection for the British farmer—he simply confesses his anxiety to oust him from his own natural sphere. This is the position, and no sophistry in the world can distort or confuse it.

* * *

Of course nobody would pay much attention to Mr. Green's letter. After all, it is so easy to say that you are ashamed of a man's article. The better way is to answer the article. That Mr. Green does not do, and would never do. With this remark I leave Mr. Green.

* * *

Lord Carrington is wise in his desire to build up the agriculture into a portion of the fabric of the State. I saw his lordship recently, and I perceive that he is absolutely in harmony with Mr. John Burns in the desire to establish a Ministry for health.

* * *

The Agricultural at this moment is a weak and anæmic Department. It does little for the farmer and does less for the State. Lord Carrington, as the head of a Ministry for health, would have an opportunity for which his fine brains, practical intelligence, and kindly heart would have expression.

* * *

I do not think that the ordinary farmer is wise in his opposition to the anxiety for the establishment of an Agricultural Party. Primarily that party should express every desire that belongs to agriculture. At this moment there is no party of the House that acts in a co-operative and disciplined method for the agrarian interest. I remember that when Mr. Ailwyn Fellowes sought to get a Dogs Bill and a Butter Bill through the House he had no support from his leader. Lord Carrington has introduced a new system into the State. Lord Carrington has done what no other Minister of Agriculture has done. He has made agriculture an evidence and an existence in the State.

* * *

The Agricultural Party is bound to come. The fact that the North of England farmers are enthusiastically in favour of this makes the organisation certain. I was last week talking with the chairman of a Midland Chamber of Agriculture. Mr. Bowen assured me that it was not possible for agriculture to become an organised factor in the House of Commons. I declared to him that he was indifferent to the forces which make up for influences in Parliament. I also saw an influential person in the West of England, and I assured him that agriculture could be organised in Parliament as well as the ordinary labour could be organised. This gentleman said that if this could be done he would be absolutely with him in my desire. What, said he, is Mr. Acland Hood going to do? I said I know not, but you may take it from me that Whitley is so enthusiastically agrarian that he will do whatever the ordinary farmer desires.

SMITHFIELD CATTLE SHOW,

ISLINGTON,

December 9 to 13, 1907.

The "Mark Lane Express" STAND.

No. 104 (MAIN GALLERY. USUAL POSITION).

OBITUARY.

Sir G. Macpherson Grant.

We regret to announce the death of Sir George Macpherson Grant, Bart., of Ballindalloch, the famous breeder of Aberdeen-Angus cattle, and one of the foremost agriculturists in Scotland.

Sir George, who was in the Scottish capital in connection with the National Fat Stock Show, had been ill for some time, but the fatal termination on Thursday afternoon was quite sudden and unexpected. Sir George Macpherson Grant was born on August 12, 1839, and succeeded his father, Sir John, as third baronet in 1850. In the agricultural life of Scotland, Sir George's name will always figure prominently, and more particularly as the owner of a herd of Aberdeen-Angus cattle whose fame has become world-wide, so much so that Ballindalloch has been known as the Warlaby of the Polled herd.

It was in 1861 that Sir George journeyed to Kinnaird Castle, and there purchased at one of Lord Southesk's sales for 50 guineas the cow Erica! Never was a purchase more fortunate. It became the foundress of the premier family of the breed, and its members have won fame in the showyards of every country. The Lady Fannys, the Miss Burgesses, the Nosegays, the Coquettes, the Rachels, the Jilts, the Prides, the Lady Idas, all found a home in the Ballindalloch herd, the history of which, when it comes to be written in detail, will form one of the most interesting documents, and one, too, in which Sir George's work will be perpetuated in the way he perhaps would have liked best, for he loved his herd. His interest in it never ceased, and its fortunes and those of members sold out of it he followed with assiduity. It is gratifying to be able to record that Sir George's successes in the showfield were continued to the end; for he carried off the premier honours in the class and the breed cup at the Scottish National Fat Stock Show in Edinburgh the day before his death.

Sir George was a life governor of the Polled Cattle Society, and for two terms of two years each he was its president. In the work of the Highland and Agricultural Society he took a great interest, and was president in 1892.

Small Holdings on Crown Lands.

The most interesting feature of the eighty-fifth report of the Commissioners of Woods and Forests, which was issued last week, relates to the efforts of the President of the Board of Agriculture to let available properties for the purpose of small holdings. The methods adopted have already been made known, through official notices and speeches of Lord Carrington, but it is here stated that the extent of the demand is indicated by the fact that, leaving out of consideration the numerous applications from men who do not specify at all the locality in which they desire land, or the quantity desired, Lord Carrington has in his possession at the present time applications for nearly 10,000 acres of land.

That the demand is fairly general is shown by the fact that 4,518 acres are desired in Lincolnshire, 2,347 acres in Yorkshire, 1,074 acres in Cheshire, 690 acres in Oxfordshire, 248 acres in Bedfordshire, 175 acres in Wiltshire, 123 acres in Norfolk, and 105 acres in Kent.

It must necessarily be a gradual process to satisfy this demand, in view of the necessity of avoiding any undue interference with the existing tenants, but it is hoped that by next Michaelmas upwards of 2,000 acres will have been let in different parts of the country in small holdings, and the process will be continued as opportunity offers wherever it is practicable.

The December hiring fair at Ayr, known as "Dud's Day," was held on Tuesday in very fine weather and was largely attended, whilst many engagements were made. Single ploughmen obtained from £16 to £17 for the half-year; byremen, £12 to £15; boys, £7 to £9 10s.; women servants, for which there was great demand, were getting from £10 to £12.

As there is a great deal of distress and a large number of unemployed men in Newcastle-on-Tyne it was agreed at a meeting last week, presided over by the Lord Mayor, that the ground for the Royal Agricultural Show of next year should be levelled and prepared by the unemployed. The previous resolution advertising for tenders to level the show ground being rescinded.

At a meeting of delegates representing six northern farmers' societies held at Inverness to consider the question of the destruction of crops by wood pigeons, replies were read from a large number of northern proprietors stating that they would be pleased to do everything in their power to keep down the pigeons, and stating that they had given instructions to their gamekeepers to do so. It was agreed to recommend that, with the consent of the proprietors, two consecutive days should be set apart in the various districts to shoot down the pigeons. The dates agreed upon were December 26 and 27.

FAT STOCK SHOWS.

Tonbridge.

The twenty-first show of fat stock at Tonbridge, Kent, took place on Monday and Tuesday, and was a successful show all through, for the entries in each of its sections were fully up to the average, and although there have been shows at which the general average of some of the classes, in point of merit, may have been higher, there have been few, if any, in which the quality of the leading winners was better.

Messrs. P. M. Collard and D. Swaffer were judges in the cattle section. The first division consisted of four classes for Sussex, the old steer, the young steer, and the corresponding classes for the heifers. The Earl of Derby was a very successful exhibitor in these classes, and his well-known Sussex herd came very deservedly to the fore.

In the old steer class a well-fed and ripe steer won first honours, and subsequently was made champion of the show. In the younger steer class the leading position was thoroughly well filled by a very handsome and promising steer owned by the exors. of Mr. L. Huth.

The winner in the older heifer class was a magnificent specimen of its breed; its width and depth of flesh were remarkable, and the quality of it left little room for criticism. This animal was owned by Mr. W. Cattley, and was bred by the late Earl of Winterton. Closely following it came a very good heifer, owned by the Earl of Derby; and this breeder provided from his well-known herd the first-prize winner in the younger class, a very choice heifer indeed, level and well finished.

Amongst the other successful exhibitors in these classes may be mentioned Mr. Hubble and Mrs Montefiore.

The other section was for any other breed, and had the same number of classes given it, and amongst the entries in these four classes were some particularly good Aberdeen-Angus cattle, probably some of the best that have been exhibited at the Tonbridge Show since its institution.

Mr. T. Wotton came out with flying colours in the older steer class. He well deserved his position, for seldom has any breeder sent forward three better animals of his own breeding than those three which won first, second, and rn for Mr. Wotton. The leading animal of this trio was made reserve champion. He might have gone a notch higher many thought, and he will doubtless be heard of again. Mr. W. W. Berry was third with a Scotch bred Aberdeen-Angus.

In the younger steer class a particularly handsome and well-brought out Shorthorn steer, owned by Messrs. Denny, was first, a position to which the quality and merit of this steer fully entitled it.

The winning animal in the older heifer class was a grand type of a cross-bred Aberdeen-Angus. This type predominated in the heifer's appearance, and the fine quality of her flesh and the evenness of her carcase will make her a dangerous competitor in any subsequent competition.

The pure bred Aberdeen-Angus won first and second in the younger heifer class, the respective owners being Messrs. W. W. Berry and G. Drummond.

In that class, which is peculiar almost to Kent and Sussex, for calves under twelve months of age, not fed expressly for slaughter, there were found a particularly good lot of youngsters. The Earl of Derby was first for both steers and heifers. His winning calves were strikingly good specimens of their breed. Second honours in these two classes went to the Sussex also. They were owned by Mr. A. J. Hickman and Mr. O. E. d'Avigdor Goldsmid.

There was a good entry of Southdown sheep, Mrs. Montefiore winning first and champion with her lambs. The Duke of Devonshire, who was second in the lamb class, took first and second for a very fine pen of wethers. Mr. W. M. Cazalet and Count A. Munster were also successful exhibitors.

The leading pen in the other sheep classes was a pen of cross-bred Southdown Kent wether lambs sent by Sir H. E. Dering. It was a pen of remarkably good quality and very good in their flesh.

There was a capital entry of pigs, Mr. E. Ascherson, the Duchess of Devonshire, and Mr. O. E. d'Avigdor Goldsmid were the three leading winners, the first named winning with a grand Berkshire just under 12 months of age, to which also champion honours went.

The exhibition of roots, hops, butter, poultry, and fruit was fully up to the high average of former years.

Redhill.

On Wednesday and Thursday last the annual show of fat stock at Redhill took place, and the wide support it has again secured proved without doubt the popularity of the show and its management, whilst the attendance confirmed the generous support that it receives from Redhill and Reigate.

The cattle section opened with four classes for breeds other than Sussex. The leading winner in the older steer class was a good Aberdeen-Angus steer owned by Mr. W. W. Berry, followed by another of the same breed owned by Mr. B. W. Parsons; both of these came to hand well, and were typical Christmas beasts. Third honours went to Mr. W. Levett, and rn to Mr. J. Weston.

In the younger steer class, Mr. B. W. Parson's winner was another of Mr. Bridges' breeding, a very promising steer. The same may also be said of that fine Shorthorn steer owned by Sir J. Colman, Bart., that was second. Another of Mr. Bridges' breeding, exhibited by Mr. A. Langridge, took third; the breeder of the last-mentioned exhibit thoroughly well deserved his success in the older heifer class with Barbarine 4th, and it was hard luck that fate decreed that this grand, beautifully handling heifer should have just missed champion honours, and had to be content with rn. Mr. W. Cattley's good-fleshed handsome cross-bred was second, and Mr. A. Palmer third.

In the younger heifer class three of the four leading animals were Aberdeen Angus, Messrs. W. W. Berry and G. Drummond owning the first and second winners, and Mr. W. D. Fladgate the reserve number. This was bred by Mr. G. F. Stanford, who himself took third honours with a neat and well-fed crossbred.

The Sussex classes lacked somewhat of the usual interest, because in them steers and heifers had to compete together. The females led in the older class. This was quite one of the best specimens of a fat stock show heifer we have seen out at the local shows this year, but her type as a Sussex was open to exception. However, there was no question as to the correctness of the award in placing her first in the class, and eventually making her champion of the show, although one readily admits it was but by the narrowest of margins this honour was secured from that equally good heifer that won first for Mr. Bridges in the other section of the Cattle Show. Mr. W. D. Fladgate claimed second honours with a steer thoroughly typical of its breed and well brought out. Mr. W. Cattley was third with a heifer bred by the late Earl Winterton, and Mr. S. Agate rn.

In the younger class the Exors. of L. Huth were first, followed by Mr S. Agate and W. Cattley in the order named.

There was a capital class for pairs of grass-fed steers, in which Mr. H. Bell won; a small class for Dexters and Kerrys, in which the Duchess of Devonshire took first honours. The classes for tenant farmers were well supported and contained, we are pleased to note, a very fine collection of typical Christmas beasts. Messrs. A. Langridge W. Clifton, G. F. Young, F. L. Crow, Harker were the principal winners.

Shorthorn Steer Gentleman John, winner of First Prize, the Special for the Best Shorthorn, and the Thorley Challenge Cup for the Breeder of the Best Animal at the Birmingham Fat Stock Show last week. It was bred by Mr. J. Ross, Millcraig, Alness, its sire being Ajax and its dam Lassie; but is the property of Mr. Peter Dunn, Pasture House, Sigglesthorne, Hull. Its age last week was 2 years 8 months 3 weeks 2 days, and its weight 16 cwt. 1 qr. 27 lb.

The sheep section was a very fine one indeed, equally good in respect to number of entries, and to its average of merit. In the untrimmed class of lambs, Sir E. Loder, Bart., was clearly first with a thoroughly typical pen of Southdowns. Messrs. W. Clifton and Still were second and third. In the trimmed class of lambs the Duke of Devonshire won first honours and also championship, with a well brought out pen of Southdowns. Mr. Thomson took second honours, Sir E. Loder third, this was a particularly good and choice pen. Mrs. Montefiore was rn.

The pig classes were very good indeed. The principal winners in them were the Earlswood Asylum, Redhill, Messrs. G. Riddle, J. Tichener, A. Palmer, and R. Morton.

The section for dead poultry was quite one of the best exhibits we have seen this season of its kind. The large number of competitors and the wide area they covered indicates its popularity. The number of entries in the live poultry classes were smaller than usual, this was owing to the date of the show clashing with several other important fixtures.

The other sections of the show for roots, butter, hay, corn, &c., were supported in a very satisfactory manner, and the quality of the exhibits were good.

Ipswich.

The annual show of the Suffolk Fat Cattle Club took place at Ipswich on Monday, Tuesday, and Wednesday, and was in every respect a successful display of stock, being large and of first-rate quality, whilst the numerous other attractions drew large attendances of visitors, thus testifying to the popularity of this fixture. The experiment of having a third day seems to have been justified, for the attendance for the whole of the show was 19,000, whereas last year the number was 10,905 as compared with the record of 11,242 in 1905.

The cattle classes were all round good, but the feature of the section was the remarkable success of Mr. R. J. Thurman, Dairy Farm, Semer, who, with a crossbred heifer bred by Mr. E. G. Pretyman, Orwell Park, cleared the board of championships. He won outright two challenge cups, each valued at 25 guineas, having taken them in two preceding years, and also two special prizes—one given by the president, Mr. Kenneth M. Clark, for the best beast in the show, over three years old, and the other for the best beast over two years, grazed by an owner whose principal income is derived from farming. Further, the Red Poll steer with which he obtained the championship for the breed at Norwich now took first prize in its class, the challenge cup, presented by Messrs. Barclay and Co., for the best beast in the show, under two years old, grazed in Suffolk, and two other champion prizes, not to mention a reserve or two. The beast which gained these honours is well grown, level, a good handler, and exceptionally heavy for its age, 14 cwt. 2 qr. 14 lb. at 1 year 11 months 3 days. It was protested against, as at Norwich, on the ground that no pedigree was produced to prove it of the Red Poll breed, and "that it has a large slug horn stump on either side of the head," which suggests that it is cross-bred, but the committee over-ruled both objections.

The reserve for the championship was the first prize winner in the class for steers or heifers of any pure or cross-breed under three years old, viz, the Shorthorn, shown by Sir Walter Corbet, which ran the King's prize-winner so close at Norwich.

The show of sheep was somewhat small, but the quality was excellent. Sir Thomas Gooch, Bart, sent a nice pen of Southdown wethers, but they could not hold their own against two pens from Mr. Herbert Smith, Walton Grange. The class for pen of three Suffolk wethers was a strong one, in fact the entries were so good that the judges had a difficult task, and they could only do justice by mentioning every entry. Here, again, Mr. Herbert Smith carried everything before him, and his three entries carried off the chief prizes.

Pigs made one of the best shows ever seen here, Large Whites, Large Blacks, and cross-breds being well represented. The first-named breed secured the championship, the fortunate exhibitor being Mr. Russell Walker, Marlesford, Wickham Market, with a very fine pair, winners in the class for pigs best suited for bacon purposes. Mr. John Goddard, of Turnstall, had the distinction of taking the premier place with Large Blacks, which subsequently came in for more honours, winning Thorley's special and reserve for the championship.

The feature of the corn section was, as usual, the display of barley, but wheat and oats were both well represented, whilst other good sections of an attractive show were those for roots and vegetables, dairy produce, and poultry.

The carcase competition proved a very attractive one. The first class in the swine carcase competition was for one bacon pig, live weight not under 190 lb. Mr. Charles Spencer, Holywell Manor, won first honours with a Large White, whose carcase excited general admiration; whilst in the class for one bacon pig, live weight exceeding 220 lb. and not more than 280 lb., the chief award went to Mr. E. Ward Snell, Darmsden. The coveted honour in this department of the exhibition was the silver tankard presented by Messrs. Charles and Thomas Harris and Co., Ltd, Calne, Wilts, regarded as the champion prize, and the winner was Mr. William Woodgate, White House, Badingham. The handsome pair of pigs were both Mr. Woodgate's own breeding, and here the excellent cross, Large Black boar and Large White sow, prevailed.

On the second day there was a sale of a large number of the animals exhibited at the show, and with a large attendance of buyers some good prices were realised. The best price for the cattle was £36, given by Mr. Webber, Felixstowe, for Mr. S. Dawson's third prize cross-bred steer. Other cattle sold at prices ranging from £20 to £33.

A large number of sheep were sold. The Southdown wethers, belonging to Sir Thomas Gooch, Benacre Hall, which were reserved, made 70s. and 67s. 6d. (2); Mr. Herbert E. Smith's wethers, which won first and second prizes, realised from 97s. 6d. to 85s.; whilst the best of Mr. D. A. Green's Suffolk wether lambs, which won fourth prize, made 80s., the others going for 77s. 6d. and 75s. Mr. Spencer Dawson's Suffolk lambs, second prize winners, made 75s., 70s., and 72s. 6d., while another three shown by the same exhibitor fetched 55s. each.

The chief sales of pigs were as follows:—Mr. K. M. Clark's reserved Large Blacks (average 3 cwt. 3 qr. 2 lb.), £5 15s. each; one of Mr. Walter Reeve's cross-breds (3 cwt. 2 qr. 4 lb.), which won a special and second prize, £6 12s. 6d.; Mr. John Symonds's third prize cross-breds (3 cwt. 2 qr. 17 lb.), £6 5s. and £6 17s. 6d.; Mr. John Goddard's first prize cross-breds (3 cwt. 0 qr. 10 lb.) £5 17s. 6d.; Mr. G. Gooderham's Executors' first prize cross-breds (3 qr. 20 lb.), five at 40s.; Mr. John Goddard's first prize cross-breds (2 cwt. 0 qr. 12 lb.), £4 2s. 6d. and £4 7s. 6d.; Mr. W. Scopes' third prize winners (2 cwt. 2 qr. 21 lb.), £4 12s. 6d. and £4 17s. 6d.; Mr. H. H. Turner's second prize winners (3 cwt. 1 qr. 18 lb.), £6 2s. 6d. and £6 15s.; Mr. Russell Walker's champion pair, £10 and £10 5s.; Mr. R. Walker's first prize winner (weight competition animal) £7.

Birmingham.

The fifty-ninth annual fat stock show at Bingley Hall, Birmingham, a full description of which appeared in our last issue, came to a conclusion on Thursday evening, and, it is satisfactory to record, was as successful from a financial point of view as it was from the show standard. The admissions for the five days numbered 43,442, as compared with 42,112 last year, an increase of 1,330; and the total amount of the receipts was £1,270 12s., an advance of £43 9s. over twelve months ago. During the week 205 pens of poultry were sold for £520 5s. 6d., which is a little less than last year, for then, as compared, 232 pens were disposed of for £535 5s., but it will be seen that some better prices were obtained, one of the best being £52 10s. for a white Orpington cockerel.

Details of the receipts and admissions for each day together with the corresponding figures for 1906, 1905, and 1904 are appended:—

York.

The fifty-first annual show of the Yorkshire Society for the Christmas Exhibition of Fat Stock, Poultry, and Roots, held at York last week, the entries were somewhat less than last year in all the sections except pigeons, but the quality was, if anything, better than ever, thus making good the deficiency in quantity. There were 93 entries of cattle, a decrease of 12 on last year: sheep numbered 39 or 26 less, and pigs 51 as against 90 in 1906; pigeons, on the other hand, showed an increase of 373, and thus brought the aggregate for the whole show to a higher level than last year, the respective figures being 2,650 and 2,544.

In a useful class of Shorthorn steers, the best animal which has been seen at York for some time was shown by Mr. J. M. Strickland, Easingwold, and it won fairly comfortably. In the corresponding class for heifers there were only three entries, and Messrs. R. and J. Davison, Malton, won. The class for three-year-old cross-bred steers was a good one, the winner being Mr. C. Emmerson, Darlington, with a Black polled animal, which subsequently was amongst the selected for the championship. The heifers only numbered four, Mr. R. Stubbs, Baldersby, being the pick. In the class for two-year-old Shorthorn steers, Sir John Swinburne was the winner. Mr. Emmerson took first and second awards in the class for bullocks of any breed or cross except Shorthorns, and in the class for the best heifer, irrespective of breed, under two years old, the award went to Mr. J. McIntyre, with a black Aberdeen-Angus. In three strong classes of Irish cattle the premier award went to Messrs. W. and T. Dale, Buttercrambe, York, whilst Mr. B. Carlton, Crockey Hill, York, scored in both the classes open to tenant farmers only.

The champion beast was found in a class of four oxen suitable for butchering purposes. This was a massive three-year old beast, and turned the scale at 1 ton 5 stones. The exhibitor was Mr. D. Lund, Flaxton, for whom it won not only the championship cup, value 50 guineas, and the prize in its class, but also the president's special prize of £20 and the York and District Butchers' silver challenge plate, value 50 guineas, the latter at sight. In the second class of heifers for butchering purposes, Mr. Edward Harley scored with a Blue Polled crossbred. Three classes of Scotch cattle had only a poor entry, and the Earl of Durham won in each.

A pen of three Whitefaced Down sheep won the championship (the Moscrop Plate) in the sheep classes. They belonged to Messrs. R. and J. Davison, of Malton, and, scaling 67 stones, made a fine show. The reserve card went to Mr. W. Robinson, of Helmsley, for three of the Scotch-cross variety. Despite reduced numbers, the sheep were of good quality all round, both in the district and open classes. Nor can less be said of the pigs, which in several classes called forth extra commendation from the judges. Mr. Leopold C. Paget, of Harewood, had the distinction of winning Capt. Behrens' special prize and the reserve ticket with two grand specimens of the White breed. The champion, though huge, and tipping the beam at 55 stones, was even beaten in weight by the reserve pig, which scaled no less than 69 stones.

The show of poultry and pigeons was one of remarkable excellence, and in the latter department exhibitors came from all parts; whilst the butter-making competition, an innovation, proved most attractive.

A large number of head of fat stock which had been exhibited at the York Fat Stock Show were disposed of in the show yard on Thursday. There was a large attendance of buyers, and a very good trade all round. Beef sold exceptionally well, and several of the prize-winning cattle made exceptional prices. The highest was £72 for the champion beast of the show, Great Scott, a blue-grey three-year-old weighing 165 stone, exhibited by Mr. D. Lund, Flaxton, the purchaser being Mr. Whitford, Hull. Sheep also sold well, quite a number realising over 70s., the best prices being 86s., 84s., 80s., and 78s.

Scottish National.

The eleventh annual show of the Scottish National Fat Stock Club held in the Waverley Market, Edinburgh, last week, proved one of the best of the series taken all round, and that the show maintains its popularity with spectators was proved by the large attendances. Cattle entries totalled 172, a slight increase on those of last year; sheep, with an entry of eighty-three pens, ten pens down, but pigs show an improvement with twenty-three pens against sixteen, but seeds and roots which last year had the great entry of 468 were down to about 350—still a good entry.

Shorthorns did not make quite such a good display as we have seen at this show, but nevertheless were a highly creditable lot. There has possibly never been a better display of Aberdeen-Angus cattle at any fat stock show in Scotland. His Majesty the King showed two animals in the two-year-old steer class, both bred at the Royal herd at Abergeldie, but they were defeated by Colonel M'Inroy's Beltane, an evenly-fleshed, very thick animal, which handled well, and was ultimately placed reserve for the championship of the breed. His Majesty was second with a nicely-finished bullock of good quality, but rather narrow in his hindquarters.

Some good types of Galloways were forward, and Highland cattle were as usual a strong and picturesque lot, whilst the cross-breds were perhaps the most interesting feature of the section.

The £20 cup for best steer in the show fell to Mr. Robert Turner's first prize two-year-old cross-bred, Colonel M'Inroy's young Angus steer being reserve. The corresponding cup for the best heifer went again to a cross-bred, the winner being Mr. M'William's two-year-old, the reserve in this case falling to the Ballindalloch Evie. Then came the final test, the £50 for best animal in the show. Mr. M'William having practically cleared the course, won, and Mr. Turner had the reserve with his steer. The Webb Challenge Cup for best animal bred by exhibitor fell to the Ballindalloch heifer, and Colonel M'Inroy's young steer was reserve. Sir James Sivewright Cup for the best animal in the show bred and shown by a tenant farmer attracted fair competition, and here Messrs. Ross won and also took reserve position. Mr. M'William further won the President's prize and the Strathmore Challenge Cup, and Col. M'Inroy had the Ardross Cup for the best young Angus steer.

Although in the sheep section there was a falling off in numbers, it was generally acknowledged that the quality of the exhibits was equal to the average of former years, the best section being that for Cheviots. Mr. Dowall had the best lot of Cheviot lambs and also wedders, and he had no difficulty in taking the Breed Cup. In the cross-bred section Mr. Duncan, of Coupar-Angus, took the breed cup with a pen of three cross hoggs of magnificent proportions, and though the animals were young, their condition was such that the award was never very much in doubt. Mr. Duncan also scored with his cross-bred lambs. The extra classes saw some good competition, and here again Mr. Duncan was seen to wonderful advantage with a pen of lambs by a Suffolk tup out of Leicester ewes. These lambs took the championship of the sheep section, the reserve being the Montrave first prize Blackfaced lambs.

There was a very creditable display of pigs, the champion cup for which was gained by Mr. William Newbigging, Gogar Mains, with a pair of the white breed, which weighed 12cwt. 64 lb., whilst the reserve card was placed upon a pair of blacks, weighing 9 cwt. 81 lb., shown by Mr. Gavin Jack, North Gyle.

SHOW GOSSIP.

The seventy-second annual show of the Huntingdonshire Agricultural Society will be held at Ramsey on Thursday, June 18, 1908, entries closing May 28, or at late fees on June 4. Mr. A. G. Dilley, Market Hill, Huntingdon, is the secretary.

The entries for the Ashford Fat Stock Show, to be held on the 16th and 17th inst., number 363, this total being a little above last year's record. The increase in the live stock classes is the most marked, for there are 140 entries against 134 in 1888, which held the record until this year. There are 100 entries of roots, 31 of corn, 49 of hops, 28 of wool, 14 of butter, and 11 of bread, while the carcase competition has attracted a dozen competitors. The chief exhibitors of live stock include many well-known breeders, some of whom have not shown at Ashford before.

The Norfolk Agricultural Association announce that their spring show of stallions will be held in the Agricultural Hall, Norwich, on Saturday, March 21, 1908, entries closing March 14; whilst their summer show will be held at Great Yarmouth on June 17 and 18, entries closing for live stock and implements on May 11.

At the monthly meeting of the Aston Town Council held on Wednesday, a letter was read from the secretary of the Warwickshire Agricultural Society inquiring whether it was desired that the show of 1908 should be held in the town of Aston. The town clerk said the Birmingham Baths and Parks Committee had been communicated with, and had replied to the effect that they would have much pleasure in placing the whole or a portion of Aston Park at the disposal of the agricultural society for their annual show, if the lower portion of the park was suitable. They suggested that application be made in due course, the arrangements to be left in the hands of the Aston Park Joint Advisory Committee to carry out, and the consent to be subject to such conditions as might be determined for the protection of the corporation property. He (the town clerk) pointed out that if the Aston Council decided to invite the society to hold the show at Aston, other questions would have to be considered. A sum of £300 would have to be raised by private subscription or otherwise, but not out of the rates. After some discussion the question was referred to a Special Committee to consider and report to the council.

At a well-attended public conference held at Maidstone on Tuesday afternoon, a County Association for Kent, to facilitate the working of the Small Holdings and Allotments Act, 1907, was formed.

MIDLAND FARMERS AT HOME

No. 1.

MR. R. MILLINGTON KNOWLES, Colston Bassett.

Resident in the Midlands are many farmers about whom the agricultural world knows but little, with the exception of occasionally seeing their names among the prize-winners at various shows. I hope, however, to give in the MARK LANE EXPRESS a few particulars concerning the farms and stock, and the districts in which some of the leading men of Nottinghamshire, Derbyshire, Lincolnshire, and Leicestershire reside, which cannot fail to prove of interest to readers of this journal. It is impossible in the limited space at my disposal to deal fully with many matters of interest, but the chief characteristics of the various holdings will be touched upon.

Colston Bassett, a quaint old Nottinghamshire village, some five miles to the south-west of Bingham, possesses many historical associations, and is owned by Mr. R. Millington Knowles, D.L., J.P., C.C., who resides at the Hall. It is recorded that in 1604 many of the inhabitants were carried off by a terrible plague, and the fine old church of St. Mary, situate in the park near to the hall, dates from 1293, but is now in ruins. Mr. Knowles in addition to being the owner farms nearly 1,000 acres in the parish, and the state of the arable land bears testimony to the steward, Mr. Gilbert H. Elliott for not only have enormous crops been

MR. GILBERT H. ELLIOT,
Agent to R. Millington Knowles, Esq., Colston Bassett Hall.

harvested, but there is practically a total absence of twitch and rubbish. The soil for the greater part is of a strong clayey character, with a subsoil of clay, the chief crops grown being wheat, oats, beans, and barley, while the large fodder stacks prove conclusively that clover also does well. It is very heavy land, and requires four good horses to a plough. I noticed a field of swedes, cabbage, and mangolds which demonstrated to the full that roots can be grown successfully, though so far as eating turnips on the land by sheep it is practically useless.

The farm buildings are admirably arranged, being some distance from the highway, the steward's house being in close proximity to them. The crewyards are covered in, which is admittedly conducive to stock doing much better than in the open, and prevents the manure from being washed by the rain, and thereby losing much of its value. The cowsheds, horse stables, and pig styes are designed not only for the well-being of the animals housed therein, but also with a view to convenience for those whose immediate duty it is to attend to their requirements. By the aid of steam the corn can be ground, turnips, &c., pulped, cake broken, and many other operations performed. The buildings are not by any means of that character to be met with in towns—nothing is of the "jerry" order, all having been erected with a view to standing a good many years to come. What is more they are kept sweet and clean by liberal and frequent applications of limewash. In the yard Dutch barns abound in profusion, and I believe Mr. Knowles was one of the first gentlemen in the neighbourhood to realise the value of this class of erection. Certain it is that one has done service for nearly twenty years, and considering the amount of thatching it has saved, and the way fodder and corn have been preserved, it has more than paid for the outlay. The other Dutch barns are of a more recent pattern, and at the present time are filled with corn and fodder, while ten or a dozen stacks jotted around the homestead speak more than words of the plenteous harvest that has favoured Colston Bassett this year. Though there is such an extensive range of buildings, they are already totally inadequate for the growing demands of an increasing herd of Shorthorns and Large White Yorkshire pigs. A new set of piggeries are now being built away from the homestead on an elaborate scale. They are planned on the very latest principles, and will combine large yards with concrete floors for exercising the porcine animals, while the styes will be heated throughout by means of hot water pipes.

Large White Yorkshire pigs have brought fame to Mr. Knowles and Colston Bassett, for I believe I am correct in stating that this year animals from this herd have carried off the champion prize at the Royal, Highland, and Welsh National Shows, which is a record to be proud of. There are some very fine pigs—both boars and sows—at present in the styes at Colston Bassett. They possess plenty of length, depth in the body, well-sprung ribs, wide and square in their quarters, wide loins, and hams that almost reach down to their feet. Almost without exception they possess good straight legs, and well-placed, while they have good heads and necks. Altogether there are now housed at Colston Bassett 300 pigs, and I understand that the present year has proved a record for numbers sold, not only for export abroad, but also in England. It is admitted that the herd of pigs is one of the finest in the country, but a new departure is being made by Mr Knowles, who is now taking up the breeding of Shorthorns with vigour. During the present year animals of the most fashionable breeds have been purchased at many of the leading sales, and I noticed a number of promising youngsters in the crews which will doubtless be seen in the show ring another season. In the park near the Hall, there were a number of animals which were a picture to gaze upon, being a Galloway-Shorthorn cross, and seemed most suitable to roam near a country gentleman's mansion. On the farm there are something like 150 head of horned stock.

There is a very fine flock of sheep, numbering between 400 and 500, being a cross of pure-bred Lincoln-Longwool ewes, upon which are used a Hampshire ram, and then bred on again. That this is a good cross for mutton was proved at last Goose Fair, and also the year previous, when lambs from the flock averaged 2 guineas apiece. Several young horses were running out in grass fields, and looked tolerably well, one or two giving promise of turning out something above the ordinary, possessing plenty of bone and hair, and rare quality. The working horses are an admirable set, of the true Shire character, and able to pull a load of goodly dimensions. There are also two good home-bred stallions—one by Menestrel, and the other by Cœur-de-Lion—and their foals are a credit to those who had the good fortune to use these sires.

As I have previously stated, the arable land is very clean and free from rubbish of all kinds. This is rather surprising, for Mr. Elliot (the steward) does not believe in a bare fallow. His system of rotation is roots, oats, beans, wheat, and barley. The soil favours beans, and some enormous crops have been secured this year. To obtain good quality barley it has been found from long experience that the best class grain is secured when sown on wheat stubbles. The yield suffers somewhat, but this is more than made up by the better quality, though the Chevalier variety never does well at Colston Bassett.

Very little corn is sold, most of it being consumed by the stock, which is all home-bred, with the exception of a few pedigree Shorthorns. Being some distance from the mining districts Mr. Elliot experiences no trouble in obtaining plenty of labour, and carpenters and bricklayers are employed as regular hands, there being ample work for them to do on various parts of the estate. Mr. Knowles has built a number of model cottages for his labourers which could with truth be termed villas, for they are roomy, and possess ample gardens and a good water supply. It is frequently asserted that farming cannot be made to pay, but I understand that, after all expenses have been met, a fair amount allowed for rent and depreciation, there is always a good profit from this farm at Colston, which is all the more creditable when it is remembered the heavy charges incurred through exhibiting stock at various shows throughout England, Scotland, and Wales. It clearly proves that where a farm is well managed a living can still be secured by an agriculturist.

R. K.

Market Information.

London.

I have allowed a fortnight to elapse since my last business report, in the hope that I might be able to tell a better story to-day. But unfortunately neither the present position nor the future prospect show any sign of early improvement. A merchant's circular lately issued refers to some increase in the demand, caused by the reduced prices, and a few days ago it appeared as if a more active trade was possible. But this week it has again collapsed, and as holders are generally desirous to realise, values are quoted lower. The condition of affairs is almost inexplicable, for we may reasonably suppose that the present absurdly low prices would certainly induce business under ordinary circumstances. There must be some reason, as yet undiscovered, to account for the abnormal stagnation now prevailing. Yet, unpromising as is the outlook, I cannot avoid the conviction that prices have touched bottom, and that we must have a reactionary movement before long. Whether we shall be able to discern its commencement before Christmas is uncertain, but I am convinced it must come sooner or later, and for the sake of my country friends I heartily trust it will not be delayed much longer.

Nuremberg.

During the past fortnight the approach of winter has been signalised by the first fall of snow, the colder weather having a further depressing effect upon the hop trade. Sales, both for home consumption and export, have fallen off, and stocks which are estimated at 16,000 to 18,000 bales are gradually increasing. There is some demand from America for the better grades, but as these are scarce, only a small amount of business has been done. Values remain without any perceptible change, but the tendency is downward except for choice samples. The arrivals for the last fourteen days, ending November 27, were 4,800 bales, and the sales for the same period 4,350 bales.

Brussels.

Certain uncovered contracts for delivery this month have imparted a little animation to the markets, inquiries for disposable hops being rather more frequent lately; but the general trade remains very quiet, and values are unchanged. The tendency is, however, rather in favour of lower prices, and quotations for December-January deliveries are from 2 to 4 francs lower than the present currency.

America.

My cable message this week speaks of the market being dull, with a downward tendency, and adds that no improvement in the near fature is anticipated. I have also received a letter from my correspondent on the Pacific Coast, dated November 15, from which I make the following extracts:—"The choicest Oregon hops can be bought to-day at 7 cents, and we doubt if there are any orders at this price. Some business has been done recently at 5½ to 6 cents, but the demand is very limited. It is almost a certainty that the best grades will be bought within the next thirty days at 5 cents. Some speculators are actually gambling upon short sales, on the basis of purchasing next summer as low as 3 and 4 cents per lb. The financial situation does not improve, and there is a prospect of a continuance of present conditions for many months. The unsold stock in this country is exceptionally large. As nearly as we can ascertain the stocks in growers' hands amount to at least 200,000 bales, and besides there is a goodly quantity held by dealers, and approximately 35,000 to 40,000 of 1906 hops still on the market. It seems as if a very low ebb of prices will prevail next summer. While growers are suffering frightful losses on present sales, we cannot see where there will be any ploughing up of hops in the large growing centres."

The Hop Conference at Wye.

My report of the interesting proceedings last week occupied so much space that I had no opportunity for comments, which appear to me desirable, especially on the subject of "the value of the male plant," so ably handled by Mr. Salmon. This appears to me to be of sufficient importance to demand further inquiry, and my apology for venturing to criticise it may be therefore offered on that ground.

While I fully recognise Mr. Salmon's painstaking industry in his elucidation of the details he so carefully brought under our notice, I may be excused in pointing out that there is comparatively little novelty in his statements. Other investigators have long ago arrived at the same conclusions. I have a record by Schroder, who made a quantitative analysis of over 200 hop cones some fifteen years back, by which he ascertained that while fertilised hops contained an average of twenty-two seeds, unfertilised hops grown under identical conditions contained less than four seeds per cone. But he ascertained at the same time that the lupulinic contents were less than 9 per cent in the fertilised, and nearly 13 per cent. in the unfertilised. Consequently, he concluded that the brewer must use, under equal conditions, 116 lb. of fertilised cones in place of 100 lb. of cones which remained sterile. Mr. Salmon's paper did not touch this aspect of the question, as he confined himself to the growing out of the hops, and the consequent results in the weight of the crop.

In view of expert opinions recently expressed as to the decadence in the quality of English hops, and the consequent failure of the industry in remuneration to the grower, it appears to be rather unfortunate that the authority of Wye College should be used to induce planters to fix their attention rather upon bulk than quality.

I do not hesitate to say that this point was the main feature in the otherwise instructive paper referred to. I have the support of the late Professor Cheshire, formerly of Swanley College, who made the fertilisation of plants and its effect his special study, and who wrote to me as follows:—

"I am decidedly of opinion that the encouragement of the male hop is in every way a mistake, except in the special case of attempting to raise seedling varieties. Every grower should be aware of the fact that the quality of his crop almost exclusively depends upon the condition of the numerous yellow glands with which the bracteoles of the female flowers are dotted. That these suffer after fertilisation, according to a general botanic law cannot be for a moment doubted. This botanic law may be thus briefly expressed. The energies of a plant in flower before fertilisation, are concentrated on those portions of the inflorescence which are most essential in leading up to fertilisation; but after this has taken place, the means to the end are deprived of nutrition in order that the nutrition may be diverted to the building up of the fertilised ovules until mature seeds result."

He further says:—"It is clear that the scientific evidence is all on one side, viz., that for the production of a hop containing the largest percentage of lupulin, fertilisation should be prevented by the suppression of the male plant. But as a set-off against this, fertilisation which directs the energies of the plant to the maturation of its seed, and so absorbs a very large part of the store of nutritive materials at its disposal, increases the actual weight of the crop by about 10 per cent., but analysis at once shows that the increase in weight is accompanied by a considerable percentage of decrease in lupulin and aroma, the very matters for which the hop is grown. If the planter grows for market he has to determine whether quality or bulk will bring the larger return; but of one point we ought not to lose sight, as intelligence increases and proper methods and judgment come to be employed, quality will undoubtedly secure the higher monetary remuneration." The Professor confirms his statement by the analogy of many other plants, and concludes that in the long run hops will grow more luxuriantly and retain their vigour better when they are not allowed to produce seeds.

Such testimony as this, reliable as it is, might perhaps be ignored if it were not supported by the well-known practice of our Continental competitors, who have adopted as an axiom that "a hop garden should resemble a nunnery, all males being excluded." Why have they done this? Growers have found that their brewers estimate the value of hops according to the presence or absence of seeds, as they know that in seeded hops they receive an inferior quantity of utilisable material per unit of weight, and also that, although lupulin is not the sole criterion of quality, it is recognised that the larger the proportion of lupulin and the consequent more agreeable aroma, the more valuable is the sample for brewing purposes.

Therefore, we find that in the districts of Bavaria and Bohemia, where the choicest hops are produced, they are practically seedless, and proportionately richer in their most precious constituents. Some years ago the Belgian Government, desirous to improve the quality of their hops, appointed a commission to inquire into the culture in other countries, and after an exhaustive examination, the results were published, concluding with certain recommendations, of which the most emphatic was—"Banish strictly all male plants from your hop-yards." The Belgian growers did not accept this recommendation, preferring to aim at larger crops of an inferior quality. We see the results to day in the lower prices they command, and the small esteem in which they are held by brewers.

It is true that American growers favour the production of seeded hops, although one of their chief authorities on the subject admits that "the continuous ripening of seed is one of the most serious drains on the vitality of hop roots." I suppose they are somewhat indifferent as to this, as the rich virgin soils on the Pacific Coast, enabling them to dispense with manures and the extensive lands at their disposal for replanting, induce them to ignore the possibility of exhaustion.

But I cannot accept the dictum of a trans-Atlantic grower, quoted, I think, by Mr. Salmon, at Wye, when he says, "if brewers expect a good, solid, bright coloured, well matured hop, well filled with lupulin, they must also expect to see the hop well filled with good, large, purple seed." This absolutely contradicts all European investigation, and also, methinks, betrays the grower's want of knowledge, and his inability to judge how much lupulin the hop actually carries. There is no doubt that proportionately to the lupulinic contents of the cones is the resin percentage in all hops.

Mr. Meacham, who, in conjunction with the eminent chemist, Mr. Lawrence Briant, has done so much to ascertain the functions of hops in the brewery, has written: "It is not bulk of hops, but preservative resin, that the brewer wishes to purchase, and for which he will be prepared to pay more money. It is on this point of resin that the battle between English and foreign hops is to be fought. In softness and clearness of bitter, and delicacy of flavour, English growers have little to fear, but from the point of view of resin percentage foreigners thus far have the advantage."

The published remarks of some acknowledged experts in our brewing industry go to prove that English hops are deteriorating in quality, that is, their lupulin and their preservative resins are decreasing.

As it seems to be clear that this loss of position is due mainly to the ambition to grow heavy crops, enhanced by the plentiful presence of seeds, we hope that, in their own interests, our growers will consider the matter, and endeavour to make such alterations in their methods of culture as will be advantageous to themselves, and without too much regard to former prejudices.

Mr. Ailwyn Fellowes and an Agricultural Party.

The Hon A. E. Fellowes, ex-President of the Board of Agriculture, in suppo ting a resolution in favour of the formation of an Independent Agricultural Party at the meeting of the Norfolk Chamber of Agriculture at Norwich on Saturday stated that, while he thought the proposal most excellent in theory, he had very many doubts as to whether it was really practicable. Independent parties were not popular either with the country or in Parliament. An Independent Agricultural Party would represent three classes—landowners, occupiers, and labourers—and they knew how difficult it was to get even the farmers to agree among themselves. Questions like Tariff Reform and the importation of store cattle would present difficulties to an Independent Agricultural Party. However, if the formation of the party could do any good, he would do his best to promote its success. The motion was carried with two dissentients.

Eight patent maltings, the property of Messrs. H. A. and D. Taylor, at Bishop's Stortford, were totally destroyed by fire on Monday last. The conflagration put the whole town in jeopardy, as the maltings adjoin the gasworks. The Great Eastern Railway Company ran special trains with fire engines from Liverpool Street, Cambridge, and Broxbourne, and the local brigade had the assistance also of the brigades from Ware and Sawbridgeworth. The damage is estimated at about £200,000.

Christmas Parcels Traffic.—In connection with the Christmas and New Year traffic the Midland Railway Company have made the most complete arrangements for the collection, quick transit, and quick delivery of parcels in London and the many provincial towns on their system. Frequent collections will be made from the receiving offices, and in addition to through vans being attached to the principal express and mail trains, special trains will be run to accommodate the traffic. In the case of parcels for short distances, the rates, with one or two exceptions, are less than those by parcels post, whilst for longer distances the rates for parcels above 1 lb. do not exceed the parcels post rates In the interests of prompt transit, all parcels should be fully and legibly addressed, and the address labels firmly attached. As an extra precaution, a duplicate label should be enclosed in each package, so that the name of the consignee may be ascertained in the event of the outside address becoming detached or defaced.

CORRESPONDENCE.

Railway Rates—Deputation to the Board of Trade.

SIR,—The Board of Trade have appointed Thursday, December 12, at 3 p.m., at their offices in Whitehall, for a meeting of a deputation of agriculturists, agricultural traders, and manufacturers of agricultural produce, with the railway companies serving Lincolnshire and the Midland Counties, for the purpose of discussing complaints as to the excessive rates in those districts in comparison with those obtaining in the North, East, and South of England.

Grain in East Anglia is conveyed in four-ton lots 40 miles for 5s. 5d. per ton, 80 miles for 6s. 8d., 120 miles for 7s. 1d. per ton. In this district the corresponding rates are:—40 miles, 6s. 7d.; 80 miles, 9s. 11d.; and 120 miles, 12s. 6d. per ton.

Hay and straw is conveyed on the London and South Western Railway, 40 miles for 6s. 10d. per ton, 80 miles for 9s. 10d., and 120 miles for 12s. 2d. The corresponding rates in this district are:—40 miles, 8s. 9d.; 80 miles, 12s. 3d.; and 120 miles, 16s. 7d.

In addition to this large excess in the rates above-mentioned, a circular has been recently issued by a combination of eight of the local railways, completely disorganising the local trade in hay and straw, by requiring farmers and traders to pay 30s. per week for the temporary storage of hay or straw on trucks, which costs the railway companies not more than 5s per week, a profit of 500 per cent.

It is generally agreed that it is in the interests of the nation and the railways alike that agriculture and its allied trades should be fairly treated.

The Great Eastern, the North Eastern, and the London and South Western Railway Companies, under the management of such leaders in the railway world as Lord Claude Hamilton (chairman also of the Clearing House Committee and of the Railway Companies' Association), Sir Charles Owens, and Sir George Gibb, have found it possible to be just to agriculture and at the same time pay a fair dividend to their shareholders. The deputation desire that this policy, which has been so successful elsewhere, should be applied to Lincolnshire and the Midland Counties.

It is most desirable that the deputation should be as weighty and efficient as possible, and it is earnestly hoped that every interest concerned will contribute its quota on the above date.

I shall be glad to receive the names of those who propose to attend, not later than Monday next.—Yours, &c.,

E. J. BULLEN,
Hon. Sec. the Midland Corn and Agricultural Trades Association, Ltd.

Castlegate, Newark,
December 3, 1907.

The Outlook in West Suffolk.

SIR,—Wheat sowing is practically over by this time—not much more than an average acreage has been got in. October was not a propitious month and wet having again set in, very little more is likely to be sown. Early sowings look well, and have come up evenly, thanks to the mild weather; we have only had three white frosts as yet. Mangels are a good average crop, and will all be safely stacked by the end of the month, although many farmers have been tempted to leave them out later than usual, as they would have kept on growing so long as the mild weather lasted; in fact, I do not ever remember to have seen them ripen so slowly. Swedes and turnips are a good crop, and with plenty of second-class hay and straw, keep prospects for the winter are good.

Very little demand for small holdings is met with around here; most of the replies to questions on the subject from the district council stating that there is very little land available and no demand for it.

Fat stock and root shows are the order of the day, every market around here having a show; it is a pity that a number of the smaller ones cannot amalgamate into one strong association and hold one show with regulations that would exclude the professional pot hunter, and that would give the tenant farmer a chance to win with a good butcher's beast. Possibly the same society might offer acreage prizes for roots, hold a ploughing match, have classes for corn, wool, butter, dead poultry, and long employment; all of which would do much more good than the present waste of money over mammoth roots grown on the site of an old mixen.—Yours, &c., H. W. D.

December 5, 1907.

Feeding Value of Mangolds in November and April.

SIR,—I should much like the opinion of some of your practical correspondents on the comparative feeding values of mangolds in, say the months of November and April.

Most of my farmer friends tell me (indeed, I have always been taught) that mangolds are of little or no use whatever until the new year comes in.

But my own experience does not point to this. On the other hand, I have proved the contrary, so far as regards giving them to dairy cows.

Take last year for instance. Early in October I began using the leaves, as many as we could tread on a cart every day, as my pastures were absolutely bare owing to the drought. On November 1, having finished the leaves, I was in full swing with the bulbs, giving from 50 to 60 lb. per day per cow. I had to do this or my milk would have gone down to vanishing point. And it is much the same this year. Towards the end of October my milk began rapidly to decrease, so much so that although in three weeks I had seven cows calve, I had no more milk at the end than at the beginning of that period. Consequently I must do something to stay this; so I began my mangolds, about 40 lb. at first, gradually increasing a little every day until they reached their maximum 60 lb., and this had the desired effect.

I might add that during the whole of this time this year I have had abundance of grass, but it seemed of no avail to stem the decrease taking place in the quantity of milk.

Now, what I want to know is this: Why, if mangolds have double the virtue as food in the spring as compared with the autumn, why do I not get more milk then?

The conditions are and have been in past years exactly the same in every respect. I never vary my feed, except to some particular cow. It consists throughout the winter of 14 lb. hay per day in two feeds, 60 lb. mangolds carted on to the grass which they cut themselves (for I never cut any unless for a cow with no teeth), and 5lb. undecorticated cotton cake, of this latter some more, some less, according to the period of lactation.

But I get not one pint more milk in April than

Questions and Answers.

FARMING.

Rations for Dairy Cattle.—The only food I have on hand is hay, which is produced on my farm. I have everything else to buy. I object to crushed oats, as these pass through the animal undigested. At present I am giving equal parts of maize and bean meal. I think I have seen it stated in your columns that maize meal and wheat meal in equal proportions make a good ration for dairy cows.—J. W.

ANSWER: I have always found that well crushed oats are perfectly digested by dairy cows. I do not remember seeing anyone advise in these columns a mixture of equal parts of maize meal and wheat meal as a good ration for dairy cows, and I do not think such would be a good ration. A good many people advise maize meal, but I do not know that maize meal is a suitable milk food; maize germ meal is decidedly better. I should advise you to use about three pounds of undecorticated cotton cake, three pounds of bean meal, three pounds of crushed oats, and about three pounds of bran, and also about ten pounds of straw, of which half may be given long, and half chaffed and mixed with the cake and meals. If however, straw (oat straw) cannot be obtained on satisfactory terms, and you must give hay freely instead, you should reduce the bean meal to two pounds per day, and give hay *ad libitum*. If, however, straw can be obtained, as advised, you need only give about half a stone of hay per day, and I should give it the last thing at night, and the meals and cake in the morning and in the afternoon.

Soot for Grass Land.—Will you kindly inform me, through the weekly news, the best time to sow soot on grass land for hay next year? Would it do to sow it now, or would it be better to wait till spring?—F. G.

ANSWER: Soot is not used to the same extent as a fertiliser for grass land as for arable crops, but it is good for the above purpose nevertheless, as it contains some salts of ammonia and encourages quick growth. The best time to apply it would be in the early spring, before the growth of the grass commences, and from thirty to forty bushels to the acre would be a good dressing.—RUSTICUS.

VETERINARY.

Horse with Grease.—I have a six-year-old mare that has cut rings of greasy heels. It began at fore de first and now is partly over up leaving a scar, but it has begun at the back of two more feet, one forefoot. She eats all right, and is not lame; sometimes a little swelling, not much, and not heated as in some greasy legs. Perhaps you can advise as to keeping and other remedies.—B. A.

ANSWER: There are various degrees or manifestations of grease, because there are several grades of inflammation of the skin of the heel, but your case looks somewhat serious in that the fore extremities are involved, which are not so commonly affected as the hind heels. This suggests a constitutional or breed tendency. Animals of this class require very careful management, particularly in winter, or there is pretty sure to be trouble. Keep the legs as dry as possible, and provide a good clean bed in a well-drained stable. Do not clip the legs, and never wash them. When the horse comes in from work wet and muddy, remove the thick of the dirt with a scraper, and wrap the legs in flannel bandages until they are dry. Whether this will be effected before next morning depends, of course, whether the work is finished early or late, and to some extent on the circulation of the animal, but when dry brush out the dirt with a dandy brush, and apply a lotion of ½ oz each of acetate of lead and sulphate of zinc, dissolved in 1½ pints of rain water.—M.R.C.V.S.

A Shying Cob.—I have a bay cob, rising seven years, which I bought at a fair about three months ago. I bought him of a stranger, and the man said he was quiet. I find that he is a nervous pony; he shies at bicycles, and sometimes at perambulators; of course, he does not like motors, but this I expect; but I do not like the idea of shying at bicycles. He does not kick, nor bolt, but simply rushes across the road. He is quiet at other times, and has no vices. Can you give me any advice so as to try to break him of this? I have never tried ill-usage, but the other way. I might sell him, and without a loss, but do not care to be horse-dealing every day, and the pony is free and fast, and would try to keep him if I could.—J. C.

ANSWER: "Simply rushes across the road" we should consider to be quite enough, for it is a most dangerous manifestation of the habit or vice of shying, because, in the sudden rush, there may be a collision with another horse or vehicle, or if the road is clear, there is sometimes an upset from the trap running one wheel up the bank, or into the ditch. Shying proceeds from one or two causes—a nervous disposition, or defective eyesight, and the first named is the most common. In your case, seeing that the animal only shies at particular objects, it is not likely to be due to defective vision, and we assume that it is quite apart from "fulness of beans," "shortness of work," or love of displaying power which causes some horses to "play up" in the hands of inexperienced horsemen. We may take it, therefore, to be a genuine case of nervousness; or exhibition of extreme watchfulness in what the cob conceives to be a dangerous situation. The only thing to do under the circumstances is to educate the animal up to understand the bicycle. It may be useful to get some cycling friend to assist in breaking the animal to bicycles. Walk him up to the machine, and round it a few times, have it ridden past him at various speeds while he is standing still, and drive him past and alongside it. This exercise should, of course, be carried out where there is plenty of room.—M.R.C.V.S.

Pig Meal.—Will you please analyse enclosed sample of pig meal (purchased recently). Since using it I have lost one pig, and am in doubt whether to attribute the loss to the pig meal.—ANXIOUS.

ANSWER: On page 612 of the issue of the MARK LANE EXPRESS for November 18th, in the section devoted to Fertilisers and Feeding Stuffs, there appeared a most useful article, headed "So-called Cheap Pig Food," to which you are advised to refer, and study. It contains a timely warning against the danger of a cheap pig food, consisting largely of cotton seed hulls, the waste product in the manufacture of decorticated cotton cake and meal, which is now being boomed on the market. A superficial examination of the sample you send shows it to consist largely of these seed shells, with a considerable proportion of grain husk. The material is, we should say, highly indigestible, and, although we cannot say, in the absence of any account of the symptoms, that it caused the death of the pig, you can draw your own conclusions.—M.R.C.V.S.

POULTRY.

Cross for Orpingtons.—I shall be glad to know best cock to mate with Orpington hens (buff). I prefer one that produces most eggs. Would a Plymouth Rock do? Are they good layers? Mine seem to be lazy. Can they be over-fed and get too fat? I give as much as they can eat morning and afternoon; soft food in the morning and corn afternoon. Shall be grateful for reliable advice.—STIBBARD.

ANSWER: We should not advise you to use a Plymouth Rock cockerel, as the progeny would be altogether too heavy and inclined to internal fatness. A Houdan cockerel would be the most profitable bird to use. The hens should be provided with plenty of scratching exercise, as this will lessen their tendency to internal fatness.

LEGAL.

Tenant's Notice.—A man hires a plot of land at a yearly rental; the owner tells him to take possession at once as the time is short to prepare the ground, and promises to come over and bring agreement for signing. The man is to fence in, owner finding materials. Owner writes he is laid up and cannot come over at present. Man takes possession, digs the ground, but no landlord comes; plants, and puts up a hut, so that he can protect his things growing by having someone staying there to look after the ground as cattle run about there. Landlord sells the land, giving the man no notice of his doing so. The buyer steps in and claims the hut and everything. Has the man any claim on the landlord?—PITSEA.

ANSWER: The hirer of the plot of ground was a yearly tenant, and the tenancy was in existence when the land was sold. Therefore the tenant is entitled to a proper notice from the new owner. The test is as follows: B, the tenant, enters into possession at the request of the landlord, and does acts which are referable only to the occupation as a tenant of the land. If the landlord declined to sign the agreement he could have brought an action for specific performance against him. Whether he could or could not have brought such an action is the test.

Tenants and the Agricultural Holdings Act.—If a landlord gives his present tenants notice to quit in view of the Agricultural Holdings Act, which comes into force on January 1, 1909, in order to bring them under a new agreement, how do those tenants stand affected under the provisions of the Act?—A READER.

ANSWER: The only section of the Act that appears likely or could have a retrospective operation is Section 4, the one you write about. Section 9 provides that the Act shall come into operation on the first day of January, 1909. Therefore nothing done in the way of terminating tenancies could possibly be affected by the Act. If the tenancy terminates at Christmas, 1908, the tenant would have a right to claim the benefits conferred by Sect. 4 in respect of additional compensation. The question is not clear if the notice given terminates a tenancy and such tenancy comes to an end after January 1, 1909, although I am of the opinion that such a case would not fall within the Act for the object aimed at in postponing the operation of the Act was to enable landlords to make fresh agreements with their tenants.

November, and if the theory quoted above is correct, surely I ought to do. As, however, I do not, I feel strongly inclined to say it should be knocked on the head altogether.

One other little matter in connection with mangolds came under my notice last year. Owing to the very late spring in this locality, I had to buy mangolds, and a neighbour having a sale, I bought 12 tons of, I think, "Golden Tankard"—anyhow, what were catalogued in the seed list as the "Dairy farmers' mangold."

My cows went on to them the day after they had finished my own (which were ordinary "Yellow Globe"), in exactly the same proportions, but they made not one iota difference in the quantity of the milk.

Now, I wonder much what I shall hear in reply to this letter.—Yours, &c.,

J. G SELLING.

Wadhurst, Sussex, December 3.

Basic Slag Analyses.

SIR,—On page 677 of your issue of the 2nd, it is stated that a sample of low grade slag, showing 27·50 per cent. of phosphate of lime, contained as much as 20·63 per cent. of free lime.

Surely this must be a mistake, as the presence of so large a quantity free—that is to say, caustic—lime would indicate a most wasteful method of manufacture, for lime is only added in sufficient quantity to remove the phosphorous and silica existing in the original iron ore. The lime therefore present in slag exists as phosphate and silicate of lime, and only 2 or 3 per cent. at the most is free or caustic lime.—Yours, &c.,

JOHN HUGHES, F.I.C.,
Agricultural Analyst.

Analytical Laboratory, 79, Mark Lane,
December 4, 1907.

*** Mr. Hughes will find the full detailed analyses of the two qualities of basic slag in Bulletin No. 10 of the Guide to Experiments for 1907, published by the County of Northumberland Education Committee.

Perhaps the analyst at the college, who made the analyses, may see Mr. Hughes' letter and favour us with a reply for publication.—ED.

Profits from Wheat Growing.

SIR,—Your correspondent "Gloucestershire" objects to the market value of the straw being included in estimating the returns from a crop of wheat, and suggests that 65s. per ton is a fictitious price for it, though this estimate of its value is borne out by the report on page viii. of the Market Supplement of your issue this week, which gives wheat straw in Derby market as being worth 60s. to 70s. per ton, and market price is a true estimate of the value either of straw or anything else. To use the word "impoverishing" in connection with land that has grown 6 qr. of wheat to the acre, and has had applied to it for the succeeding crop (roots) 25 tons dung made by cattle eating corn and cake, 5 cwt. bones, and 2 cwt. nitrate of soda per acre, is absurd. Your correspondent would be interested to know how often I am able to grow wheat on the same acre of ground.

My rotation of cropping is wheat, roots, barley, seeds, oats, wheat; and my contention is, that in a grass country, where straw is valuable, wheat is as paying a crop to grow as any other; and a knowledge of this fact is less likely to mislead, than is an attempt to prove that farmers continue to grow wheat at a loss, which neither I nor anyone else believes they either would or could do.

As I stated in the first half of my former letter on this subject, farming is not a paying occupation as things have been the last twenty years; and no class knows this better than landlords, who know that the circumstances of the majority of their tenants would not permit them to pay higher rents, even if they were willing to try to go on farming at an increased rent.

It is a mistake for farmers to try to make out out that every crop they raise is grown at a loss; but this has been the cry for so long that it has become the general belief that a farmer should not make any profit, and if he can be got to admit that his balance-sheet shows a few pounds to the right, his rent must be increased at once, so that he may be restored to a position that gives him the privilege of lamenting his losses. "Gloucestershire" insinuates that it is not practicable to grow 6 qr. of corn and 2 tons of straw on an acre of wheat, but many readers of your paper will know that this has been done on exceptional occasions. I myself have had the yield twice in my time—once in the year 1891 and again in 1905—but of course such a crop cannot be expected to be got very often.

No matter how well the land may be farmed or the crop managed, more than 4 qr. of wheat per acre cannot be relied upon.

It is possible to force a big crop of straw any year if you have enough plant; but if this is overdone the crop will be laid, and the quantity and quality of the grain decreased, while the cost of cutting will be increased.

Four quarters of wheat at 35s. would be £7, and the straw from an acre of average wheat would be worth £5 to sell here, and therefore should be valued at that price if kept; for unless the owner wanted it either for thatch or bedding, he would not think of keeping it for its manurial value alone, because he could buy something far more valuable for that purpose with the money.—Yours, &c., A. J. R.

December 4, 1907.

Where is the Flail still in Use?

SIR,—Thanks to your valuable paper I have received replies from Essex, Sussex, and Devon on the subject, in each case the answer being in the affirmative. Would some of your readers in other counties give me the result of their knowledge.—Yours, &c., H. W. LEWER.

Priors, Loughton, Essex, December 5, 1907.

Midland Notes.

WE have had our first taste of genuine wintry weather. Warwickshire has seen but a thin powdering of snow, and that not universal; but the North Stafford and Shropshire hill country has been thickly covered. Here, in the centre of England, the trouble is with floods. It is impossible to say how many square miles are under water or are just now emerging as the waters subside; but I can answer for big tracts of land beside the Avon, between Warwick and Brandon, and for much low-lying land in the Leam and Sowe valleys. Round about Hunningham, Bubbenhall, and Kenilworth many cattle have had to be removed from flooded fields—sometimes not without difficulty.

IT is only by good fortune that no loss of human life has to be recorded. A Coleshill farmer (Mr. Johnson) had an extremely unpleasant experience lately, when the horse he was riding was carried off its feet by the torrent when crossing what is usually a very trifling ford; and a labourer from Spernal, near Studley, fared worse when both the horse he was driving and the milk float behind were swept away down the brook near Studley Station. In this case a rescue was effected with difficulty.

IF it be found possible to bring the 1908 Warwickshire Show to Aston Park—as is proposed—the fixture ought to be assured of popular success. Aston, to all intents and purposes, is still part of Birmingham, although it has nowadays a mayor and corporation of its own; and the park stands in the midst of a thickly-crowded urban and suburban population, to whom anything in the nature of an agricultural show will have all the fascination of an entire novelty.

THE only difficulty in the way is that of raising the necessary fund of some £300. But there are so many wealthy manufacturers, shopkeepers, and professional men in the district, many of whom stand to gain by any large incursion of visitors from other parts, that this should present no serious obstacle.

EVESHAM fruit-growers (as was foreshadowed in this column recently) have their desire. The order for the burning of mildewed gooseberry bushes is to be withdrawn, and another order substituted, requiring only spraying and cutting back. Let us hope that with the change the last has been heard for the present of a pest which has caused more trouble, anxiety, and general uncertainty than anything for many years past. Let us hope also that Worcestershire may not have to pay in the future more heavily than ever for the concession to local feeling. For if entire destruction of affected bushes were justifiable when the disease was thought a new and very rare one, is it not paradoxical to adopt gentler measures now that it is known to be well established and fairly common? Destruction without hope of compensation, however, would have been ruinous to many small men.

THERE was an echo of the hopping season at the last meeting of the Staffordshire Education Committee. That body, it seems, is not content with the provision commonly made for Black Country hop-pickers in the gardens of Worcester and Hereford. It sent a superintendent of school attendance officers to make investigations, and that gentleman has reported that he found the sleeping accommodation and sanitary arrangements primitive; also that children not engaged in picking were discovered "rolling about among the vines," probably enjoying the experience as thoroughly as middle-class children enjoy rolling about the sands of the seashore.

ACTING, however, upon this report, the committee has decided not to adjust the holidays to fit in with the picking season. It will therefore go on, as in the past, losing grants because the parents will insist upon the customary country outing, and duly prosecuting them for carrying the youngsters with them.

KIDDERMINSTER has begun well in preparing for next year's visit of the Hereford and Worcester Show. The local committee, which has just been formed, is a strong one, with Messrs. Joseland and C. Lawley as secretaries, and Mr. Michael Tomkinson as treasurer. The Hereford Society held its show at Kidderminster in 1893, and it was from the circumstance of the fixture being held there that the idea of amalgamating the two county societies originated.

December 5, 1907.

Northern Notes.

MUCH misconception exists about the Small Holdings Act. An agricultural labourer who had saved a bit of money went into a lawyer's office and said he wanted a small holding, fully expecting to be supplied with a bit of land almost immediately. Why should there be any delay, he argued, when there was an Act of Parliament which says a man is entitled to a small farm if he only asks for it? This is the sort of ignorance with which the councils have to deal.

TO clear the air of wrong notions, and to bring the knowledge of the people up to date, the member for the Buckrose Division of Yorkshire has been asked by a parish council, and he has consented, to give an address on the Small Holdings Act in a public hall, and he will no doubt, as he did (before entering Parliament) in 1894, carry his lecture to other places in his widely-scattered and purely agricultural constituency.

I HAVE heard that in all parts of Yorkshire there will be a big demand for small holdings. In a North Yorkshire district, whenever a small farm is to let, the applications for it are very numerous. A correspondent, giving his experiences of what has happened in the northern part of this county, says he saw in a moorland district several large farms that were partially gone out of cultivation. Forty years ago he had seen on one of these farms after harvest a very large stackyard of oats and barley; this year he saw but two small round stacks, some of the buildings were down, and looked almost deserted. He passed three or four such places in the same deserted state, and one of them was a farm on which, as a lad, he had helped to thrash with the steamer for four days at a stretch, but not a stack was to be seen and scarcely a building.

THE remedy for this state of affairs may perhaps be found in splitting up the land into small lots. At one time it was said the owners of these half-derelict lands were too poor to build. Now the same correspondent thinks they are too rich, as they are planting everywhere, and fast turning it into a game forest. Some of this same land used to grow 7 to 9 qr. of oats to the acre. Bad roads and steep are a drawback, as well as the distance from a railway. But county councils and landlords combined could work wonders in effecting a transformation.

MANY North Country people will be "in town" this week for the Smithfield Show, and they would do well to take advantage of Earl Carrington's "At Home" at the Board of Agriculture on Wednesday and Thursday. The President has always shown a lively interest in the work of his department, and he has won the confidence of those engaged on the land; and having a thoroughly practical knowledge of what is wanted, the farmers who visit him this week in London, and who have not previously made his acquaintance, are sure to be charmed with his personality. He is a West Yorkshire farmer, and "a right good fellow!"

A PHASE of the small holdings question that seems to have escaped particular notice is of special interest to large farmers. I allude to the possibility of the best among the foremen desiring to cultivate a bit of land on their own account, and, as the services of first-class foremen are not always obtainable, the point is a serious one for farmers who naturally regard with some degree of apprehension, the working of an Act that may, they think, prove inimical to their interests. Our rural district councils are largely made up of the farming element, and uncertainty as to the future and the effects of farming on a small scale have not conduced to eagerness of inquiry on their part whether the demand for small holdings has or has not a tangible existence. At any rate, the rural councillors are not willing advocates of small holdings.

POULTRY.

Turkeys: Fattening for Christmas Markets.

As Christmas fare the turkey has gradually been ousting all other kinds of poultry from public favour, and it now stands alone as the most highly appreciated dish of the festive season. Everybody who can afford to buy a turkey will have one on Christmas Day, and the goose, which at one time was the universal dish, has taken a back seat. The result of this change of taste is that the price of turkeys has gone up steadily, and there is no doubt that turkey raising is now one of the most profitable branches of the poultry industry. With the exception of a few big farms, where turkeys are raised by men, the industry is almost exclusively in the hands of the women of the British Islands, and so well are the various processes, from the mating up of the breeding-pens to the hatching of the poults and the fattening and killing of them, carried out, that there is no danger that anybody who wants a turkey at Christmas will have to do without it—if he can pay the price.

From Stubbles to Sheds.

The time is now at hand when turkeys must be put through a special course of fattening, with the object of bringing them up to the greatest possible weight, by furnishing their large frames with meat of the best quality that a judicious system of feeding can produce. For corn growers the year has been a bad one, and on almost every farm there is a large quantity of damaged corn, but this is all in favour of the turkey raiser, and by liberal feeding now farmers who have a large flock of turkeys may make up for some of the loss occasioned by a wretched harvest. There seems to be a shortage in the turkey crop as compared with past years, but it is noticeable that the birds are particularly well grown and in better condition than they have been in mid-November of other years, and this is due to the liberal stubble feeding which they have enjoyed. But the stubbles are now practically cleared of grain, and in order that turkeys may lose nothing of the condition which they have gained they should be moved at once to the fattening sheds. Whilst being fattened turkeys must be confined to a house or shed, and as there are few farmers who have a special house for this purpose, it is generally necessary to make use of any farm building that can be spared for a few weeks. These birds will not thrive in a close atmosphere, and ordinary fowl-houses are too small and stuffy for their comfort, but if there is a large open barn, cow-shed, wood-shed, or some building of this kind, it can be temporarily converted into a fattening-shed. Plenty of ventilation is what they want, and if one side of the house is open, it is all the better for turkeys, and they can be fenced in by means of wire netting, but as they are restless when there is too much light passing into the house, it is advisable to cover the netting with an awning of thin canvas, or the opening may be closed by canvas alone. Houses which are not open on one side, but which have large windows, may be made suitable by taking out the windows and substituting netting or very thin canvas. The floor of the house should be well littered with straw, and it is not a bad plan to put in a few low perches.

First Fortnight's Fattening.

For the first two weeks or so after turkeys have been first confined they will eat freely without being crammed, provided that their foods are palatably prepared and that they are allowed out of doors for their meals. I have found it advisable to have a yard attached to the house and to let the birds into this morning and evening for an hour or so. In the morning they are fed mash in troughs, and are also supplied with a tub of milk to drink from, and plenty of grit and charcoal in a corner of the yard. Mash made up of the following stuffs has been found quite suitable:—Three parts barley-meal, three parts maizemeal, three parts ground oats, five parts boiled potatoes, five parts boiled turnips, and one part linseed meal containing 12 per cent. of oil. Let the whole be mixed dry and then moistened to a crumbly consistency by the addition of skim-milk. The evening meal may also be fed in troughs, and may consist of grains of various sorts, cracked or rolled and fed dry. Oats, maize, barley, and wheat are suitable, but I consider a mixture of equal parts barley and oats best, as these grains yield flesh of fine and firm quality, which is an important consideration.

Cramming with Pellets.

It is generally observed that, after a couple of weeks' feeding in confinement, turkeys lose appetite, and it then becomes necessary to finish them by cramming. A system largely in vogue amongst farmers' wives is cramming with pellets, and the process may be described thus:—The food consists of finely ground barley and oats with about 10 per cent. of melted tallow or fat, mixed with skim milk to form a stiff paste. The food is kneaded into pellets by the feeder, who is generally a woman, and she sits on a low stool, with a pailful of the food and a large bowl of milk by her side. The turkey is taken between the knees, its mouth is opened, and the pellets are dipped in the milk and slipped down the gullet. The pellets are made about the size of a finger, and a cock turkey will take from 1 lb. to 1½ lb. of them at a meal, whilst a hen may take ¾ lb. Turkeys are crammed in this way twice a day for about a fortnight, and enormous increases in weight are made by large-framed, healthy birds.

Cramming by Machine.

This process is very similar to the "Sussex" method of cramming chickens, and the same machine may be used for both purposes, although it is usual to have a longer nozzle for turkeys. The birds are confined to a house as in the methods described, and having been fed in the natural way for a fortnight, they are crammed for the remainder of the time until fat. I have known cocks to gain 6 lb. each in a fortnight by this process, and hens have increased by 4 lb., and although the cramming of turkeys by machines is not commonly practised, I have no doubt that it is the most satisfactory and profitable method. The birds must be crammed twice a day, filling the crop at each meal, and then returning them to their shed, which should be kept nearly dark. The food must be semi-liquid, in order to pass through the nozzle, and may consist as before of barley meal, finely-ground oats, and skim-milk, with tallow at the rate of 2 to 3 oz. for each bird per day—not per meal, as has sometimes been recommended. When large turkeys are to be crammed, a wooden stand or table should be made, upon which they may be placed to raise them level with the machine, as they can hardly be taken under the arm, as fowls and small turkeys are held. The flesh of turkeys crammed with semi-liquid food is said to be superior in quality to that of turkeys crammed by any other process.

H. DE COURCY.

Winter Eggs.

"Eggs are eggs" now, and it should be the aim of everyone who keeps fowls to endeavour to produce them at this season. Of course, it is easier said than done; but, nevertheless, there are many who are doing it. In the first place, the birds must be housed comfortably—that is to say, there must not be too many crowded together so that the house is stuffy, otherwise the birds will feel a great change when leaving the house on cold, damp mornings; there should be, however, an efficient system of ventilation, so planned above the heads of the birds as to avoid draughts; clean nest boxes, with some soft hay, and a dummy egg must be provided.

All the early pullets and those hens which were the first to moult should be selected and separated from the later pullets and hens. Good food, with a proportion of meat, a mixture of good biscuit meal and meat, should be prepared with hot water, not enough to make it pasty, but just as much as the meal will absorb. This should be allowed to stand about half an hour, and then dried off with barley meal or thirds, so as to make a crumbly mixture, fed warm, as much as the birds will clear up in about five minutes, in the early morn, and a feed of sound oats or wheat, one handful per bird, in the afternoon about 4 p.m., is sufficient for birds on free range (this being a farmers' journal, it is assumed that the majority of birds have free run).

The houses should have a southerly or south-easterly aspect, so that the full benefit of the sun may be obtained, and, where possible, the position should be sheltered by hedges or banks from north and east winds.

H. C. C.

Sitting Hens and Strange Nests.

When fowls are set in a strange nest it is best to put them on their new nest at night unless very tame. They should never be forced or hurried, and should be placed in front of the nest they are to occupy, with a few common eggs in it, when they will generally take to it at once, and if not disturbed again too soon they will stick to it and sit well.

One way of making hens sit is to take the bird and let her stand in front of the nest, holding her in front of the breast by one hand, and then stroking her gently with the other from head to tail, just as one would stroke a cat or dog, then place the left hand in the same position as the right one with which the bird was held, and draw the fingers of the right hand underneath the beak and down the neck. Nothing else will tame broody hens half as much as this treatment.

Hens that have travelled a journey or been removed should be put into a coop and fed well with hard corn and water. They should then be placed on the nest like this in the evening and covered in so that they are partly in the dark, and should be allowed to remain on the nest all the next day and taken off the day after. This ensures that they will be well settled down before being disturbed. For the first few days they should be fed in a coop or other small place; if not, they become very wild, and will not go back to the nest.

Fertilisers and Feeding Stuffs.

The Functions of Fertilisers.

It may be taken for granted that every farmer knows that the essential ingredients to be replaced in the soil as plant food, to restore those extracted by the crop, are nitrogen, phosphoric acid, lime, and potash, or ammonia, phosphate of lime, and potash, according to the nomenclature generally adopted in this country.

The part which each of these ingredients fulfils in the organism of plants, and the interdependence of one ingredient with another, are not exactly known, and the object of continued investigation, but, generally speaking, the following functions are attributed to them :—

Nitrogen is indispensable and enters into the composition of all the organs of a plant. It is nitrogen which gives to vegetable products, thus to cereals, those nutritive qualities which have rendered them valuable as nourishment for man and animal from time immemorial. It is nitrogen that produces the albuminoids in hay, the flesh of animals, and the caseine in milk. It is the want of this ingredient that causes the leaves of corn in the spring to be yellow, a sure indication that a dose of nitrate of soda should be prescribed.

Phosphoric Acid is found in every part of plants, but accumulates more especially in the seed. It is the principal constituent in the bone formation of man and animals, and where it is wanting in the soil plants grow feebly and animals do not thrive. In some parts of Europe where the character of the soil is granitic and deficient in phosphoric acid, both horses and cattle remain small in statue and feeble. Their bones are so weak and brittle that they possess no resisting power, and have been known to break from a mere blow. In such districts the liberal use of basic slag and superphosphate will gradually make an enormous change.

Potash.—Potash is always abundant in the ash of plants. When this constituent is deficient the plant cannot grow vigorously, because in the absence of a sufficient supply of potash the green matter of the plant is not able to elaborate those substances which are indispensable for the formation of new organs.

Lime plays an important rôle in the soil in causing the decomposition of animal and vegetable matter, in promoting nitrification, in rendering the soil potash soluble, &c. It is also utilised to a small extent by the plant as plant-food, but its principal advantage is more in the way of its action on other ingredients in the soil.

Now if one or other of the elements is naturally abundant in an available condition in the soil, it would be waste to apply further quantities in the form of artificials ; but, on the other hand, if one is deficient, the plant cannot make proper use of the others.

The crop is then governed by what is termed the "law of the minimum" ; it can grow only up to the limit of the ingredient present in insufficient quantity.

In this respect plants may be compared to a stone mason, who with different materials, sand, lime, and water, compounds mortar. But of what use to him would be a big heap of sand if he had no lime. He could only make as much mortar as the lime would suffice for, and similarly with the other materials if one was lacking.

In the same way a plant requires all the constituents for its growth ; if one is present in insufficient quantity, its growth is arrested when that limited quantity is used up.

Are Phosphate and Potash washed out of the Soil?

It is said that the best time to apply basic slag and kainit is in the autumn or early winter, as by this early application the phosphoric acid in the slag becomes available for the plants in the spring, when they start growing, and the potash in the kainit improves in condition, having parted during the winter months with the proportion of chlorides which are not desirable for the crop.

But the question is often asked whether, with such early application, there is not a great risk of loss of the valuable constituents from being washed out during the heavy winter rains, especially in meadows and pastures which are subject to being flooded, or, if not washed away, washed too deeply into the soil.

It might naturally be assumed that this would be the case, but experience shows that there is not much ground for such apprehension, especially if the heavy rain does not come directly after the application of the manures. Certainly with basic slag there is no danger. It is not in a water soluble condition. Both its valuable constituents—phosphoric acid and lime—are absorbed so quickly and intimately by the soil, and, moreover, the slag, in consequence of its weight, lies so near to the soil that it could not be washed away.

With regard to the kainit, we cannot speak with the same certainty ; it is possible that in case of heavy floods a portion of the potash may be washed away or washed too deeply in the soil. The potash being soluble may be lost, but it may also be assumed that a large proportion of the kainit is retained by the soil.

Experiments indicate that this is the case, because meadows to which kainit has been applied in the autumn have shown great benefit from the application, even although the autumn and winter were subject to heavy rain.

It may, however, be prudent not to apply kainit to low-lying meadow in the autumn, but to give them a dressing of sulphate of potash in the spring ; the application of kainit to meadows in the spring is not to be recommended, as the chlorides act unfavourably on the quality of the herbage.

Potato Culture.

The results of trials with fertilisers on potatoes have shown conclusively that potash is of supreme importance for the crop, and that the best artificial form in which it can be applied is sulphate of potash.

The summary of the results obtained in the field trials of the Midland Agricultural Institute affords useful information. It was as follows :—

1. Where farmyard manure alone is applied to the potato crop, moderately heavy dressings (up to 20 tons per acre) may profitably be given.

2. The largest profit was realised on the plot where a small dressing of dung was supplemented with a moderate dressing of artificials, as follows :—

10 tons farmyard manure.
2 cwt. nitrate of soda.
4 cwt superphosphate.
1½ cwt. sulphate of potash.

3. Artificials alone give considerable profit when applied in moderately large dressings, but are not so good as artificials and dung together.

4. The dressing of artificials only, which gave the best results, was the following :—

1½ cwt. sulphate of ammonia.
4 cwt. superphosphate.
1½ cwt. sulphate of potash.

5. It pays better to supply nitrogen to the potato crop, in the form of sulphate of ammonia, than as nitrate of soda.

6. Dissolved bones do not give such good results as when the same amount of phosphoric acid is applied in the form of superphosphate

7. When equal amounts of potash are used, sulphate of potash has a more beneficial effect upon the potato crop than either muriate or kainit.

8. Very heavy dressings of artificials may give a heavier crop, but are not so profitable as moderately large applications, and are, therefore, not to be recommended.

It may be noted that the dressing of artificials mentioned in paragraph 4 as giving the best results was equal to 7 cwt. per acre of a fertiliser with an analysis of :—

5 to 7 per cent ammonia.
15 to 17 ,, ,, soluble phosphate.
10 to 11 ,, ,, potash.

and would cost at to-day's prices somewhere about £6 10s. per ton.

Importance of Nitrogen.

In a soil of medium quality, poor in nitrogen and phosphoric acid, the supply of nitrogen in fertilisers plays a *rôle* four times as important from the point of view of crop increase, as that of phosphoric acid or potash, according to the report of Professor Grandeau, on the result of his experiments.

The results, obtained in the course of his experiments conducted over a series of years, explain the excellent and, in deed, sometimes extraordinary effect produced by the application of nitrate of soda to the soil. In spite of the high price of the fertiliser, its use, according to the opinion of the professor, is profitable. Its consumption throughout the world continues to increase yearly to such an extent that its exhaustion within a number of years not very remote is looked forward to with some anxiety, although within recent years science has unlocked the door to supplies from other sources which will be plentiful and, it may be hoped, cheap long before the nitrate deposits in Chili have been entirely exhausted.

Correspondence dealing with Fertilisers and Feeding Stuffs appears in the regular correspondence columns of the paper. We think it unnecessary to publish the table of unit values in each issue. It will be published in an early issue of each month.

Result of an Analysis.

Compound Feeding Cake of an Inferior Quality.

To the Editor of the MARK LANE EXPRESS.

DEAR SIR,—I send you a piece of compound cake which I have purchased — 4 tons — to feed young stock during winter along with crushed oats. They don't seem to care about the cake, but eat the oats. Being a constant reader of your paper, I send sample of the cake to you so that you can publish its percentages and feeding qualities, &c. Invoiced as 8 per cent. oil and 24 per cent. albuminoids ; price per ton £6 15s.

ANXIOUS.

Result of Analysis.

Moisture	14·25
Oil	6 07
Albuminoids	20·37
Carbohydrates	39·74
Indigestible fibre	11·87
*Mineral matter	7 70
	100 00
*Containing sand	2 30

The sample is much below the guarantee ; moreover it contains a very large amount of sand, and consequently is not fit for young stock. They show their good sense in preferring the oats.

Compound Fertilisers.

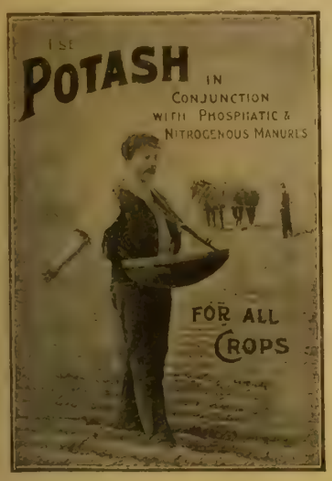
Should a farmer buy the ingredients of a complete fertiliser separately and mix them himself, or should he buy the complete fertiliser ready made from a manufacturer ?

We are of opinion, for reasons given more than once in these columns, that the latter course is the best, so long as the buyer gets the manure from a good firm and stipulates for a guaranteed analysis. He can also stipulate from what sources the ingredients are to be derived.

On this subject the remarks of an American agricultural paper seem applicable. The term "complete" fertiliser, writes the paper, covers a great many forms of plant food. A fertiliser may be complete for one crop or on a certain soil, yet be incomplete for some other crop, or under other conditions.

The real complete fertiliser is that which is intimately mixed by special machinery at a factory, and under the supervision of those who fully understand how to perform the work.

One of the greatest injuries done to the American farmer is that of inducing him to suppose that the raw materials can be mixed on a barn floor with a shovel and a sand screen. The impossibility of even experienced handlers of fertilisers performing such work with the aid of crude appliances should be considered.



That farmers, who do not understand fully the requirements of their soils and crops, and who should have their plant foods in the finest possible condition for use, should be advised to mix raw materials on a barn floor, it is to be deplored, as such farmers will not thus procure fertilisers at the lowest cost, they will be disappointed in results and they will suffer a loss which could be avoided by using a complete and thoroughly mixed plant food.

Those who have advocated home-mixing in years past have exposed their lack of information of factory methods, for it is a fact that in order to render raw materials fine, dry, and have them intimately mixed so that the crops can receive food uniformly it may be necessary under some circumstances to run the materials through the machinery a second time, sometimes depending upon the weather and the nature of the material. The strongest crushers and grinders, the most complete screening arrangement, and the most improved mixers must be resorted to, in order to put upon the market products sufficiently uniform to permit of samples being taken for analysis. A hundred samples might be taken from a ton of home-mixed fertiliser and no two of them would be even nearly alike, for the reason that it is impossible to perform such mixing without the machinery for so doing.

Potatoes for Cows.

It has been observed that when potatoes in a raw state are supplied in any quantity to cows, they act injuriously on the quality of the milk and the butter made from it. The fat contents of the milk are diminished, and the milk acquires a bitter flavour, which becomes more marked as the supply of potatoes is increased.

In order to obviate these defects the potatoes should be steamed. They can then be given without the fear of unfavourable results, and their use can be recommended. Care must, however, be taken that only sound potatoes are employed. Diseased or frost-bitten tubers act very injuriously on the health of the cows, and consequently on the yield and quality of the milk.

THREE RELIABLE CALF MEALS WHICH NEVER DISAPPOINT.

"This 'Cream Equivalent' do smell beautiful, I a'most wish I were a Calf."

1. THE "LANCASTER" CALF FOOD.

13/- PER CWT.; OR, IN FOUR CWT. LOTS, 12/6 PER CWT.
Carriage paid to nearest Railway Station.

This Meal does not swell out so far as the "Milk Equivalent," but is much easier to prepare, and is recommended to those who do not personally see to proper preparation.

2. BIBBY'S "MILK EQUIVALENT."

12/6 PER CWT.; OR, IN FOUR CWT. LOTS, 12/- PER CWT.
Carriage paid to nearest Railway Station.

This Meal swells out splendidly, but needs careful preparation. It is, however, a first-class Meal, and probably the most economic in use of all the Calf Meals in the Market.

3. BIBBY'S "CREAM EQUIVALENT."

15/- PER CWT.
Carriage paid to nearest Railway Station.

Is the latest and most popular of our foods; we believe it is the nearest approach to the ideal that has yet been reached in preparations of this kind.

Our new Circular, "How to Rear Calves for the Dairy," will be sent free of cost to any applicant.

THE CATTLE SHOW.

The 109th show of the Smithfield Club, which opened this morning in the Agricultural Hall, Islington, worthily maintains the high standard achieved by previous exhibitions. A most satisfactory entry was obtained. Exhibits from all the principal feeders in the United Kingdom, comprising 281 head of cattle, 158 pens of sheep, and 150 pens of pigs, are on view.

The prize money, as compared with 1906, shows several alterations, and the first is a reduction in the total amount offered. This year the sum is £4,113 16s. 6d., as compared with £4,152 6s. 2d. last year, so that there is a decrease of £38 9s. 8d. The amount, however, still allows of handsome prizes in all sections, and there is no actual reduction in the class prizes or specials, which remain at the same amount as last year. The cause of the reduced total is the elimination of one or two classes which have not met with sufficient support, and have as a result been allowed to drop out.

A notable example of this is that Cotswold sheep, which used to have, like other breeds, a section to themselves with a special breed award, have gradually dwindled, until this year they are swallowed up in the section for Devons or any other long-woolled breed. This section now also includes the South Devons, which last year only numbered one. Cheviots only totalled two in two classes, so that exhibitors of these particular breeds have only themselves to blame for the loss of a section at the premier Christmas show of Great Britain.

There is another omission to note in the sheep section; this is that the section for Dorset sheep has only one class this year, it being for lambs under twelve months old, and none for wethers.

Last year the section for Small White or Black pigs failed to attract an entry, and the result is the section does not figure in the Agricultural Hall to-day. On the other hand, the porker class suitable for the London trade was so successful last year that two more classes have been added.

The champion beast may win £260 and the King's Challenge Cup, the champion pen of sheep £110 and the Prince of Wales's Challenge Cup, and the champion pen of pigs £70 and the Prince Christian's Challenge Cup.

The carcase competitions, for which separate entries are made, is as popular as ever, the entries comprising thirty-three cattle, sixty-five sheep, and thirty-four pigs. These animals are exhibited alive on Monday, and their carcases on the Wednesday of the show. In addition to the prizes offered by the Club, valuable challenge cups are offered by the Butchers' Company of London in each section of this competition, the holders of which also receive the Club's silver medals.

LANCASHIRE CHEESE.

Some time ago in this Journal reference was made to the progress of cheese-making in Lancashire, and the cultivation of the public taste for this famous product of the farms in the Red Rose county. Preston has just had a great dairy show and cheese fair, and a very imposing display was made in the public hall, on the lines of the great show at Chester.

Few people appear to have heard of Lancashire cheese outside of the county, nor is Cheshire cheese so well-known as it might be in some parts of the four northern counties. Both Lancashire and Cheshire produce an article of very fine quality—second to none in the opinion of many connoisseurs. A description of Lancashire cheese is summed up in these words: "The mildest, the meatiest, and the sweetest in the Kingdom." The chief foreign supplies have filled most of

the shops of South Lancashire towns and cities for many years; but lately the praises of the home manufactured article have been sounded far and near, and there appears to be a well-assured future before the producers.

The Earl of Derby is president of the new society, and he is backed by a very influential committee, who are likely to make it a great power for usefulness. There were nearly 150 entries in the cheese classes alone. The opening day was brilliantly fine, and the sun shone down into the hall in glorious effulgence, showing to the best advantage the pyramids of golden-hued Lancashire cheese. The cheese was wonderful for appearance, texture, and flavour, and in a season not of the best, reflected the greatest credit upon the farmers. If anybody in these days has a good article to sell, all the publicity possible should be given to it.

Lancashire, already famous by reason of its cotton industry and its own "Royal" show, may establish another claim to notoriety through its cheese.

Notes of the Week.

Norwich and Birmingham Fat Stock Shows being over, the centre of agricultural interest is now the London Smithfield Show.

Founded in 1789, it has always been the most important, and this year will fully main its reputation.

Many important agricultural meetings take place during the week.

Lord Carrington will be "at home" at his official residence on Wednesday and Thursday to all farmers.

And he will be present at the annual dinner of the Farmers' Club and Central Chambers of Agriculture on the 10th inst.

Rust disease in wheat is said to cause an annual loss of over £100,000,000 in the world's crop.

But "Trusts" disease probably causes a good deal more.

The Meat Trust disease—Chicagoensis ma'odoura—is now invading this country.

Nearly 80 per cent. of the meat consumed in London comes from abroad.

What is a "downer"? It is, in Chicago phrase, a bullock too weak and ill to stand up.

It is, as they say over there, rustled over to the slaughterhouse to save its life!

What is a "canner"? It is a diseased bullock slaughtered and canned for consumption.

What are "spread-bells," "lumpy jaws," and "animated skeletons," which, according to American report, find their way to the slaughter-houses.

This year such trash is said to be abnormally plentiful.

Our Fat Show Stock forms a pleasant contrast.

The moral is, buy British bred and British fed meat.

Motorists request that owners of hedges along country roads and lanes will cut them down, so that the view may not be obstructed.

Motorists show so much consideration for others that the proprietors will promptly spoil the beauty of their hedges to oblige them.

It may be noted that there is a Bill before the Belgian Parliament to tax motors for the up keep of the roads.

The tax will vary from 8s. on motor cycles to over £8 on big motor cars.

We were startled the other day to note that a woman, in giving evidence, told the judge that her husband was a highwayman.

It turned out that he did not belong to what was known as "the profession of the road," but was simply employed in the prosaic occupation of a road-mender.

The collection of fruit at the Royal Horticultural Society's Show was worth a visit.

It contained specimens of the best fruit grown in different parts of the British Empire, from the luscious and curious fruits of the tropics to the fruit grown far north in Canada.

What are bananas? asked the teacher. A group of islands in the West Indies was the reply.

THE FARMERS' DIARY.

TUESDAY, DECEMBER 10.—First Shilling Day at the Smithfield Club's Show at Islington, 9 a.m. to 9 p.m.—Annual Dinner of the Farmers' Club and Central Chamber of Agriculture, 7 p.m. at the Criterion, Lord Desborough in the Chair; Lord Carrington to reply for Agriculture—Mr. Ailwyn Fellowes addresses the Leicestershire Chamber of Agriculture at Melton Mowbray—Leeds Fat Stock Market, first day—Special Sales of Fat Stock at Ipswich, Lynn, and Hull—Farmers' Christmas Fat Stock Show and Sale at Preston—Fat Stock Sale at Hitchin—Cattle Fairs at Bath, Melton Mowbray, Haverfordwest, Knaresborough, and Rugeley.

WEDNESDAY, DECEMBER 11.—Smithfield Show at Islington continued—Lord Carrington At Home, 4, Whitehall Place, noon—Special Meeting of the Royal Agricultural Society at Islington, 2 p.m.—Denbigh Great Pig Fair—Show of Table Poultry at Islington, first day—Great Horse Sale at Peterborough—Annual Dinner of the Estate Agents' Institute, 6.30 p.m. at De Keyser's Hotel—Leeds Fat Stock Market, second day—Barnstaple Fat Stock Show—Edenbridge Fat Stock Show—Aylesbury Fat Stock Show—Dublin Fat Stock Show—Malmesbury Annual Fat Stock Market; and Teagle's Sale of Shorthorns—Council Meeting of the Central Chamber of Agriculture—Middlesex Fat Stock Show at Southall—The Lord Mayor opens the Meat Market Abattoirs at Islington, 3 p.m.—Brackley Sheep Fair—Cattle Fairs at Gloucester, Ringwood, Narberth, Baldwood, Petersfield, Boston, and Abingdon.

THURSDAY, DECEMBER 12.—Smithfield Show at Islington continued—Lord Carrington At Home, 4, Whitehall Place, noon—Leeds Fat Stock Market, third day—Show of Table Poultry at Islington, second day—Maidstone Annual Fat Stock Show—Maidstone Annual Agricultural Dinner, Lord Castlereagh, M.P., in the Chair—Hunters Improvement Society's Meeting, 12, Hanover Square—Plymouth Fat Stock and Poultry Show—Romsey Show—Cattle Fairs at St. Neots and Retford.

FRIDAY, DECEMBER 13.—Smithfield Show at Islington, last day—Leicester Agricultural Fair—Cattle Fairs at Leyburn, Kimbolton, and Leominster—Great Horse Sale at Derby—Pony Society's Meeting, 12, Hanover Square—Fat Stock Show at Yeovil.

SATURDAY, DECEMBER 14.—Norwich Christmas Market—Kingston Christmas Market—Buckingham Great Fair.

MONDAY, DECEMBER 16.—Ashford Cattle Show, first day—Bridgnorth Great Fair—Cattle Fairs at York, Bedale, Warwick, and Welshpool.

Royal Agricultural Society's Annual Report.

The annual general meeting of the Royal Agricultural Society will be held in the Club Room at the Royal Agricultural Hall, Islington, on Wednesday next, the 11th inst., at 2 p.m.

The report of the council to be presented at this meeting is a very lengthy one, covering the whole of the work of the society during the past year, but the details have already been made public in the report of the various meetings held, so that we need only give one or two points not previously dealt with. Of these the chief, perhaps, is that dealing with

The Membership,

for it is recorded that, despite the fact that 629 governors and members joined the society during the year, the net increase was only seventy, owing to the losses through deaths, resignations, &c., having been the large one of 659. The cause of the loss is as follows:—Deaths, 3 governors, 92 life members, 154 annual members, and 1 honorary member; 31 members have been struck off the books under By-law 12, owing to absence of addresses; 61 under By-law 13, for arrears of subscription; and 1 governor and 216 annual members have resigned.

The total number of governors and members now on the register is 9,690, divided as follows:—One foundation life governor, 171 annual governors, 91 life governors, 6,308 annual members, 3,090 life members, 29 honorary members.

The Lincoln Show.

The show of Lincoln and the arrangements for next year's exhibition at Newcastle naturally received a good deal of attention. As regards Lincoln it is reported that the number of visitors—133,006—is the largest since the Cardiff meeting in 1901, when the attendance was 167,423, whilst as to the financial success of the Lincoln Show, it is estimated that the profit will be £5,056, in addition to which there will be the contribution of £2,000 from the ordinary funds of the society to the show account.

Prizes at Newcastle.

Coming to the Newcastle Show, it is pointed out that the date fixed is Tuesday, June 30, to Saturday, July 4, and that the prize sheet to be issued early in the New Year will be of the same comprehensive nature as that provided at Lincoln this year. Towards the prizes to be offered £5,000 will be contributed by the Royal Agricultural Society from its own funds, £2,000 by the Newcastle Local Committee, and £300 by the Northumberland and Durham Agricultural Societies, whilst, in addition, offers of champion and other prizes have been received from numerous agricultural and breed societies.

The first prizes in the most important classes for horses will be increased from £15 to £20, and in the classes for cattle, sheep, and pigs, third, fourth, and fifth prizes will be offered in cases where the exhibitors exceed a certain number in a class.

Prizes, amounting in all to £260, are offered by the Newcastle Local Committee for the best managed farms in Northumberland and Durham, and entries for these close on Tuesday, the 31st inst. Applications for forms should be addressed to the secretary of the society, at 16, Bedford Square, W.C. The entry fee to members of the Royal Agricultural Society or of the Northumberland or Durham Agricultural Societies will be £1, and, to non-members of these societies, £2.

An offer of prizes of the value of £50 and £25 has been accepted for plans of farm buildings, and the detailed conditions of competition are now under consideration, whilst prizes of gold and bronze medals will be offered in two classes for manure distributors for (*a*) artificial manure and (*b*) farmyard manure.

The site of the Newcastle Show is on the Town Moor, where the 1887 meeting was held. It is about one mile distant from the Central Railway Station, and is reached by two routes of electric tramways.

Prize Winners at Birmingham.

The first of our three illustrations on page 713 is of the pen of Shropshire lambs with which Sir R. P. Cooper, Bart., Shenstone Court, near Lichfield, won the first prize for three fat wether lambs lambed in 1907. They are nine months old, and weigh 4 cwt. 2 qrs. 5 lb.

The pen of Berkshire pigs is that which won first prize in the class for two fat pigs exceeding nine and not exceeding twelve months old, and were reserve for the Hotel and Innkeepers' Challenge Cup for the best pen of pigs in the show. They were bred and exhibited by Mr. Alfred Brown, Hill Farm, Southampton; their age last week was 11 months and 2 weeks.

Our third illustration is of the prize winners of the sheep championship, viz., Mr. T. Fowell Buxton's Hampshire Down wether lamds, first in their class and winners of the Cooper Challenge Cup for the best pen of sheep. They were bred by Mr. Buxton at Waters Place, Ware, Herts, were 10 months and 1 week old, and weighed 5 cwt. 2 qr. 5 lb.

In view of the increase in gooseberry mildew the Board of Agriculture has issued an order prohibiting the landing in Great Britain of any gooseberry bush or currant bush brought from any place out of Great Britain. The order will not apply to the landing of any bush on or before January 31, if a licence authorising such landing has previously been obtained from the Board of Agriculture and Fisheries, and is produced if so required by any officer of customs when the bush is landed. Bush includes a cutting, stock, or seedling, and any part of a bush except the fruit. The penalty for contravention of the Order, which comes into force on the 14th inst., is not exceeding £10.

Notes and Jottings.

SMITHFIELD Show stands without equal in the showyard world, either at home or abroad, in respect to its exhibition of live stock, but its importance in this respect has been many times increased since. Mainly through the efforts of the London butchers, this great annual show became one in which sheep fed expressly for exhibition alive, and those fed, or which ought to be fed, expressly for exhibition in the carcase, are exhibited side by side.

IT is not proposed to discuss in these notes the main objects that induce breeders to prepare the excellent specimens of their breeds for exhibition alive, nor to go into full details in respect to the preparation of those exhibited dead, but it is desired to call the attention of flockmasters as a whole to the important results that careful observation of the two sections of this show should convey.

IT has sometimes been said that the Christmas shows have not any particular interest to that section of the live stock world which is generally included under the term of "Stud Stock Breeders" The contrary, however, is the case, for at these exhibitions the result of their care and thought, and in fact the result of their labour in endeavouring to breed thoroughly good specimens of their several breeds, is seen to a greater advantage than at any other show.

THE stud stock breeder looks at the perfected specimens of the several breeds exhibited as actual examples of the work he and his predecessors have been able to accomplish in the improvement of the formation of the carcase, the earlier development of it, and the elimination therefrom of all the coarser and wasteful portions of it. Look at it how one may, no one will gainsay that the work of our stud stock breeders during the past half century has been a wonderful one. The formation of the carcase of the sheep, the improvement and the development of the more valuable parts of that carcase, and also the improvement of the lesser valuable parts that has been accomplished during the period mentioned, are certainly stupendous.

IN another direction the value of Smithfield Show to the breeders of stud sheep is perhaps not so fully realised as it might be, *i.e.*, in connection with the value of the use of pure-bred sires in the production of crossbred sheep.

THE cross-bred section of this show is one of the best examples that our breeders can have to prove the value of the pure-bred sheep of this country. It is true that the ordinary breeder and feeder of sheep does not so generally as might be the case enter into competition in these classes at this show, but there are thousands of flockmasters scattered all through their own country and the other mutton-producing countries of the world that in their ordinary routine are constantly and continually using pure-bred sires for the production of mutton.

THE first cross between any two pure breeds is generally admitted to be a very profitable cross indeed. It is said to be the most profitable one any feeder can have. Be this so or not, the perfected specimens of the cross-bred sheep which will be seen at Smithfield Show this week, prove how true this contention is. There are no classes in the whole of the show that contain more instruction or information as to the value of the stud sheep of this country than those mentioned above.

IN years gone by Smithfield Show was an event that interested but few outside our own country. Now the contrary is the case; all over the world reference is made to the results obtained by the feeders at Smithfield Show in respect to the average daily gain, which means, in other words, to the earlier development of the carcase, and full notice is also taken of the excellence or otherwise of the exhibits of sheep in the carcase test classes.

THESE classes, by the way, are full of instruction to every feeder of sheep. It is true they show, by the awards given, the particular

PRIZE WINNERS AT BIRMINGHAM.

SIR RICHARD COOPER'S FIRST PRIZE SHROPSHIRE LAMBS.
MR. A. BROWN'S PEN OF BERKSHIRE PIGS, RESERVE CHAMPIONS.
MR. T. FOWELL BUXTON'S HAMPSHIRE DOWN LAMBS, THE CHAMPION SHEEP.

(*Full details are given on page 712.*)

class of mutton that is most in demand for the metropolitan market; and, if one might suggest it, it probably would be an improvement if sometimes the judges for these classes were to be selected from some one or other of the large provincial towns, so that it might be possible to have an indication as to the requirements of the mutton consumers in other places, instead of always being limited to the metropolis.

ONE of the most striking lessons conveyed by these interesting and instructive competitions is that the butchers do not favour an over-abundant quantity of fat, or, in other words, they, by their awards, have shown to the feeder that it is very easy indeed to over-feed the sheep, or make them too fat for the best-class trade.

ANOTHER point that has come prominently to the notice of the writer when inspecting the carcases is that as a rule the awards given indicate a clear preference for deep-fleshed sheep, with plenty of lean and a well-formed carcase. This latter point is one to which the ordinary breeder should give greater attention than he does at the present time. It is quite certain that if this merit is to be secured it can only be done by using sheep for breeding purposes that have the same merit. The ordinary flocks of this country doubtless contain many breeding ewes which have not that well formed carcase so much desired by the higher class of butchers, but it is possible by careful selection of sires used in such flocks to secure a nearer approach than is often done. Far too many of our ordinary sheep breeders are content to take an ill-formed ram for stud purposes, without any thought as to what its progeny may be, simply because it appears cheaper, or, in other words, because it can be purchased at less money than a better-formed or more symmetrical sheep.

SUCH a procedure is very costly indeed, for right away through it works against the best interests of the breeder. His lambs, if he sells them as such, are not so taking to the eye, and to the careful observer not so valuable, because when finished their carcases will not have the same good appearance, nor the different joints of them be so well formed as they would have been had better and more symmetrical sires been used.

AGAIN, Smithfield Show, taken as a whole, forms one of the best object-lessons to the young beginner; let him, first of all, examine carefully those specimens that win the leading honours in the live stock section, and then betake himself to the carcase classes, and make the same careful examination there, and on returning home carefully think out the various leading points in connection with the awards in both sections, and apply them to his own everyday course of flock management. If this be done thoroughly and carefully, there will doubtless be many a young breeder who will gather from this unique exhibition of mutton sheep lessons of incalculable value and worth to him in the course of his business.

National Sheep Breeders' Association.

The annual general meeting of the National Sheep Breeders' Association will take place (by permission of the Smithfield Club) in the Prince's Saloon, situated at the end of the Arcade Gallery of the Royal Agricultural Hall, Islington, to-morrow (Tuesday), at 3 p.m, the agenda being as follows:—

1. Read minutes of previous meeting.
2. To receive hon. treasurer's report and statement of accounts for the past year.
3. To receive and consider annual report (copy follows).
4. To elect officials for 1908:—(*a*) President-elect; (*b*) executive committee; (*c*) hon. treasurer; (*d*) hon. auditor; (*e*) secretary; (*f*) representatives on the council of the Mansion House Association on Railway and Canal Traffic.
5. To consider the following resolution, moved by Mr. A. Amos:—"That the Board of Agriculture be asked to amend the Sheep Scab Order so that no sheep shall be sent to any public market or sale after they have been shorn (or in the case of their not being shorn, after Aug. 1) until they have been dipped; or in the case of fat sheep or fat lambs for slaughter, they shall only be excepted provided there is a tiver mark down the back and across the loin signifying that they are to be slaughtered within ten days."
6. To receive and consider correspondence, including replies to letters written by direction of the last council meeting.
7. To do or transact any other urgent or important business.

Shropshire Sheep Breeders' Association.

The report presented at the annual meeting of the Shropshire Sheep Breeders' Association and Flock Book Society, held at Birmingham on Monday, stated that the present numerical strength of the society was 229 life members and 165 annual members, making a total of 394, and the total worth of the association was £1,469, as compared with £1,467 last year. High prices had ruled for mutton and wool throughout the year, and so far as Shropshires were concerned, the shipments had been on a huge scale; in fact, it was a record year. Amongst the most important markets were North America and Canada, South America, Australia, Tasmania, and New Zealand, where the breed was making good headway and the Shropshire ram was becoming more popular than ever for crossing purposes. The total number of Shropshire sheep exported during the year was 2,314, as compared with 1,902 in the previous year and 1,032 in 1905. Of the grand total, considerably more than half—namely, 1,427—were sent to the United States and Canada, against 1,057 in the preceding year; 569 went to South America, against 657; 212 to Australia, Tasmania, and New Zealand, against 82; 45 to South Africa, Algiers, Algoa Bay, &c., against 52; and 61 to Russia, Germany, France, Spain, Denmark, Sweden, Hungary, Jamaica, Finland, &c., as compared with 54 a year ago.

There was no doubt, the report added, that breeders who had the right stamp of Shropshires would meet an ever-increasing demand. Size, pink skins, and dense wool of good long staple were the main features to keep in view. The sheep stock of the whole world showed a great diminution in numbers, and there was an inclination the world over to take up more vigorously the breeding of sheep, and that alone would help to keep up prices.

The council recommended that next season a sum not exceeding £100 (including £20 for an auction class, £30 for pens of five shearling rams, and £15 for two shear rams at the Royal Show at Newcastle-on-Tyne) should be set apart for the purpose of promoting the interests of Shropshire sheep breeders and making more widely known the special attributes of the breed.

The chairman, Mr. J. Bowen Jones, in moving the adoption of the report, congratulated the members on the great increase which had taken place in the shipments of sheep. Last year a record number was exported, and since the report was drawn up 650 more had been sent abroad.

Sir R. P. Cooper seconded the resolution, remarking that in all breeds pedigrees should be correctly kept, as foreign buyers were now very particular in that matter. He always did his utmost to advance the interests of the Shropshire breed, and that day he was exhibiting Shropshires in every class at the Chicago Fat Stock Show.

The resolution was carried.

Does Lucerne Blow Sheep?

An interesting discussion on the above question took place at a recent meeting of the East Sussex Farmers' Club, the matter arising out of a paper on "Lucerne as Forage," read by Mr. Southworth of Uckfield Agricultural College. Mr. Southworth during his remarks stated that lucerne as a green meat was splendid forage for horses, cattle, and sheep, and this was the statement that raised the discussion.

Mr. Wallis said he quite agreed that lucerne was a capital thing to give cattle and horses, but he could not agree that it was beneficial for sheep. He had had some experience of feeding sheep on lucerne, and all he could say was that he would never put sheep upon it again. They were sure to "blow" upon it.

The vice-chairman of the club, Mr. A. Wadman, agreed with Mr. Wallis. He had never, he said, seen anything in his life that would "blow" sheep like it if they were put upon it in an unfavourable stage of growth. Sheep would almost "blow" as they walked over some crops, but this was not the case with every crop.

Mr. Southworth remarked that at the College they had never experienced any difficulty in feeding sheep on lucerne, but, of course, they had only a small farm, and the feeding was not carried out to any great extent.

Mr. J. Kenward's opinion was that sheep could be fed on lucerne provided they were not put upon it with empty stomachs. He contended that if they were put on lucerne "full," they could take it without "blowing." Sheep would "blow" on clover if they were given it without being fed on anything else previously.

The vice-chairman said there was no doubt but what Mr. Kenward said was perfectly true. To his mind they should be very careful not to allow it to go forth that sheep could not be fed on lucerne without it "blowing" them. At certain times and at certain stages sheep could no doubt feed upon it beneficially, but at the same time it was well that the point should be made clear that there was a danger in some instances to fold sheep on lucerne. The position was to his mind that they did not want it to go forth that sheep could not be fed on lucerne, but along with that people should understand that they could not feed sheep on lucerne with impunity, and that if they did they would very likely lose their flock.

Farmers and Swine Fever.

A reply has been received from the Board of Agriculture in response to a petition from farmers and others in the Spalding district, asking for the removal of the swine fever restrictions now in force, and under which the markets at Spalding, Holbeach, Long Sutton, and Donington are at present closed.

In reply, the Board regret that the existing position of the county with regard to swine fever would not justify them in withdrawing the restrictions at the present time, but the district was being closely watched, and the restrictions would not be maintained longer than was absolutely necessary to effect the object in view—namely, to prevent the disease from spreading to other parts of the country, and to secure its eradication from the district itself

The Board had considered representations made with regard to the movement of swine for breeding purposes, but they could not see their way to make any modification of the regulations in the direction suggested.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Dec. 3, 1907:—

Period	Anthrax. Animals Attacked.	Anthrax. Outbreaks.	Foot-and-Mouth Disease. Animals Attacked.	Foot-and-Mouth Disease. Outbreaks.	Glanders (including Farcy). Animals Attacked. NOTE.—The figures for the current year are approximate only.

We have received from Messrs. F. C. Southwell and Co, Ltd., a copy of the second edition of the International Stock Book, which contains a full description of the International Stock Food, with copious illustrations of the various animals found on a farm and valuable hints as to treating them in case of illness. International stock food is a purely vegetable preparation composed of roots, herbs, barks, seeds, &c, and is fed to stock in small quantities in addition to the regular grain ration or cake for the purpose of aiding digestion and ensuring perfect assimilation. The following are a few of the reasons claimed why the stock food should be used:—Because it is economical—"six feeds for a penny; it saves 20 per cent. of the corn feed, fattens stock in thirty days' less time, cures and prevents many diseases, increases the quantity of milk 15 to 20 per cent., stimulates and strengthens the entire system, and gives perfect digestion and complete assimilation. A copy of this interesting book can be had on application to Messrs. F. C. Southwell and Co., Ltd, 75, Southwark Street, London.

CATTLE.

THE VALUE OF LIVE STOCK ON THE FARM.

The paper fixed to be read at to-day's meeting of the Farmers' Club at the Whitehall Rooms was entitled "The Value of the Live Stock of the Farm," by Mr. Alfred Mansell, of the well-known firm of live stock exporters, &c., Shrewsbury. As usual, we have been favoured with an advance proof of the paper, extracts from which we give below.

At the outset Mr. Mansell gives a large number of figures in order to show "that the British farmer's main income is now derived from live stock and animal products, and that this market is seriously assailed from outside; and, in the second place, the figures, if intelligently followed, should be the means of guiding his efforts into profitable channels."

In finishing with the figures, Mr. Mansell remarks:—"The continually increasing business in the export of pedigree stock is most encouraging, and there can be no doubt that so long as we maintain our supremacy in this particular line, we shall enjoy the world's patronge on an ever-expanding scale; and if ever the general farmer fully realises the value of a well bred sire as compared with a scrub, the breeder of pedigree stock should have a ready sale for all his male animals."

Mr. Mansell continues: The value of the live stock of the farm on any particular holding is in direct proportion to how far the tenant has gauged his idiosyncrasies and propensities, and has the judgment and knowledge to select a suitable farm for his special purpose. Some men are born breeders; they possess the patience, powers of observation, and all the other great qualities that go to make a breeder: it may be of cattle, sheep, or horses, for it by no means follows that a successful breeder of cattle can prove himself a shepherd of the first order or possess an eye for a horse.

Others, again, of a more commercial spirit prefer buying in and feeding on an extensive scale, and to be successful in this particular line requires much care in selecting the right class of store animal—one that has all the indications of good breeding and has not been stunted in its growth.

The ultimate result depends so much upon the skill and judgment the buyer is possessed of, not only in knowing the sorts to buy, but how to feel the pulse of the seller and make a bargain.

A Point in Fattening.

It is too often ignored that an inferior, badly-bred animal requires more time, and consequently more food, to fatten than a well-bred one, and that the finished article is worth several shillings less per cwt. (live weight) than first quality.

I would recommend anyone who is sceptical as to the truth of the foregoing statement to select two typical animals (the well-bred and the exact opposite) and feed and treat them in precisely the same way, and put them every fortnight or so on the weighbridge and ascertain the gain in live weight. Nothing will be more convincing than this test if carefully carried out. It will prove beyond a doubt that the feeding of second and third-rate cattle is a financial loss to the feeder.

Again, another man may have an inclination to dairying, and possess no special aptitude as a breeder or feeder; but no matter what course is decided upon, it is better to follow one's natural bent and inclination, and, if possible, let the class of stock you propose to keep be suitable for their environment.

Need of Care in Starting.

I would counsel the utmost care in making a start, and I assume without question that at the outset only animals of high individual merit have been selected.

A sire is a most valuable asset, and a bull, according to the old saying, is *half the herd*; but the benefit to be obtained from a high-class sire is greatly minimised and the grading-up retarded when the foundation stock is of an indifferent character. In some cases under my own observation it has taken years to eradicate the bad points possessed by the foundation stock, and the offspring is never entirely free from this back taint.

Speaking of environment, I do not think this is sufficiently studied on all occasions. I have seen men trying to breed Shire horses on land only suitable for hill sheep; in other cases running a flock of sheep on lowlying meadows. Some farms are essentially adapted for feeding, whilst others lend themselves more to breeding and dairying, and all these points should be fully considered if the best results are to be obtained.

The subject of our illustration above is the Devon Yearling Heifer Beauty 12th, with which Mr. J. Surridge, Manor Farm, Brompton Ralph, Wiveliscombe, won a First Prize at the Dunster Summer Show this year.

Speaking generally, it may be taken as an accepted fact that there is more room for a grading-up of the quality in

Home-fed Beef,

in contradistinction to mutton, and this may be accounted for largely owing to the fact that there are more bad, scrubby bulls available than inferior rams and ram lambs.

In the case of bulls, no end of farmers fail to castrate all their calves, with the result that a large number of these mongrels (being cheap and nasty) actually do service as sires. Small wonder the country is so full of cattle which compare most unfavourably with the general run of export cattle that reach us in the shape of dead meat.

If it could be brought home to the general farmer that the consistent use of a well-bred sire, not necessarily an expensive one, would give him better annual returns, and at the same time increase the capital value of his stock, a great national problem would be solved. We should then eliminate "*inferior quality*" from our returns, and first quality would assume its *proper proportions*.

In other ways, the value of the live stock of the farm can be largely augmented by

Strict Attention to Details,

and taking every possible precaution to prevent losses.

The master's eye should ever be ready to detect a weak link in the management on the part of any of his stockmen, not in any captious spirit, but rather in a kind and friendly way, which all good men would appreciate and in no way resent.

With this object in view, cultivate the powers of observation to its fullest extent, and you will then be able in many cases to prevent serious losses by taking the necessary preventive measures at the initial stage.

What Landlords can do.

Landlords can and do, in numerous instances everything in their power to increase their tenants' returns with live stock, and the following may be cited as distinct aids in that direction:—

(*a*) To provide well-ventilated and conveniently arranged buildings and covered yards for the comfortable accommodation of stock adequate for the farm, and properly conserve the farmyard manure.

(*b*) The erection of cheap, roomy sheds on some of the soundest pasture fields for the wintering of stock.

(*c*) The provision of a proper supply of good cottages necessary for the farm, it being most important to secure zealous, careful, and skilful men in the feeding and management of live stock.

The Legislature can Aid Stock Farmers.

(*a*) By maintaining in their integrity the present regulations on the import of live stock, so that the health of our herds and flocks is in no way seriously jeopardised.

(*b*) By making such regulations as to prevent as far as possible the fraudulent sale of imported meat as English.

(*c*) By taking more drastic steps to eradicate sheep scab, which is practically unknown amongst pedigree flocks, but is ever a source of danger to the man who buys in and feeds.

In conclusion, I would say there is only

One Road to Success

in the breeding of pedigree or, in fact, commercial stock, and that is to use the best sires within your reach, and not to be tempted to sell your best young females, except upon very rare occasions; and in the case of cattle and sheep, do not let your females degenerate into a lot of old crones. This can be avoided by keeping your best females annually and letting the older ones go before they have put on too much age.

With commercial stock the British farmer must be up-to-date, and carefully watch the trend of the markets. Quality, early maturity and desirable weights should be studied. There are more buyers for fat cattle not exceeding 680 lb., sheep 70 lb., and pigs 200-240 lb. than the heavier weights which found favour some years ago.

Summarising, it is perfectly clear that the ordinary farmer, to be successful, must

Breed or Feed the Very Best.

That the breeder of pedigree stock will always have a good foreign demand, as, no matter how much the pedigree stock of the world is improved, they will always have to come to the old country to maintain the character and high quality of the respective breeds.

That there is no doubt the type and character of English breeds in other countries sooner or later undergoes a change and new blood is required. This practically gives us a monopoly in supplying the world at large with pedigree stock, and, in addition to the foreign market, the home demand for the general run of serviceable male animals must improve as the ordinary farmer becomes fully alive to the better results to be obtained by the use of well-bred sires.

Shrewsbury Store Stock Sales.

Mr. W. Everall's final store stock sale of the year took place in Shrewsbury Smithfield on November 29, when he had a good entry of upwards of 1,000 cattle of all ages, which sold readily at improved prices. Buyers were numerous and attended from the principal winter feeding counties in England, and practically all the cattle changed hands. The principal entry was from Mr. R. Smith, Kilmarnham, who sent forty-four beautiful Angus and Shorthorn Polly bullocks and heifers, which made £14 10s., £13 10s., and £11 15s. (32s. per cwt.); Mr. O'Connell sent nineteen Angus and Shorthorn bullocks, which made £16, £15 5s., and £14 10s. (33s. per cwt.); Mr. Kiernan sent twenty Shorthorn heifers, making £13 17s. 6d. (31s. per cwt.); Mr. P. Webb a lot of Hereford Shorthorn cross bullocks, which made £13 10s. (33s. per cwt); Mr. A. C. Smith, Polled Shorthorn yearlings, £8 2s. 6d.; Mr. C. D. Crowle, Shorthorn heifers, £11 10s.; Mr. James Lyons, Polly bullocks, £12 10s. Amongst the principal lots of home-bred cattle were two lots of Angus cross bullocks from Colonel Bulkeley, C.B., which readily sold up to £12 15s.; Mr. T. Jones (Hurst), Hereford bullocks, £12 10s.; Mr. Morris (Kinton), Shorthorn heifers, £8 7s. 6d. Other prices were the following:—Herefords, £15 5s., £11 17s. 6d., £14 10s., &c.; Shorthorns, £13 17s. 6d., £12 10s., £12 5s., £12 2s. 6d., £11 10s., £10 10s., £9 7s. 6d.

HORSES.

After-Dinner Oratory—Government Inaction—Keeping the Mares—Can Anything be Done?—Contagious Diseases—Glanders—Influenza.

After-dinner Oratory.

AT a public dinner where sportsmen and horsemen congregate there is pretty sure to be, amongst the numerous speeches made, some more or less practical suggestions respecting horse breeding and horse management. Men somehow, without intending, begin to give expression to their theories, and occasionally some excellent advice is given, which is far-reaching in its effects. It is to be hoped that this will be the case with some of the remarks made at the recent Gimcrack dinner. Before, however, proceeding to notice these in detail, I would point out that wherever horsemen congregate, they are like the Irishman on a desert island, they are "agin the Government." It has become monotonous—I had nearly said tiresome—to hear the attacks made on Government after Government for their indifference to what is undoubtedly one of the great economical questions of the day—horsebreeding.

Government Inaction.

"ALL they do is to find a few thousands for King's Premiums, and what is that?" Such is the chorus that we hear time after time at all dinners and gatherings of horsemen. And, curiously enough, though we have plenty of grumbling at Government inaction, and though there are men who advocate the formation of Government studs, the idea of the latter is not popular amongst the rank and file of breeders, who, rightly or wrongly, seem to think they would be placed at a disadvantage by the Government undertaking to breed horses. But there are many ways in which the horse-breeding industry could be encouraged without copying the example of foreign Governments. Many men seem to be of opinion that stallions of other breeds should have an opportunity of contending for Premiums on something like the same lines as Thoroughbreds do, and that the system of King's Premiums should be extended and developed. There seems every reason to think that some such development would be attended with good results. There can be no doubt that the King's Premiums have done a great deal of good, quite sufficient, indeed, to warrant a considerable extension of the principle, and we have a right to ask for some further development in this direction.

Keeping the Mares.

A SPEAKER at the Gimcrack dinner on Tuesday evening suggested that there should be an export duty on mares. Whether such a thing would be within the range of practical politics this is not the place to discuss, but some attempt should be made to stop the drain upon the country which is going on every day, and which seems rather to increase than otherwise. If one looks down the list of buyers at any big sale, it is the foreigner who buys the best mares. This has been the case at the Newmarket sales; it is the case equally when good Hackneys are in the market. Indeed, no breed escapes them, and we let our mares go with a complacency that is surprising. A curious instance of our apathy came to my notice last week. A man was inveighing bitterly against the indiscriminate exporting of mares, and urging the necessity of stopping it by some means. Now, no man does more in the way of sending mares out of the country, or has sent more mares out of the country of late years than the gentleman in question, and his reason for urging the necessity of stopping export of mares in some way was that he found increasing difficulty in carrying on his own export business. It was not a very logical position to take up it is true, but it was a perfectly natural one. He was hampered in his efforts to make money by the very thing he was making his money by, and selfish trade interest made him blind to the fact that he was himself a chief offender.

Can Anything be Done?

WHETHER anything can be done by legislation to stop this drain upon the horse-breeding resources of the country is open to question. An *ad valorem* export duty on mares might be levied, but would it stop the drain? Would the man, for example, who gives 2,000 guineas for a mare be deterred by an *ad valorem* duty of 5 per cent. or even 10 or 15 per cent.? I think not. And on the rank-and-file of the good half-bred, Hackney and other mares that leave the country, a large *ad valorem* duty would have no effect on the man who knew the value of what he was getting. I am of opinion that until the men who own the mares recognise of themselves the importance of keeping their mares quite as much as the foreign customers do the importance of buying them at practically any price, the export will go on, and that it cannot be perceptibly checked by any export duty that can be levied.

Contagious Diseases.

COLONEL HALL WALKER drew attention in his speech to the prevalence of glanders and distemper or influenza, or by whatever name it may be called, and he pointed out that no systematic attempt has been made to stamp out those two scourges of horse breeding. The losses which accrue from these diseases are very great, much greater than anyone who is not in close touch with horse breeding could be led to believe, and especially are the losses which proceed from influenza heavy. Some one in conversation said that if these diseases plagued cattle they would have been stamped out years ago, and there certainly seems to be some grounds for the statement.

Glanders.

THERE is no more dangerous or insidious disease to which the live stock of the country is liable than glanders, and happily it does not prevail to the extent which it once did. Indeed, I question if there are many glandered horses to be found out of the big towns in these days. I have heard people talk of glandered horses, and on the moors between Guisborough and Whitby there is a practically unfathomable bog, which is known as the glandered horse hole, and in which glandered horses used to be buried; but I have never heard of any serious outbreak of the disease in the country. But it would be a mistake to say that no cases are known in the country. One came under my own notice within the last twenty years. A relative of mine was riding his cob home, and he found he was not quite right, so he got off him and proceeded to lead him. He had not gone very far when a terrible discharge took place from the horse's nose, and some of it went on to his coat. In his younger days my relative had had some experience of glanders, and at once knew what was the matter. He was luckily close at home, and to kill the horse and burn his coat was the work of not many moments. One of the worst things about glanders is that the disease sometimes lays dormant for a considerable time, and obviously this is a great danger. The case I have mentioned is the only one that has come under my notice; but it is well enough known that there are many cases every year in the big towns. And the fact that glanders is mostly found in big towns makes it all the easier to deal with. There should not be, one would think, any difficulty in stamping out the disease altogether, if a systematic attempt were made.

Influenza.

INFLUENZA, though not such a virulent disease, is from its prevalence and its far-reaching consequences a more important one from the standpoint of the ordinary horse-breeder. What the losses from it amount to in a year it is impossible to tell. How many disappointed breeders will tell you that several of the best horses they have bred have gone roarers or whistlers after an attack of this disease. Now it stands to reason that the average profit derived from horse breeding must be seriously affected by such a state of things. We all know that the proportion of high-class horses that are bred is only small, and when a small breeder has two or three of his best go wrong and bring a few pounds instead of from £150 to £200 he is naturally discouraged. And there is little reason to doubt that the roaring and whistling are hereditary, that at any rate a large percentage of the wind trouble which exists is due to distemper. How, then, is this disease to be stamped out? Plenty of people will tell you that it is impossible. It certainly is impossible unless an attempt is made. The self and same argument was used upwards of twenty years ago, when an attempt was made to stamp out foot-and-mouth disease. "We've always had it, and we always will have it," was the argument used by the sceptics. But the attempt was made, and with the results which we all know. And so far as the lay mind can see, there is no reason why distemper should not be stamped out. At any rate, the question is one which calls for an exhaustive inquiry, and until the Government endeavours to deal with this disease and glanders, or proves satisfactorily that nothing can be done, any move in other directions seems to be superfluous.

THE LOOKER-ON.

AUCTION SALES.

Auctioneers will favour us by sending in their advertisements as early in the week as possible.

Charges for announcements under this heading Six Shillings an inch.

By Messrs. IRELAND.

Norwich, Norfolk.—Ireland's Norwich Hill Auction Mart (established 50 years). Every Saturday. Fat Bullocks and Sheep, Store Sheep. Special Spring and Autumn Store Cattle Sales.

MESSRS. IRELAND solicit consignments for these important weekly sales; best market value assured.

Cattle consigned to Ireland's, Norwich, will be properly fed and carefully attended to.

All cattle weighed upon entry to the sale ring if desired. Full particulars to be sent to—

IRELAND'S, Auctioneers.
Norwich, Norfolk.

By THE FARMERS' AUCTION CO., LTD.

LARGE AND IMPORTANT CHRISTMAS SALES.

The attention of Butchers and Dealers is respectfully directed to the following highly important Christmas Fat Stock Sales, to be conducted at

PENRITH AUCTION MARKET,

on the London and North-Western Rly. Main Line, and 18 miles south of Carlisle,

BY

THE FARMERS' AUCTION COMPANY, LTD. (with which is amalgamated Messrs. THORNBORROW & Co.)

THURSDAY, DECEMBER 12, 1907.

Great Christmas Prize Show and Sale of towards 6,000 Sheep and Lambs of exceptionally good quality, comprising a grand collection of Grey-faced, Cheviot, and Blackfaced Shearlings and Ewes, also large and choice consignments of Tup Hoggs.

Judging at 9 o'clock. Sale at 10 prompt.

FRIDAY, DECEMBER 13, 1907.

Great Christmas Prize Show and Sale of towards 500 head of prime Fat Cattle, including large and choice entries of Shorthorn and Crossbred Steers and Heifers, also Bulls and young Cows.

Judging at 9. Sale at 10 prompt.

MONDAY, DECEMBER 16, 1907.

Great Christmas Prize Show and Sale of towards 450 Fat Pigs and Veal Calves. Large and select consignments of well-fed young Porkers, heavy Pigs, and young Sows of excellent quality will be forward.

Judging at 9.30. Sale at 10 o'clock.

Catalogues of the above Sales will be ready five days previous to day of Sale, and may be had on application to—

GEO. LONGRIGG,
Secretary.

By Messrs. G. B. HILLIARD & SON.

Peremptory Sale by Order of the Mortgagee.

TO ENGINEERS, MANUFACTURERS, CORN MERCHANTS, MILLERS, AND OTHERS REQUIRING CHEAP WATER CARRIAGE.

LITTLE BADDOW AND BOREHAM, ESSEX.

Midway between Chelmsford and Maldon, and about 2¼ miles from Hatfield Peverel Station, G.E.R.

WITH IMMEDIATE POSSESSION.

G. B. HILLIARD AND SON will SELL by AUCTION, at the CORN EXCHANGE, CHELMSFORD, on FRIDAY, DECEMBER 20, 1907, at Four o'clock,

THE VALUABLE

FREEHOLD MERCANTILE PREMISES, known as

LITTLE BADDOW MILL.

Abutting upon the Chelmer and Blackwater Navigation Canal, in the above Parishes, and including a commodious building fitted with

TWO CRUSHING MILLS.

A 30-H.P. UP-TO-DATE TURBINE (installed by Messrs. Armfield & Co., of Ringwood).

A PATENT GERMAN ARC CANDLE KILN, with two iron furnaces and brick chimney shaft.

A four-stall stable and two horse boxes, granary or warehouse, inclosed yard, cowshed, and TWO PIECES OF GRASS LAND.

Particulars and Conditions of Sale may be obtained of Messrs. TATHAM and LOUSADA, Solicitors, 16, Old Broad Street, London, E.C.; of Messrs. HAMPTON and SONS, 2 and 3, Cockspur Street, London, S.W.; and of the AUCTIONEERS, Chelmsford (Telephone No. 17), and 3, Pinners Court, Old Broad Street, London, E.C.

Lincolnshire Notes.

ONCE more the burning question of railway rates in Lincolnshire is coming to the fighting point. The Board of Trade have intervened, and as a preliminary step are endeavouring to bring the parties together. A conference will be held at the Board of Trade Office on Thursday next. The parties on one side of the dispute will be all the representatives and all the associations representative of the industry of agriculture, and the sale of or manufacture of agricultural produce. On the one hand there will be the Lincolnshire Farmers' Union, the Notts and Derbyshire Millers' Association, the Midland Corn and Agricultural Trades' Association, Ltd., the Lincoln Chamber of Agriculture, the Lincoln Chamber of Commerce, the maltsters and the Midland Farmers' Co-operative Society; on the other the railway companies which serve at such a high price the county of Lincolnshire and the Midland Counties.

THIS is not the first attempt that has been made to bring the dispute to a head. A conference was held at Newark in 1906, but without satisfactory result. That the Lincolnshire farmer has a grievance the following figures will show:—Grain in East Anglia is conveyed in four ton lots 40 miles for 5s. 5d. per ton, 80 miles for 6s. 8d, 120 miles for 7s. 1d. per ton. In this district the corresponding rates are:—40 miles, 6s. 7d.; 80 miles, 7s. 11d.; and 120 miles, 12s. 6d. per ton. Hay and straw is conveyed on the London and South Western Railway 40 miles for 6s. 10d. per ton, 80 miles for 9s. 10d., and 120 miles for 12s. 2d. The corresponding rates in this district are:—40 miles, 8s. 9d.; 80 miles, 12s. 3d.; and 120 miles, 16s. 7d. In addition to this large excess, a circular has been recently issued by a combination of eight of the local railways, completely disorganising the local trade in hay and straw, by requiring farmers and traders to pay 30s. per week for the temporary storage of hay or straw on trucks, which costs the railway companies not more than 5s. per week, a profit of 500 per cent. The agriculturists of Lincolnshire think it is time they began to act as well as grumble.

AT the annual meeting of its Hereford branch, the Lincolnshire Farmers' Union rejoined the crusade against the motor car. A resolution was sent to the Central Committee declaring that the new method of locomotion demands new legislation in regard to the matter of road management. The roads, the Lincolnshire farmer thinks, should be less a local charge than they are now. At any rate, an additional Government grant should be made towards the cost of their repair. There is reason in the argument. It seems to me the users of motors should themselves be the first to see it.

THE reopening by the chairman of the Holland County Council of the local markets for the sale of store pigs does something to relieve the situation caused by the prolonged embargo of the Board of Agriculture. But the district is beginning to seriously protest against the restrictions. The *Spalding Free Press* pretty well expresses the local feeling. "It is high time, says that journal in a leading article, that the markets were declared absolutely free. "It is unreasonable to expect that swine fever, any more than any other complaint amongst animals or human beings, can be extinguished for all time. It is absurd to become unduly concerned, and to impose harassing restrictions, every time a pig is found to be suffering from the disease. The supervision of the authorities should be strict, and the utmost care should be exercised by pig breeders, feeders, and butchers; but surely there is no need to go into a panic whenever a few cases occur." I agree so far with the article as to say that the panic should not be needlessly prolonged. It should be relieved at the very first available opportunity.

FRUIT growers in some parts of South Lincolnshire are having to grapple with a serious blight known as the gooseberry mildew. Acres upon acres of the best shrubs have been affected. A week ago a representative of the Board of Agriculture met the Diseases of Animals Committee at Spalding, and urged that some action of a preventive character should be taken in the county of Holland. He recommends that a first-class gardener should be appointed, who should receive special instruction in the matter, in order to go round the district where the disease had already made its appearance. The committee, however, decided to do nothing beyond drawing attention to the Board of Agriculture's Order. Let us hope some more determined association will take up the responsibility.

MR. HENRY CHAPLIN is braving the lion in his den. He is criticising Earl Carrington's model small holdings scheme. At a meeting at Scarborough on Friday week he said that on Lord Carrington's Spalding estate, where 650 acres are

NOVA SCOTIA

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General of Nova Scotia, Mr. JOHN HOWARD, 57, Pall Mall, London, S.W.

devoted to small holdings, his lordship established the practice of letting his land, not directly to the people who were to occupy it, but through a middleman—a system which, in his opinion, ought to be strictly avoided. There was also upon the estate a most lamentable lack of cottage accommodation. He was, indeed, surprised on reading the evidence, to find how much this was the case on the estate, but it was a fact that the whole of the estate, which was let for a very good rent as far as Lord Carrington was concerned, was let to a syndicate, without any restrictions whatever as to the rents which they might charge to tenants, or the covenants which they might make.

MR CHAPLIN qualified his observations. He did not mean to say for a moment that evil would happen, or that the association would behave in a manner that would revive the evils of middlemen in the olden days, but what he objected to was the re-establishment of the principle which gave them absolute power to do whatever they pleased. In this case, with regard to cottage accommodation, he found that on the estate there were over 200 tenants, and the majority of them, according to the agent, had to walk on an average six miles a day to and from the work on which they were employed. In support of this, Mr. Chaplin quoted the evidence of Lord Carrington's agent, and added that if the majority of the tenants on any other estate that he knew of had to walk that distance, most of the landlords he was acquainted with would consider that they had been singularly lacking in the performance of their duty. That the subject will not go unanswered, we may pretty fairly trust the energetic association which controls the small holdings of South Lincolnshire.

THE extent of the demand for small holdings is known at last. Earl Carrington has in his possession applications for 10,000 acres of land, and out of this Lincolnshire is asking for nearly half, or 4,518 acres. That is a genuine demand enough, surely.

December 5, 1907.

Ripon Farmers and Sugar Beet Growing.

Members of the Ripon Agricultural Association recently undertook to experiment in the growing of sugar beet. From a report prepared on the result it seems that though in some instances part of the crop has run to seed owing to the rain and absence of sun in the earlier part of the season, yet on the whole it is fairly satisfactory, and would average 13 to 16 tons per acre.

Samples from four farms near Ripon were submitted to Professor Sigmund Stein, sugar expert of Liverpool, who gives an analysis in comparison with roots grown in Germany and analysed by Mr. Licht, of Magdeburg. Professor Stein adds that he considers the result satisfactory. The weight of the Ripon roots exceeds that of the German roots, being nearly twice the size. The saccharine contents of the Ripon roots he also considers to be very satisfactory.

Professor Stein is an advocate for the cultivation of sugar beet in this country, but the members of the Ripon Agricultural Association express the opinion that owing to the attitude of the present Government towards the admission of bounty-fed sugar the attempt to create a sugar industry in this country must be abandoned.

DAIRY.

Sir Edward Strachey and the Butter Bill.

Sir Edward Strachey, M.P., who represents the Board of Agriculture in the House of Commons, presided at Martock (Somerset) Fat Stock Christmas Market dinner, and in the course of a speech made some interesting remarks concerning the Butter and Margarine Act.

Legislation dealing with the adulteration of butter was not, he said, so simple a matter as it would seem. Any Bill must interfere with certain powerful interests, and to pass a Bill was no easy matter. It was due to this that the late Government had introduced and withdrawn four Butter Bills and had been unable to appoint a Select Committee of the House of Commons to inquire into the butter trade, though they promised the Central Chamber of Agriculture to do so in 1905. As soon as the Liberal Government came into office he moved for a Select Committee of the House of Commons to consider butter adulteration. This committee was appointed at the beginning of the Session of 1905, and reported before its close. The report of that committee was practically unanimous, and upon that report he founded and carried the Butter and Margarine Act through Parliament last Session. What was the principal object of the Bill? It was to stop adulteration of butter at its source by means of inspection and registration of all butter factories. Further, no adulterants could in the future be stored in these factories.

In the past it had been very difficult to stop the sale of adulterated butter from abroad. For as the law had been the foreign adulterator had been protected from the difficulty of proving that foreign butter was unadulterated. Mere suspicion of adulteration of butter submitted, of samples taken at the ports for the Government analyst, was not enough. It was necessary for Somerset House to prove up to the hilt that the butter was adulterated. Now under the new Act it would be the other way about. The foreign butter, if suspected by the Government analyst of being adulterated, would have to be proved by the foreign importer to be pure genuine butter. It was only fair that the onus of proof should rest upon the importer, as we in this country had no power to stop adulteration in factories abroad by inspection, as could be done in this country.

The Select Committee did not recommend the prohibition of the sale of milk-blended butter or of margarine, nor did the Act prohibit its sale. So long as milk-blended butter was not sold under that name or by any other name connected with the dairy interest it could be sold as a butter substitute. So, too, could margarine be sold so long as fancy names—such as butterfat—were not used, and the word margarine appeared wherever the fancy name was placed on the wrapper.

The Act, while it did not prohibit the sale of any butter substitute, did prohibit the use of the farmer's trade-mark of butter being used for such substitutes. He knew some of his agricultural friends would have liked the prohibition of all butter substitutes, but that was impossible, as the poor, who could not buy butter owing to its price, must be able to buy butter substitutes, so long as they were not sold under the name of butter to the detriment of the producer as well as the consumer.

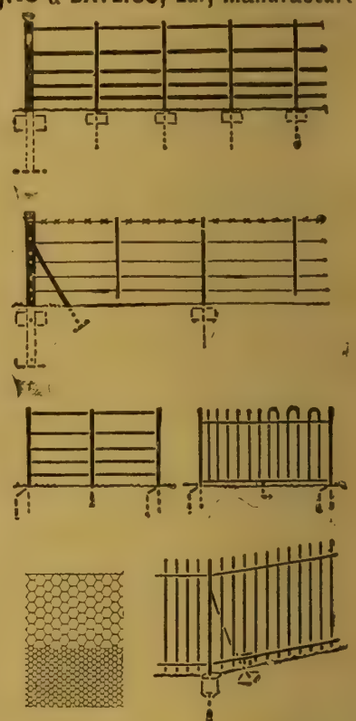
The Price of Milk in the North.

A large meeting of Cumberland and Westmorland dairy farmers was held at Carlisle on the 30th ult. to consider a couple of resolutions which had been passed by the Eden Valley and Penrith District Farmers' and Dairymen's Association, expressing the desirability of increasing the price of milk and the rearrangement of milk contracts, and suggesting that representatives of the association confer with the principal dairy companies to see if they will agree to an increase, and if they do not agree that they be informed that the association will commence milk depôts in the towns, for the benefit of its own members.

Mr. G. Dixon, Easton, who presided, said it would be well if all the farmers pulled together. The heavy prices for dairy cows, the great cost of feeding stuffs, and the small price which dairymen gave for the milk, made the farmer's work altogether unremunerative. The middleman was now buying his milk at 7d. and 9d. a gallon, and was getting 1s. 4d. for it; and he had not the risk, the expense, and the labour of keeping cows.

Mr. Irving said it would be of no use for Cumberland and Westmorland farmers to take action unless they could get Scotch farmers to join them. A great part of the Newcastle milk supply came from across the Border. Scotch farmers were coming into Cumberland, getting all the farms they could, and stocking them with Ayrshire cows.

Mr. Soulsby said the Cumbrians had an advantage over the Scotsmen, by reason of the facilities they had for milk carriage on Sundays.



After another speech a resolution was passed supporting that of the Eden Valley Association, and it was decided to ask the middlemen to pay 7½d. in summer and 9½d. in winter for the milk. A resolution was also agreed to that should any member of the association undersell his milk, he be fined two guineas, to go to the funds of the association.

At a largely attended meeting of farmers and milk kitters of Preston and the Fylde held at Preston on Wednesday, it was decided to increase the price of milk by 1d. per gallon, to charge casual customers 2d. per pint, and dispense with the "long pull." Each farmer present resolved to sign an undertaking to pay on demand to the committee of the association £5 in case of violation of the agreement.

It was further decided to join the Lancashire Farmers' Association, it being urged that success could be achieved by taking advantage of its powerful organisation.

Ownership of Roadside Growth.—An interesting case dealing with the question of ownership of roadside growth was recently heard by his Honour Judge Templer at Barnard Castle County Court, the plaintiff being a farmer named Joseph Willis, who sought to recover from Anthony Coulthard, a roadman, £1 damages, alleged to have been sustained through the defendant cutting rushes on the side of the road adjoining the plaintiff's allotment. For the plaintiff, who was represented by counsel instructed by the Farmers' Protection Association, Darlington, it was stated that at the side of the road next to plaintiff's land grew a number of very tall rushes, which were very valuable in the district for thatching stacks. For thirty years plaintiff had cut these rushes for the purpose of thatching his stacks. One day defendant cut the rushes and led them away. A great deal of evidence was given for both sides, but in the end his honour gave judgment for plaintiff for £1 and costs. In doing so he remarked that he thought that, so far as herbage was concerned, it belonged to the adjoining owner. They must infer that the road for the purposes of the road was a public highway, but for the purpose of the herbage and so on it belonged to the persons most interested, and that was the person next door. That was confirmed by the action of the tenant himself, who in that case must be taken as the agent of the landlord. For a long period of years he had used that right. Therefore, he thought, that in that case they must presume that it really did not belong to any ordinary highway, and that it belonged to Miss Wilson, the owner of the adjoining land, and her tenants.

LEGAL NOTICE.

In the High Court of Justice,
Chancery Division,
Mr. Justice PICTON.
In the matter of
THE AVONVALE BREAD COMPANY, LIMITED, EVESHAM.

THE Receiver and Manager, appointed by the Chancery Court, is desirous of disposing of the business carried on by the above Company, as a going concern.

The Freehold property is situate in the centre of the Vale of Evesham, and close to the Midland and Great Western Railways, and on the banks of the river, which is navigable to Gloucester, and contains in the whole an area of about 3a. 1r. 2p., comprising Mill Buildings, large Four-Storey Building known as "The Factory," connected with the Mill by covered girder bridge and a substantial Dwelling House known as the "Mill House," with good garden, which is let at a nominal rental of £30. Also Foreman's Cottage and Offices, and a productive Orchard known as "The Island."

The Machinery consists of a 5 (Bag) Plant (4 bus.) on Simon's System, with Wheat Cleaning Machinery, Wheat Washer, &c., driven by two Turbines ("Simon's Action"), Provender Plant, consisting of two Pairs Stones with necessary adjuncts driven by a large undershot Wheel, one high and low pressure Condensing Steam Engine (18in. Cylinder), Electric Lighting Plant, &c.

Being situated in the centre of a Feeding District there is a large local demand at full prices for offals, horse corn and provender, &c., which is of considerable benefit to the Company.

Fishing rights connected with the River (Avon), of about one mile in extent, are let at a nominal rent of £6 10s. per annum.

There is ample accommodation for a considerable increase of Plant

The Stock in Trade can be purchased at a valuation.

Goodwill includes all books and papers, together with valuable connection acquired by the Company.

Further particulars and cards to view can be obtained from Messrs. GEOFFREY NEW & ODGERS, Solicitors, Evesham; or the Receiver and Manager, Mr. H. J. PEART; of Messrs. SHARP, PARSONS & Co., Chartered Accountants, 120, Colmore Row, Birmingham.

Colonial Fruit.

THERE is no doubt about the fact that fruit culture in our colonies on the other side of the Atlantic is treated very seriously, and the growers are alive to the advantages of advertisement. A few weeks ago visitors at the Royal Horticultural Hall, Westminster, had the opportunity of feasting their eyes on a splendid and varied display of fruit, but the section of the exhibition which interested us most was that devoted to apples. The finest collection was the one from British Columbia, and a splendid advertisement it was for the province. The size and rich colouring of the fruit afforded evidence of the character of the climate, but when one realised that the apples had travelled some 6,000 miles by rail and steamer one willingly agreed that the growers are also masters of the art of grading and packing. Just so, and here perhaps we have the chief secret of the success of colonial fruit growers. They have set out to grow good apples on a systematic method, they know the varieties most suitable for export, and they spare no pains in grading and packing. In short, the thing is done well from beginning to end, and in the exhibition referred to English growers had opportunities of learning useful lessons. It is true that on this side we have not all the advantages enjoyed in the Western provinces, but that the old country can produce fine apples has been demonstrated more than once in the same hall, but we want to grow more of the best. It is our second-rate stuff that cannot compete with colonial produce.

The First of the Lambs.

WHEN young lambs make their appearance in a cold and dismal world before the old year has run its course, the occasion is not unfrequently celebrated by a paragraph in the local paper, which makes the fact known to all and sundry who may be interested. We have already seen several of these press notices, telling of lambs born before the end of November, and our sympathy has been with the lambs, which naturally at this time of the year run risks of succumbing to inclement weather. Still, the shepherd is drawn by a peculiar feeling of affection to the first lamb, particularly when it creates a record in point of earliness. He feels that it is a weakling, unable to battle with the adverse circumstances, so he treats it as a nursling, and spares himself no effort in order that he may be able to rear it, and if he is successful he feels that he has scored a triumph. A month hence, of course, young lambs will not be so much of a novelty, and just now the ewes that are due to lamb early must be kept in good condition and be fed with care. This is particularly essential with old ewes which have teeth troubles, where the object is to have fat lambs for the early market.

Sheep and Cattle on the Railway.

CONSIDERING the number of cattle and sheep that are moved about every week on the railway, comparatively few fatalities occur, though one never sees a number of beasts packed tightly in a cattle-truck and jostled together in the operations of shunting without thinking of the discomfort they must suffer, and how relieved they must be when the journey comes to an end. In the transfer of sheep and cattle railway companies have a good many hard things said about them, particularly when delays arise, and the man who is expecting stock at a certain time has to kick his heels in impatience for hours before they arrive. Still, we know that things cannot always run smoothly on a railway, particularly when fogs have to be dealt with, and credit must be given to the officials for doing their best. But in the transfer of cattle and sheep by rail it is most essential that the comfort of the animals should be considered and suffering be avoided; and bearing on this a case was reported quite recently of a number of sheep being packed in a railway truck, and when they reached their destination five were found to be dead and six more had to be killed.

The Farmers' Week.

AS we write the Smithfield Show is a great centre of attraction in London, and there are probably more members of the farming community in the metropolis than will be seen again for a year. In the first place, the most popular farmer in Great Britain was there, and the interest taken in the stock by his Majesty showed what a man of many parts the King is. One gets a little tired of hearing people rate about the overfed beasts at the Cattle Show, but as a rule the individuals who adopt this strain are not practical, and the big event loses none of its attractions for farmers who are. It is not alone the animals which bring agriculturists up to town in Cattle Show week, for the occasion is selected as being suitable for holding meetings in which members of the farming fraternity are interested; and lastly—tell it not in Gath?—our friends from the country enjoy a little turn round London once a year, and the Cattle Show comes at a season when time can best be spared. There is something about the typical farmer which marks him wherever he goes, and apart from his orthodox breeches-and-gaiter show attire, his stalwart figure and ruddy countenance distinguish him as he walks along the Strand from the native Londoner, and as a specimen of healthy humanity the comparison is in favour of the farmer. When these lines appear the farmers' week will be over, and our country friends will be back at home, but the events of the Smithfield Show will provide food for comment for a long time to come.

Water-Logged Land.

IN most districts work on the land has been brought to a complete standstill through the daily repetition of rain, rain, rain, and in lowlying parts fields are no longer fields, but huge lakes, while roads are flooded and traffic is hampered. We naturally expect a fair amount of wet at this time of the year, but have grown weary of the continual downpour, and the general wish is for a spell of dry frost for Christmas. To say that land, particularly where it is disposed on the side of stiffness, is water-logged is using a mild expression, and under the most favourable circumstances the only arable work possible between the storms is the ploughing of stubbles that are as yet undisturbed. When circumstances permit it is good to get on with this work as the turned-up ridges will be ready for the action of the frost which we naturally expect will come. By the way, the steam-cultivator people are having a bad time of it owing to the wet, for even if the implements could work it is almost impossible to get the ponderous engines in position in the fields.

The Lighting of Villages.

A good deal has been done of late years to brighten up rural villages, but many of them remain in darkness at night, and the adoption or otherwise of the Lighting Act is still the cause of much controversy and even bitter feeling. We happened to be in a little village a short time ago where it was thought by certain members of the community how nice it would be to cheer up the place at night by having lamps in the streets. The farmers and people who lived outside were quite agreeable so long as the villagers who derived most benefit from the lamps were willing to pay for them, but they disapproved of paying extra rates for the benefit of their neighbours. A public meeting was called to decide the matter; the outsiders turned up in great force, overthrew the resolution, and the village is in darkness, with more people at enmity with each other than was the case before. This is only one case in which the outside community has put the veto on the lighting of villages, and a certain amount of sympathy may be claimed by both sides. We agree with the desirability of lighting villages in the winter, as a few lamps about the streets make all the difference to cheerfulness and convenience; but, after all, there is something human about the man who lives at a solitary farm two miles away objecting to help to pay for a privilege from which he derives little or no benefit, and while village lighting remains a matter of local option the difficulties described will continue to exist.

The Value of Conferences.

THAT farmers are interested in discussion on matters concerning their industry is proved by the large number of practitioners who recently attended the Hop Growers' Conference at Wye College, and took active part in the proceedings. Just so, and in our opinion conferences of this kind need not be confined to hop growers, for in various other branches of farming they hold out possibilities of usefulness. There is no better means of education and the distribution of useful knowledge than by interchange of opinion amongst practical men, who when they meet together are afforded opportunities of relating their experiences under varying conditions. In the farming world of to-day there is no room for secrecy, nor is there any need for it, and in conference practical men can be of mutual assistance to each other. We contend that a farmer's education is never completed, and whatever branch a man may be most interested in he is well versed indeed if he can attend a conference without adding something to his store of knowledge. And apart from this it is a good thing for farmers to meet together in a spirit of good fellowship to exchange ideas and discuss matters of mutual interest and concern.

The Indifference of Farmers.

WHILE we freely admit that there is a section of the farming community who are well to the front in matters connected with the industry, and are doing their best to make its interest more powerful in the land, in many ways that need not be particularised, yet the fact remains that the efforts of the energetic and up to-date are sadly hampered by the apathy and indifference of another—and a large—section, who either will not move at all or are contented to sit on the fence and see what is going to happen before joining any movement that is started for their benefit. Even in a go-ahead county like Lincolnshire where the Farmers' Union is making its power felt, we observe that apathy and indifference are difficulties to be overcome, but it is a pity that this should be. There is no spirit of revolution moving, but it is in keeping with the times that farmers whose interests are mutual should stand together, and how can this be when one half are contented with seats on the fence?

Agricultural Politics.

BY A LOBBYIST.

The Fears of the "Times."

Many I assure my contemporary the *Times* that it has unduly alarmed itself over the action of the Central Chamber of Agriculture in accepting a resolution in favour of the formation of an Independent Agricultural Party. It has so inflamed its own vision that it already perceives on the floor of the House of Commons a band of agrarian Ishmaelites of the most extreme Keir-Hardie pattern, ever on the war-path, careless of traditions, heedless of patriotism, and unable to discipline itself in harmony, with imperial necessities. Fancy our old Somersetshire friend, Mr. Kidner, being the parent of a Parliamentary progeny of this kind. The *Times* can perceive no substantial result to be achieved by "the presence in Parliament of a group of half a dozen." Well, had such a group been present in Parliament in the last ten years we should not have had to wait so long for the Butter Act or the Dogs Act—we should not have had ten years of absolute legislative infertility so far as agriculture is concerned. The *Times*' Conservatism is really the source of the grissly fears with which it has influenced its o'er sensitive mind. Those fears are grotesquely overdone. After all, the word "independent" does not mean an antagonism towards all that is conventional and respectable. It does not mean the abandonment of ordinary partisan views and of all ambitions outside those affecting agriculture. It simply means the possession by a body of resolute-minded men of the determination that agriculture shall not merely not be neglected in Parliament, but that in this age when the Parliamentary victory goes to the best-organised and the most persistent section, Parliament shall not be left uninstructed in the evolving necessities of the nation's historic interest. This is not inconsistent with a real reverence for the Imperial structure, or with a readiness to make sacrifices on its behalf.

* * *

What Ministers Design.

I have been anticipating in this column that we should not in the next Session have so much heed paid to agrarianism as we had in the last two Sessions. But apparently I am mistaken. On re-conning the recent speeches of Mr. John Burns and Earl Carrington, I am simply appalled by the Gargantuan bill-of-fare which these two statesmen apparently intend to submit for Parliamentary digestion. Old age pensions—which, by the way, we must not forget was first suggested as a means of redeeming the lot of the agricultural labourer—are apparently inevitable. Mr. Burns has made such progress with his Housing Bill—which will have special clauses dealing with the rural situation—that, if my information be correct, it is actually ready for presentation to Parliament. This does not exhaust Mr. Burns's immediate anxieties. He has confessed that he shall not be satisfied—and he hopes to have received Parliamentary sanction for his purpose in the next session—until he has a million acres utilised in a disciplined scheme of afforestation. And Earl Carrington is every whit as ambitious. He hopes, in conjunction with Mr. Burns, to deal satisfactorily with the milk question—a generous anxiety in which every farmer sympathises with him. He is not without a belief that the horse-breeding problem will be grappled with. His lordship, too, is not without belief that agricultural land will be relieved of its terrible burden of rates as a sequel to the Valuation Bill. These are spendid anticipations in very truth. More power to your elbows, ye enthusiastic dignitaries of statesmanship. I am a little pessimistically inclined—I too well know how often the best-laid schemes of mice and men gang aft agley.

* * *

The Reticence of Mr. Chaplin.

I have secured through an admirable local newspaper, the *Salisbury and Winchester Journal*, a full report of the speeches Mr. Henry Chaplin recently delivered at Salisbury. Here was the avowed and accepted leader of the agrarian politicians speaking at a centre, every one of whose material interests is associated with the farming profession, and yet who deliberately refrained from dealing with the ominous question as to how, under a system of Protection in which antagonism to the British farmer in the markets of Great Britain is to be deliberately encouraged, British agriculture could possibly advantage. I use the word "deliberately" with malice aforethought. It would be absurd to suppose that a man who keeps himself so admirably abreast of rural thought as Mr. Chaplain does is not aware of the grim foreboding which the idea of the stimulated preference for Colonial agricultural preference—and that is what this new policy means—has inspired even in the minds of ardent Protectionists. It is a thousand pities that a statesman of the calibre of Mr. Chaplin should indulge in the dry husks of the ordinary platform orator when a matter of this grave omen to the interest of which he has been so long the friend and exponent perturbs the agrarian mind. I beseech Mr. Chaplin to abandon what I may describe as the pig-iron ethics of this neo-Protectionism, and to address himself to the explanation of the fears—they may be illusory—that possess so many men who regard him as their Parliamentary leader.

* * *

Is this Protection for the Farmer?

Now, let me take one sentence from Mr. Chaplin's tariff reform speech at Salisbury. "It was," said he, "no part of the policy advocated by Mr. Chamberlain or Mr. Balfour to increase the cost of food." Here, then, we have an authoritative exposition of the intention of the two great economic protagonists. Of course, this exposition—if not altogether in harmony with what the Chamberlain, *père et fils*, have said in the past—is simply an emphasis of Mr. Balfour's recent declaration. The tax on the foreigner is to be small; the infliction on the worker—the great consumer o our agrarian products—is to be infinitesimal to the extent of being almost non-existent. While this is so economic facilities of such a character are to be given to our Colonies—who can only dump into our markets products which must enter into grave competitive rivalry with English agrarian products—in their trading with Great Britain that those Colonies will gladly consent to purchase all the other necessities that they do not produce within their own borders from the Motherland. Should we hail the prospect with pleasure? The colonists say in effect: "We have with our virgin soil a remarkable fertility; let us supply your markets, and then we will buy everthing else we need from our island Motherland." From the point of view of the urban industrialist this is admirable—he is secured and assured a growing market, in which he sees energetic rivals brusquely rebuked, and he secures this advantage without any penalty to himself. But what of the farmer? I know that your excellent correspondent, Mr. Malden and those who think with him, indulge in visions of a differentiated import tax—of a heavy infliction for the foreigner and a small infliction for the colonist—and assume that the British farmer would under those conditions be able to still retain the home marts. This is not the intention of either home or colonial statecraft. There is to be no tax on food, mind you; Mr. Balfour insists that any tax shall be a small one. Is, I again ask Mr. Chaplin, this protection for the British farmer?

* * *

Agriculture and Health.

Now, this idea of the suggested Ministry for Health being affiliated to the Board of Agriculture is justified by precedent. The Ministry for Health is in more than one of our colonies the department which controls the economic destinies of agriculture. In the United States the Agricultural Department has charge of all the regulations affecting the food and beverages of the community. And, after all, there is method in the idea. Every food and practically every beverage is really a product of the soil. The farmer is the great food and drink producer of the country. To associate responsibility for the purity and wholesomeness of that food and drink with a department responsible for local government—for evolving order and rhythm out of a system necessarily intricate—is something worse than an anomaly. The Local Government Board, too, will in the coming day when the people are assured of an old-age pension, be so harassed with duties that a complete and vigilant oversight of regulations affecting food will be beyond its capacity. No new Ministry is, however, needed. The Board of Agriculture is the natural department wh should have control of these matters. I am anxious that the Board should be dowered with the duty, not because I wish to detach any of its interests from agriculturel proper, but because I wish to give it such a significance in the machinery of the State that it will possess resources which will enable it to do for agriculture that which everyone of its chieftains has lamented his inability to achieve. The Board of Agriculture, as the Ministry for Health, would be able to accomplish much for the farmer. Innocuous now, it would be powerful then.

* * *

Lord Carrington's At Home.

If there was one feature about Lord Carrington's at home which most delighted all who attended it that feature was its frank, genuine, and generous unconventionality. Frigid starchiness was entirely absent. It was a frank interchange of view between a Minister honestly anxious to get at the mind of the farmer and to persuade him of his anxiety to play the friendly and sympathetic part—to the extent to which the meagre resources allowed by a niggard State permitted him; and between farmers anxious to estimate the reality of the proposed sincerity of the Government and to comprehend how far that sincerity would operate to their further advantage. Of course, it could not but be that the existence of this mutual desire bred a happy spirit of fraternity and good-feeling. I dare aver that not a single visitor quitted the Board of Agriculture without being convinced that behind the breezy *bonhomie* of Earl Carrington is a close, zealous, intimate anxiety to benefit the lot of the farmer, and to do this as far as possible partisan sentiment being what it is—acting in harmony with the farmer himself.

THE SMITHFIELD SHOW.

PECULIAR CHAMPIONSHIP DECISIONS.

FULL CRITICAL REPORT.

THE 109th annual show of the Smithfield Club took place last week in the Agricultural Hall, Islington, and it was evident from the large number of visitors who paid at the entrances that the Cattle Show still maintains its popularity among all classes. The weather during the week was not of a most favourable character, rain falling persistently on several of the days. The opening of the new hall was a great improvement, and by a judicious redistribution of many of the stands the galleries were made more spacious and convenient for the large crowds visiting the Agricultural Hall.

On the first day of the show H.M. the King, the King of Norway, and H.R.H. the Prince of Wales visited the exhibition. It was generally hoped that the German Emperor would perhaps have accompanied the Royal visitors, but this was found to be impossible. His Majesty thoroughly inspected the prize-winning animals, but his fortune in the prize list was not so great as last year.

The Championships.

There was but one topic of conversation in connection with the Smithfield Show this week, and that was the extraordinary championship decision. The allocation of the champion prizes in the cattle section was carried out by Mr. Clement Stephenson, Newcastle-on-Tyne, and Mr. Hutchinson Catterick, Yorkshire.

Taking the special prizes as they fell to be decided by the judges, there came first the £25 cup for the best yearling steer. This honour fell to His Majesty's white Shorthorn, with Mr. Hudson's Aberdeen-Angus steer reserve.

Then followed the £50 cup for the best ox, and the judges again favoured the Shorthorns, the ticket going to Sir Oswald Mosley's two-year-old steer. The next move was to find a reserve for the steer championship, and in order to do this Mr. Peter Dunn's Shorthorn steer Gentleman John was brought before the judges, who almost at once preferred him to Sir Oswald Mosley's steer, and they would have liked to have revised their decision, which had been arrived at before seeing Mr. Dunn's animal. The stewards, however, intervened, and pointed out that, as the award had once been given, it could not be withdrawn by the judges.

The £50 cup for the best heifer was won by Lord Rosebery's two-year-old Aberdeen-Angus heifer Eloquent of Dalmeny 2nd, while Mr. Lean's two-year-old Shorthorn heifer was reserve.

Then came the rather unusual ending. The champion plate of 100 guineas forms the blue ribbon of the meeting, and the judges, confident in their judgment, entirely discarded the class allocations and gave the honour to Mr. Peter Dunn's second prize two-year-old Shorthorn steer. The course was an unusual one, and gave rise to great comment, but the judges were commended for their independent action, which placed as champion of the show an animal which was very popular round the ring, and their decision was undoubtedly the correct one. A reserve champion was found in Lord Rosebery's Aberdeen-Angus heifer, this being the second year his lordship has occupied this position. He, however, had the King's challenge cup for the best animal bred by exhibitor, Mr. Leon's Shorthorn heifer being reserve.

CATTLE.

Devons.

There was a very considerable difference between the Devon classes at Bingley Hall and those at Islington. At the latter one was very able to compare the varying characteristics of the breed. The Devons are given pride of place in the catalogue, and therefore were the first to be observed. But what a clashing of types these afforded. There was the small model, perfect in its symmetry and attractive to any eye; beside these stood a big fellow of the working ox type of days gone by, full of firm lean flesh, but so high on the leg as to make one consider whether the supply of gravy beef would be excessive; and then might be seen the modern type, the cross obtained from those before mentioned, and these naturally attracted the attention of the judges as being the modern ideal type of Devon so much sought after, but seldom has been in sufficient numbers to hold the sway, as it happily did on this occasion. When the young steers were first led out it was very evident that the Devon judge was going for type. There were nine of them. Here the judgment of Birmingham was confirmed, as Lord Rosebery was again placed first with a nice steer with grand back and loin with good butts; it was an easy winner in this class, and took reserve for the Breed Cup. The runner-up was His Majesty the King's steer, a very useful steer very typical of the breed, but hardly so weighty as the first, but by some considered to be the prettier. Mr. T. S. Morgan was third with his Whimple Model 2nd, another very level-backed bull with good sirloin, but not showing quite so well at the rump as in Birmingham; the same exhibitor's Marsh Mallow was highly commended, a large growing, somewhat plain steer, not quite so good over the rumps as Earl Cawdor's Curly, a good growing steer with a good back, but a trifle weak forrard, but likely to come on well for another year. Mr. Charles Morris and Viscount Portman were both commended with two good butcher's beasts. The older steers were not quite so attractive, and the prize-winners were not all of one type. As with the younger class, the types were so conflicting that it was easy to discern that the judges were not running well in double harness, and they ended their disagreement by calling in the referee, leaving him four animals which he was to place in their order of merit; this he did with satisfaction to himself, but not in the same order as either of the other judges would have. The first prize went to a big, heavy-fleshed steer, firm as a board, with plenty of quality, and it certainly showed itself better than some of the others, more so than the Earl of Rosebery's steer, bred by Mr. Thomas Yeo, Barnstaple. This is a nice thick steer, but a little gone on the back; however, she turned the tables on Mr. J. J. Cridlan's Birmingham winner, Model. It is a lovely quality steer, with grand sirloin and well finished, but it has an exceptionally short neck, and showed evidence of its travels by the weakening of the back, so it had to be third, though some might have reversed its position with the previous one. The reserve went to His Majesty the King's steer, a very fleshy one with good loin, but did not move freely. Mr. T. S. Morgan was highly commended with Whimple Favourite, a level, deep steer, hardly so weighty as the others, and might have been better from the pin backwards. Mr. Charles Morris was highly commended with a heavy steer, deep-fleshed, rather coarse forward, and did not move out so well. Mr. W. D. Sanders

MR. PETER DUNN.

The Exhibitor of the Champion Beast at the Smithfield Show.

GENERAL VIEW OF THE AGRICULTURAL HALL

THE KING AND PRINCE OF WALES INSPECTING THE CHAMPION BEAST.

showed for a commended card only a Devon of the olden times, which scaled 18 cwt. 12 lb. It was a mass of firm, useful beef. The Breed Cup went to Mr. Sonning's exhibit in this class.

There was a very nice class indeed, or rather a quartette of females. Earl Cawdor here easily secured the lead with Stackpole Nally 4th, a nicely-finished heifer, very even and of good type; Mr. T. S. Morgan was second with Ruby, a nice quality heifer, but which had lost some of her Birmingham bloom; Viscount Portman was third with a small somewhat bunchy heifer with a lot of spine, Bryanston Gentile; his Majesty the King was reserved with Carolina of the model type, rather small.

South Devons.

It was evident that the South Devon men had at last realised the importance of being adequately represented as regards numbers, but some of those present would have been more fitting for the carcase competition than where they were; they neeeded more finish, and one was inclined to believe the statement of one exhibitor that he had only begun to feed his animal six weeks before the show. The breed now having made good their entry, it must be kept up, and thereby command extended qualification. The first prize went to Mr. W. M. Roberts, St. German's, Cornwall, with Erney; that two years and ten months was only a stone short of 19 cwt.; it was a level, good steer, with lots of boiling meat, but could have done with more furnish. Mr. J. Sparrow Wrath was second with Rob Roy, a big high steer that had not stood its journey; the same exhibitor's younger steer Sir Fred, which was placed third, might easily have been put second; though not so weighty as the other, it was more evenly made. It was a true, typical South Devon, and would make a grand animal next year. The reserve went to a very useful steer—Mr. N. Boon's Victor. Messrs. Whitley were highly commended with Primley Hero, a level straight steer showing a lot of daylight. Mr. J. Luscombe was commended with Coarswell Lad. All the representatives of this breed were noticed, and all named, which makes identification easy.

Herefords.

There was little change to note in the display of this breed at Islington as compared with Birmingham the previous week. Most of the animals had as a rule held their condition quite as well as could be expected, and gave a generally good account of themselves. In the junior class Mr. R. Phipps' steer Favourite by Locarno, that was first in the Midlands, held his position, and also obtained reserve for the breed cup of the White Faces.

Mr. James Edwards had a very neat steer second, by Carbineer, of Grove blood on the dam's side, and a very nicely built one, with quality. A second entry of Mr. Phipps, half brother to the winner, carried off the third prize, and a second entry of Mr. Edwards the reserve card and an hc.

The older class of steers made a very good display of beef, having generally been fed very evenly and got up to great weights. Sir J. R. G. Cotterell's bullock, the get of Rameses out of Sylph by Balfour, was pretty easily placed first, and also given the breed cup, thus repeating his honours of the previous week. His outline is very pleasing, and he is wealthy of flesh of the right kind. Sir Richard Cooper followed with another very good steer of Mr. H. F. Russell's breeding, whilst His Majesty's steer by Fire King was only able to hold the third place. Mr. G. Faber, from the south of England, contributed a very useful, level steer, which was reserve and highly commended, hc also being allotted to Mr. Richard Bright for another good-fleshed steer by Marmion.

As at Birmingham, the female class was small. There were only four entries catalogued. His Majesty the King's Prudence by Fire King was placed at the head of them, a position her depth and wealth of flesh well merited. Mr. W. Tudge's Princess Beatrice, another well-known heifer, filled the second place, whilst the Hon. F. G. Wynn, with Queenie, a deep-bodied heifer of his own breeding by Union Jack, was awarded third.

Shorthorns.

There was a considerably improved entry of Shorthorns at Islington as compared with Birmingham the previous week. There were not, however, as has sometimes been the case, any great additions from the Edinburgh and Northern shows. The general quality was very satisfactory, indeed much better than might have been anticipated when the great demand for breeding stock is taken into consideration.

Steers under two years old were seven in number, the first prize being once more accorded to the Royal white steer, which had been similarly placed the previous week at Birmingham. As was said of him at that exhibition, "he is a particularly neat, fine quality steer, well covered with a kindly coat of hair," but so far as substance is concerned he is not any too well developed. Messrs. Denny, from the south of England, provided a very good second with the right kind of back and flesh, a good coat, and shapely and substantial; he was bred by exhibitors and sired by Fitz William. Messrs. Ross, from the north, were honoured with the third prize for a good ribbed, short-legged roan by Sarasate out of an Ajax dam. A very useful white of Mr. E. S. Godsell's, of Messrs. Garne and Sons' breeding, a steer with a good deal to commend him, handling well, and got by Village Beau, was reserve and highly commended, beating by a place Sir Oswald Mosley's very smart young steer by Beauty's Pride from a Scottish Beau dam.

The older steer class held seven entries, the results of which have been already partially detailed. At the Midland Exhibition Mr. Peter Dunn's Gentleman John was pretty readily placed first in his class; he was bred by Mr. John Ross, sired by Ajax, dam Lassie by Champion. To him was placed second at the Midland Exhibition a big and level red and white steer of Sir Oswald Mosley's by Beauty's Pride. At Islington in the class-judging these decisions were reversed, the Rolleston steer being placed at the front; both are admirable steers but of considerably different type. The Rolleston steer, first in London, scales over 18 cwt., and is a lengthy, good fleshed and good coated beast, but as a show steer he certainly does not fill the eye so well as the second prize one, which is beautifully packed in the hind-quarters and along the top with the best quality of beef, and is capitally brought out; on the scales, however, he is nearly 2 cwt. behind the winner, which, as we have already seen, the championship judges reinstated. The third prize was accorded to His Majesty the King for a wonderfully mellow-fleshed white steer by Royal Carlisle, which is altogether a creditable specimen; he was first in his class at the Norfolk Show, where he also carried off the special prize as the best beast bred and fed in Norfolk. Sir Walter Corbet was honoured with the reserve card and an hc for a capitally ribbed steer, bred by Mr. John Ross and sired by Winning Count; he handles very ripe and has an extraordinarily good top of roasting beef. Shorthorn heifers were a stronger class, and were headed by Mr. H. S. Leon's well-known Silver Streak, which thus repeats her Norwich and Birmingham victories, and has held herself together wonderfully during the show campaign.

His Majesty the King came in for the second prize for another of Carlisle's famous whites, Molly, out of Meg by Pride Collynie. This heifer has a wonderful back and depth of body, and carries a great amount of good flesh. Third honour went to Mr. James McWilliam for Missie, a roan of Mr. Duthie's breeding sired by Bapton Favourite, a good-fleshed and shapely heifer for her position. His Majesty the King was accorded the reserve and hc for the Royal Chieftain heifer Eva, and Mr. J. B. Dimmock obtained a commended card for a very useful white Norfolk heifer.

Sussex.

The very large entry of this breed formed one of the most creditable sections in the hall. Not only has the breed improved vastly of late years, but it has become more uniform in breed character, and many of the older steers had attained upwards of 18 cwt. apiece. They are heavily-fleshed cattle, too, and they ripen in good time.

Earl Winterton, Mr. John Aungier, and the Exors. of the late Mr. L. Huth held the best animals in the class for junior steers, which was capitally filled. Older steers also made up a remarkable class, the winners in these being Mr. W. G. Fladgate, Mr. Gerald Warde, and Mr. Stephen Agate. Heifers were also an exceedingly good lot, though not so numerous as the steers. Mr. P. F. R. Saillard's first prize one was a remarkably wide and shapely heifer, carrying a great wealth of beef. Mr. Gerald Warde and the Earl of Derby carried off the other prizes.

Red Polls.

This breed were quite in a minority with respect to numbers, but it is not often that their quality was as high. Mr. R. J. Thurman and the Right Hon. A. E. Fellows divided the prizes for young steers in the order named, the first prize animal also being reserve for the breed cup. Two very ripe older steers were shown by Sir Walter Corbett and Mr. G. D. Smith, but the pick of the section and winner of the breed cup was Sir Walter Corbett's beautiful heifer Acton Beryl. Sir Richard Cooper and Mr. J. B. Dimmock were also well represented in the class.

Aberdeen-Angus.

The total entry of this breed was satisfactory from a numerical point of view, and there were a number of extraordinary good animals representing the breed, though we seldom recollect seeing them of such variable character. The junior steer class, as in the other sections, was the first to be dealt with, and eight very useful steers came before the judges. Mr. R. W. Hudson's Danesfield Waterman, a son of Danesfield Jester, is a steer of such superb quality and symmetry that he easily occupied the first position, after being similarly honoured at Norwich and Birmingham. Colonel Charles McInroy, from the North, came in second with a compact, level, good-fleshed steer by Ben Vrackie that followed pretty closely, and Mr. J. J. Cridlan was honoured with the third prize for his good steer Black Silk. The reserve and an hc to Mr. James McWilliam, and a c to Sir Walter Gilbey, Bart., concluded the honours of the class.

The five older steers catalogued were several of them animals of great weight, running to close upon 18 cwt., and were wonderfully well-finished beef; notwithstanding this, however, none of these shared in the champion honours. Mr. James McWilliam was first with a ripe, good fleshed one by Alick of Abelour, and Mr. Thomas Wotton, from the south of England, carried off both the remaining prizes with steers of his own breeding sired by Ruthless Boy. Colonel McInroy could not get beyond the reserve and a hc for a very good but slightly younger steer sired by Edeyrn.

Coming to the female class, these must be called the pride of the section, holding seven good heifers. The first of these was the Earl of Rosebery's Eloquent of Dalmeny 2nd referred to in the championships. She is a heifer with great depth and room about her, though in the back she might come to hand considerably better than she does. She was, of course, accorded the Breed Cup of the blackskins. Mr. George Bruce, of Tochineal, with Lassie of Cullen, a very massive, heavy-fleshed, weighty heifer, bred by Sir John R. Gladstone, and sired by Earl Marshal filled the second place, Mr. J. H. Bridges providing the third winner in Barbarina 4th, a heifer with wonderful loin and fore end, but rather lacking in under line. She was sired by Lepanto of Careston. Mr. J. J. Cridlan's fine heifer Elegance of Maisemore, whose perfect symmetry and good finish won for her the championship of Norwich and also first in her class and the Scotch Cup at Birmingham, had to be content with the reserve number and an hc, very hard lines for so good a heifer. Colonel McInroy also obtained an hc for Belgaum, a level daughter of Ben Vrackie, Mr. George Young also being similarly honoured for a rather young heifer in Cadboll Nancy. This concluded the honours of the breed.

Galloways.

This breed were farly strong numerically, and there were a number of remarkably neat steers and heifers shown, presenting great improvement as compared with a few years ago. Mr. R. W. Hudson carried off the breed cup with a steer that had been winning at Norwich and Birmingham very deservedly. Mr. David Brown, Messrs. Bigger and Sons, Mr. Wallace, Mr. Robert Graham, Mr. C. R. Dudgeon, and Sir R. W. Buchanan Jardine were the other successful exhibitors.

Highland.

This was quite one of the leading sections in the hall, a more uniform and good quality lot have probably never been exhibited at Islington before. His Majesty the King's herd achieved great distinction here, carrying off three first prizes, two seconds, and the breed cup with quite a wonderful collection of steers and heifers. The season had evidently been well suited to these shaggy northern cattle. Other successful exhibitors were Sir W. Ogilvy Dalgleish, the Countess Dowager of Seafield, and Mr. W. J. Nimmo.

Kerries and Dexters.

These classes were not numerically strong, but so far as symmetry and quality were concerned, the leading animals could scarcely have been improved upon. Mr. R. W. Hudson, from Danesfield, has become quite invincible in this section of the show, and his entries upon the present occasion form quite a sensational display, carrying off all the leading class prizes as well as the breed cup. His Majesty the King, Mr. B. De Bertodano, W. Martin, J. Sutton, Sir Walter Gilby, and the Duchess of Devonshire were also successful exhibitors.

The small crossbred classes which followed were, if possible, more meritorious than the pure bred ones, the leading honours again falling to Mr. R. W. Hudson's entries. His Majesty the King, Mr. Douglas Fletcher, Mr. W. Westgate, Sir Walter Gilby, Mr. G. F. Stanford, and the Duchess of Newcastle, were also capitally represented and shared the honours.

The leading cows in this section were the Shorthorn and Aberdeen-Angus with the Dexters.

Crossbred.

It was a very interesting collection of animals of thoroughly good practical character that filled these classes; some of the older steers and heifers too were good weight, and almost without exception all were thoroughly ripe, shapely, and of high quality; quite the majority were of the Angus and Shorthorn cross. Still, there were a good number of the Galloway and Shorthorn crosses as well as North Devon and Angus crosses.

Most of the animals in the steer class under two years old were noticed by the judges. Included in this class was Miss Alice de Rothschild's blue roan and white Waddesdon Starlight by First Principal, a steer with great scale about him, depth of body, and capital flesh, laid on evenly. He was accounted good enough to take one of the breed cups. Messrs. Ross exhibited two very neat steers in the class by Gondolier that carried off second prize and reserve number, leaving the third prize to Mr. R. W. Hudson's

Danesfield Lordship, another level Angus and Shorthorn cross.

Of the old steers, Mr. William Dunn had the best in the very even-fleshed and ripe red Tochineal Charlie, a bullock of considerable size as well as the best quality of beef. Mr. Robert Turner came in second with a wonderfully well finished black, big on his top and handling well, and Mr. J. C. Williams was placed third with a Devon and Angus cross, quite of first-class quality and well put together. Minor honours consisted of r and hc to the Earl of Powis for a good Shorthorn and Galloway cross and hc to the Earl of Durham for another of similar breeding.

Messrs. Ross scored a great success in the heifer class under two years, carrying off both first and second prizes for a blue-grey and a black of very symmetrical build and full of quality. Mr. J. C. Williams again came in third with a very pretty heifer of the Devon and Angus cross that runs up very closely; a second entry from the same herd of similar breeding was also reserve and highly commended, whilst highly commendeds were given to Mr. James McWilliam and Mr. Thomas Kidner.

Miss Alice de Rothschild's herd scored another great success in the heifers over two and under three years of age, both first and second prizes being readily accorded to her exhibits. These very fine heifers were both bred at Waddesdon, and were of Angus and Shorthorn cross. The first prize heifer pulls up the beam at a good weight,

(Steers above 2 and not over 3 years old.)

Aberdeen-Angus Heifer Eloquent of Dalmeny 2nd, Reserve Champion Beast at the Smithfield Club Show last week. Bred and exhibited by the Earl of Rosebery, K.G., Dalmeny Park, Edinburgh; sire Prometheus of Dalmeny, dam Eloquent; age 2 years 9 months 5 days; weight 16 cwt. 0 qr. 5 lb. In addition to being Reserve Champion, Eloquent of Dalmeny 2nd was the First Prize winner in the Class for Aberdeen-Angus Heifers, was awarded the Cup for the Best Aberdeen-Angus, the Silver Cup for the Best Heifer in the Cattle Classes, and the King's Challenge Cup for the Best Beast in the Show bred by the Exhibitor.

and is remarkably well filled with roasting beef both in the hindquarters and chine. Mr. R. J. Thurman, from the Eastern Counties, carried off the third prize with a very good Shorthorn and Angus cross, and Mr. James McWilliam was reserved and highly commended with a fairly young heifer of Mr. James Macdonald's breeding sired by Marksman of Culdrain. Lord Calthorpe had also a capital Devon and Angus heifer highly commended, which was certainly deserving of better things.

Below we give a table showing the average daily gain of the prize-winning cattle:—

Exhibitor and Breed.	Age. Days.	Weight. lbs.	Average Daily Gain. lbs.

SHEEP.

The Smithfield Sheep Show this year is one that cannot be otherwise than satisfactory to those who are engaged in this industry. It was a very excellent entry indeed, and a matter of satisfaction to observe that there were few, if any, exhibits that could be classed otherwise than of good merit and typical specimens of their breed.

Championships.

Great interest naturally centred round the contests for the champion cups. The first of these to come up for decision was that of the Long Woolled breed, in which Mr. E. F. Jordan's particularly fine pen of Leicester wether sheep was made winner. It is now a considerable time since Mr. Jordan, or indeed any Leicester breeder, won this honour. The last occasion was in 1896, when the same breeder won. The rn for the Champion Long Woolled Cup went to Mr. W. B. Swallow for his particularly handsome pen of Lincoln wether lambs, that were rn for the breed cup of that breed—a decision that caused considerable comment, and one certainly not supported by precedence.

The contest for the Short-woolled championship resulted in one of the best pens of Southdown lambs, owned by Mr. C. Adeene, being made winners that we have seen exhibited for many years. Mr. James Flower, as has been the case for several years past, once again had to be content with the rn for this honour.

The Prince of Wales' Challenge Cup for the best pen of sheep in the show went to Mr. Adeane's beautiful pen of Southdown wether lambs. The last and only previous occasion upon which this honour has been won by Southdown wether lambs was in 1884, when Mr. W. Toop was successful. Mr. E. F. Jordan took the rn with his champion pen of Long-woolled Leicesters.

Leicesters, or Border Leicesters.

The entries in these classes were all of the Leicester breed. The competitors in them were two, Mr. E. F. Jordan and Mrs. S. Perry Herrick. Mr. Jordan's exhibits were invincible, taking first and second in each class, the breed cup and its reserve. The breed cup winning pen referred to in the champion contest was of very high merit indeed, and the same remark is applicable to that excellent pen of lambs that led in its class for the same owner. Mrs. S. Perry Herrick, with typical specimens of the breed, but not quite forward enough in condition for Smithfield, was third and reserve in each class.

Lincolns.

It is a matter of regret that more breeders do not enter at Smithfield, and thus take fuller advantage of the great opportunity this show offers them for the exhibition of their breed.

The lamb class was a particularly good one. Mr. W. B. Swallow's high-class, fine, lengthy, and good pen of lambs were its winners, and subsequently were made rn for the breed cup, and obtained that unique distinction of being placed above the breed cup winners in the champion contest by reason of being selected as the second best pen of Longwoolled sheep in the show. A shorter but equally good-fleshed pen from Messrs. S. E. Dean and Sons was made second, followed by that well brought out and matched pen owned by Mr. H. Dudding, that were third.

As has been the case in the four previous years, Messrs. Dean and Sons won in the wether class. A remarkably big, massive, and well-fed pen of wethers these were, and they won without question the first honours, their greater weight undoubtedly scoring heavily in their favour. Mr. Dudding's second prize pen was a choice one in all respects, whilst the third prize pen, owned by Mr. W. B. Swallow, was from a breed point of view excellent, but hardly handled so well as the winners. Mr. F. Ward's rn pen is deserving of notice, on the ground of general good merit and quality.

Kent or Romney Marsh.

No set of breeders have made greater strides in the development of their breed than these. The lamb class was one of the best classes of its age in the Long-woolled section; a grand pen, with plenty of scale and size, owned by Mr. T. Wotton, was correctly placed first, and secured the reserve number for the breed cup. A second entry from this flock was hc. Sir H. E. Dering's second prize pen were of great merit. They were of good scale, well grown, and fine lambs. Mr. F. Neame's equally good pen, with rather more depth of flesh, were third; and Mr. Henry Rigden's well-matched trio of well-grown lambs rn.

The winning pen of wethers owned by Mr. C. Gordon Neame, which were made breed cup winners, also proved themselves to be, when carefully examined, a particularly handsome and good pen of sheep. We have seldom come across a pen of Kent wethers showing the same depth of flesh, well developed, and fine backs. In Mr. T. Wotton's two entries, which were second and r, there were some very choice specimens of the breed. The second prize pen were hardly so well matched as the winning pen, for had they been so, it would have been a very close shave between them. The reserve number pen was a very good one too, and some thought that one if not more of these sheep might have been substituted for others in the leading pen of this flock. Mr. J. E. Quested's well-matched pen took third honours, and Messrs. H. Rigden, F. Neame, and C. Gordon Neame, for his second entry, were commended.

Cotswolds, Devons, or any other Long Woolled Breeds.

There was no entry in either of these classes, and it is a matter of regret that this should be so, but not of surprise, for nowadays breeders of pure-bred sheep are very much averse to exhibiting their sheep in classes in which they compete directly with other pure breeds.

Cheviots.

A small entry, but one of superior merit and quality, represented this popular North Country breed of sheep. Mr. John McDowall won first and reserve in the lamb class with two specially good pens. The winners were run very close indeed, with a beautifully-finished pen that had been fed by Messrs. Denny in Kent.

In the wether class the competition was keener than usual. Despite this, however, Mr. John McDowall was able once again, with choicely-fed and finished sheep, to secure first and second honours, together with the breed cup and its rn. Mr. J. D. Fletcher was third with a neat, well-matched pen, and Mr. S. Linton rn.

Mountain Breeds, other than Welsh.

The highly satisfactory entry was made in this class, and the competition was very keen indeed. Sir J. Gilmour won first and rn in the lamb class; the winning pen were remarkably good specimens of the breed, and handled well. The second prize pen was owned by Mr. John McDowall, an excellent pen of very superior merit, leaving third honours to Mr. S. Linton, and Mr. J. Howison took the c.

In the class for wethers an interesting competition took place, occasioned by the entry of two pens of Kerry hill sheep. These were owned by Mr. L. Moore, and their high merit and quality was such that they rendered the final placing of the awards uncertain until the very last, when the decision was given in favour of Mr. John McDowall's Blackfaced Mountain pen, a grand pen of wether sheep, deep and good in the flesh. Mr. Moore's two pens were second and rn, and they were of that merit and quality which certainly attracted attention to their breed. Sir J. Gilmour was third with a very handsome pen of Blackfaced Mountain sheep.

Welsh Mountain Breed.

There was only one class for this breed—*i.e.*, for wethers, but it was one of grand quality and merit throughout. The University College of North Wales took first and third, the leading pen being of high quality. Messrs. E. Nicholas and Sons were second, another choice pen of mutton sheep, and Mr. W. Conwy Bell took rn.

Southdowns.

The largest, and we think it can be said without fear of contradiction, the best entry of any breed at this year's show, was made by the Southdown sheep. The class for wether lambs was a remarkably good one, and it is seldom that a better or more typical pen of its breed has been selected for the leading honour. This pen came from Mr. C. Adeane's flock, its choice quality of flesh, and the depth of it, together with its fine conformation, made it a remarkably good pen. The flock mates in the other pen entered in the class were fourth. The Exors. of Colonel McCalmont were also represented by two pens; second and hc were the awards they won. A very specially good pen indeed, with grand hindquarters, back and loin, was the leading pen of these two, their close attendants were a beautifully matched and even trio of choice quality lambs from the Duke of Devonshire's flock. Then came another grand lot of lambs, i.e., the double entry owned by Sir J. Wernehr; they were made rn and hc. The touch and quality of the flesh of these sheep was very good indeed, and few better in respect to type and character were seen in the class. A pen, bred by Mr. John Langmead and exhibited by Mr. James Toop, was commended.

The wether class was a very strong one indeed, numbering twelve entries present, all of which were included in the award list, an indication of the high opinion in which the exhibits were held

by the judges. First and fourth honours in this grand class went to two remarkably good pens of beautifully formed wethers, having a great depth of flesh and fine touch, owned by the Exors. of Colonel H. McCalmont. Second and commended were the honours won by Sir J. Wernher for his two entries in the class. The second prize pen bore inspection well, and although there was some question as to the correctness of this award, it is only fair to add that it secured general support, though at the same time there is no question but that the high merit and the quality of the flesh of the entry from the Duke of Devonshire, that was placed third, made them dangerous competitors for the higher honour. H.M. the King was rn and c for two pens of very high class sheep. Sir T. Gooch, Mrs. Montefiore, and Mr. W. Cazalet were hc and the Duke of Richmond c for two choice pens of high quality sheep, which somehow or the other did not appeal successfully to the judges.

Hampshire Downs.

Although somewhat smaller in the number of entries than used to be the case, this breed was represented by a notably fine collection of lambs and wethers. In the lamb class that remarkable depth of flesh for which Mr. T. F. Buxton's flock was so noted, was shown to a marked degree of perfection in the particularly handsome pen of lambs that won first honours for him, and which were subsequently placed as rn for the Breed Cup. They were remarkably good in all respects so far as regards flesh and conformation. Their flock mates, a pen of rather smaller scale, were fourth. Second and hc went to Mr. James Flower. His second pen was a notably good one, of very high merit and quality, but hardly so ripe as the leading pen. The Exors. of Sir W. G. Pearce owned the third and rn pen; these were well-grown lambs of high merit and grand quality. Mr. S. Darling was c for his two entries.

The wether class had for its winners a pen of outstanding quality, type, and merit, owned by Mr. James Flower, well fed, ripe, and good in flesh; this pen well deserved its position, and were made breed cup winners. A good, deep-fleshed and well-brought out pen, owned by Mr. T. F. Buxton, took second honours, leaving the third prize and rn to the Exors. of Sir W. G. Pearce, Bart., two pens of fine and well-grown typical sheep of their breed.

Suffolks.

The competition in the lamb class was much more satisfactory this year, because there were more entries and more competitors. Mr. H. E. Smith won first honours with a remarkably good and well-grown pen of lambs; they were made breed cup winners. His second entry, equally well grown, was placed third. The better pen of two choicely-bred and well-fed pens, owned by Mr. D. Abbot Green, was made second, and the other placed rn. The merit and quality of Sir A. G. Hazlerigg's pen fully entitled it to the commendation it won.

In the wether class Mr. H. E. Smith was the only competitor. First and second honours went to his fine exhibits, the leading pen taking the Breed Cup.

Shropshires.

In the lamb class Sir Richard Cooper was an easy winner with a capitally-matched and well-fed trio. Lady Rothschild's two pens followed as second and rn. These were well brought out and good in their flesh. Mrs. W. F. Inge took hc.

In the wether class two pens from Sir Richard Cooper were first and second, and the quality, type, and character of the leading pen which won also the Breed Cup, was as good as one has seen for some considerable time. They were a well-grown lot. Mr. A. S. Berry was rn with another fine lot of sheep, and Mrs W. F. Inge hc.

Oxford Downs.

The increased number of entries and also of competitors in these two classes is a matter of very great satisfaction, and it is hoped that such will continue to be the case in future years. The first prize and rn for Breed Cup went to a remarkably good pen of lambs with plenty of scale and good flesh, owned by Mr. James Horlick. Mr. John Hazell's success in taking the second prize was well deserved, whilst Mr. J. T. Hobbs, who had upon this occasion to be content with third and hc for his two pens, has the satisfaction of knowing that the increased competition of the present year is to some considerable extent due to his and other leading breeders' efforts in making the breed more popular by the exhibition of their sheep at the summer shows. Mr. H. Baker was rn.

In the wether class, Mr. James Horlick again went to the front, and with this particularly good and well-fed pen was made Breed Cup winner, his second entry taking the rn. Mr. J. T. Hobbs was second, beaten by the decision of the judges, but it was one of those decisions that others might willingly have altered, for this pen was remarkably good in respect to quality of flesh and touch. Miss Alice de Rothschild was made third winner, with a well-finished and typical pen of the breed.

Ryelands.

Only two pens, but both of them fine pens, represented this breed. They came from Mr. W. T. Barnoby's well-known flock. They were choice in quality and excellent in merit, and won first and second prizes.

Dorset Horns.

Like the previous breed there was only one class for it—*i.e.*, for wether lambs. The winners here were Mr. James Toop's beautifully-moulded, thick, and deep-carcased lambs. They were easy winners in the class, and also took the Breed Cup offered for this breed and the Ryelands together. Mr. Troyte-Chafyn-Grove owned the other two pens, and they were placed second and rn.

Crossbred.

A most interesting section of the show, for it is in these classes that one comes across the result of the cross-breeding between two pure breeds of sheep. In the lamb class for English breeds the Oxford Down Hampshire cross, as exhibited by Mr. T. Rush, secured the preference of the judges, and won first and rn in the class, the leading pen taking also the Breed Cup. It was a very fine pen of mutton sheep, so also were those two particularly handsome and good backed pens of the Dorset Horn Southdown cross, exhibited by Mr. James Toop.

At the Smithfield Club Show last week the Pen of Southdown Lambs shown above won the Prince of Wales's Challenge Cup for the Best Pen of Three Sheep or Lambs in the Show bred by Exhibitor, The Championship of the Short-woolled Sheep section, and the First Prize for Southdown Lambs, and the £15 Cup for the Best Pen of Southdowns. They were bred and exhibited by Mr. C. R. W. Adeane, Babraham Hall, Cambridge. Age about 10 months; weight 3 cwt. 3 qr. 10 lb.

In the wether class there were only two entries present, both owned by Mr. T. Rush, and they were placed first and second. The winning pen took also the rn for the Breed Cup.

It is seldom we have seen a better, larger, or closer competition in the Scotch Cross-bred Lamb class than upon the present occasion. Mr. S. Linton won first with a beautifully-finished pen; Mr. J. R. Sim took second honours, closely pressed for this position by the pen owned by Messrs. Denny, who were third and hc, leaving the rn to Mr John McDowall, a breeder who made the keenest of fights for the leading position in the corresponding wether class, where, however, he had to be content with second and third awards, leaving the premier position to Mr. S. Linton, jun., for a remarkably good pen of the Border Leicester Cheviot cross. Mr. J. R. Sim took the rn with a well-grown pen of the Leicester-Blackfaced cross.

Below we give a table showing the average daily gain of the prize-winning sheep:—

Breed and Owner.	Age. Days.	Weight. lbs.	Average Daily Gain. lbs.

Mr K M Clark, Large Black	2 0 15	23 3	11½	2nd	3rd

PIGS.

This year the pigs were given more room in the large new hall, and they could be more readily inspected, and the result of this inspection was to disclose the fact that some of the sections were not up to average merit; there were none of those outstanding specimens that so readily command attention, and it is more than evident that grass feeding does not pay even for Smithfield. The Middle Whites were of average merit. In the younger section Mr. Charles Spencer was an easy first and second with pigs sired by Holywell Rosario, dam Holywell Royal Rose, they were very matchy and good; Mr. Alfred Brown's pen being reserved. In the older class there was a much keener contest. Mr. Julius A. Fricker being first and breed cup with two rather lengthy, very deep, compact pigs, with nice hams. Mr. George Hayter ran him rather close with two pens containing Holywell blood. Mr. Arthur Hiscock was reserved with strong, deep pigs. The reserve for the breed cup went to Mr. C. Spencer's young pen.

The classes of the pig section were undoubtedly the Large Whites. There were a number of outstanding specimens here that could not fail to claim attention. The classes were good. Mr. Thomas Henson was first with a matching pair with good backs and loins in the younger section, Mr. Alfred Brown being a close second here, although his pigs had not quite the bloom of the others. The Earl of Rosebery was well represented by a couple of the get of Cicero of Dalmeny. Mr. R. R. Rothwell's reserve were not quite matchy, especially when outside the pens. The Earl of Ellesmere's pen was commended only. However, his herd had its opportunity in the older class of the get of Worsley Eclipse 9th, dam Hope of Worsley. These were the champions of the show, and they also took Prince Christian's Challenge Cup, as being bred by the exhibitor. They were long, and yet not too long, with depth, grand loins, and full of quality. The Earl of Rosebery had a very choice pen to follow, as they showed a lot of character. Mr. Arthur Hiscock would have been a strong runner for second place had his pigs been a little stronger in the hams. They showed a lot of breeding, but were not so weighty as the others. Messrs. Wherry's reserve pen, attracted a lot of attention. The breed cup went to the Earl of Ellesmere's pen, Earl Rosebery's pen being reserve for the same.

The Large Blacks were most noticeable for the apathy displayed by the Western breeders, and those who came up did not find much encouragement either. There were only few entrants in the younger section. Mr. Kenneth M. Clark had practically a walk over in the younger class with his two pens by Sudbourne Surprise by different dams. They were very compact, and excellently shown. Mr. C. F. Marriner's reserve pen did not show the weight of the others. This breed was seen at its best in the older class, Mr. Kenneth M. Clark coming in here with a very fine pen with good backs and neat heads and excellent hams, and thus secured the Breed Cup. Second to them was Sir A. G. Hazlerigg's pair, very coaty, nice quality, but rather small ears. These were placed reserve for the cup. Mr. John Goddard was third with lengthy pigs, rather thin in the coat. Mr. Knight was reserved with some very pretty and useful baconers. Mr. John Warne's commended lot were in their coats.

The Berkshires this year were remarkably even and not quite so blaring as we have seen them as to marking, but there was an absence of leaders. All were noticed in the younger class. The Visiting Committee, Middlesex County Asylum, appear to have got hold of a remarkably good strain of blood, and they know how to handle it to the best advantage. Their pen was shown in the pink of condition, and were very even and sizable. They had nice backs, deep sides, and well-turned hams, and were placed reserve for the Breed Cup. H.R.H. the Prince of Wales sent a very choice pen from Sandringham, but they had been just too well done. Although they were the weightiest pen in the class, the judge could not but put them second. The Duchess of Devonshire had a useful pen indeed for third position, and the reserve pen also came from the same herd, Mr. J. Fricker getting a highly commended for his Fightable F. B. The merit was more broken up in the older class, the judges soon returning quite a number to their

pens. Here Mr. A. J. Fricker came out on top with two of the most typical specimens of the breed in the show. They were nicely fed and bred, and were easy winners. The Duchess of Devonshire had a very matching pair, whilst the contest was keen between Mr. Alfred Brown's and Mr. N. Benjafield's pens for third and fourth positions, the Visiting Committee Middlesex Asylum and Prince Christian being alike highly commended.

The Tamworths made a very neat show, and it is evident that the dark grisly colours are fading into the golden one that has now become so fashionable. In the younger section Lord Hastings appeared upon the scene to upset the Birmingham calculations by taking first and second, with two straight and even pens by Warwickshire Boy, Mr. D. W. Philip being second and reserve, his pigs being scarcely so forward as the others in the first instance and with the reserve not quite a pair. There was a good class of older ones, Mr. Ibbetson now upsetting Mr. Philips' Birmingham lead by taking first with nice thick pigs and third with another pen, thus sandwiching Mr. Philips' lengthy pigs. Sir Peter C. Walker's pen were reserved. The cup went to Lord Hastings' pen, Mr. Ibbotson's being reserved.

The Crossbreds were decidedly weak. Usually rather the better of the two. Mr. J. A. Fricker here came an easy first with his Berkshires, Mr. Arthur Hiscock's second being of the same breed. In fact, all the prizes and mentions in this class went to the Berkshires.

The cross-breds made better porkers than baconers, Mr. A. Brown winning with a Berkshire middle and Berkshire cross. Mr. N. Benjafield had a pair of neat porkers of Berkshire White cross. Mr. J. Goddard took third with Large White-Large Black cross; the Earl of Ellesmere's reserve being Large White-Large Black cross; the Duchess of Devonshire's highly commended pen being of the Somersetshire breed; Mr. A. Hiscock's commended, Berkshire Middle White.

The single pigs made a useful show in the class for Whites. Messrs. Wherry were first, and the Earl of Ellesmere second with the heaviest pig—4 cwt. 3 qr. 5 lb—just under eleven months old. Mr. John Neaverson's Large White was reserved. In the Black class there was not such a large entry. Sir A. G. Hazlerigg was first with a Large Black which scaled 4 cwt. 1 qr. 17 lb, Mr. K. Clark's Large Black being second.

The Berkshire singles were best, Mr. J. A. Fricker took first and single champion, H.R.H. Prince Christian being second and reserve for

The Champion Pen of Two Pigs at the Smithfield Club Show last week—Large Whites, bred and exhibited by the Earl of Ellesmere, Worsley, Manchester. Their sire was Worsley Eclipse 9th, dam Hope of Worsley; age 10 months 3 weeks 6 days; weight 10 cwt. 3 qr. 22 lb. In addition to the Championship, they won the First Prize for Large Whites over 9 and not above 12 months old, the Cup for the Best Pen of Large White Pigs, and Prince Christian's Challenge Cup for the Best Pen of Two Pigs in the Show bred by Exhibitor.

they constitute one of the strongest, if not the strongest, features in the show. The first prize in the young class went to Mr. R. R. Rothwell's Large Black-Large White Cross. This produced a very weighty pair of fair quality; they took the breed cup. Mr. Alfred Brown came in second and reserve for cup with Middle White Berkshire; these were rather thick but good meat. Mr. N. Benjafield's third lot, a cross Berkshire on Middle White, did not show as much black as the others, though they were very useful bacon pigs. The Earl of Ellesmere's reserve was Large Black-Large White Cross; whilst Mr. George Atkins' highly commended was a Large White-Berkshire cross. The Duchess of Devonshire was commended with a breed that promises to become more recognised in the showyards in the near future, the Old Gloster Spots and Somersetshire breed. There was only a useful class in the older section. Mr. A. Brown took the lead with his Middle White Berkshire cross, Mr. Nathaniel Benjafield having brought a very useful pair from Large White on a cross, dam Small Black and Small White; Mr. George Hayter was third with a Middle White Berkshire cross, Mr. Arthur Hiscock's reserve being Large White, dam Berkshire. Mr. Arthur Briant's highly commended being a Large White on cross, dam Berkshire Middle White. The porker classes were not so interesting as might be expected. In the class for Whites not exceeding 100 lb. weight, Mr. Arthur Hiscock was first with some nice porkers of the Large White breed. Messrs. Wherry's second being also Large Whites, and the thirds going to Mr. Alfred Braun's Middles, Mr. R. A. Ayres' Large Whites being reserved. The class for Berkshire or Blacks was single champion. Mr. Robert Ibbotson had the best Tamworths being first and second.

In the cross-breds Mr. N. Benjafield came out on top with Large White, Small Black, and Small White Cross. Mr. George Austin's being second with Large White and Berkshire cross.

This year the small breeds vanished from the Hall, as prizes were offered not for either Small Blacks or Small Whites.

The tendency of the pig section as a whole was towards more meat less fat.

CHAMPION AND SPECIAL PRIZES.

CATTLE.

Champion Plate, value 100 guineas, for the best beast in the show.—1, Mr Peter Dunn, Pasture House, Sigglesthorne, Hull, Shorthorn Steer Gentleman John; r, Earl of Rosebery, Dalmeny Park, Edinburgh, Aberdeen-Angus heifer Eloquent of Dalmeny 2nd.

The King's Challenge Cup for the best beast in the show, bred by exhibitor.—1, Earl of Rosebery, Dalmeny Park, Edinburgh, Aberdeen-Angus heifer Eloquent of Dalmeny 2nd; r, Mr H S Leon, Bletchley Park, Bletchley, Bucks, Shorthorn heifer Silver Streak.

Silver Cup, value £25, for the best beast in the show, not exceeding two years old.—1, H.M. the King, Royal Farms, Windsor, Shorthorn steer; r, Mr R W Hudson, Danesfield, Marlow, Aberdeen-Angus steer Danesfield Waterman.

Silver cup, value £50, for the best steer or ox.—Sir Oswald Mosley, Rolleston Hall, Burton-on-Trent, Shorthorn steer; r, Mr Peter Dunn, Pasture House, Sigglesthorne, Hull, Shorthorn steer Gentleman John.

Silver cup, value £50, for the best heifer, The Earl of Rosebery, Dalmeny Park, Edinburgh, Aberdeen-Angus heifer Eloquent of Dalmeny 2nd; r, Mr H S Leon, Bletchley Park, Bletchley, Bucks, Shorthorn heifer Silver Streak.

Breed Cups.

Devon.—Mr Edmund Hobbs, Sonning Farm, Reading, steer; r, Earl of Rosebery, Mentmore, Leighton Buzzard, steer.

Hereford.—Sir J R G Cotterell, Garnons, Herefordshire, steer; r, Mr R Phipps, Buckenhill, Bromyard, steer Favourite.

Shorthorn.—Sir O Mosley, Rolleston Hall, Burton-on-Trent, steer; r, Mr Peter Dunn, Pasture House, Sigglesthorne, Hull, steer Gentleman John.

Sussex.—Mr W G Gladgate, Apsley, Thakeham, Pulborough, steer, Apsley Sam; r, Mr P F R Saillard Buchan Hill, Crawley, heifer, Bewbush Evelyn.

Red Poll.—Sir W Cornet, Acton Reynold, Shrewsbury, heifer, Acton Beryl; r, Mr R J Thurman, Dairy Farm, Semer, Ipswich, steer.

Aberdeen-Angus.—Earl of Rosebery, Dalmeny Park, Edinburgh, heifer, Eloquent of Dalmeny 2nd: r, Mr G Bruce, Tochineal, Cullen, Banffshire, heifer, Lassie of Cullen.

Galloway.—Mr R W Hudson, Danesfield, Marlow, Bucks, steer, Danesfield Challenger: r Mr D Brown, Stepford, Dunscore, Dumfriesshire, steer, Challenge of Stepford.

Welsh.—The Coed Coch Trustees, Llawrcoed Coed Farm, Abergele, steer, Pedr; r, Hon F G Wynn, Glynllivon Park, Carnarvon, heifer, Lady Glyn.

Highland.—H M the King, Sandringham, steer; r, H M the King, Sandringham, heifer.

Cross-bred.—Miss A de Rothschild, Waddesdon Manor, Aylesbury, steer, Waddesdon Starlight; r, Mr W Dunn, Catfoss House, Sigglesthorne, Hull, steer, Tochineal Charlie.

Kerry or Dexter.—Mr R W Hudson, Danesfield, Marlow, heifer, Danesfield Marjorie; r, Mr R W Hudson, Danesfield, Marlow, steer, Danesfield Dandy.

Small Cross-bred.—Mr R W Hudson, Danesfield, Marlow, heifer, Danesfield Sincerity 2nd; r, Mr R W Hudson, Danesfield, Marlow, Danesfield Sweet William.

SHEEP.

Plates and Cups.

Prince of Wales's Challenge Cup for best pen of three sheep or lambs bred by exhibitor.—1, Mr C R W Adeane, Babraham Hall, Cambridge, Southdown lambs; r, Mr E F Jordan, Eastburn, Driffield Leicester sheep.

Plate value £50 for the best pen of three longwoolled sheep or lambs.—1, Mr E F Jordan, Eastburn, Driffield, Leicester sheep; r, Mr W B Swallow, Wootton Lawn, Ulceby, Lincs, Lincoln lambs.

Plate, value £50, for the best pen of three short-woolled sheep or lambs.—1, Mr C W R Adeane, Babraham Hall, Cambridge, Southdown lambs: r, Mr J Flower, Chilmark, Salisbury, Hampshire Down sheep.

Breed Cups.

Leicesters.—Mr E F Jordan, Eastburn, Driffield, sheep; r, ditto, lambs.

Lincolns.—Messrs S E Dean and Sons, Dowsby Hall, Bourne, Lincs, sheep; r, Mr W B Swallow, Wootton Lawn, Ulceby, Lincs, lambs.

Kent or Romney Marsh.—C J Neame, Copton Manor, Faversham, sheep; r, Mr T Wotton, Tile Lodge, Sturry, Canterbury, lambs.

Cheviots.—Mr J McDowall, Girdstingwood, Kirkcudbright, sheep; r, ditto, sheep.

Mountain.—Mr J McDowall, Girdstingwood, Kirkcudbright, sheep; r, Sir J Gilmour, Leven, Fife, lambs.

Southdowns.—Mr C R W Adeane, Babraham Hall, Cambridge, lambs; r, Exors of late Colonel H McCalmont, Cheveley Park, Newmarket, sheep.

Hampshire Downs.—Mr J Flower, Chilmark, Salisbury, sheep; r, Mr T F Buxton, Waters Place, Ware, Herts, lambs.

Suffolks.—Mr H E Smith, The Grange, Walton, Ipswich, lambs; r, ditto, lambs.

Shropshires.—Sir R Cooper, Ashlyns Hall, Berkhamsted, sheep; r, ditto, sheep.

Oxford Downs.—Mr J Horlick, Cowley Manor, Cheltenham, sheep; r, ditto, lambs.

Ryelands or Dorsets.—Mr J Toop, Bosham, Chichester, Dorset lambs; r, Mr W T Barneby, Saltmarshe, Castle Bromyard, Ryeland sheep.

Crossbreds.—Mr T Rush, Mitchells, Saffron Walden, lambs: r, ditto, sheep.

PIGS.

Cups and Plates.

Prince Christian's Challenge Cup for the best pen of two pigs bred by exhibitors.—1, Earl of Ellesmere, Worsley, Manchester, Large White pigs; r, Visiting Committee of the Middlesex County Asylum, Tooting, S.W., Berkshire pigs.

Plate value £10 for the best pen of two pigs.—1, Earl of Ellesmere, Worsley, Manchester, Large White pigs; r, Visiting Committee of the Middlesex County Asylum, Tooting, S.W., Berkshire pigs.

Plate value £5 for the best single pig.—1, Mr J A Fricker, Suddon Grange, Wincanton, Somerset, Berkshire pig; r, Prince Christian, Cumberland Lodge, Windsor, Berkshire pig.

Breed Cups.

Middle White.—Mr J A Fricker, Suddon Grange, Wincanton, Somerset; r, Mr C Spencer, Holywell Manor, St. Ives, Hunts.

Large White.—Earl of Ellesmere, Worsley, Manchester; r, Earl of Rosebery, Dalmeny Park, Edinburgh.

Large Black.—Mr K M Clark, Sudbourne Hall, Orford, S.O., Suffolk; r, Sir A G Hazlerigg, Noseley Hall, Billesdon, Leicester.

Berkshire.—Mr J A Fricker, Suddon Grange, Wincanton, Somerset; r, Visiting Committee of the Middlesex County Asylum, Tooting, S.W.

Tamworth.—Lord Hastings, Melton Constable, Norfolk; r, Mr W R Ibbotson, The Hawthorns, Knowle, Warwickshire.

Any distinct or cross breed.—Mr A Brown, Hill Farm, Southampton; r, Mr R Benjafield, Short's Green Farm, Motcombe, Shaftesbury.

JUDGES.

CATTLE.

Devons, South Devons, and Sussex.—Mr Chas L Hancock, Cothelstone, Bishops Lydeard, Taunton; Mr Ernest E Braby, Rudgwick, Horsham.

Herefords and Red-Polled.—Mr A P Turner, Pembridge, Herefordshire; Mr Herbert Blofield, Wymondham, Norfolk.

Shorthorns and Cross-Breds.—Mr Henry Dudding, Riby Grove, Stallingboro', Lincs; Mr George C Terry, Weedon Hill, Aylesbury.

Aberdeen-Angus and Galloways.—Mr George J Walker, Portlethen, Aberdeen; Mr Robert Shennan, Balig, Kirkcudbright.

Welsh and Highland.—Mr John Vaughan, Llyssun, Llanerfyl, Welshpool; Mr H Macdiarmid, Tiree, Oban.

Kerry, Dexter, and Small Cross-bred Cattle.—Mr R Tait Robertson, La Mancha, Malahide, co. Dublin; Mr F Turrill, Brookhampton, Wallingford, Berks.

£25 Cup, £50 Cups, Champion Plate, and King's Challenge Cup.—Mr T H Hutchinson, Catterick, Yorks; Mr Clement Stephenson, Newcastle-on-Tyne.

SHEEP.

Leicesters, Border Leicesters, and Lincolns.—Mr John Twentyman, Sparsholt, Winchester; Mr Robert Fisher, Leconfield, Beverly.

Cotswolds, Kentish or Romney Marsh, and Devons.—Mr Robert Jacobs, Burford, Oxon; Mr Arthur Finn, Lydd, Kent.

Cheviots and Mountain.—Mr A Douglas, Riccalton, Jedburgh; Mr Owen Price, Nantyrharn Cray, Brecon.

Southdowns and Shropshires.—Mr Herbert Padwick, West Thorney, Emsworth; Mr Alfred Tanner, Shrawardine, Shrewsbury.

Hampshire Downs and Suffolks.—Mr John Pain, Borough, Micheldever; Mr S R Sherwood, Playford, Ipswich.

Oxford Downs and Cross-breds.—Mr John Bryan, Southleigh, Witney; Mr James Burbidge, Reading.

Ryeland and Dorset.—Mr David Price, Bulwark House,

Brecon; Mr W A Johnson, Stafford Park, Piddletown, Dorchester.

Champion Plates for Long and Shortwoolled Sheep, and Prince of Wales's Challenge Cup.—Mr Hugh Penfold, La Bagatelle, The Grove Blackheath; Mr Benjamin Painter, Cow Close Farm, Burley-on-the-Hill, Oakham.

PIGS.

Middle and Large Whites.—Mr Walter J. Henman, Reading; Colonel F Walker-Jones, Burton, Westmorland.

Large Blacks and Berkshires.—Mr H W Packard, Shotley, Ipswich; Mr James Lawrence, Shrivenham, Berks.

Tamworths and Cross-Breds.—Mr W H Mitchell, Elmdene, Kenilworth; Mr H W Bishop, Pendley, Tring.

Champion Plates, and Prince Christian's Challenge Cup.—Mr A S Gibson, Ruddington, Nottingham; Mr J W Kimber, Fyfield Wick, Abingdon.

CARCASE COMPETITION.

Cattle and Sheep.—Mr Robert R Alden, the Market, Oxford; Mr J G Randall, the Broadway, Crouch End, N.

Pigs.—Mr T Sack, Caledonian Road, Holloway; Mr R T Venner, Reading.

Champion Prizes and Challenge Cups.—Mr Percy Scarlett-Smout, 30, Mount Street, W.

Annual Meeting of the Smithfield Club.

The annual general meeting of the Smithfield Club was held on Tuesday, when, in the absence of the president (Mr. James Hornsby), the president-elect (the Duke of Richmond and Gordon) took the chair.

In moving the adoption of the annual report the Duke of Richmond referred with regret to the death of Earl Winterton. He thought they might be satisfied with the present show, the general average of which was very good. They must also not forget the almost unique case in their history, that they were honoured on the previous day by the visit of two Kings in addition to the Prince of Wales. They were always glad to welcome His Majesty. They sympathised with him since his place in the prize list was not quite equal to what it was last year, but it had given some others a look in.

Mr. George Adams seconded the motion.

Mr. Davis Brown expressed regret that the council had not adopted the resolution of the National Sheep Breeders' Association that

> "Where a flock-book is issued all sheep competing for any prizes should be entered, or be eligible for entry, in the flock-book belonging to that breed."

The breeds exhibited, he said, should have the hall-mark upon them. As an instance of how this worked out an animal had been shown at that show in the Red-polled classes which was not a pure bred Red-polled. This animal had been before six judges at different shows, and had won each time. This show was the only time it had come before a judge of the Red-polled breed, and he would have thrown it out. He had seen another animal which was by an Aberdeen-Angus out of a Shorthorn. It had very slight "slugs." With their present rules they might perfectly well have been shown as a Red-polled. He did not suppose Shorthorn men would care to give a prize to an animal without horns, and they, as Red-polled men, did not care to have a prize given in Red-polled classes to an animal with horns. He hoped that in the course of time the council of the club would see its way to adopt such regulation.

The report and balance sheet were adopted.

The Earl of Coventry moved the election of the Duke of Richmond as president, and this proposal was carried.

The Duke of Richmond, in reply, referred to the connection of his forefathers with the show, and said that for the last three generations they and their tenants had existed as a happy family.

The Earl of Derby was elected president for 1909, the vice-presidents were re-appointed, and a cordial vote of thanks was passed to the retiring president (Mr. J. Hornsby).

The Herdsmen's Club.

The Herdsmen's Smithfield Club held their business meeting on the Saturday under the presidency of Mr. J. Hallas. The balance-sheet presented by Mr. George Sinclair was a most satisfactory one, the total receipts for the year, including last year's balance amounting to £170 9s. 4d. Of this sum £61 15s had been paid to herdsmen, and £19 1s. 5d. in various accounts, leaving a balance of £89 12s. 11d. A ballot has been taken during the year as to whether the club shall continue on the old foundation lines, or converted into one more of a benefit form. Rather divergent views are taken as regards this, and this was very observable at the social dinner on Monday evening at Reggieria's Restaurant. There was not such a large crowd as usual. In the absence of Mr. Hallas the chair was taken by Mr. J. Horley. After the loyal toasts had been honoured the chairman made a spirited speech in favour of the club, and remarked that it would be a pity for it to be wrecked by divergent opinions, and invited suggestions from those present. Mr. C. Macdonald thought that much more benefit would be obtained from a 5s. subscription than the present half-crown. Mr. E. Bohane, secretary of the Royal Lancashire Society, suggested the appointment of a special committee, with a few outsiders who had the interest of the club at heart, to restore unanimity. Mr. Frank Webb Shenstone was unanimously elected president for the ensuing year. Subsequently a most enjoyable entertainment was provided by Messrs. Thorley, Mr. Fred Snachell being a capital master of ceremonies.

SHOWS.

King's Lynn.

The eighteenth annual Christmas Fat Stock Show at Lynn, held on Monday, was most successful, being favoured with fine weather, a large entry of excellent animals, and a good attendance from the town and district. The entries were more numerous than on any previous occasion, and totalled 153 against 122 last year. It was in the cattle classes that the increase in the number of competitors was chiefly seen, the sheep classes being rather small in some instances, but the pigs were up to the average. As regards quality, the bullocks were a wonderfully fine lot, sheep, despite their small numbers, were of excellent quality, and the porkers contributed to make the show one of all-round merit.

The King again sent animals from Sandringham, but His Majesty was not so successful as on some former occasions. He was represented in four of the cattle classes, and won the silver cup for the best pair of steers of any age or breed. As His Majesty generally hands his cups on, the trophy will probably go to Mr. W. W. Ringer, of Titchwell, who was second in the class. In the class for the best heifer, His Majesty was reserve with a red Shorthorn, but a white Shorthorn from Sandringham in the same section was passed. More fortunate was the King in the heifer class, where the stipulation "bred by exhibitor" was not imposed, and here he was awarded third prize with a nice compact red Scot, scaling only 11 cwt. 1 qr. In the well-filled class for the best fat beast, open to the county of Norfolk, the King was highly commended with the red and white steer which assisted in winning the silver cup in the pair class. Among the sheep, his Majesty was represented among the short-woolled shearling wethers, pens for three lambs of any kind with Southdowns, and Southdown wethers and lambs, but failed to gain the judge's eye. The Prince of Wales exhibited some black Berkshire pigs, but was an unsuccessful competitor.

The championship prize of 10 guineas, given by the King as patron, was won by Colonel J. E. Groom, of Ashwicken, with his roan heifer, which was first in its class and reserve in the county competition. Mr. H. Tallent was reserve for the championship with the blue grey which was second to Mr. Groom's beast in the heifer class.

In the sheep classes, Mr. J. Hunter was most successful with Hampshire Downs, he taking the first prizes and the championship.

Leeds.

At the forty-eighth annual show of the Leeds Smithfield Club held last week the entries numbered 2,317 as against 1,874 last year; but the increase was almost solely due to the poultry section being nearly double the size of some former years, for with the exception of butter, entries of which numbered 14 against 11 last year, the other sections all denoted slight decreases. Quality, however, was well maintained, and the show all round was a highly creditable one.

In the Shorthorn classes His Majesty the King was an exhibitor, and his red-and-white ox was successful in the class under three years of age. It was a nice heavy beast, with good back and thighs, and handled well. It also received the Leeds Tradesmen's Plate, presentod for the best animal in the Shorthorn classes. An animal belonging to Mr. J. M. Strickland, Easingwold, placed second, did not handle so firmly as the ox shown by the King. In the next class for cows of any age or heifers under three years, a white heifer owned by Mr. Thomas Atkinson, Bury, the only animal shown, obtained the first award, and was reserve for the Leeds Tradesmen's Plate.

The polled Scots and Scots cross-bred cattle made an excellent feature of the show, and among the former the champion was found—namely, the Aberdeen-Angus steer, Joe, exhibited in the class for oxen under three years, and the property of the Earl of Durham, Lambton Castle. It was a fine firm, level animal, with good back and thighs. In its class it stood first, and afterwards was awarded the Leeds Smithfield Club's challenge trophy, value 50 guineas, and the President's Special prize, value 10 guineas, as the champion beast in the show, and the Leeds City Corporation prize offered for best animal in the polled Scots classes. In the class for polled cows of any age or heifers under four years, a nice symmetrical heifer, owned by Mr. Brigham Carlton, York, obtained the premier position. It was rather light, and but for that the champion would have had a strong rival. The Earl of Durham was also successful with his steer Hector and his heifer Mary in the classes for horned Highland oxen and horned Highland cows or heifers respectively, the latter being a good typical beast.

Among the Scots cross-bred oxen, an animal of excellent quality, shown by Mr. Charles Emmerson, Darlington, was a favourite of the judges. In addition to the first award in its class it secured the Leeds Smithfield Club's challenge trophy for the best beast exhibited by a tenant-farmer, the Leeds Butchers' Challenge Trophy for the best Scots cross-bred ox, cow, or heifer; the Leeds Licensed Victuallers' Plate for the best animal in the show, the property of a tenant-farmer; and the Leeds Tradesmen's Plate for the best animal among the cross-breds. It was also reserve for the champion position, but did not handle so firmly as Lord Durham's Aberdeen-Angus steer.

Sheep were few, the section having at no time been a great attraction to sheep breeders. Sixteen pens constituted the department, and this in spite of the fact that the committee endeavoured to meet the needs of breeders by a rearrangement of classes. No more than four pens were seen in any one class; in two there were only a couple of pens, while there was not a single entry of Leicester or Longwool sheep—a repetition of last year's experience that suggests the advisability of permanently cancelling the class. The few sheep that were here, however, were thoroughly representative of their different breeds. Again Messrs. R. and J. Davison, of York, secured Messrs. Goodall and Backhouse's cup, and as this was their third win it became their absolute property. Pigs made a good show, and in this section Mr. L. C. Paget, of Harewood, for the second time gained Mr. Joshua Sheldon's champion trophy and the Leeds Tradesmen's Plate.

Sale of His Majesty the King's Fat Stock.

On Tuesday Messrs. Buckland and Sons offered at the Cattle Market, Slough, His Majesty the King's Christmas fat stock from the Royal farms. This year the order of sale was somewhat altered, as it commenced with the pigs; there were 131 of these offered. The first, a very heavy Berkshire hog, was purchased by Mr. Harding, Slough, at £10, Mr. Kirkpatrick, Dumfries, taking the next at a similar figure. There were buyers from Sheffield, Doncaster, and elsewhere for these singles, the lowest value of which was £6. There was quite as good demand for the pairs, the top price reached here being £13, and they gradually came down to £7 10s. per pair. For the porkers there was quite as keen a demand. The first three of these made £10 10s.; the last four made £11 5s. The 131 pigs made £563 17s. 6d. There were thirty-five fat bullocks offered—twenty-five Devons and ten Blue Greys. The first of the Devons was purchased for the Principality by Mr. Watkins, Port Talbot, at £37. Several more went in the same direction, Mr. Skidmore, Pontypridd, taking one Devon at £39, and a Blue Grey at £17. Mr. Williams, Merthyr Tydvil, bought two Devons, one £36, the other at £18. Mr. Willis, Sheffield, as usual, bought the highest one at £43. There were only four of the Devons sold under £30 each—two at £27, one £25, one £18. The Blue Greys did not reach such values. Two of these realised £22 10s. from Mr. Sanders, Maidenhead, and Mr. Coleman, Teddington. The others went as follows:—£21 10s., two £21, £20, £19, and £17. The thirty-five beasts made £1,044. There was not such a demand for heavy mutton as there has been in some previous years; a couple of pens of heavy Hampshire Down wethers went to Messrs. Mattock and Willis, Sheffield, at £18 15s. per pen. Mr. Waud, Manchester, gave the highest price, £21 5s., the prices gradually declined to £17. More interest was taken in the Hampshire Down tegs, the best pen of these made £20 15s., Mr. Crutchley, Birmingham, being the purchaser. Prices lowered to £13 10s., at which only one pen was sold. The Southdown tegs found two pens of five each making £11 10s. per pen, the lowest being £10. The 340 sheep made £1,046 15s. The total of the sale was £2,654 12s. 6d.

OBITUARY.

Mr. William Hornsby.

We regret to announce that Mr. William Hornsby, of Grantham, died at his North Lincolnshire residence, Burwell Park, near Louth, on Tuesday, aged sixty-nine years. He was the youngest son of the late Mr. Richard Hornsby, the founder of the well-known firm of agricultural engineers at Grantham, and after receiving his education at Wesley College, Sheffield, entered the firm, of which he became a director. He was a magistrate for the county parts of Lindsey and Kesteven, and also for the borough of Grantham, a Deputy-Lieutenant of Lincolnshire, and was High Sheriff of that county in 1898, whilst in 1902 he was unanimously elected Mayor of Grantham. He was Lord of the Manor of Burwell, and patron of that living.

THE FARMERS' DINNER.

The annual Farmers' Dinner, held in conjunction by the Central Chamber of Agriculture and the Farmers' Club, took place on Tuesday at the Criterion Restaurant. Lord Desborough was in the chair, and the guest of the evening was Earl Carrington (President of the Board of Agriculture), the other visitors including the Earl of Onslow, Mr. Abel H. Smith, M.P., Mr. E. B. Barnard, M.P., Mr. G. L. Courthope, M.P., Sir G. Greenall, Mr. R. L. Everett, M.P., Mr. Martin J. Sutton, Mr. C. Pell Hall (president of the Land Agents' Society), Mr. J. Harold Howard (chairman of the Farmers' Club), Sir John Macfadyean (president of the Royal College of Veterinary Surgeons), Colonel H. Le Roy Lewis, Dr. J. A. Voelcker, and others.

After the loyal toasts had been honoured, Lord Onslow, in proposing "Success to Agriculture," said he was afraid in the memory of many of them agriculture had not been a success, but rather a failure. In the past year, however, he thought things had assumed a rather more rosy and favourable aspect, at any rate prices were better. He had never taken a despairing view of British agriculture, because he knew that the produce of the soil could be turned out better in this country than in any country in the world. As to the future, they were hanging upon the lips of the President of the Board of Agriculture to know what legislation was in store for them. In the House of Lords an undertaking had been given that the law on the subject of agricultural holdings and small holdings was to be consolidated into one Act, and he hoped Lord Carrington would fulfil his promise. The moment had come when all parties should join in an endeavour to strengthen the Chamber of Agriculture.

Earl Carrington, replying to the toast, said Mr. Disraeli once remarked that "one of the worst things men had to endure was anticipation of catastrophes, which never come to pass." There has been no catastrophe in England or Wales this year, and he could congratulate them on a good harvest, though Scotland had not been so fortunate. Potatoes were poor, but roots were a good crop, and hops just below the average. Wheat, barley, beans, and hay were within reasonable distance of a record, and oats actually beyond the previous record. Corn, too, was fetching a much higher price now than it did this time last year, and comparing the average prices for last week with the similar period of last year, he found that wheat had gone up 8s. 6d. a quarter, barley 3s., and oats 1s. 2d. The first question to be dealt with when he took office two years ago was that of Canadian cattle. Breeders were against, and graziers and Imperialists who thought that no risk or sacrifice was too great to secure the loyalty of our colonies were in favour, of a change in the existing law. He could reassure the fears of the latter, as he was informed on the very highest authority that the decision either way would be cheerfully and loyally accepted. Meat in this country was neither dearer nor scarcer in consequence of those regulations, and recognising the terrible risk of disease and infection which a change in the law might involve, he was not prepared to advise or to sanction it. In his Department nine Acts of Parliament had been carried through in two years, and he had endeavoured to carry out Leonie Leon's advice to Gambetta, "Offend as few as possible—when you have thought out your policy, stick to it, and let it be a policy of results," but in legislation they must consider what was practicable as well as what was desirable. As regards swine fever, he was not quite satisfied. The Department hoped to revise the regulations, and remove some hardships. He was consulting Mr. Burns in reference to the milk question. The decline in horse breeding was a serious national question, and they hoped to devise a scheme more beneficial than the one now adopted. An interim report on the subject would be presented before long. He recognised that there was one subject above all others on which farmers felt that they had a legitimate grievance—viz., the unfair burden of the rates on agricultural land. As Minister of Agriculture it was his duty to impress on his colleagues the just claims of the agricultural interest for some measure of relief, and he thought he might say that the Government were fully alive to the urgent importance of dealing with the whole question of local taxation on broad and comprehensive lines. They proposed to take the first step in that direction by the introduction of a Valuation Bill next year. The Government's land proposals did not go as far as they could have wished. During the consideration of that matter it was proposed that there should be a Court of Conciliation between landlord and tenant, if there was any difference of opinion about what the rent should be. That plan had worked admirably on his own estates, and he hoped to be able to bring it into practice on the Crown Estates. The important provisions of the Land Tenure Act of 1906 were the freedom of cropping, compensation for damage done by winged game, and compensation for disturbance when estates were forcibly sold in the market by mortgagees. The Bill would be of much use to tenant farmers when notice to quit was given all over the estate.

His Lordship went on to say that he hardly hazarded an opinion as to the creation of an Agricultural Party, but he gladly welcomed Associations and Unions. As to the Small Holdings Bill, he said it had been questioned by Lord Lansdowne and others whether there was any real demand for land. The movement was still in its infancy, but the returns supplied to him were surprising and most encouraging. A Berkshire Association had received applications for 800 acres. In North Dorset another Association had received applications for 2,000 acres, the Cambridge County Council for 3,400 acres, and the Huntingdon County Council for 5,000 acres. On the Crown lands he had received application for 10,000 acres in Lincolnshire, Yorkshire, Cheshire, Oxfordshire, Bedfordshire, Wiltshire, Norfolk, and Kent, and the secretary of the Co-operative Small Holdings Society wrote that a correspondent in Bedfordshire had remarked:—"We hope nothing more will be done at present, as we think that the whole county is applied for." He (Earl Carrington) thought no one need have any anxiety in the matter—the interests of landowners, farmers, and labourers were all safeguarded. In his small way he had been able to put over 3,000 small tenants on his estate, and in forty years on 23,000 acres of land he had only lost nineteen farm tenants of their own free will, so he could not have upset them much. On the Crown lands this year he had let off 3,494 acres. In addition to only forty-four small holdings in existence twelve months ago, they now had 3,000 acres farmed by small tenants. He hoped and believed that the scheme could be, and would be, carried through in its entirety on safe lines, and that they would to some extent be able to stop the rural depopulation without any injustice to the landlords or to the labourers, and without depriving any tenant farmer of his livelihood or his home.

Mr. E. B. Barnard, M.P., who was responsible in a rousing speech for the toast of "The Central and Associated Chambers of Agriculture and the Farmers' Club," dealt at length with the suggested formation of an Agricultural Party. It was not for him to say whether it was practicable or not, but it was certainly advisable that something should be done for agriculture, which at present was sacrificed by both parties to urban interests.

The chairman and Mr. Harold Howard having responded on behalf of their respective bodies,

Mr. Martin J. Sutton submitted the "Agricultural Societies of the United Kingdom." Even those who see signs of decadence in other British industries admit that British agriculture holds its own, and that the foreigner has to come to England to see the best crops of corn and roots the most perfect breeds of horses and cattle, sheep and pigs, and the finest and most durable agricultural machinery. There are doubtless many causes for this pre-eminence of British agriculture, but you will agree that agricultural societies and shows have had no little to do with it, and certainly without the shows the foreign buyers could not have been brought in touch with English breeders of stock and English makers of implements, as they have been during the past half century. We are proud of our great national societies—the R.A.S.E. (which we rejoice to know has taken a new lease of life), the Highland Society (which, with its huge reserve fund, seems beyond the reach of adversity), and the Royal Dublin Society (which possesses in Ball's Bridge an absolutely unique show asset). Two organisations have already had a toast to themselves, so that I am precluded from referring further to our hosts to-day—the Farmers' Club and the Central and Associated Chambers. It would be difficult, however, to name any bodies which have done more for agriculture—the Farmers' Club by means of its invaluable discussions and practical papers, the Chambers, by representing and focussing agricultural opinion on subjects demanding legislative action. They, with the Smithfield Club, and the oldest society of all, the Bath and West and Southern Counties Association, and many others represented here to-day, have done a grand work. One invaluable service of our great societies is their affording a common ground of meeting for men of all politics and every shade of thought. It is of the utmost importance that agriculture should not be tied to the chariot wheels of either of the great political parties, and although, as some of you are aware, I am not personally in favour of the project of forming a distinct Agricultural Party or group in the House of Commons. I do believe that agriculturists should, when important questions arise, involving the welfare of the rural population, be willing to sink mere party politics and vote for that candidate who, while supporting national interests generally, is prepared to specially further the success of agriculture, our greatest national industry. Agriculture is as popular as ever. It is kept up to its high point of development by the splendid scientific and practical work of our great societies, and enabled to show its excellence to all the world through the shows and exhibitions those societies organise.

In reply to which Sir Gilbert Greenall, hon. director of the Royal Agricultural Society, said that although he was privileged to speak on behalf of the premier society, he thought that the efforts of the local societies should not be overlooked, and deserved encouragement.

Mr. John Treadwell was responsible for "The Visitors," which was briefly replied to by Mr. C. Pell Hall, and a more than usually successful evening came to a termination.

The Farmers' Club.

The sixty-fifth annual meeting of the Farmers' Club was held at the Whitehall Rooms on Monday under the chairmanship of Mr. Howard, and among those present was the President of the Board of Agriculture. The report presented was very encouraging, for it stated that the progress of the club had been maintained during the past year. Sixty-eight members had been lost either by death or resignation, and eighty-two new members had joined. The total membership stood at 921, as compared with 907 a year ago. The surplus of assets over liabilities was lower than last year, but stood at the handsome amount of £1,684 2s. 1d.

Dr. Voelcker's election as chairman for 1908 was announced, and Mr W. D. Little was elected vice-chairman.

Mr. Alfred Mansell, of Shrewsbury, then read his paper, "The Value of the Live Stock of the Farm," interesting extracts from which we gave in our last issue.

In the course of the discussion, Mr. Kidner expressed the hope that the new sheep scab regulations would greatly limit the disease, though it might not be effectually stamped out.

Mr. O. D. Johnston (Suffolk) considered the sheep scab regulations should be considerably modified in places free from the disease.

Mr. Alfred Amos (Wye) urged that it should be made a punishable offence to send to the public market sheep visibly affected with foot-rot.

Mr. B. St. John Ackers (Gloucester) thought farmers should insist that those in authority should help them to stamp out every disease possible.

Professor J. F. Lloyd, F.C.S., was surprised that nothing had been said about tuberculosis, the most serious matter stock breeders had to consider. Medical men were clamouring for the destruction of infected animals.

In spite of several appeals, Earl Carrington declined to speak, remarking that he had attended as a listener.

Replying to the discussion, Mr. Mansell advised stock breeders to buy few animals at first, but let those be of the right sort. It would be better to have indifferent animals of the best stock than the best from an inferior class. The spread of sheep scab he considered a disgrace. People who came from abroad were astounded at its extent. He advised caution in the treatment of tuberculosis. If drastic measures were taken, very few milking cows would be left in the country.

Imports of Agricultural Produce.

Account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended December 7, 1907, together with the quantities imported in the corresponding week of the previous year (the figures for 1906 are in parentheses):—

Animals, living:—Oxen, bulls, cows, and calves (11,749), 10,800; sheep and lambs (927), 3,777; horses (219), 97.

Fresh meat:—Beef (106,775 cwts.), 94,064; mutton (92,905), 105,664; pork (14,397), 13,550.

Salted or preserved meat:—Bacon (99,197 cwt.), 101,691; beef (1,015), 2,606; hams (20,546), 24,935; pork (1,989), 4,634; meat (11,823), fresh, 11,867, salted, 1,595; meat, preserved (3,134), 9,431.

Dairy produce and substitutes:—Butter (73,789 cwt.), 74,965; margarine (19,265), 15,539; cheese (32,841), 76,371; milk, cream (104), 162; milk, condensed (11,858), 19,724; milk, preserved, other kinds (591), 610.

Eggs (great hundreds):—(372,005), 439,888; poultry (value £14,546), £22,058; game (value £1,567), £3,922; rabbits, dead (not tinned), (4,421 cwt.), 18,112; lard (43,492 cwt.), 51,403.

Corn, grain, meal, and flour:—Wheat (1,656,100 cwt.), 1,336,400; wheat, meal and flour (321,000), 414,500; barley (318,000), 462,300; oats (209,300), 422,000; peas (29,740), 51,590; beans (10,880), 24,880; maize or Indian corn ((849,500), 670,500.

Fruit (raw):—Apples (130,450 cwt.), 283,252; grapes (3,061 cwt.), 16,360; pears (2,042 cwt.), 2,366.

AN AGRICULTURAL PARTY.

Central Chamber's Decision.

The outstanding feature of the meeting of the Central and Associated Chambers of Agriculture, held at the Whitehall Rooms on Wednesday, was the discussion on the desirability of forming an independent Agricultural Parliamentary Party. It may be recalled that at the meeting of the council in November the report of the Organising Committee favouring the formation of an independent agricultural party in the House of Commons was fully discussed, and it was resolved to forward copies of the report to the various Associated Chambers for consideration. The views of some fifty-three chambers had since been recorded, and of these forty chambers approved of and seven opposed the formation of an independent party. Six chambers, although not opposed to the formation of such a party, considered it impracticable at present.

On Wednesday the subject was brought before the meeting by Mr. S. Kidner (Taunton) moving the following resolution:—"That in the opinion of the council an Independent Agricultural Parliamentary Party should be formed, and that with this object in view immediate steps should be taken to appoint a committee to consider the matter and report to the council."

He said that whatever view some gentlemen might take of the subject, he thought they would agree that it was absolutely imperative to them to go forward with the work. (Hear, hear.) It had been said that the scheme would be impossible if they had to work those 150 constituencies which were supposed to be agricultural. He did not think anyone contemplated such a thing. It was simply suggested that they ought to have more support from these constituencies, and ought to be able to rely on the members representing them more than they had been able to do in the past. (Hear, hear.) Even if they only had one member on whom they would absolutely rely they would have someone to go to in a case of necessity. Behind the proposition there was a supplemental one, that they should try and move those gentlemen supposed to represent agricultural constituencies, a little more than at present, and the adoption of the scheme of an agricultural party in no way diminished the importance of whipping those other members into line. (Hear, hear.)

Mr. Lathom (Oxfordshire) seconded, and expressed the hope that the motion would be passed unanimously.

Mr. G. L. Courthope, M.P., proposed, by way of amendment, to insert after "formed" the words "and other steps taken to strengthen the representation of agriculture in Parliament." His object, he said, was to bring the resolution more into keeping with Mr. Kidner's ideas by securing that the steps to be taken should not be confined solely to the formation of an independent party, but that support should be enlisted from representatives of those seats where it was impossible to run an independent candidate of their own.

Mr. Kidner intimated his willingness to accept the amendment.

Mr. R. L. Everett, M.P. (South-East Suffolk), regretted that such a movement should be set on foot. He could not remember any time when there was less occasion for a movement of the kind. (Cries of dissent.) The agricultural position was more hopeful to-day than it had been for many years past. ("Oh.") Last year and this year conditions had improved, and their prospects were more hopeful than they had been for a quarrer of a century past. (A Voice: "How about hops?") I have no practical knowledge of hops, continued the speaker, but it is a very small part of the whole agricultural position. They had excellent agricultural organisation now. They had in the Chamber of Agriculture, a perfect representation of the land-owning and land-occupying classes. They had a Parliament more sympathetic towards agriculture — [Mr. Everett was unable to continue for some minutes owing to an outbreak of laughter. Finally he repeated his words amid renewed laughter and "booing."] It was more sympathetic, he said, than any Parliament existing in his time. (A Voice: "Hear, hear.") It had passed in two years more agricultural measures than any Parliament existing in his time. (A Voice: "And they are thrown out by the House of Lords." (Laughter.) They had no great agricultural grievances at the present time. (A Voice: "How about the rates?") The rates did not constitute an agricultural question. It was a national question. (A Voice, derisively: "I beg your pardon.") It was a grievance of the ratepayers throughout the country, and if they wanted anything done specially for themselves at the expense of their fellow countrymen—well, they might want it, and they would not get it. (A Voice: "No one wants it.") They had a Parliament willing to listen to any reasonable request made to it. (Cries of "No.") They had a number of members in sympathy with agriculture willing to join together—Conservative and Radical alike—to remedy any distinctly defined agricultural grievance, and he could not see why they should want to form an independent Agricultural Party. They could not do it, and if they did it would only mean the weakening of the party they already had.

Mr. Herman Biddell (Ipswich) said up to a certain point he agreed with Mr. Everett, but it was not very far in his speech before he had to dissent. (Laughter.) He wished to entirely dissociate himself from the reasons Mr. Everett had given for the course he wanted to take. They had an admirable association to represent agriculture in that Chamber, but they wanted to extend its usefulness by securing additional members, and by inducing the great body of agriculturists to join the local Chambers. He was anxious to have the luke-warm agriculturists secured as members of the local associations. As for Mr. Everett's statement that everything in regard to agriculture was satisfactory, it was remarked that he did not carry the room. (Laughter.) He was afraid, if the resolution ever came into effect, it would weaken the Chambers of Agriculture all over the kingdom. If they could but strengthen the local associations, they could do without the party that was now asked for.

Mr. Orlebar, twitting Mr. Everett with the fact that agriculturists had no special grievance, said it was curious, if that was so, six deputations should have decided upon going from that Chamber to the Board of Agriculture. Four were not received, while at the other two the President of the Board of Agriculture did not attend. (Laughter.) They would have to start an agricultural organisation on the same lines as the Conservatives and Liberals had theirs. They had never let an election pass without making their influence felt through their association.

Mr. Laurence Hardy, M.P. (Kent), moved the omission of the word "independent" from the resolution in order that the committee should not be hampered from considering alternatives to the formation of an independent party. He believed that the formation of an independent party on the lines of the Labour party and the Nationalist party was impracticable.

Mr. L. Wrigley (Monmouth) seconded the amendment.

Mr. W. Weston (Bucks) protested that the omission of the word "independent" would "spoil" the whole show. At present candidates of both parties were ready to promise anything at elections, and then left agriculture out in the cold.

Mr. E. B. Barnard, M.P. for Kidderminster, held that the word "independent" covered the whole position. There was an overwhelming consensus of opinion in favour of continuing the movement, and seeing whether the committee could devise machinery for giving effect to it.

Major Craigie, in supporting the amendment, said the difficulties in the way of an independent party were greater than some recognised. What they wanted in Parliament at the present time were a few men who knew the ropes, but he hoped the Chamber would pause before deciding to form an independent party. Parliament no longer occupied the place it did thirty yeare ago, and it had not the same influence, nor did it receive the same respect. Unless they could move the Press on their behalf, they would never move Parliament.

Mr. Kidner intimated that there was no intention to impose any restraint on the committee, which would be given an absolutely free hand in dealing with the matter, and would be free to suggest any alternative.

Mr. Laurance Hardy thereupon withdrew his amendment.

Mr. Martin Sutton moved the following amendment:—That in the opinion of this council the formation of an independent Parliamentary party, and other steps taken to ensure the better representation of agriculture in Parliament, are questions worthy of the most serious attention, and immediate steps should be taken to consider these objects and report to the council.

Mr. J. M. White seconded, but Mr. Sutton's amendment was finally lost by a large majority. All but four then voted in favour of the original motion as amended by Mr. Courthope.

On the proposition of Mr. Kidner, a committee was formed of the following gentlemen for the purpose of giving effect to the resolution:—Messrs. Dennis, C. Turner, Kidner, Balden, Latham, Simmons, Christian, Kendrick, Orlebar, Eve, and Davis. It was further decided that the committee should have power to add to its numbers to the extent of twenty members.

Replying to a vote of thanks, the chairman, Lord Desborough, said that there was no doubt but a great deal of the agricultural legislation originated from the Associated Chambers of Agriculture, and he belied that an increasing year of work for that chamber was about to begin. Attention was being directed to agriculture throughout the country, and his idea was that the way to influence it was to strengthen the present agricultural bodies and not duplicate authorities.

Other Business.

Prior to the above discussion the council considered their annual report, the adoption of which was moved from the chair clause by clause. On the question of the Butter and Margarine Act the council recorded that only twenty-two members of the House of Commons voted in favour of reducing the limit of moisture in mixtures, "notwithstanding the violent speeches which had been made in earlier discussions on the Bill against allowing 24 per cent."

Mr. Laurence Hardy, M.P., thought it was unfair to blame the members of Parliament who were supposed to represent agriculture in the House of Commons. It was impossible for them to take strong action, because those in charge of the Bill quoted the action of the central chamber against them.

The chairman (Lord Desborough) explained that the Chamber had been informed that if they carried the motion for a further reduction, it would mean the loss of the Bill, and agriculturists preferred to have the Bill without this amendment rather than no Bill at all. (Hear, hear.)

With regard to swine fever, the council expressed dissatisfaction with the policy of the Board of Agriculture in their efforts to stamp out the disease.

Mr. R. L. Everett, M.P., said it would be better for farmers to take their chance with swine fever than to have to put up with the present restrictions.

The other clauses were approved without comment, and the report was adopted.

The chairman intimated that, in view of the present condition of the industry, the Business Committee recommended that the question of the hop industry be considered at the next meeting of the council, and this was agreed to.

Resolutions by Local Societies.

At a largely-attended meeting of the Maidstone Farmers' Club the following resolution was carried at the suggestion of the secretary, Mr. G. Champion:—"That this meeting is strongly of opinion that the time has arrived when it is urgently necessary to secure proper representation of agriculture in Parliament, and that this result is more likely to be obtained by extending and strengthening the organisation of the central and provincial chambers than by seeking to establish a new party."

A special general meeting of the Lincolnshire Chamber of Agriculture, held at Lincoln on the 7th inst., to consider the proposal of the Central Chamber for the formation of an independent agricultural party in the House of Commons, passed a resolution approving of the formation of an independent party as an ideal, but suggesting in the meantime the formation of a joint agricultural committee in the House of Commons to work in the constituencies, and the adoption of Conservative or Liberal candidates in agricultural constituencies who would stand up for agriculture in the House of Commons.

The Worcestershire Chamber of Agriculture have by an almost unanimous vote expressed approval of the report of the Central Chamber of Agriculture's Organisation Committee, and pledged its assistance in carrying out the recommendations it contains; whilst the Warwickshire Chamber of Agriculture have passed a resolution to the effect "That the chamber is of opinion that agriculture should be more effectively represented in Parliament, and that the Central Chamber be asked to formulate a scheme to carry out this object."

On the other hand, the Shropshire Chamber has unanimously passed a resolution to the effect that the Chamber did not favour the creation of a separate agricultural party in Parliament, but strongly advocated the strengthening of the agricultural influence in the already existing organisations, and considered that candidates for agricultural constituencies throughout the country should be urged by Chambers of Agriculture to hold themselves, if elected, independent of the party whip on all questions affecting agriculture. It was thought there were in Parliament already too many of the delegate type of representative.

The Nantwich Farmers' Club discussed the matter on the 7th inst., and a resolution was passed unanimously that "while in the opinion of this club it is not deemed possible or opportune to form an Agricultural Party, yet it would gladly welcome and support any effort that can be made to secure more direct representation of agriculture." It was decided to send copies of the resolution to the Cheshire Chamber of Agriculture and the Central Chamber of Agriculture.

Whilst a licensed drover named Albert Harris, aged twenty-one years, was chasing a beast at the Metropolitan Cattle Market, Caledonian-road, Islington, on Wednesday morning, the animal crushed him against the railing of one of the pens.

3, WELLINGTON STREET, STRAND, LONDON, W.C.

Try a little Colman's Mustard in the food given to the hens and then count the extra eggs. Ask those who tried it last winter.

(*See "The Field," Feb.* 6, 1906.)

Take one teaspoonful of Colman's Mustard for every six fowls, mix it with the dry meal first, and then add the water. The extra eggs will pay for the Mustard many times over, and the hens are all the better for the tonic.

The best Mustard for the purpose is, of course,

Colman's

Testing Eggs.

Although it is not advisable to interfere with eggs undergoing the process of incubation more than absolutely necessary, it is desirable for several reasons that they should be examined and tested, principally in order to ascertain whether they contain the germ of life, and are fertile or otherwise.

All eggs that are being incubated, either by artificial or natural means, should be tested after seven days have elapsed, as at this period those that prove to be infertile, although useless for hatching, can be utilised for other purposes; in fact, many people consider such eggs suitable for cooking, but even if this is thought undesirable they can be used for feeding chickens, or be boiled hard and saved for feeding the forthcoming brood.

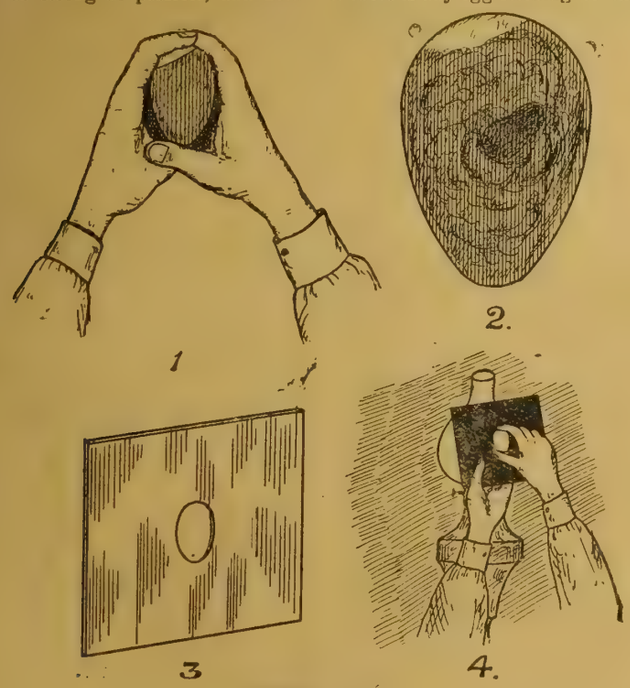
Testing eggs for fertility is not a difficult matter, and although there are many lamps and appliances specially designed and made for this purpose, and which no doubt are very useful and save a considerable amount of time where a large number of eggs are incubated and have to be tested, a simple arrangement that can be made by anyone will answer quite satisfactorily; in fact, it is possible to test eggs by the aid of nothing more than a bright light in a dark room.

Have a light as strong as possible, and hold each egg, one at a time, between the eye and the light, the fingers and hands being arranged round the egg in such a manner that they act as a screen to keep the direct light away from the eye, as shown in Fig. 1 of the accompanying sketches.

This method will answer all right, but a better practice is to take a stout piece of dark-coloured cardboard, or, if desired, a light-coloured piece can be painted black, size 9 in. or 10 in. square, and cut a hole in the centre the shape of an egg, as shown in Fig. 3, but a little smaller in size, the broad end of the egg, of coarse, being held upwards when testing. The eggs are placed against the hole one by one, and held up before a bright light in a dark room, with the result that the infertile eggs can at once be distinguished from the fertile.

If a fairly large number of eggs have to be tested several cardboards should be prepared with holes varying a little to take eggs of different sizes. A bull's eye or bicycle lamp will be found to give a satisfactory light for the purpose in question, and if a dark room is not available the eggs should be tested at night.

White-shelled eggs are easier to test than those with brown shells, the dark colour obstructing the light, and on this account such eggs are frequently tested on the eighth or ninth day of incubation instead of on the eleventh.



On being tested, infertile eggs will appear quite clear, as in Fig. 1, like those newly laid, whilst fertile eggs have a darkened centre surrounded by a clouded substance, very similar to Fig. 2, and if the light is very strong small blood vessels will probably be visible.

Powerful egg-testing apparatus can be obtained whereby it is possible to distinguish infertile from fertile eggs after four days' incubation, but being rather costly, such appliances are only in general use where a large number of eggs have to be dealt with.

The germless eggs should, of course, be removed from the nest or incubator, as not only will space be saved, but where two hens have been set the same day and the number of infertile eggs have proved to be numerous, all the fertile ones can be placed under one hen and the other either released from duty or provided with a fresh sitting.

Eggs should again be tested on the fourteenth day of incubation, and addled eggs, which are those in which germination has commenced, and from some cause or other been arrested and failed or died, should be removed and thrown away, as they are useless.

Not infrequently an egg gets broken in the nest through the hen treading on it or through some other accidental cause, and for this reason it is advisable that the sitting should be glanced at every morning when the hen is off for feeding. A broken egg should at once be removed, and any yolk or white adhering to the other eggs must be washed off, and soiled hay or straw removed also; if there is any egg sticking to the hen's feathers it must be washed off, or it would probably cause further breakage of eggs through their sticking to her feathers.

TESTING EGGS.

Utility Poultry Club's Twelve Months' Laying Competition.

We have now received the result of the first two months' of the Utility Poultry Club's twelve months' laying competition, which, it will be remembered, is being carried out at Stocks Farm, Rayne, Braintree, under the management of the hon. secretary of the club, Mr. E. W. Richardson. Each pen consists of six pure-bred pullets, hatched not earlier than January, 1907, and they have duplicate grass runs, and a scratching shelter is provided for each house.

At the end of two months the premier position was still held by a pen of White Wyandottes, but the pen which was third at the end of the first month—the pen which then held the best record now being second, with a total of 135 points, as against the first pen's record of 156; whilst the pen of Buff Rocks, which was second at the end of the first month, is now third, with a total of 131 points. It will thus be seen that there has not been a great deal of change in the position of the leading pens.

As regards individual effort, the largest number of first-grade eggs—*i.e.*, scaling 2 oz. or over—laid by one pullet during the second month was twenty-three, which is the record of one of the pullets in the pen of Buff Rocks third in the list, whereas in the first month a White Wyandotte had this honour with a total of twenty-five first-grade eggs, second coming one in the above-mentioned pen of Buff Rocks, with a similar total to that of the second month—viz., twenty-three. The records of the pens at the top of the list at the second month are shown in the following table:—

Breed.	1st Grade Eggs.	2nd Grade Eggs.	Uncalculable Eggs.	Eggs in Second Month.	Total
White Wyandottes ..	55	51	1	49	156
,, ,, ..	42	16	—	77	135
Buff Rocks	38	34	1	58	131
White Leghorns	40	50		41	131
White Wyandottes .	39	61	1	28	129
,, ,, ..	44	37	1	41	123
,, ,, ..	14	79	—	30	123
White La Bresse	17	80		18	115
Buff Rocks	42	5	1	31	79
White Wyandottes ..	24	30	—	24	78

The manager reports that the birds remain in good health. During the first half of the month the weather was fine, but during the third week heavy rains alternated with keen frosts. The Leghorns appear to have been upset by the weather, and are laying very moderately, several having gone into moult.

An inspector of the Board of Agriculture and Fisheries has visited the scene of the competition, and having reported favourably thereon, the Board has made a grant in aid of the work now being carried on.

Spring Chicken.

No time should be lost in getting a good pen of birds mated up to produce the "early bird," for it is a well-known fact that early birds are worth twice as much as those hatched in March or April, although they may not be half as heavy, it must be understood that the title refers to table chicken. It is not necessary to get special birds to produce these chicks, hens should be selected that have good breasts, fleshy and straight boned, bright looking, active birds. These should be mated with an Old English Game or Houdan cockerell, they will throw quick-maturing, fleshy chicks, with small bone and white skin, the favourite colour with London salesmen. In some districts, however, yellow skin is not objected to.

Having mated up a pen—six or eight females should be the limit at this time of the season—they should be housed in a comfortable, well ventilated house (free from draught), and should have a warm mash of biscuit meal and thirds, or a mixture of barley meal, thirds, and a little granulated meat or fresh meat scraps. These should be mixed up with warm water and made to a fairly stiff, crumbly consistency, given in troughs (to prevent waste) as soon as the birds get about in the morning; another meal, wheat or good plump oats, just before roosting time will be sufficient if they have a free range, otherwise they will require a slight feed at midday. This should also be wheat or oats, and it is the best plan to scatter it among short straw, dead leaves, &c., to give the birds employment in scratching for the grains, and a supply of grit—sharp flint is best, failing this, broken china and crockery is a good substitute—and also a small box or dish should be placed within reach containing oyster-shell grit to give the hens the necessary lime for the formation of good shells. The grit should also be placed in a shallow box or dish so that the birds may help themselves. If there is not a stream of clean water at hand a fresh daily supply must be given.

Every available broody hen should be set, giving her from nine to twelve eggs, according to her size, the latter number being quite sufficient for a large hen early in the season. The sitting box should have a spadeful or two of soil placed in the bottom, and beaten into the shape of a nest with the hands, so that when it is finished with a lining of soft hay, the eggs will roll gently towards the centre. Place the box in a sheltered corner out of sight of other hens, in an outhouse if possible, and feed the hen on maize, as this will keep up the bodily heat better than other grain; give also a daily supply of water.

At hatching time, if the chicks are coming out all right, do not disturb them until the next day, as they will not require food till then, and will dry off better under the hen. The first feed may be bread crumbs, moistened with milk; afterwards scalded biscuit meal is the best food during the greater part of day, with occasional feeds of split groats, broken wheat, canary seed, &c.

If the coop containing chicks can be placed in an open shed facing the south that will be the best place, so that they can have a dry place to run. Feed them several times a day, but not much at a time, and do not forget the water. If fed well, kept clean and dry, they should make nice plump birds in March. C.

It has been decided to discontinue Huntingdon Wool Fair, which has been in existence for seventy-two years.

Fertilisers and Feeding Stuffs.

Make the Most of Farm Produce.

If the production of milk and stock-rearing is to be conducted on the most profitable lines, the farmer must utilise to the fullest extent the produce of his own farm, and must try to limit his expenditure on foreign foods. Concentrated cattle foods are useful, and very convenient, but they cost a lot of money, and we should think they are emp'oyed in many cases to an unnecessary extent. They are not perfect foods; some of them act injuriously on the quality of the milk and butter; they are sometimes not free from admixture of weed seeds and other forms of adulteration, and the oil and albuminoids in them are expensive. The farmer might well grow more beans and peas for the use of his stock. These crops contain about 22 per cent. of albuminoids and 2 per cent. of oil, and thus constitute a pure concentrated food, which can take the place of some of the bought foods.

We know quite well that in intensive farming it is necessary to depend to a certain extent on cakes and other bought food stuffs, but we would like to direct attention to the point that, with the object of lessening his expenditure, farmers should aim at supplying from their own soil as much as possible and proportionately limit their purchases.

We import into this country feeding stuffs to the value of over £5,000,000 a year, an enormous sum out of our pockets, and we must confess that we should like to see it reduced.

The mangel crop is one which furnishes a very large quantity of nourishment, and its growth could be extended. With careful cultivation and the application of suitable fertilisers it may be made to yield as much as 40 tons of bulbs and 8 tons of leaves to the acre. These contain about 1,300 lb. of albuminoids, 160 lb. of oil, and 9,000 lb. of carbohydrates, which is considerably more than the yield of any other crop.

The big leaves of the plant absorb the carbonic acid from the atmosphere for the formation of sugar in the root, and in this way it may be said to form a contrast to the Leguminosæ which derive nitrogen from the air to enrich the soil.

Wheat Cultivation.

How to increase the yield of wheat per acre and to make more profit from the crop, was discussed at the seventh International Congress, and the following recommendations were agreed to:—

1. The cultivation of more prolific varieties, and in districts especially favoured by climatic and suitable conditions.

2. More careful selection of the seed, and the choice of the best local variety in localities where improved breeds are not found suitable.

3. A better system of soil cultivation and more complete destruction of weeds and parasites.

More careful treatment of farmyard manure in order to prevent loss and waste of nitrogen in it.

Extended employment of green-manuring with leguminous crops.

Growing Christmas Trees for Profit.

A speciality of forestry on the heathlands of Schleswig-Holstein is the cultivation of Christmas trees, an industry which increases from year to year. It has been found that the sandy heath soils can be turned to profit for this purpose, as there is a large demand towards the end of the year, and in spite of the increased production the trees fetch 3d. to 4d. each.

The Society for the Cultivation of Heathlands rather protest against the industry, as their object is to develop once more the fir forests that grew on the land, whereas the trees used for the universal German custom are ruthlessly cut down when about eight years old, and as many of the growers will not go to the expense of applying manure to the land, it is getting quite exhausted.

It can only be really recommended as an adjunct of proper tree planting, and as a means of covering the cost of the operations.

According to the experience of recent years the costs involved in planting an acre of such poor heathland.

	s.	d.
For purchase of the land	90	0
Digging	100	0
4,000	20	0
Planting	12	0
	222	0

Say £11 per acre.

This cost can be covered in the first seven to ten years in thinning out the little trees and disposing of them as Christmas trees.

It is an industry to which some of our small holders in districts where there is land of such a character might devote attention.

Farmyard Manure—Winter or Spring Application?

There is considerab'e difference of opinion as to the relative advantages of the application of farmyard manure to meadows for hay in winter or spring.

The result of experiments would seem to show that on an average the effect of the dressing on the first cutting is practically the same, but that for the aftermath the effect of the spring dressing is considerably greater.

Here are some results of first cutting confirming this opinion, the figures being ex racted from last year's report of the West of Scotland Agricultural College:—

1904.		1905.	
Plot 12.	Plot 13.	Plot 12.	Plot 13.
Applied in spring.	Applied in winter.	Applied in spring.	Applied in winter.
Average yield per acre. ton. cwt.	Average yield per acre. ton. cwt.	Average yield per acre. ton. cwt.	Average yield per acre. ton. cwt.
2 3¾	2 3¾	1 14½	1 14½

But when we come to the actual effect of the dressing on the "aftermath," we find that on every one of the farms and in both seasons there was a distinct superiority for the spring manured crop. The difference certainly was not great, but sufficient to turn the scale in favour of the spring application.

All the same, the results of the trials, based on the actual extra yield obtained from the dressing of farmyard manure, show once more that the application of farmyard manure by itself to the hay crop does not yield results commensurate to the expense.

If used for the hay crop, farmyard manure should be supplemented by artificials, or, really, it is better practice to apply artificials alone to the hay crop and reserve the farmyard manure for some other crop which would give a better return for it.

The Difference in Food Assimilation Between Cattle and Pigs.

Every farmer knows that some kinds of food are more suitable for fattening cattle and other kinds for pigs; for instance, hay and straw are excellently adapted for the larger animals, but not so suitable for pigs. The difference in the power of assimilating foods arises from the difference in the formation of the digestive arrangements of the animals.

Young grass is good for pigs, but when it gets old and fibrous they are not able to digest it properly.

Experiments show that red clover is digested up to 68 per cent. by cattle and 40 per cent. by pigs, although it may be remarked that pigs will eat rank grasses and weeds which cattle would not touch.

As regards concentrated foods, it is interesting to note that maize, peas, barley meal, cocoanut meal, according to trials made on the Continent, can be equally well utilised by both cattle and pigs. On the other hand, bean meal, palm nut cake, and bran are better for cattle. It appears that these foods are digested in the following proportions:—

	By cattle, per cent.	By pigs, per cent.
Bean meal	90	80
Palm nut cake	75	70
Bran	75	70

The bulky carbohydrates are assimilated in a greater degree by pigs, thus:—

	By cattle per cent.	By pigs per cent.
Potatoes	85	92
Mangels	88	90
Beet	87	95

Taken altogether, the loss of food in fattening pigs is less than in fattening cattle. After what may be called the "hunger" requirement has been satisfied in cattle, the additional nourishment is utilised up to 60 per cent. in putting on flesh and fat, whereas with pigs 70 to 80 per cent. of the surplus food is converted into fat.

It should be noted that the experiments were made on young pigs, whereas the cattle were fully grown, which seems to furnish another illustration of the advantage to be derived from fattening young animals.

Manuring of Seed Hay.

Phosphates and potash applied alone, and also in combination with nitrogen, have been remunerative. Their effect in preventing exhaustion of the soil and in improving the quality of the hay warrants their inclusion in any artificial dressing for the crop.

Relative Value of Cakes.

"G. H." asks us whether we can give him the feeding value of two cakes.

No. 1 analysis 10 per cent. oil
20 ,, albuminoids
40 ,, carbohydrates
Cost £6 15s. per ton.

No. 2 analysis 6 per cent. oil
18 ,, albuminoids
36 ,, carbohydrates
Cost £7 7s. 6d. per ton.

And their relative value compared with linseed cake and cotton cake.

*** The No. 1 cake contains, according to the analysis given, 115 total feeding units, and as it cost £6 15s., each feeding unit costs just about 1s. 2d.

No. 2 cake contains, according to the analysis given, 96 total feeding units, and as it cost £7 7s. 6d. per ton, each feeding unit costs about 1s. 6½d.

Thus of these two cakes upon the analyses the No. 1 cake is considerably cheaper.

As regards their relative feeding value as compared with linseed cake and cotton cake undecorticated, it may be mentioned that the cost of the feeding unit in linseed cake is to day about 1s. 3d., and in cotton cake 1s.

But without knowing what purpose our correspondent wants the cake for, and full particulars, it is impossible for us to express an opinion as to which may be most suitable and economical for the purpose he has in view.

The "Farmers' Red Book" contains a lot of useful information about cakes and feeding stuffs, and we would recommend "G. H." to study it.

Feeding Value of Mangels.

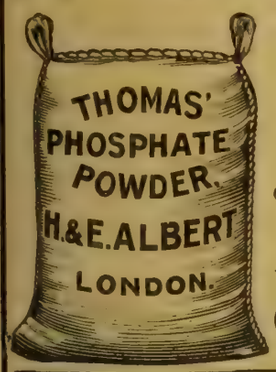
In our last issue attention was drawn to the large amount of nourishment contained in a good crop of mangels. Some experiments were made by the Department of Agriculture, Cambridge University, to ascertain the relative value with the "Long Red" and the "Yellow Globe." The two kinds were tested against one another for several years, and in this year's report we find the following conclusion arrived at as the result:—

1. Long Red mangels are superior to Yellow Globes for the purpose of fattening full-grown cattle, where the rations used are similar to those generally employed in the eastern counties. This superiority is doubtless due to the higher percentage of dry matter present in the first-named variety.

2. Yellow Globe mangels, although containing a smaller percentage of dry matter than Long Reds, are equal or even superior to the latter for the purposes of fattening yearling cattle, or for feeding store stock. For these purposes the dry matter of the Yellow mangel, probably because of the higher percentage of nitrogenous substance which it contains, is apparently better adapted than the dry matter of the Long Red variety.

Striking Example of Intensive Cultivation.

A few years ago there was a slump in the prices of coffee owing to the supply exceeding the demand, and the Brazilian Government decided to remove the evil of over-production in the country by enacting a law to prohibit the extension of the acreage under coffee.



As the planters could not extend their estates, they directed all their energy to the improvement of the existing plantations. They replaced all old and broken trees with young and vigorous growths. With plough and spade they produced a fine state of tilth. They heavily fertilised the soil, and more or less shiftless and ineffective culture became intensive culture.

In the last season millions of young trees that had replaced the old stock came into full bearing. The plantations have produced far more coffee to the acre and better coffee from the same trees. The product in San Paulo, the greatest of the coffee states, was 120 per cent. larger than in the previous year, and more than 27 per cent. larger than in the banner year of 1901-2. The total crop of Brazil reached 20,409,180 bags, exceeding the largest crop ever raised before by 4,132,715 bags, or more than 25 per cent. Brazil's coffee lands have given a splendid illustration of the results of more thorough and intensive culture.

We may remind our readers that we are prepared to analyse free of cost for our regular subscribers, who are farmers, and not in trade as vendors of fertilisers or feeding stuffs, samples of minimum lots of 2 tons of either article, in cases where there is solid reason to suspect an attempt to defraud. The analyses are published, under a nom de plume, in the paper.

THREE RELIABLE CALF MEALS WHICH NEVER DISAPPOINT.

"This 'Cream Equivalent' do smell beautiful, I a'most wish I were a Calf."

1. THE "LANCASTER" CALF FOOD.

13/- PER CWT.; OR, IN FOUR CWT. LOTS, 12/6 PER CWT.
Carriage paid to nearest Railway Station.

This Meal does not swell out so far as the "Milk Equivalent," but is much easier to prepare, and is recommended to those who do not personally see to proper preparation.

2. BIBBY'S "MILK EQUIVALENT."

12/6 PER CWT.; OR, IN FOUR CWT. LOTS, 12/- PER CWT.
Carriage paid to nearest Railway Station.

This Meal swells out splendidly, but needs careful preparation. It is, however, a first-class Meal, and probably the most economic in use of all the Calf Meals in the Market.

3. BIBBY'S "CREAM EQUIVALENT."

15/- PER CWT.
Carriage paid to nearest Railway Station.

Is the latest and most popular of our foods; we believe it is the nearest approach to the ideal that has yet been reached in preparations of this kind.

Our new Circular, "How to Rear Calves for the Dairy," will be sent free of cost to any applicant.

SMITHFIELD WEEK.

The Smithfield Show week becomes an ever increasingly important one for all agriculturists. The show in itself is a host, but every year the number of meetings of societies and other agricultural bodies become more numerous.

The Cattle Show, as the exhibition of the Smithfield Club is more generally known, grows in popularity, and the Agricultural Hall, in spite of extended accommodation, was crowded with visitors from the country during the day, while in the evening Londoners took the opportunity to inspect the cattle and other agricultural produce. The show, as will be understood from the critical report which appears in our pages, was one worthy of the traditions of the Smithfield Club, and it is quite certain that this body has not lost its hold on the affections of the farmers, and continues to furnish a court of appeal from the other fat stock shows.

The Farmers' Dinner, which took place on Tuesday, was remarkable from the fact that not only was the present President of the Board of Agriculture there, but that Lord Onslow, who occupied that prominent position a few years ago in a Conservative Administration, was also a guest. The pronouncement of Lord Carrington on the agricultural programme of the Government seemed to meet with a favourable reception. Lord Carrington promised to look into the question of horse breeding, which implies that he will put what is now the Royal Commission on Horse Breeding on a sounder footing, and one which is more likely to be of assistance to horse breeders than the present

system of premiums for Thoroughbred stallions. The President of the Board in undertaking to inquire into the swine fever restrictions is taking a most popular step. It cannot be denied that the stringent measures which have been enforced by the Board of Agriculture have not met with the success that was anticipated, and Lord Carrington is doing quite the right thing in acknowledging their partial failure, and we hope that some scheme will be devised which will not bear too heavily on the careful and cleanly farmer, and will enable more attention to be paid to the keeping of pigs.

The Royal Agricultural Society also held their annual meeting during last week. An innovation was the holding of the meeting in the Agricultural Hall, and the departure seems to have met with the unanimous approval of the members of the society. The balance-sheet of the Lincoln Show disclosed a profit of over £5,000, and it was said at the meeting that the society's invested fund now amounts to £21,000. In the face of such pleasant circumstances it will be understood that the meeting passed off most smoothly, and it is satisfactory for all parties concerned to think that once again our national society has a reserve fund which can be relied upon in cases of emergency.

WHAT IS A CHAMPION?

The peculiar position that has arisen from the awarding of the special prizes for the best beast at the Smithfield Show leads one to ask the question as to what constitutes a champion?

Visitors have been very much misled during the week by the peculiar way in which the prizes have been allotted. Any rational mind has has no difficulty in understanding that a distinct set of judges may prefer the second prize to the first prize animal, and that there is a *bonâ fide* difference of opinion as to the merits of the beasts; but where the ridiculous part of the whole affair comes in is the fact that the best beast in the show is neither the best steer nor the best heifer, all of which awards were given by one set of judges.

We know that people in the inner ring are well aware as to how this apparently contradictory award came about, but to the ordinary visitor it savours somewhat of the nature of a Chinese puzzle. It is understood that the Smithfield Club will discuss the whole affair at their next council meeting, and it is said that they will introduce a rule prohibiting second-prize animals from coming before the cup judges.

We should be sorry to see this occur, as it does not need a great deal of imagination to think of a case where the second-prize animal in its class might easily be the second best in the show. Again, the independence of the judges in reversing the decision of the class judges does not tend to weaken the position of the Club, for it shows plainly that the exhibitor at Islington is perfectly sure of getting a true and unbiassed judgment of the merits of his exhibit.

There must be a difference in the awards of different judges, and we think that had it not been for the unfortunate misunderstanding in the allocation of the best steer and heifer and the supreme championship prizes, little would have been heard of the reversal of the class awards.

Notes of the Week.

There is a saying that "all roads lead to Rome." During last week all roads in this country seem to have led to the Agricultural Hall.

The hall was literally packed with visitors, so that it was difficult to get about.

During the first three days one rubbed shoulders with men from every part of the kingdom. Towardh the end of the week the Cockney element was mucs in evidence.

The show increases in popularity from year to year.

The announcements over many of the prize animals that they have been sold to Mr. So and So, butcher, awakens a pathetic feeling.

Poor beasts, bred in luxury, to come to such an untimely end.

The weather was exceptionally good for show week. We were not, as usual, half asphyxiated by a London fog.

How the show has developed since its humble origin in 1798, when it was founded as the "Smithfield Cattle and Sheep Society."

In 1802 the title of the society was changed to its present one—"The Smithfield Club."

In a little livery stable somewhere in Smithfield the first show took place in 1799, and the prizes distributed amounted to £52 in plate.

The Baker Street Bazaar was the scene of the show for some years.

From the beginning of the show our Royal family have taken an interest in it.

As the *Outlook* writes, "English kings for 700 years have been agriculturists; but it is safe to say that no model farms in history compare with Windsor, and that for knowledge of the national importance of stock breeding King Edward VII. excels all his predecessors."

Much sympathy is felt for Mr. James Hornsby, who was called from the show by the sad event of his brother's death.

Lord Carrington has led a strenuous life during the week. "At home" to farmers at his official residence, attending dinners and meetings, receiving deputations.

He must have sometimes wished that he was a small holder, leading the simple life so much talked about nowadays.

The smock-frock—beloved of artists—of the farm labourer is a thing of the past; but in the gallery of the Hall we noticed one old chap so attired. Somehow he did not look genuine, and we fear the old-fashioned dress may have been put on for the occasion.

The "Farmers' Red Book" is both useful and ornamental.

We were reminded by Mr. G. C. Phillips at the Surveyors' Institution that "nearly 2,000 years ago M. P. Cato, the Roman farmer-censor, propounded to the Italian farmers the following questions:—

First, "What is good tillage?" "to plough." "What is the second?" "to plough." "The third?" "to manure."

Truth is everlasting, and what Cato—we nearly wrote Cato, M.P.—said holds good—"yesterday, to-day, and to-morrow."

The "long pull" is to be dispensed with in the sale of milk by farmers in the neighbourhood of Preston and Fylde.

If the farmers join in "a long pull and a strong pull and a pull altogether," they may be successful in attaining their object.

Young men and maidens will be pleased to hear that large consignments of mistletoe are on their way to this country.

There is nothing fresh—not even the meat—about the meat trust menace. The arrangement is still in a state of incubation.

English housewives will find their plum-puddings dearer this year than usual. It is calculated that the puddings—much beloved by children—will cost nearly 5d. per lb. more.

The first dairy co-operative society was founded in Denmark in 1882. Now there are more than a thousand of such societies.

More than four fifths of all the farmers belong to such societies, and they own 80 per cent. of the cows.

THE FARMERS' DIARY.

TUESDAY, DECEMBER 17.—East Kent Agricultural Dinner at Ashford, 5 p.m., Mr. Hardy, M.P., in the Chair—Ashford Cattle Show and Jubilee Sale — Horse Sales at Leeds and Maidstone — Salisbury Christmas Market—Agricultural Fairs at York, Thirsk, and Carmarthen—Leighton Buzzard Fair — Martock Fat Stock Sale —Nottingham Horse Fair—Live and Fat Stock Sales at Langport, Castle Cary, Bicester, and Ipswich.

WEDNESDAY, DECEMBER 18.—Grantham Fat Stock Sale—Horse Sale at Crewe—Horse Sale at Doncaster — Buckingham Fair — Ringwood Fat Stock Sale — Malmesbury Cattle and Sheep Fair — Gloucester Fair—Frome Christmas Poultry Sale — Dorchester Great Christmas Market—Live Stock Sales at Wincanton, Sherborne, and Dorchester.

THURSDAY, DECEMBER 19.—Chester Horse Fair—Bedford Great Cattle Fair—Kettering Cattle and Sheep Fair—Blandford Market—Birmingham Horse Sale.

FRIDAY, DECEMBER 20.—York Great Annual Fair.

SATURDAY, DECEMBER 21.—Very little business will be done at the Saturday Markets of the 28th; some will be shut. Purchases this day will therefore, at all the chief Saturday Markets, be made for the most part to tide over the last ten days of the Old Year. Intending sellers should note this—Fairs at Stanhope, Macclesfield, and Penrhyn.

MONDAY, DECEMBER 23.—Hampton-in-Arden Great Winter Horse Sale—A large attendance and trade at Mark Lane are expected, as after to-day the Corn Exchange will be shut until the 30th—Fairs at Newport Pagnell, Pickering, Saintfield, and Sleaford.

NOTES AND NEWS OF AGRICULTURAL SOCIETIES.

The members of the Mid-Somerset Agricultural Society are to be congratulated on having had a most successful year, for whereas at the beginning of the year the deposit at the bank was £100, at the end it was £200, despite the fact that there had been an outlay of £30 on fittings. The most notable feature was the increase in the amount of entrance fees received, thus showing the growing popularity of the society's show; in fact, the whole year's record testifies to its increasing importance, and for its increased finance and general success it was generally agreed at the annual meeting that the society were indebted mainly to their indefatigable secretary, Mr. Ozzard.

The members of the Gloucestershire Chamber of Agriculture discussed the question of the desirability of forming an Independent Agricultural Parliamentary Party at their last meeting. The Hon. M. H. Hicks-Beach, M.P., said that no industry of equal importance was so badly organised as agriculture, but he thought it extremely doubtful whether, at the present moment, it would be possible to form an independent Agricultural Party, as when political questions were involved a good many members of such a Party might feel they were in a difficult position. He moved the following resolution:—"That this Chamber, while strongly in favour of steps being taken to organise agriculturists throughout the country, with a view to making their desires more distinctly felt in Parliament, deems it impracticable at present to form an Independent Agricultural Party." A rider was suggested to the effect that before any election specific promises should be obtained from candidates to support any measures in the interest of agriculture, and this was added to the resolution, which was carried unanimously.

At a well-attended meeting of the Somerset Chamber of Agriculture and South Somerset Farmers' Club, held at Yeovil to consider a report from the Organising Committee of the Central Chamber on the subject of an Agricultural Party in Parliament, the following resolution was carried unanimously:—That, in the opinion of this Chamber, it is desirable that an Independent Agricultural Party should be formed in the House of Commons on the lines recommended by the Organisation Committee of the Central Chamber.

HORSES.

Ancient Records—The General Stud Book—Thoroughbreds as a Basis for Breeding Theories—The Value of Mares in a Pedigree—Another Instance of Inbreeding to Mares—The Age of Brood Mares.

Ancient Records.

IT is a remarkable thing that the books about Horses and Horsemanship which were written in the sixteenth and seventeenth centuries are both numerous and voluminous, and though there are many things amongst the wondrous remedies for equine diseases, and the remarkable statements about horses and their peculiarities, which go to show that our ancestors were practical horsemen, there is not any record of the breeding of the horses of the day. A few short sentences describe in a more or less vague fashion how it is advisable to mate mares in order to obtain a certain result, but generally a few pages, two or three at the most, are devoted to this important subject, and with the exception of a few remarkable horses—a very few—of whose exploits apocryphal histories are given, are all we have which can be classed as horse history. It was not till nearly the end of the eighteenth century that any attempt was made to collect or trace the pedigrees of horses on any regular system, and then only with reference to one breed—the Thoroughbred.

The General Stud Book.

IF it had not been for racing we should have groped on in the dark respecting the breeding of horses for many a year longer than we did. It was in 1791 that Mr. James Weatherby compiled "An Introduction to a General Stud Book," as his preface tells us, "with a view to correct the then increasing evil of false and inaccurate pedigrees." Racing had then been conducted on a regular system for quite three quarters of a century, the Jockey Club had been in existence for upwards of forty years, and the Gimcrack Club, to which I referred last week, had eaten twenty-five of those dinners which have since gone to the making of history before anyone thought it worth while—or perhaps it would be more accurate to say before anyone was industrious enough—to attempt to collect pedigrees. And notwithstanding the excellent example set by the Shorthorn Society in the beginning of the Nineteenth Century it was not until the early eighties that any attempt was made to collect the pedigrees of other breeds of horses.

Photos by (Anderson, Leighton Buzzard.

The first of the above illustrations depicts the Shire Stallion Lockinge Blagdon (22542), bay, 17 hands, foaled 1903, a winner of numerous prizes, and undoubtedly a coming sire. Below are three of his foals (Blagdon Royal Albert, Blagdon Ruby and Blagdon Delight), also prize winners; all are full of Shire character. Lockinge Blagdon is bred on similar lines to Lockinge Forest King, his dam being by Royal Albert, and on his sire's side he gets the Harold and Premier blood, but he is built on a large scale, which adds much to his value. He is the property of Mr. Clement Keevil, Billington, Leighton Buzzard.

Thoroughbreds as a Basis for Breeding Theories.

WE have therefore only the Thoroughbred Stud Book on which we can rely as a basis for founding theories of breeding. The records of half a century are not sufficient to base a theory upon, and it is very questionable whether there is any reliable information respecting the breeding of our horses, light or heavy, of older date than this, except, of course, in a few isolated cases, and then the information is not complete, and only two or three crosses are given instead of anything approaching a full pedigree. With the Thoroughbred, however, there are fairly reliable records going back for nearly 200 years, and it must be borne in mind that the early horses in the General Stud Book were horses of undoubted ancient lineage, for they had all "done something." Here, then, we find reliable data to go upon, and I make no doubt that if we had equally reliable data respecting our other breeds we should find breeding light horses especially a much easier and more profitable business than it is at present.

The Value of Mares in a Pedigree.

LAST week I had something to say about the value of mares in a pedigree, and I now proceed to give an instance of it. Perhaps Rosicrucian was the best horse Sir Joseph Hawley bred, though he never gained classic honours. He was running till he was six years old, and at the stud he was a very conspicuous success. The man, indeed, would be hard to please that would not be delighted to get one horse in a lifetime at all approaching in excellence to Rosicrucian. Now let us examine his pedigree closely. To begin with, and a rare beginning it is too, we have the names of the three sisters, Eleanor, Cressida, and Julia occurring in the pedigree no fewer than eight times, of which Julias occur five times, and Cressidas twice. These three great mares were by Whiskey—Young Giantess by Diomed, and were the dams of Muley (from Eleanor), Priam (from Cressida), and Phantom (from Julia). Then, again, take Diversion, the grandam of Rosicrucian. Penelope by Trumpetor, another great mare, appears in the pedigrees of her paternal grandsire and grandam. Then Web, the dam of Middleton, Diversion's grandsire, and an own brother to the famous Whalebone, appears twice in the pedigree. A horse in whose pedigree the blood of so many famous mares is to be found could scarcely fail to be great. He was, as it were, saturated with the blood of the three great sisters, and his record speaks for itself.

Another Instance of Inbreeding to Mares.

ANOTHER instance of inbreeding to mares that has come to my notice is that of Mr. John Welford's Cleveland Bays. Mr. John Welford is one of the most successful breeders of Cleveland Bays in the country, and his strain has been very much sought after. He has been more careful to keep records of his horses and their pedigrees than most men have, and his records reach a long way back—into the thirties or earlier. Now Mr. Welford has systematically inbred to his mares, and with the result that he has kept the peculiar characteristics of his strain in a remarkable manner. On some future occasion I shall give one or two of Mr. Welford's pedigrees, but I have not got them to hand as I am writing. Speaking from memory I should not say that the inbreeding is so pronounced as in the case of Rosicrucian, but then the records do not go so far back, and it is quite possible that Mr. Welford's Clevelands may be quite as inbred to a few mares as Sir Joseph Hawling's famous horse.

The Age of Brood Mares.

I WAS asked the other day whether I believe in breeding from very young mares. I certainly do not believe in breeding from very old ones, by which I mean that I do not think there is a reasonable prospect of success in breeding from a mare that is practically worn out with hard work before she is put to the stud. Yet curiously enough one never enunciated a theory on this subject without an instance being quoted in proof of its error. For example, one hears it said that first foals are never worth a great deal, or are seldom worth much; there is a strongly held opinion that first foals are inferior to those which are bred later. And yet Fandango was worth all the others that Castanette bred put together. Then, again, take

the theory of a hard worked and an old mare being an unsuccessful brood mare. No sooner does one give utterance to it than one is confronted with Alice Hawthorn, who was nine years old when she dropped her first foal, and who was nineteen when she foaled Thormanby, the best she ever bred. So all theories should be taken with a big grain of salt.

I DO not think it advisable to breed from immature mares. I frequently see three-year-old mares with foals at foot, and though I have occasionally known these foals to turn out very well indeed, breeding at such an early age must mean premature decay for the mares. It stands to reason that if a mare is only half grown the strain upon her involved by breeding will have a much more serious effect than when she is fully developed. But I do believe very strongly in beginning to breed from young mares, and I am of opinion that if a farmer were to take a foal off his young Hunter mare when she is five years old he would find it answer a very good purpose. The mare could be broken in and made handy when three years old, ridden about during the summer when she was four years old, and taken up and hunted about Christmas, after her foal was weaned. Then she would be at a marketable age, and would have earned her meat in the meantime. I have done something like this myself, and with an excellent result. I had a mare some seven years old that had been hard worked before she came into my hands, and had been hard hunted for some two or three seasons after I got her. Her fore-legs began to show signs of wear, so I laid her up for a year and took a foal off her—which, by the way, was the best she ever bred. The eighteen months' rest did her a lot of good, and she did a lot more good work before she finally went to the stud. She bred some fair horses, but was not a conspicuous success as a brood mare, and was an uncertain breeder. THE LOOKER-ON.

Royal Commission on Horse Breeding.

A meeting of the Royal Commission on Horse Breeding was held at the Royal Agricultural Hall, Islington on Monday, when, on the motion of the Duke of Portland, K.G., seconded by Lord Ribblesdale, it was unanimously agreed that the following resolution be forwarded by the chairman to the Earl Carrington, President of the Board of Agriculture:—

"That the Royal Commission on Horse Breeding desire to express their extreme disappointment at no official answer having been received in reply to the letter dated November 8, 1906, from Lord Sefton, late chairman of the Commission, and further to record their surprise that no official answer has been given to the suggestions made by the Royal Commissioners at the conference held at the Board of Agriculture Offices, 4, Whitehall Place, S.W., on October 31, 1906, at the express desire and invitation of the president of the Board of Agriculture."

Sir John Gilmour, Bart., had a resolution on the agenda concerning the management of future shows, but at his request this was withdrawn.

Shire Horse Society.

Mr. H. H. Smith Carington (president-elect) occupied the chair at the meeting of the council of the above society held on Tuesday, when nineteen new members were elected.

Mr. J. W. Kenworthy (vice-chairman of the Editing Committee) reported that the committee had that day considered applications for the following prefixes, all of which were granted.

Prefix.	*Applicant.*
Bexton	William Platt.
Quarrington	Walter Ward.
Raithby	C. S. and G. H. Upton.
Stone Park.....	J. Kendrick.
Willingham	D. Askew and Son.
Winsford	Arthur Dodd.

The proof of the 1907 Show Notes had been duly approved, and its insertion ordered in the forthcoming volume of the Stud Book.

Sir P. Albert Muntz, Bart., M.P. (Vice-chairman of the Horse Show Committee), reported that the schedule for the coming show had been finally considered and the committee recommended, in respect of the barren mare class, the addition of breeders' prizes for the first and second prize animals, while mares in this class would not be able to compete for the special prizes or cups. Exhibitors owning mares that had produced living foals in 1907 would have the option of entering for either this class or for the ordinary brood mare classes.

The conditions applying to sales held under the society's auspices had also been very carefully considered and the following clause adopted, to apply amongst others at the coming London Show, viz.: Any horse realising twenty guineas or over and found to be a shiverer, unless so stated at the time of sale, is returnable before removal from the place of sale. The auctioneers shall then appoint a veterinary surgeon to examine the horse, and his decision shall be final; the expenses of the examination to be borne by the unsuccessful side.

The committee recommended that the society should in conjunction with the other Horse Breeding Shows, provide canvas for the fronts of the horse boxes, a specimen being submitted and favourably commented upon. Each exhibitor would be at liberty to cover the top of his box, provided it did not hang over the society's canvas.

The committee recommended that the following rule should be added to the conditions and regulations of the prize schedule:—

"No person who shall have been shown to the satisfaction of the council to have been excluded from exhibiting for prizes at the exhibition of any society of good standing in consequence of having attempted to obtain a prize by giving a false certificate, or by other unfair means, and no person who is known to be under exclusion from any other society for fraudulent practices, shall be allowed to exhibit at this or any other show of the society."

This report was adopted.

The dates of the council meetings in 1908 were arranged as follows:—Tuesday, January 28; Thursday, February 27; Tuesday, March 31; Tuesday, June 2; Tuesday, November 3; Tuesday, December 8.

Importation of Horses.

Under an Order of the Board of Agriculture and Fisheries, entitled "The Glanders or Farcy Order of 1907," which comes into force on January 1, 1908, no horse, ass, or mule brought to Great Britain from any other country, except Ireland, the Channel Islands, or the Isle of Man, is to be landed in Great Britain unless it is accompanied by a certificate of a veterinary surgeon to the effect that he examined the animal immediately before it was embarked or whilst it was on board the vessel, as the case may be, and that he found that the animal did not show symptoms of glanders or farcy.

As regards importation into Ireland or the Channel Islands, intending exporters of animals from Great Britain should communicate in the first instance with (1) the secretary, Department of Agriculture and Technical Instruction for Ireland, Upper Merrion Street, Dublin; (2) the Piers and Harbours Committee of the States of Jersey, Greffe Office, Royal Square, St. Heliers, Jersey, or (3) the Supervisor, Guernsey, as the case may be, with a view to ascertain the steps to be taken to comply with the regulations of the Government concerned.

A Veterinary Inspector on Swine Fever.

At a meeting of the Lancashire Veterinary Medical Society in Manchester, Mr. J. S. Lloyd, chief veterinary inspector, Sheffield, read a paper on the subject of the control of swine fever. Mr. Lloyd was of the opinion that the disease has not been seriously grappled with, and he suggested some very stringent rules. Of course these would be resisted by many, and there would be a great outcry, but he said:—

No contagious disease of animals ever known has so far been eradicated without someone having to suffer—take, for example, rabies, the latest disease to be stamped out—and surely it is better to put up with some temporary inconvenience if there is any likelihood of deserving a permanent benefit thereby. The mistaken policy of the Board in the past seems to have arisen chiefly from the desire to please everybody. It cannot be done with success. The result during the last two years has been to increase the outbreaks of swine fever, and to decrease the number of pigs, at the same time spending yearly about £50,000 of public money.

Mr. Lloyd added that it should be borne in mind by farmers and small-holders and cottagers—for all are concerned—that though severe measures will press heavily on them at first they will be temporary, for they will eradicate the disease. The present un-method is "agony long drawn out," and apparently interminable.

British Berkshire Society.

A council meeting was held on December 11 at the Agricultural Hall, Islington. The president being unavoidably absent, the Hon. C. B. Portman was invited to take the chair.

After the minutes were read and approved, the adoption of the report from the finance and other committees was moved by Mr. J. P. King, seconded by Mr. Crosland, and carried. Included in this report was the recommendation to offer in prizes—to the Royal Agricultural Society—5 guineas for the best animal in the Berkshire single pig classes, and £18 for three prizes in the young boar class, special prizes of £5 each to the Royal Counties, Bath and West, and the Oxfordshire Societies, and of 3 guineas each to the Royal Lancashire, Suffolk, and Tring Agricultural Societies, and to any other society giving not less than £20 in prizes for pure-bred Berkshires, and conforming to our regulations, also the appointment of Mr. C. C. Smith on the list of judges.

The secretary's report had shown the present membership to be 190 against 163 last year, the current Herd Book had 50 more entries than the previous one, and 454 export certificates had been issued during the year, against 288 last year, 75 per cent. of the first number going to the Argentine. The bank balance was £131 and a further £100 was to be invested in consols.

A resolution, proposed by Mr. W. Crosland—viz., "That the registered prefix of Berkshire, Breeders be used for animals of their own breeding only"—was carried by a majority of four votes, and Mr. Crosland's second resolution—"That when a Berkshire pig has been entered in the Herd Book, the name cannot afterwards be altered"—was carried unanimously.

The following five members were reappointed on the Finance and General Purposes Committee for next year—viz., Messrs. Wm. A. Barnes, J. W. Kimber, J. P. King, Wm. T. Hall, and T. E. Hayter, the last three being also reappointed on the joint board of breed societies.

The next council meeting was fixed to take place at the Royal Counties Show at Southampton on the second day.

General Meeting.

The general meeting of members took place immediately afterwards, the Hon. C. B. Portman in the chair. After the minutes were read, Mr. Edward J. Morant of Brockenhurst Park, was unanimously elected as president for the year 1908. Mr. A. E. Preston was reappointed auditor. The report of the scrutineers showed that sixty-three papers were examined, and that Messrs. J. P. King, J. Lawrence, J. W. Kimber, and J. Jefferson, four of the retiring members, were re-elected, whilst Mr. Colin Campbell was elected in place of Mr. S. A. Leigh.

The Royal Statistical Society's second ordinary meeting of the present session will be held to-morrow (Tuesday), at 5 p.m., at the Society's Rooms, 9, Adelphi Terrace, Strand, W.C., London, when a paper entitled, "An Inquiry into the Rent of Agricultural Land in England and Wales during the 19th Century," will be read by Mr. Robert J. Thompson.

AUCTION SALES.

Auctioneers will favour us by sending in their advertisements as early in the week as possible.

Charges for announcements under this heading Six Shillings an inch.

By Messrs. IRELAND.

Norwich, Norfolk.—Ireland's Norwich Hill Auction Mart (established 50 years). Every Saturday. Fat Bullocks and Sheep, Store Sheep. Specia Spring and Autumn Store Cattle Sales.

MESSRS. IRELAND solicit consignments for these important weekly sales; best market value assured.

Cattle consigned to Ireland's, Norwich, will be properly fed and carefully attended to.

All cattle weighed upon entry to the sale ring if desired. Full particulars to be sent to—

IRELAND'S, Auctioneers.

Norwich, Norfolk.

By Messrs. C. B. HILLIARD & SON.

Peremptory Sale by Order of the Mortgagee.

ESSEX. LITTLE BADDOW & BOREHAM.

WITH IMMEDIATE POSSESSION.

G. B. HILLIARD AND SON will SELL by AUCTION, at the CORN EXCHANGE, CHELMSFORD, on FRIDAY, DECEMBER 20, 1907, at Four o'clock, the valuable FREEHOLD MERCANTILE PREMISES, known as LITTLE BADDOW MILL, abutting upon the Chelmer and Blackwater Navigation Canal, in the above Parishes, and TWO PIECES OF GRASS-LAND, as previously advertised.

Particulars and Conditions of Sale may be obtained of Messrs. TATHAM and LONSADA, Solicitors, 16, Old Broad Street, London, E.C.; of Messrs. HAMPTON and SONS, 2 and 3, Cockspur Street, London, S.W.; and of the AUCTIONEERS, Chelmsford (Telephone No. 17).

SHEEP.

Notes and Jottings.

FLOCKMASTERS have, like all other live, stock breeders, passed through a very busy week at Smithfield. For all, the week must have been of great gratification, for at no period in our sheep breeding industry have the prospects been on the whole brighter than at the present day.

IT is true that our mutton feeders are faced with tremendous competition from the Colonies and abroad, but the manner in which they have met that competition hitherto proves that provided the same determination is continued, there is no apparent reason why those who breed and keep the best class of stock, and fit it properly for the market, should not receive full remuneration for their work.

WHAT a marvellous transformation has taken place in the sheep exhibits of Smithfield during the past thirty years. The heavy, coarse, over fed wether is non-existent; the fat ewe class, for which in those days there was so good a demand, has likewise gone, and in the place of them we find wethers of the choicest quality, well fed, but much improved in symmetry, and in the development of the more valuable parts of the carcase, fed to a degree of perfection that leaves little to be desired; and then, beyond this, we have those remarkable classes of lambs—such as was not thought possible, except in exceptional cases, at the date mentioned above to be secured.

IN many cases the wether lambs exhibited at the present time have attained a degree of development and weight, accompanied with the corresponding depth of flesh, that took at least double the time in ordinary feeding to secure.

THE report of the show is dealt with in full detail elsewhere, and the writer of these notes has no desire to infringe upon the work of your reporter, but he cannot omit calling attention to the points particularly mentioned above, for these points are the real secret of the great hopefulness of the sheep industry in the future.

THE demand at the present time is for perhaps a smaller joint than formerly, but the demand is equally keen now as in former years to secure the best-shaped joints, the best proportionate meat in respect to lean and fat and the highest quality of bone. These merits are the work of those breeders who have been and are at the present time continually working for the improvement of one or other of these points.

THE fine specimens of the several breeds exhibited at Smithfield (amongst which we regret to observe there were neither Cotswolds, Devon Long Wools, nor South Devon sheep) are specially selected for the purpose of showing to the breeder—home, foreign, and colonial—the ideal aimed at by the expert breeders of the present day. What, in effect, is this ideal? It is nothing more or less than the continued development and improvement of all the more valuable parts of the carcase, and the elimination of those that are of lesser value and are not desirable.

THE action of the championship judges in the Long Woolled champion contest, by which they gave preference to the rn Breed Cup pen of Lincolns over the Breed Cup winning pen of that breed by placing the former pen as rn for the champion honours, raises a most important question—*i.e.*, whether the judges, selected for their general knowledge of sheep-breeding to award champion honours, ought or ought not to have the power in effect to upset the awards of the class judges, who are specially selected as being experts in connection with their respective breeds.

IT was stated that this award was really of not much value, for it was merely an honorary position that was given to the Lincoln wether lamb pen by it, but this is not so. Admittedly there is no pecuniary value attached to the award, but there is a very great deal of *kudos*, and rightly so too; for any breeder who is able to produce that pen which according to the expert judge is the best specimen pen of that particular breed, has just cause to complain if any other set of judges choose to upset such award at the same show.

IT is not, of course, within the province of the writer to refer to the other portion of the show, but it is common knowledge that in the cattle section a second-prize steer was ultimately made champion of the show. The same principle is involved in connection with this section, and taken together, both point to the absolute need of one of two alternatives—either frankly to acknowledge that the championship judges have the right and power to sit in judgment upon the work of the experts specially selected for the class judging, or to frame such rules and regulations, if not already framed, and see that the officials entrusted with carrying them out do so, so as to prevent the unnecessary disappointment that was experienced during the past show.

A CONSIDERABLE number of meetings took place during the week, none probably of more importance to the general interest of sheep breeders than that of the National Sheep Breeders' Association. The main business, other than the election of the officials for the current year, which included Mr. Henry Dudding as president and Mr. Herbert Padwick as president-elect, was the discussion of that ever-recurring question, sheep scab.

THE discussion arose upon a resolution sent up by Mr. A. Amos, who suggested increased stringency in the administration of the Order, with certain conditions which had in the past proved most effective in his own district.

IT is true such restrictions might have caused trouble, but after all, the small amount of inconvenience caused by the regulations found necessary in dealing with this disease is infinitesimal in comparison with the trouble and loss the disease occasions.

THE result of this discussion, however, was somewhat different from that anticipated, for an amendment was carried by an overwhelming majority, "That in the opinion of the National Sheep Breeders' Association sheep scab will never be effectually eradicated until the owner of scabby sheep is penalised after due notice of the enactment of an order inflicting a penalty has been given." This resolution, which was very strongly supported, unquestionably brings us a decided step nearer to that condition of affairs which will more readily than any other aid in bringing about the eradication of this disease—*i.e.*, when the real culprit is made to pay for neglecting to cleanse his flock, as every flockmaster of this country could readily do if he were only so minded.

THERE can be no question but that sheep scab is a disease that can be got rid of, and effectually so, and also that it is a disease which continues to exist simply and solely because of the negligence of the careless flockmasters.

THE pure-bred flocks of this country are to all intents and purposes absolutely clear of the disease, and if the same means were adopted by every other flockmaster all the flocks would soon be in the same position, a position which would

The Pen of Leicester Sheep shown above were awarded the Longwoolled Sheep Championship and Reserve for the Prince of Wales's Challenge Cup for the Best Pen of Sheep bred by exhibitor at the Smithfield Club Show last week, as well as First Prize for Leicester or Border Leicester Sheep over 12 and under 24 months old, and the Breed Cup for the Best Pen of Leicesters or Border Leicesters. They were bred and exhibited by Mr. E. F. Jordan, Eastburn, Driffield; their age was 21 months, and their weight 7 cwt. 3 qr. 22 lb.

be most beneficial to their owners, and also to the country at large.

National Sheep Breeders' Association.

The annual meeting of the National Sheep Breeders' Association was held on Tuesday, Mr. James Flower in the chair. The report and balance-sheet, which were of a satisfactory nature, showed that the assets of the association amounted to £157. Mr. Herbert Padwick (Southdown Society) was appointed president-elect for the ensuing year.

Mr. A. Amos moved a resolution to the effect that the Board of Agriculture should be asked to amend the Sheep Scab Order, so "that no sheep shall be sent to any public market or sale after they have been shorn (or in the case of their not being shorn after August 1) until they have been dipped; or, in the case of fat sheep or fat lambs for slaughter, they shall only be accepted provided there is a tiver down the back and across the loins, signifying that they are to be slaughtered within ten days."

An amendment was moved in the following terms:—"That the National Sheep Breeders' Association is of opinion that sheep scab will not be effectively eradicated until the owner of scabby sheep is penalised after due notice of the enactment of the Order." One of the speakers pointed out that a great danger of taking sheep from this country to the colonies came from sheep scab.

Several members expressed themselves in favour of strong measures being taken so as to get rid of the disease, while others thought this penalty should be inflicted only after the owner had had due notice to get rid of the scab, and the amendment was carried.

CATTLE.

Tuberculosis in Cattle Conference.

The Earl of Northbrook presided on Wednesday over a large and influential meeting at the Royal Agricultural Hall, Islington, which had been summoned for the purpose of forming a committee to watch over the interests of agriculture in view of possible legislation in connection with this important matter.

Amongst those present were 110 delegates from 51 different societies of the United Kingdom, and the following resolution was unanimously adopted on the motion of the Right Hon. Victor C. W. Cavendish, M.P., seconded by Lord Digby, "that a committee representative of the cattle, breed, dairy, and other societies be formed for the purpose of watching the interests of agriculture in view of possible legislation with regard to milk and meat supply," and that such committee be constituted as follows, with power to add to their number:—

The Earl of Northbrook, Hon. Cecil T. Parker, Mr. J. Bowen Jones, Mr. Richardson Carr, Mr. Ernest Mathews, Mr. C. M. S. Pilkington, Mr. Richard Stratton, Mr. George Taylor, Mr. C. R. W. Adeane, Lord Moreton, the Duke of Richmond and Gordon, K.G. (President of the Smithfield Club), Sir John MacFadyean (Principal of the Royal Veterinary College), four representatives of the Central Chamber of Agriculture, one representative of the British Dairy Farmers' Association, one representative of each of the Breed Societies.

The chairman stated that it would be the desire of those present that the committee should be as widely representative as possible, and that the proposed committee would form the nucleus of the larger body. The various societies interested would be at once communicated with, requesting them to nominate their representatives.

Considerable discussion ensued, and various recommendations were made for the consideration and guidance of the committee in carrying out the objects for which the committee had been appointed.

The Committee held a preliminary meeting on Thursday, the 12th inst., at which Lord Kenyon, the Right Hon. Victor Cavendish, M.P., and Mr. W. J. Norton were elected members.

Directions were given for letters to be written to various societies requesting them to appoint representatives on the committee, in anticipation of a further meeting to be held on Friday, January 3, 1908.

Sale of Stock at Gloucester.

At Messrs. Bruton Knowles and Co.'s Christmas sale of stock at Gloucester a large number of cattle, sheep, and pigs were offered. The trade generally with the cattle, though not good, was distinctly better than expected; there was a good attendance of buyers, and the competition was well maintained throughout the day. The following were the best averages so far as the cattle were concerned:—Mr. G. Greenwood, £31 2s. 6d. (2); Mr. H. Harvey, £25 10s. (6); the Duke of Beaufort, £23 15 (2); Mr. W. H. Butt, £23 6s. 6d. (10); Mr. G. F. Moore, £22 18s. 4d. (12); Mr. W. Goulding, £22 15s. (5); Mr. W. Browning, £22 13s. 9d. (4); Mr. S. Chandler, £22 1s. 3d. (4); Mr. G. Vines, £21 12s. 6d. (10); Mr. G. Shipton, £21 11s. (5); and Mr. J. Cave, £21 5s. (5).

The sheep were an exceptionally good lot, and all round a good trade was done at prices up to 74s., and 72s. paid for two yearling wethers of enormous size, belonging to Mr. Horlick, by Mr. Jones, Chepstow. They belonged to the same lot of wethers which took first prize at Smithfield the same day. Other prices range up to 64s. 6d. As regards pigs, a large number of baconers sold at from 5½s. to £5, whilst Mr. Summers' prize sow realised £18, and went to Cardiff; Mr. Dudfield's fetching £10 15s. (Mr. Summers), and Mr. C. Morse's £10 11s. (Mr. C. Jones, Gloucester). Mr. Rickards' heaviest pig in the sale went to Mr. Daniels at £10 2s. 6d.

New Slaughter Houses at Islington.

On Wednesday the Lord Mayor and Sheriffs visited in state the Metropolitan Cattle Market at Islington and opened the new public slaughter-houses, the foundation-stone of which was laid about a year ago. The buildings are intended to supersede the private slaughter-houses erected in the vicinity, of which the City Corporation are the landlords. They have been erected at a cost of £32,000; they are not calculated to prove an immediately remunerative undertaking, but are provided by the Corporation, as the market authority for the Metropolis in the interests of sanitation and the food supply.

These are the first public slaughter-houses to be provided in London, and have been so planned by Mr Sydney Perks, the City Surveyor, that they can be extended without serious structural alterations. The walls are lined with impervious glazed bricks, and the ventilation and sanitary arrangements are of the most modern kind. The animals will be lifted after killing by hoists worked by electricity, the first of their kind in England. The cooling room is 200 ft. long and 30 ft. broad, and provides accommodation for 720 sides of beef and 1,000 sheep.

In the pig slaughter-houses there are four killing styes with scalding and cooling tubs to each, and the cooling-room adjoining has hangings for 1,200 pigs. A special feature of the equipment is a system of overhead rails, by which carcases of animals can be moved without unnecessary handling.

Devon Cattle Breeders' Society.

In the course of the report to be presented at the annual meeting of the Devon Cattle Breeders' Society it is stated that a committee has been appointed to take steps to establish milking classes for Devon cows.

It has been arranged to give £34, in two classes, at the Bath and West Show, at Dorchester, in June, 1908. The council hope that these classes may be well filled. An effort is being made to increase the special prize fund. A few members have come forward with very handsome subscriptions, but a large majority have not responded. The council beg to appeal for assistance to those members who have not already promised subscriptions. The council have resolved to offer prizes at the show and sale to be held in Exeter on February 19, 1908, in two classes—for the best bull calved in the year 1906, and for the best bull calved in the year 1907.

Dairy Shorthorn Society.

The council of the Dairy Shorthorn (Coates's Herd Book) Association met on Tuesday, when Mr. C. E. Wodehouse drew attention to the existing judges' instructions at shows, and said there appeared to be a tendency to pay too much attention to milk and not sufficient attention to size, quality, and general excellence of the animal itself. He did not think the object of the association would be furthered by awarding their prizes to animals which had little to recommend them but their udders. An animal with milk alone was not much use to the breeder of pedigree cattle. Although he had always regarded milk as a *sine qua non* in his herd he was not a believer in the five or six gallon cow, with simply a milk record to recommend her. He thought that the prizes of the association should go to the four-and-a half gallon cow with a fine head, good horns, even flesh, and showing quality all over—an animal which would breed a bull, which was fit for export, and also to go into any herd at home.

Mr. Adeane suggested that they should add to the instructions to judges the words:

"Regard should also be paid to the type and character of pure-bred Shorthorns."

It was agreed that this suggestion should be considered at the next meeting of the council.

It was decided to give £90 in prizes at the forthcoming summer shows, as compared with £80 last year.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

At Athlone Fair, co. Westmeath, held on December 10, there was a small fair; demand only moderate, and a good many young cattle remaining unsold. Good springers were in keen demand. Calves, 2nd class, £3 7s. 6d. to £4 10s.; yearlings, 1st class, £5 5s. to £9; 2nd class, £6 to £6 15s.; 3rd class, £4 10s. to £5 10s.; two years old, 1st class, £11 10s. to £12; 2nd class, £8 10s. to £10 10s.; 3rd class, £6 12s. 6d. to £7 10s.; three years old, 1st class, £13 10s. to £15; 2nd class, £10 10s. to £13; springers, 1st class, £17 to £17 15s.; 2nd class, £12 10s. to £15; 3rd class, £9 15s. to £10 10s. Very small supply of sheep, for which demand was by no means brisk. Lambs, 2nd class, 25s. to 29s.; one-year-old and over, 1st class, 49s.; 2nd class, 34s. 6d. to 42s.

Dogheda Fair, co. Louth, held on December 11.—Small fair; demand moderate, except for nice-conditioned polled bullocks, which were scarce and dear. Yearlings, 1st class, £8 2s. 6d. to £9; 2nd class, £7 5s. to £8; two-year-olds, 1st class, £12 5s. to £13 10s.; 2nd class, £10 5s. to £11 10s.; three-year-olds, 1st class, £14 15s. to £15 10s.; 2nd class, £12 5s. to £13 10s.; springers, 1st class, £17 10s. to £18 15s; 2nd class, £14 5s. to £15 15s; young pigs, eight to ten weeks olds, for which demand was bad, sold at from 15s. to 21s. each.

Contagious Diseases of Animals.

NOTE.—The figures for the current year are approximate only.

The Holbeach (Lincs.) Board of Guardians have adopted corn grinding as a task of work for vagrants, and during the past year they have ground 861 sacks of corn, which, at the amount charged—3d. per sack—brought in £10 15s. 3d. The profit was put at about half this amount and a proposal is made for introducing another mill.

Live Stock Record.

DIRECTORY OF BRITISH PEDIGREE STOCK OWNERS.

Breeder of Pure Lincoln Long Wool Sheep.
Lustrous Fleeces. Good Constitutions.
SUITABLE FOR HOME AND ABROAD. STOCK FOR SALE.

Sussex Society.

Mr. W. T. Ingram, chairman of the council, presided at the annual meeting of the Sussex County Agricultural Society, and in his annual statement referred to the invitation received from the City of Chichester to hold the next show there. The meeting at which the matter was discussed was, he said, the largest gathering of agriculturists ever held in Chichester, and the society was assured that they need have no fears on financial grounds. Comparing the accounts of the two last shows at Hastings, the chairman had some pleasant things to say, which showed the progress made by the show. The profit on the year was £153 4s., but the overdraft of £33 12s. and an account of £26 due to Brighton Corporation in respect of the previous year brought the net profit down to about £93. They had invested another £50 in Conso's, which brought their investments up to £473. He moved the adoption of the accounts, which was carried.

On the proposition of Mr. Stride, seconded by Mr. Hobgen, the Duke of Norfolk was elected patron, and the Duke of Richmond president for the year. Mr. S. S. Titt was re-elected hon. auditor and Mr. R. H. Powell hon. treasurer, and thanked for past services.

On the proposition of Mr. Chasemore, seconded by Mr. Braby, Mr. Dyer was reappointed secretary, and granted an increase of £25 in his salary, bringing the amount up to £125. Several members referred to the great increase which had taken place in the secretary's work.

ROYAL AGRICULTURAL SOCIETY.

ANNUAL MEETING.

The annual general meeting of the Royal Agricultural Society of England was held on Wednesday afternoon at the Agricultural Hall, Islington, when, owing to the absence through illness of the Earl of Yarborough, the chair was taken by Mr. F. S. W. Cornwallis, one of the trustees.

The chairman expressed regret at the absence of the president, Lord Yarborough, owing to a serious illness of long duration. No one could have worked more zealously for the society than the president, and they all hoped Lord Yarborough would soon be back in this country enjoying perfect health. (Hear, hear.) He had received a letter from Lord Yarborough which stated that his illness had compelled him to go abroad for the winter, and containing an expression of his indebtedness to the staff for their valuable aid in the work of the society. It would be seen, he continued, that the financial accounts of the Lincoln Show were most interesting. The result of this most successful show, which had been honoured by a visit of the King, was to provide a credit balance of £5,056. (Cheers.) This amount of profit had been exceeded only on two previous occasions—first, in York, in 1883, and second, in Manchester, in 1869 In addition to this profit, a sum of £2,000 would be set aside from the ordinary funds of the society to the show account, thereby enabling a total of £7,056 to go to the reserve fund. (Cheers.) The recent experiments of combining with the local agricultural show authorities had proved to be most advantageous to both parties, and the society had received with gratification an expression to this effect from the council of the Lincolnshire Agricultural Society. The arrangements for the show at Newcastle next year were making most satisfactory progress, and every indication was forthcoming to lead the society to hope that the show would be one of the most successful ever held. The local committees had been most generous in their contribution to the prize fund, for they had intimated that they would subscribe a sum not exceeding £2,000. The society had accepted the invitation of Gloucester to hold the show there in 1909. The financial position of the society had much improved since the last annual meeting, and the reserve fund, including investments, stood at £14,000, which, with the £7,000 to be added shortly, would bring the reserve fund up to £21,000. (Cheers.) It was, however, a subject of regret that the total number of members on the books of the society was but seventy more than at the last meeting. Certainly the membership was not so large as it might well be. Though the suggestion that each member should try to obtain one new subscriber had produced some result, yet it had not been so generally adopted as it might have been. He impressed upon the members the duty of helping the council in this matter, because a large membership was the surest foundation on which the society could build. (Cheers.) Mr. J. B. Ellis moved the adoption of the annual report.

Mr. J. Evens, as a Lincolnshire tenant farmer, said he had great pleasure in seconding the motion. The Lincolnshire farmers were proud to receive a visit of the society, and to know that it had been productive of such splendid results. He regretted the slow increase in the membership, and expressed the hope that every member present would try to get a new recruit.

The report was adopted unanimously.

Sir Albert Muntz moved the election of Mr. Victor C. Cavendish, M.P., as president for the ensuing year. (Applause).

Mr. Joseph Martin seconded the motion, which was carried.

Mr. Cavendish, in reply, said that of all the positions an Englishman could occupy he thought that of the President of the Royal Agricultural Society was, indeed, one of the greatest. He knew it might be difficult to do much to increase the popularity and power of the society, but they had made so much advance during the last few years that he thought they had every encouragement to persevere. (Applause.)

The trustees, vice-presidents, and auditors were re elected.

The chairman then announced the election of the following ordinary members of the council who represent the several divisions in Group B and additional members elected under by-law 83.

Buckinghamshire: E. Mathews, Little Shardeloes, Amersham.

Devonshire) J. H. Hine, Pomphlett Farm, Plymstock, Plymouth.

Durham: C. Middleton, Vane Terrace, Darlington.

Essex: W. Nocton, Langham Hall, Colchester.

Herefordshire: A. P. Turner, The Leen, Pembridge.

Leicestershire: Sir H. F. de Trafford, Hill Crest, Market Harboro'.

Lincolnshire: C. W. Tindall, Wainfleet S.O.

London: H. Frank, 9, Conduit Street, W. W. A. May, 3, Wellington Street, Strand. J. Thornton, 7, Princes Street, Hanover Square.

Nottinghamshire: C. M. S. Pilkington, Woollaton, Nottingham.

Rutland: S. N. Bankart, Hallaton Hall, Uppingham.

Shropshire: T. S. Minton, Montford, Shrewsbury.

South Wales: C C. Rogers, Stanage Park, Brampton Bryan.

Staffordshire: R. G. Patterson, Acton Russell, Stafford.

Suffolk: Fred Smith, Woodbridge.

Surrey: E. A. Hamlyn, Oakdale, Ockley.

Wiltshire: H. H. Smith, Bowood, Calne.

Yorks (W.R): E. W. Stanyforth, Kirk Hammerton Hall, York.

The chairman inviting suggestions,

Mr. E. A Hamlyn (Ockley, Surrey) suggested that the council should have a proper recruiting committee of four or five members to attend specially to the membership. With regard to the importation of meat, he believed that the quantity of foreign meat coming into Deptford and Smithfield was something like 80 or 90 per cent. Yet no butcher would tell them that he sold anything but the primest English joints. He suggested that the council should consider whether it would not be advisable to again approach the Board of Agriculture, with the object that butchers should be compelled to exhibit descriptive labels when they sold foreign meat (Applause)

Mr. H. M. Simmons (Eastbourne) suggested that the judges should not know the names of the owners of the cattle they were judging. He also proposed that the men should not be allowed to bring their own cattle out. Let a Sussex man bring a Shorthorn out, and the Shorthorn man bring the Sussex out. He had noticed some shows where the judges judged the owners instead of the cattle. (Laughter.)

Mr. Eldred G. F. Walker, on behalf of the west country cider growers, urged that when cider was disqualified for not passing the tests of the chemists, the society should not be ashamed to put on the exhibits "disqualified for the use of preservatives." They also wanted two judges. They would be prepared to give a prize in the cider classes when the society came to Gloucester if they had two judges.

The chairman said the suggestions would all be carefully considered, and a vote of thanks to the chairman brought the meeting to a close.

COUNCIL MEETING.

A monthly Council was held at 16, Bedford Square, W.C., on Wednesday, Mr. F. S. W. Cornwallis (trustee) in the chair. The minutes of the last meeting of the council having been taken as read and approved, the election of three governors and sixty members was proceeded with.

The reports of the various standing committees were then presented. and reported as below :—

Finance.

Mr. Adeane (chairman) reported that they had authorised the transference before the end of the the year, of the following amounts from the ordinary account to the reserve fund :—

Credit balance on the Lincoln Show ..	£5,056	0	18
Contributions from the ordinary funds to the show fund	2,000	0	0
Balance standing to the credit of the Harewood House (sinking fund) account	130	15	2
	£7,186	16	0

The secretary had laid upon the table the balance sheet of the Lincoln Show, which had been approved and certified by the auditors on the 20th ult. The committee recommended the appointment of the same gentlemen as stewarts of Finance at the forthcoming show at Newcastle as acted at Lincoln—viz., the Chairman (Mr. Adeane), Sir Richard Cooper, Bart., Mr. Aveling, and Mr. Richardson Carr.

The committee recommended that members of the Newcastle Flower Show who had paid an annual subscription of 10s. and upwards for the years 1907 and 1908 be granted a free ticket giving admission to the show each day, and those members being annual subscribers of 5s. a free day ticket admitting twice on each of the days on which the horticultural show is open to the public.

Mr. Adeane, in presenting this report, said he had now the pleasure to lay before the council the accounts of the Lincoln show, which had been duly audited. Printed copies were in the hands of all those present, and therefore he did not think it necessary to detain the council by going into the details very minutely. They had made two changes in the statement of accounts. For the first time, he believed, they had shown the gross amount of the prizes awarded at the show—namely, £7,844, instead of, as heretofore, only the net amount given by the Royal Agricultural Society. The gross amount, as they would see, included the sum of £3,898, which had been contributed by the various breed societies and the Lincoln local committee. They had thought it proper to do this, as the whole money given in prizes went through the accounts of the society. They had made one other alteration. In previous years, on the income side, a statement had been included showing the distribution of the prizes awarded. This statement they had thought it more proper to take out of the accounts and print on a separate page for the information of its members. The figures which he had been able to give them at their last meeting, showing an approximate profit of £5,056 at Lincoln, had proved to be correct. The profit on the Lincoln Show exceeded that on the Derby Show by no less than £3,028. He thought the council would appreciate the great saving which had been made in the erection of the showyard, which amounted to £1,099, and it was encouraging to find that the admissions of the Lincoln Showyard showed an increase of £1,971, proving that the extra half-crown day at Lincoln had resulted in a profit. He was sure they would all think the show accounts were really very satisfactory. The Lincoln Show was financially the third best that the society had ever held. As they had had such excellent results from the show, he would like to mention, before he sat down, one or two of the circumstances which had contributed to that success. Beyond everything, the visit of His Majesty the King to the Lincoln Show had increased the popularity of that event, and it was not only encouraging to the society, but to all agriculturists in the country. Then there was the warm and generous welcome they had received from the city and county, and, in connection with that, he thought they would like to acknowledge the great services rendered to the society by their president, Lord Yarborough, who, unfortunately, was unable to be present that day. He feared that Lord Yarborough had contracted his illness in the prosecution of his duties in the Lincoln Showyard. He thought that the names of the Mayors of Lincoln should be mentioned—Mr. Newsum, who had been Mayor when the Society had been approached in connection with the show of 1907, and Mr. Ruston, who had been Mayor during the time of the visit. The thanks of the society were also due to those gentlemen who had assisted in the county to entertain the society. He had also acknowledged the great help they had received from the Breed Societies, who were again supporting the society in the most unstinted manner in connection with the Newcastle Show. A successful show like that at Lincoln could not be held without a great deal of hard work and organisation, and the result depended enormously upon the honorary director, and he did not think the council could fully acknowledge the great services which Sir Gilbert Greenall had rendered to the society, nor express too much their admiration of his ability, and of the strenuous manner in which he had carried out his duties.

Lord Middleton said that the excellent account which Mr. Adeane had given them of the finances of the society was most pleasing, but, for all that, they should be very careful in the future, and keep a reserve fund, not only for a rainy day, but for the time when they visited some agricultural district where they would not have such a satisfactory financial result as in the more populous districts.

Stock Prizes.

Mr. Reynard (chairman) reported that the committee recommended the acceptance, with thanks, of the offers of champion and other prizes from the following Breed Societies :—

Polo and Riding Pony Society.
Hackney Horse Society.
Shetland Pony Stud Book Society.
Suffolk Horse Society.
Hereford Herd Book Society.
Devon Cattle Breeders' Society.
Galloway Cattle Society.
Ayrshire Cattle Herd Book Society.
English Guernsey Cattle Society.
Shropshire Sheep Breeders' Association.
Suffolk Sheep Society.
Lincoln Long-wool Sheep Breeders' Association.
Cotswold Sheep Society.
Cheviot Sheep Society.
National Pig Breeders' Association.
British Berkshire Society.
Lincolnshire Curly-Coated Pig Breeders' Association.
Poultry Club.

The Northumberland and Durham Agricultural Societies had offered £300 for special prizes to be awarded to members of those societies only in the open classes for horses, cattle, sheep, and pigs. Silver cups (value £25 each) had been offered through the Newcastle Local Committee (1) for the best Shorthorn animal bred in the county of Durham; (2) for the best Cheviot sheep bred in the county of Northumberland: and £500 for ploughing matches.

The following gentlemen had accepted the council's invitation to act as auctioneers in connection with the Newcastle Show :—Horses—Mr. Arthur C. Beck; cattle — Mr. John Thornton; sheep and pigs—Mr. Alfred Mansell.

Prizes for Farm Buildings.

A sub-committee had been appointed, consisting of the chairman, Sir Gilbert Greenall, and Sir Richard Cooper, to consider the arrangements and draw up conditions for prizes for plans for farm buildings. The committee gave final consideration to the prize sheet, which they recommended for the acceptance of the Council. The committee recommended that the chairman and the honorary director be requested to settle and accept any further offers of prizes for the Newcastle Show. The committee have met eight times and made eight reports.

Mr. Reynard (chairman), in moving the adoption of this report, said he would like to add his acknowledgments to those of the chairman of the Finance Committee of the very liberal support received from the Breed Societies. He would also like to add that Sir Richard Cooper had very generously offered to supplement the two prizes of £50 and £25, already offered by him for plans of farm buildings, by the addition of a third prize of £15, and a fourth prize of £10, making four prizes in all. It was anticipated that numerous entries would be attracted by these prizes.

The proprietors of the *Newcastle Daily Chronicle* had been good enough to place a sum not exceeding £500 at the disposal of the society, to be expended on ploughing matches throughout the counties of Northumberland and Durham, with a view to stimulating the interest of these counties in the forthcoming show.

Judges for Newcastle.

Mr. Reynard (chairman) reported that the following gentlemen invited to act as judges at the Newcastle Show had accepted office :—

HORSES.

Hunters and Polo Ponies: The Earl of Orkney, the Tythe House, Stewkley, near Leighton Buzzard, and Anthony F. Maude, Kilwarlin, Hillsborough, Ireland. Cleveland Bay and Coach Horse: W. Scarth Dixon, Fairlight, Luton, Beds. Hackney, Hackney Ponies, and Harness Horses: R. G. Heaton, The Ferry, Chatteris, and John Wrephitt, East Thorpe, Market Weighton. Shetland Ponies, Highland and Fell Ponies, Dale Ponies: John J. R. Meiklejohn, Raith, Kirkcaldy. Shire: Edward Green, The Moors, Welshpool, and Edmond Whinnerah, Warton, Carnforth. Clydesdale: J. P. Sleigh, St. John's Wells, Fyvie, and William Taylor, Park Mains, Renfrew. Suffolk: W. R. Hustler, Earl's Hall, Cockfield, R.S.O., Suffolk. Draught geldings: William Taylor, Park Mains, Renfrew, and Edmond Winnerah, Warton, Carnforth.

CATTLE.

Shorthorns: James Durno, Jack-town, Rothienorman, Aberdeenshire, and George Freeman, Sherborne, Northleach, R.S.O., Glos. Dairy Shorthorn cows and heifers: Robert Hobbs, jun., Kelmscott, Lechlade, Glos. Lincolnshire Red Shorthorn: C. Crawley, Hemington, Oundle. Hereford: Lawton Moore, Brampton Bryan, Herefordshire, and W. Thomas, The Hayes, Sully, Cardiff. Devon: W. J. Chick, Stratton, Dorchester. South Devon: J. M. Peeke, Hernaford, Totnes. Sussex: Gerald Warde, Tutsham Hall, West Farleigh, near Maidstone. Welsh: T. H. Vaughan, Sychtyn, Llanerfyl, Welshpool. Red Polled: A. D. Bruce, Estate Office, Elvetham Park, Winchfield Aberdeen Angus: George Cran, Moritch, Glenkindie, Aberdeenshire; James Whyte, Hayston, Glamis. Galloway: John McTurk, Ashley Bank, Castle Douglas. Highland: J. R. Campbell, Shinness, Lairg, Sutherland. Ayrshire: A. W. Montgomerie, Lessnessock, Ochiltree, Ayrshire. Jersey: Phillip J. Ahier, Seymour Farm, Gorey, Jersey; and W. Ashcroft, 13, The Waldrons, Croydon, Surrey. Guernsey: C. D. Mare, Ashwick Chelmarsh, Bridgnorth. Longhorns: John T. Oxley, Stowe, Buckingham. Kerry and Dexter: Colonel W. Stallard, St. John's House, Worcester, and F. N. Webb, Babraham, Cambridge. Special Milk Yield Prizes and Butter Tests: Awards made on Certificate of the Steward of Dairying.

SHEEP.

Oxford Down: Andrew S. Elliot, Hollybush, Galashiels; Shropshire: W. Barrs, Tempe Measham, Atherstone, and A. S. Gibson, Estate Office, Longford Hall, Stretford, Manchester. Southdown: Herbert Padwick, The Manor House, West Thorney, Emsworth, and Garrett Taylor, Trowse House, Norwich. Hampshire Down: Joseph Dean, Westwood, Wilton Road, Salisbury, and W. T. Hall, Highclere Farm, Newbury. Suffolk: J. R. Grimsey, St. Helena, Dunwich, Suffolk. Dorset Horn: W. J. Chick, Stratton, Dorchester. Ryeland: J. H. Yeomans, Withington, Hereford. Kerry Hill: George Macqueen, Tan-yr-Alt, Welshpool. Lincoln: Charles Clarke, Brookside, Scopwick, Lincoln, and William Wright, Scamblesby House, Horncastle. Leicester: J. J. Stamper, Highfield House, Nunnington, Yorkshire. Border Leicester: James Jeffrey, Denebrie, Prestonkirk, and Andrew Wood, Brockshaws, Stocksfield-on-Tyne. Cotswold: W. Thomas, The Hayes, Sully, Cardiff. Kent or Romney Marsh: C. J. G. Hulkes, Somerhill Estate Office, Tonbridge, Kent. Wensleydale: William Rhodes, Lundholme, Westhouse, Kirby, Lowndale, and J. O. Trotter, Scruton, Bedale. South Devon: J. M. Peeke, Hernaford, Totnes. Cheviot: Michael Johnstone, Alton, Moffat, and Thomas O. Thornton, Hyndlee, Hawick. Lonk: William S. Airy, Whalley, near Blackburn. Herdwick: John Nelson, Undercragg, Mungrisdale, Penrith. Welsh Mountain: T. H. Vaughan, Sychtyn, Llanerfyl, Welshpool. Black-faced Mountain: John Craig, Innergeldie, Comrie, Perthshire.

PIGS.

Large White: A. F. Nichol, Bradford, Belford, Northumberland. Middle White: Henry Smith, junr., The Cottage, Cropwell Butler, Nottingham. Tamworth: C. Howard Taylor, Hampole Priory, near Doncaster. Berkshire: R. E. Horwood, Drayton Beauchamp, Tring. Large Black: R. Beaumont Bond, The Red House, Sproughton, Ipswich. Lincolnshire Curly Coated: Henry Goodyear, Austerby, Bourne.

PRODUCE.

Butter: J. F. Blackshaw, Kingston, Derby. Cheese: C. W. Oubridge, Newcastle-on-Tyne. Cider and Perry: B. T. P. Barker, M.A., Long Ashton, near Bristol. Wool: F. C. Colling, 1, Drake Street, Cheapside, Bradford (Chief or judge to be appointed.)

Next Meeting.

After other business had been transacted the council adjourned until January 29, 1908.

DAIRY.

Legislation Affecting Milk Production.

The chief item of interest at the meeting of the British Dairy Farmers' Association on Tuesday was the discussion on legislation affecting milk production. As chairman of the Cattle Disease and Epidemic Committee, Mr. George Taylor reported that the committee had given anxious consideration to the question of proposed general legislation affecting the dairy industry, and especially in regard to milk production. They were in the main in accord with the views of the Central Chamber of Agriculture, but he indicated a few important exceptions.

The whole matter was then fully debated by the council, and finally it was resolved that no legislation on the subject would be satisfactory to those engaged in the dairy industry unless it provided as under :—

1. That the Dairies, Cowsheds, and Milkshops Orders of 1885 and 1899 be consolidated and amended in such manner as shall be approved by the Board of Agriculture.

2. That adequate legislative steps shall be taken to secure the proper (*a*) lighting, (*b*) ventilation, (*c*) cleansing, (*d*) drainage, (*e*) water supply of such cowsheds in both urban and rural district areas; provision being also made for the proper cleansing of cows and premises adjoining the cowsheds.

3. That the question of air space in existing cowsheds shall not be dealt with by hard-and-fast regulations, but that regard must be had in all cases to the situation and surroundings, and any regulations dealing with this matter must be subject to the approval of the Board of Agriculture.

4. That every county council shall only register such premises as they may deem suitable, and when the premises to be occupied as a dairy or cowshed shall have been made so as to satisfy their requirements.

5. That all premises occupied for the purpose of milk selling within the meaning of the Dairies, Cowsheds, and Milkshops Orders shall be inspected by the inspector to the county council not less than twice in each year.

6. That all cattle used for the purpose of milk selling shall be examined (especially for tuberculosis of the udder) by duly qualified veterinary surgeons appointed by the county council not less than twice in each year.

7. That every animal which appears to show symptoms of tuberculosis of the udder shall be isolated and the county council informed thereof.

That if considered by the council's veterinary surgeon to be so suffering the cow shall be slaughtered.

Previous to the slaughter the cow shall be valued as a milking cow by a public valuer appointed by the Board of Agriculture.

Immediately after slaughter the cow may, at the request of the owner, be examined either by an independent veterinary surgeon or by one appointed by the Board of Agriculture.

If free from tuberculosis of the udder the full value shall be paid to the owner (plus £2 to cover the loss sustained by dislocation of his business) out of the National Exchequer.

The county council to bear and pay any cost of any valuer or veternary surgeon employed for this purpose.

8. The Model Milk Clauses or any similar clauses to the same effect contained in all previous private Acts to be repealed.

9. That the Dairies, Cowsheds, and Milkshops Orders of 1885 and 1899, as consolidated and amended, be made compulsory.

10. That any legislation when brought into effect shall be administered by the Board of Agriculture and the County Council.

At the same meeting it was decided that a silver medal of the association be offered at the Cornwall Dairy Show to be held at Truro next March for the best dairy cow, and a silver medal for the best milker.

The General Purposes Committee presented a return showing that there were no imports of fresh milk into the United Kingdom during the four weeks ended November 30. In that period, however, 1,129 cwt. of preserved milk were received from abroad, compared with 909 cwt. in the corresponding weeks of last year. Of cream the imports were 385 compared with 303 cwt.; and of condensed milk 74,549 against 59,037 cwt.

The next meeting of the council was fixed to be held on Wednesday, February 5.

It was reported at the annual meeting of the South Durham and North Yorks Horse and Dog Show Society that there had been a gratifying increase in the membership during the year, whilst the success of the show had resulted in a considerable addition to the reserve fund. The society has now an asset of £279, and a balance in the bank of £180. Sir J. Backhouse was re-elected president.

The Farmers' Red Book.

The "Agricultural Annual and Mark Lane Express Almanac" (more popularly known as the Farmers' Red Book) for 1908 has now made its appearance, and we think it will be generally admitted that it is the best of the series; it certainly is so far as size is concerned, and seeing that new features have been added whilst retaining all the old and popular ones, the 1908 edition of this Annual should extend the popularity of what may be termed *the* farmers' book of reference.

The articles, as usual, cater for all tastes, touching as they do on live stock of all descriptions, arable farming, dairying, poultry-keeping, hop-growing, cider-making, and that all-important question, wheat prices. The latter subject is dealt with by a well-known authority on the corn trade, and what he says will be read with interest by all who have anything to do with corn growing or selling. "Farming and Farmers in 1907" is an interesting record of the year, whilst the sales of live stock are all fully dealt with, a special article being devoted to each section—viz, horses, cattle, sheep, and pigs. Mention of this reminds us that the book itself is so arranged that all the articles dealing with horse matters are together, and the same with cattle, sheep, and pig subjects, an arrangement which we think will meet with general approval.

But to return to the articles. After the farming records we have an article by R. Kirk dealing with the spread of farmers' societies, and showing what is being done in Lincolnshire and Nottinghamshire. This is followed by "Fungi Formed by Farmyard Manure," written and capitally illustrated by James Scott, who draws attention to a danger in farmyard manure which may not be known by a good many users of this excellent fertiliser. Then we come to the live stock section, with its reviews of the sales during 1907 interspersed with useful articles, such as "Two Bony Enlargements: Splint and Ringbone," by "M.R.C.V.S"; "The Bedding and Feeding of Cattle," by "Essex"; and "Management of Young Pigs," by "E.," whilst there is an entertaining article on "New Forest Ponies," another on "Some Old Types of Cart Horses," by W. Scarth Dixon, and W. J. Malden has something to say concerning how the breeds of sheep have improved.

The dairy deparment is represented by two articles—viz., "Salt in Butter, by "Lactissima," and "Cheddar Cheese," by "Mendip," whilst there are articles dealing with table fowls, hop growing in England, and cider making, and also what may be one of the most popular contributions of the lot—a chatty description, with a large number of illustrations, of that home of agricultural experiments, Rothamsted.

The "Yellow Supplement" of twenty pages, devoted entirely to feeding stuffs and fertiliser matters, which is again included, has been thoroughly revised and brought up to date, as has, in fact, the whole of the book. Further, there are one or two new features which add to the value of the work, and of these we may mention the list of the principal live-stock fairs to be held in 1908. This has never before been given in this Annual, but we think it is a feature that will be appreciated; at any rate, it has meant the addition of twelve pages, a net gain to the purchaser, for nothing has been sacrificed to make room for the fairs. Another welcome feature is the extension of those useful articles accompanied by diagrams, such as "How to Measure Manure Heaps," "Weight of Cattle by Measurement," "Methods of Tying up a Horse," "To Prevent Cows Kicking," "How to Cure Self-sucking Cows," &c. These are matters which farmers require to know, yet we have found that many do not know the rules, so that their inclusion in the "Farmers' Red Book" will be much appreciated.

The illustrations, typical of the various branches of farming, are on the excellent lines of previous years; the statistical tables and items of reference have all been brought up to date, as has the list of agricultural societies. Thus it will be seen that there is an abundance of interesting and useful reading in the "Farmers' Red Book," which, published at 1s., is wonderful value for money. It can be obtained of all booksellers, or can be had for 1s. 4d., post free, direct from the publishers, 3, Wellington Street, Strand, London, W.C.

The 1908 show of the Northamptonshire Agricultural Society will be held at Northampton on Wednesday and Thursday, June 10 and 11, entries closing May 13, at double fees on May 18. The secretary is Mr. A. E Lovell, Harpole, Northampton.

At a well-attended meeting held at Felixstowe on Wednesday it was unanimously decided "That a committee representative of the town and district be elected to make all necessary arrangements to welcome the Suffolk Agricultural Society's Show to Felixstowe in June, 1908, to invite subscriptions or offers of special prizes as a local contribution to the prize fund, and to make such arrangements as shall induce visitors to attend the show and stay in the town."

CORRESPONDENCE.

Where is the Flail Still in Use?

SIR,—In answer to your correspondent of the flail, the ancient instrument is still used in several places I know for the purpose of threshing out seed beans, for which it is well adapted, as such can be more relied on to grow, not being broken or cracked, as some are by machines.—Yours, &c., GLOUCESTERSHIRE.

December 10, 1907.

An Old Stack of Wheat.

SIR,—I should like to draw your attention to the reference you made in one of your issues about my old stack of wheat. I think you said the reason I have kept it so long was because I had taken a vow not to sell it under a certain price; this is quite false, and I should be glad if you will take the trouble to contradict this statement in your paper.

I now keep it as a curiosity, and nothing else.—Yours, &c., P. SELBY.

Aisby, December 7, 1907.

Tariff Reform and Agricultural Interests.

SIR,—If your "Lobbyist" correspondent desires to impute to me statements at all, I respectfully desire he will be at least accurate in doing so. I did not say I was "ashamed" (as he makes out) of the letter written by Mr. P. Reid.

Again, I do not consider it part of my duty to answer in detail every person to whose statements I take an objection. This was the position I took up in regard to Mr. Reid, with the hope that possibly he and any others of the same way of thinking would examine Mr. Chamberlain's proposals carefully before expressing the sentiments that he did in regard to them. Your correspondent thinks that I ought to have "answered" Mr. Reid's article. I think it is incumbent both upon Mr Reid as well as upon your own correspondent, first to know what Mr. Chamberlain proposes, and then to state accurately what the probable bearing of the policy would be upon agriculture. This the former did not do; and as to the latter ("Lobbyist"), I have no wish to answer his flippancies in the way which is somewhat customary, I am sorry to say, with him when dealing with opponents. However, if your "Lobbyist" correspondent is willing to discuss the question of Tariff Reform in its bearing upon agriculture, I have no objection to meet him in a public debate before a representative body of farmers. He seems to think that anyone who differs from him or from anybody else is afraid of him. That is not my case; and if I go out of my way to make a challenge it is simply that farmers may see and find out who he is who so constantly carps at and criticises the efforts of others.—Yours, &c.,

J. L. GREEN, Secretary.

Rural Labourers' League, December 13, 1907.

Meat Trade in the West.

SIR,—I think it a great pity that the writer of your article on the "Meat Trade in the West" should not use a little more care in informing himself as to the state of trade.

He states that specially-finished "steers and heifers, to be kept on till wanted for the Christmas trade, are making not less than 13s to 14s. per score in many cases, and very seldom under 12s. 6d. to 13s. for ordinary runs."

Questions and Answers.

FARMING.

Dressing Seed Corn.—In your Dec. 2nd issue of your journal, I notice you give an account of treating seed corn to protect it from rooks—one is—2½ oz. coal tar, 2½ oz. petroleum mixed with one quart water per bushel. The other is—1 quart of tar to 1 qr. of wheat. I shall be pleased if you can tell me if this is absolutely harmless to the seed corn.—FARMER.

ANSWER: There is nothing in the ingredients named that can injure the germinating power of the seed. It may be useful if we give the whole passage on the subject from the Board of Agriculture's publication. "Treating seed wheat and barley with coal tar at the rate of 1 quart of tar to 1 quarter of wheat is also mentioned as a successful means of protecting grain against rooks. A little lime should be added to the seed the morning after treatment as a drier before drilling. A note on this subject appeared in this journal of December, 1904, in which two solutions are mentioned; viz., 2½ oz. of coal tar, 2½ oz. of petroleum mixed with 1 quart of water per bushel of seed; and 1¼ pints of coal tar, 5¾ pints of petroleum, 1¼ pints of carbolic acid to 5 quarters of seed. In making the latter mixture the coal tar should be made quite hot, the petroleum added and then the carbolic acid, the whole being well stirred: this should be poured on the grain at the rate of about 2 pints to 4 bushels. This must be stirred up quickly till each grain is blackened. In order to dry the grain about 2 pints of phosphate of lime must be mixed in afterwards."—ED.

VETERINARY.

Abscesses on Sheep's Feet.—I have a lot of sheep very lame they have abscesses on their feet, some break out just above the hoof and some between their claws, needless to say they are losing flesh rapidly, as some of them are unable to stand at all. They have recently been on turnips, but at present I have them fastened in a long shed. I should be glad if veterinary surgeon could give me any advice as to the cause of this, what it is, and the best treatment for them. I have been washing them out with Jeye's fluid.—H. M. A.

ANSWER: "Recently been on turnips" presumably means that they have been folded on the roots, and if so we can, in view of the filthy weather recently experienced, and still prevailing, appreciate the state of the folds, if the land is at all heavy. Probably this is the cause, but whether the abscess formation is due to maceration of the feet in mud and wet, or to blocking and inflammation of the interungulate canal, we are not in a position to determine. As many sheep are affected, and some of them so badly as to be unable to stand, we should strongly advise you to get the local veterinary surgeon to look at them.—M.R.C.V.S.

Grease in Horses (page 703).—As to keep, mare is kept very moderately, having so very little work; she gets good old hay—as much as she can eat—and perhaps a root or two occasionally, a little linseed cake and a little bran to keep her open. We have given her two tar balls, and a week after 2 ozs. of saltpetre, and she seems to have dried up a bit. She went out on grass at days rather late, but it did not seem to do any good. She is getting condition powders since the other medicines. My idea is that she wants inward treatment as well as outward. Her legs have the appearance in her hair of grease, yet not much enlarged, and nothing ailed her till she was over five years old. Her mother had the same appearance, except that she never broke out the same nor had any signs of being wrong, only a little crooked and rough in hair.—B. A.

ANSWER: Perhaps you are right in your idea that the case needs constitutional as well as local treatment. It certainly proves beneficial in many instances. Try the following balls:—Powdered resin and nitrate of potash, of each 1½ drachms; sulphate of copper, chlorate of potash and powdered gentian, of each 1 drachm; powdered nux vomica and powdered white hellbore, of each 10 grains; powdered Castile soap and Venice turpentine to form a 1oz ball. Get a dozen made up by a chemist, and give one each other night until exhausted. Do not neglect the local treatment advised, or to practise the system of management advocated.—M.R.C.V.S.

Calf with Fits.—I have a crossbred heifer calf, three months old, which the last fortnight has had several fits, which come on when it begins to drink its milk, and falls down. I rub it a few minutes and it gets better, but looks very strange for a time. It eats well between the fits, fed on a little green food, with a feed of mixed meal and bran twice a day. Any remedy or information as to cause would greatly oblige.—S. S.

ANSWER: Any sudden seizure in which there is temporary loss of consciousness and voluntary motor power is popularly called a "fit," and the term is a vague and most inexpressive term, that conveys very little that is definite to the outsider. A "fit" in a young animal occurring under the circumstances described is, however, almost sure to be due to either over or improper feeding, in your case probably the former, since there is no reason to find fault with the constituents of the diet. The brain and nerves are in intimate sympathy with the stomach, and such attacks as these from which your calf suffers are very common in young, newly-weaned pigs from over-feeding. Make such change in the diet of your calf as commonsense may suggest, and temporarily, at least, reduce the quantity of food. Give a purgative dose of Epsom salts, and assist its action by copious injections of warm soapy water, or water and oil. Exactly what the case will require by the time you see this reply we cannot possibly foresee, for the "fits" may have ceased, or the animal may have died in one of the attacks. Where they continue, bromide of potassium and chloral hydrate is a useful medicine to give, after the purgative and reduced diet.—M.R.C.V.S.

LEGAL.

Agriculturalist versus Employee.—On Feb. 16th last a man applied to us for a situation as waggoner. After stating to him particulars of the work required and wages given, an additional sum of one pound was promised upon completion of harvest. The applicant then asked if we would wait (one month) for him. His then employer would not release him earlier. This we agreed to do; and then asked him what notice he, on his part and we on our part, should accept or give to terminate the engagement. He at once replied, *one month*, this arangement being satisfactory to both parties. He entered our employ on March 18th last. On Sept. 13th he gave us two weeks' notice to leave our employ, and left our service on Sept. 27th. Being resident in the hop growing district, and our hop picking not being finished until Oct. 4th, we contend that our harvest was not completed until that date. Consequently we refused to pay the above-named sum. He is now taking action to recover this amount. We intend to contest the claim, and to counter-claim a sum in lieu of proper notice. Considering the foregoing is worthy the attention of all our agricultural friends and employers of labour, we solicit the opinions of the readers of your valuable paper. The terms mentioned were verbally given.—LOVERS OF JUSTICE.

ANSWER: The first point is to understand what the contract was. If it were a contract for the employment of the man's service by him till the completion of harvest, the £1 bonus would not be payable till the harvest was completed; that is, an additional inducement was offered for the man to stop on. If this is the true view of the contract you would be able both to defend the claim and successfully counter-claim. No doubt this is an important matter for many agriculturalists who employ labour for the harvest.—BARRISTER-AT-LAW.

A Fence Question.—Fence or hedge between our fields belongs to a neighbouring farmer. On his side he has an iron fence; he does no hedging nor ditching, and the hedge leans over my side and prevents me ploughing my headlands. I have sent to him twice asking him to trim his hedge, but he takes no notice. What am I to do with a man like this?—X. Y. Z.

ANSWER: If the hedge grows over your ground and interferes with your ploughing your headlands you are justified in cutting off so much of as intrudes on your ground. It has been decided in the House of Lords that a person is entitled to cut down boughs that overhang his ground. The same rule would apply to an overhanging hedge.—BARRISTER-AT-LAW.

Refusal to Purchase.—A farmer shows a sample of 100 qrs. of barley to a maltster at market. The maltster offers 28s. per qr., as the barley is of an inferior quality. The farmer accepts the offer, and remarks that the barley is out of condition. The maltster on taking the sample home tests it, and finds that it is heated and that a small percentage only grows. He then writes and refuses to receive the bulk. Is he legally justified in doing so? He refuses it on the ground that he bought it for malting purposes, and finds it is not suitable for that purpose. He also states that the farmer should have informed him that it was heated, and contends that in buying barley out of condition he was not buying heated barley. Can the farmer compel the maltster to accept delivery of the bulk?—READER.

ANSWER: The sale is of course a sale by sample. Section 15, subsection 1, of the Sale of Goods Act enacts that a contract for sale is a contract for sale by sample, where there is a term in the contract expressed or implied to that effect. Subsection 2: In the case of a contract for sale by sample, (*a*) there is an implied condition that the bulk shall correspond with the sample in quality; (*b*) there is an implied condition that the buyer shall have a reasonable opportunity of comparing the bulk with the sample, and (*c*) there is an implied condition that the goods shall be free from any defect rendering them unmerchantable, which would not be apparent on reasonable examination of the sample. Applying this section and subsection to the case in point, particularly Subsection (*c*), I think that the maltster could in all probability successfully defend his action by stating that if this were a fair sample of the bulk it would render the barley unmerchantable. I am not aware of the precise value to be attached to the heating of the barley from a maltster's point of view.—BARRISTER-AT-LAW.

Income Tax.—The rent of my farm is £170 per year. A small farm of which I am the owner is let at £74 per year. Can I claim exemption from income tax on the £74? If so, how should I proceed? Thanking you in anticipation.—R. W.

ANSWER: Your question does not enlighten me as to what your income is. The £74 is undoubtedly income; the £170 is the rent you pay the owner; from that rent you deduct the amount of the property tax, after having first paid it. If your total income from all sources does not exceed £160 you are entitled to obtain a certificate of exemption. You had better see the surveyor of taxes about this. The Finance Act of this year has made some important changes in the law.—BARRISTER-AT-LAW.

As to Tenancy.—I am tenant of a small farm in Lancashire, and am under notice to quit, which terminates for some of the land on the 2nd Feb., 1908, but the housing and outhousing, with outlet, on the 1st May, 1908. I am under *no* agreement of any kind, either verbally or otherwise. Can the landlord prevent me from removing anything, such as manure, hay, etc., after the 2nd Feb., 1908, if left till then, as I am occupying the outbuildings in the interval between Feb. and April 30th. I brought manure with me from last tenancy, and it is the custom here to sell or dispose of it when leaving. Also, could he prevent me from removing rose trees, raspberry, rhubarb, etc., if done before the 2nd Feb., 1908, when the other tenant takes possession of garden.—A. B.

ANSWER: According to the custom of Lancashire, an outgoing tenant professes to quit his land on Feb. 2nd, with the exception of a pasture field, called the "outlet for the cattle." The house-buildings and the outlet are given up on May 1st or May 12th, as the case may be. The tenant leaving his land therefore gets half the wheat up allowed him by the incoming tenant if it is after green crops, which is generally is; if it is after the summer fallow he gets two thirds of the wheat crop allowed him and that is all, with the exception of the allowance for clover or grass seeds which have been sown the previous year. The dung belongs to the farm, and the incoming tenant makes no payment for the manure he finds upon the premises, but in South Lancashire manure is sold by the outgoing tenant at full market price, whether made on the farm or carted to it from other places. I think the landlord could restrain you from moving anything off the land after Feb. 2nd. With reference to raspberry, rhubarb, etc., the property is in the landlord when once planted, except in the case of a holding, as to which, Section 3 of the Market Gardeners' Compensation Act, 1895, applies, but I do not understand that you are a market gardener, but a farmer.—BARRISTER-AT-LAW.

Employer's Liability.—I should be obliged if you would advise me as to what risk (if any) is attached to the employment of men over say 60 or 70 years of age. Our insurance policy intimates that it covers all risks under both Acts of Parliament. A reply in your next issue of MARK LANE EXPRESS will oblige.—R. G.

ANSWER: There is no risk in such a case as yours when you have an insurance policy, which covers all risks. The suggested reason against the employment of elderly men is that they would be likely to meet with more accidents than younger men by reason of their lack of quickness in dealing with machinery; but this, it must be remembered, is counterbalanced by the greater caution that elderly men usually exercise in keeping out of unnecessary danger.—BARRISTER-AT-LAW.

POULTRY.

Hens Coughing.—I have noticed some of my hens for some time past making a peculiar noise. The only thing I can liken it to is a sneeze or a hiccough. They all seem healthy. What is it? Have also noticed in their droppings flint grit. Should it pass through so quickly? It is not rounded as if it were old, useless grit.—T. D.

ANSWER: These birds have had bronchial colds, and should have a teaspoonful of warmed glycerine given to each of them daily before breakfast, and roup powder in the proportion of a teaspoonful to four birds should be added to their soft food daily, and last thing at night they should have some stewed linseed given to them. The fact of their passing the grit in this way proves that they are out of order, and a small dose of warmed castor oil each once a week would be helpful to them.

A Turkey Question.—I have five hens and two gobblers of one strain of Mammoth Bronze, and one hen and three gobblers of another strain (also Mammoth Bronze). I thought of keeping some to breed from, but fear that I cannot do this as they are all March, 1907, matched. What do you advise?—H. B.

ANSWER: By all means keep March-hatched turkeys for breeding purposes. Some of the finest youngsters are bred from birds of the previous years hatching when the turkey pullets and cockerel are entirely unrelated to each other and well matured. It would be well to keep the five pullets of the one strain and the best of the three cockerels of the other for mating with them, and dispose of the remainder.

Now this is one of the most glaring misstatements that has come under my notice for a very long time. I have attended several of the best markets in the west this last week, and in no one instance has anything been sold over 12s., and the great bulk of prime Christmas fed beef has made from 10s. 6d. to 11s., rarely reaching the latter figure. This, mind you, for the very best Devons. Many prime heifers and steers made less than 10s. per score.—Yours, &c.,

December 11, 1907. WEST SOMERSET.

The Season in Mid-Cumberland and North Westmorland.

SIR,—However far your numerous readers and correspondents may differ in their opinions as regards the prospects and condition of farmers for the current year, I think we shall agree that 1907 is near enough its end to justify its history being written, but I am quite sure that whoever undertakes that duty will find it a very difficult one to discharge with anything approaching perfect accuracy.

I am quite sure that in this district all will admit that this season has been a most capricious one; the changes have been so rapid, great, and frequent that it would almost have required the keeping of a daily record. There is one point, however, we shall agree upon—viz., that we have had most abundant of crops of all kinds of winter fodder, especially hay and straw, the former of which was generally well secured, and probably one-third of the latter; but the information we are daily receiving through the thrashing mills shows that quite as much loss has been sustained through heated corn sprouting, so that the marketable value is fully one-third below average. A large quantity of the straw is scarcely fit for anything but litter, but the good sale for store stock during autumn, which still continues, and improves if anything, shows that there is confidence that it will last for a fairly long winter.

It is the green crop that is the chief failure, especially turnips, which, although good where the soil was sufficiently good and dry to enable them to be sown at the farmer's pleasure, on the other hand there are hundreds of acres that never get sown owing to the extremely wet, cold weather that prevailed through the middle of summer, but in many breaks where sheep have been hurried on they are disappearing fast, and show small remnants.

There does not appear much chance of the farming community receiving any encouragement or relief from political centres. They are far too much interested in framing measures to catch votes, and with the Land Tenure Act, which is shortly to come into force, the wisest cannot foresee; but it is clear that new conditions must be drawn up to meet the altered circumstances, which is likely to prove a rich harvest for lawyers, and reduce that general confidence which at present exists between landlords and tenants, and that is of far more importance than all the Small Holdings Acts, which are so loudly proclaimed as the means by which land is to be repeopled, but will prove in practice nothing more than a delusion and a mockery. T. B.

December 12, 1907.

Profits from Wheat-Growing.

SIR,—May I be allowed to thank your correspondent, "A. J. R," for the very instructive and interesting account he gives with regard to wheat-growing. He misunderstands me in saying I object to the market value of the straw being included in estimating the returns of a crop of wheat, also that I suggested that 65s. per ton would be a fictitious price for straw.

To the first I contend that the straw should be the basis by which the ground should be refertilised, either by being sold and returned to the ground in an equivalent of artificial manure, or otherwise by being converted into manure.

I adhere to my previous statement that "Son of the Soil" gave a very fair detailed account of growing an acre of wheat, and that the only apparent difference of the two was in their respective statements as to the market value, and the spending price of the straw. The account of "Son of the Soil" could be relied on as an average and ordinary crop, whereas "A. J. R.'s" account is an exceptional and extraordinary crop, which he himself admits is not always to be relied on, he not having the yield but twice in his time. Then there is the favoured locality in which he farms, where he can make nearly as much of his two tons of straw per acre as "Son of the Soil" could make of his corn; this makes a very wide difference. Verily he lives in the land of Goshen for wheat-growing, and I think he should have his rent risen without delay, but peradventure he is a landlord.

Yet another sentence I must take exception to is that every crop farmers grow they try to make out is grown at a loss; but let us be charitable, and hope he did not mean it, that it was really a mistake on his part. Anyway, I will not give it such a hard name as insinuation, which he does not hesitate to attribute to me, in that he says I insinuate that it is not practicable to grow 6 qr. of corn and 2 tons of straw on an acre of ground. Here he again misunderstands for on the contrary, I have known 60 bushels on one occasion grown to the acre on a patch of six acres; but, as your correspondent truly says, such crops are not always to be relied on; and I have experienced some very disappointing and disastrous results from promising crops of this kind, which have been *seemingly* cruelly laid and twisted with the weather before it had time to fill, and the whole crop converted into about 25 to 30 bushels of cullings or chickens' food to an acre, an immense bulk of straw, almost rotten, and the cost of cutting from £1 to 25s. an acre. I can only describe such a crop as a misfortune for anyone to have; much better have one of "Son of the Soil's" average crops of stand-up wheat than seek to grow the large yield—it is infinitely better in the long run.—Yours, &c., GLOUCESTERSHIRE.

December 10, 1907.

Agricultural Politics.

SIR,—I have for years read with much interest and instruction the views expressed by "A Lobbyist," for he brings to bear an experience useful for farmers to have set before them, in a form which they would not get otherwise; and I am pleased I have been able to draw out from him more on the question of Protection. We meet the question with different experiences, and therefore we do not necessarily see everything from the same aspect. It seems to me that his experience in the Lobby has instilled into his mind, and embedded firmly, what Parliamentary representatives certainly act upon—the fact that the farmer can be safely ignored, because he is attached to no cohesive attacking or resistive body. He is provided with farmers' clubs and Chambers of Agriculture, where party politics are eschewed, and where a safety valve is supplied for the blowing off of excessive gas; and when that gas is blown off he is a quiescent animal, and ready to be pulled by the ear by the party to which in ordinary course he most naturally inclines. The result is the farmer gets patted on the back as a decent sort of chap, and that is all he gets. He says neither party seem to do him any good; and why on earth should it? He takes what he gets lying down. Now, it seems to me that "Lobbyist" is preaching this gospel of lying down. You have got Free Trade, which has ruined you, but do not put up a hand to save yourself or the wicked Mr. Balfour will be down on you and the Birmingham bogey will swallow you, or your carcase will be thrown to the Colonial wolves—seems to me to be the aspect in which he regards it farmers should view the situation Personally, I do not see that need of fear to act; the only thing is to act, and to hit hard enough.

"Lobbyist" insists on Protection; but insists on its being protection all round. I do not suppose that farmers, as a whole, mind particularly how they get it, if they get their industry regarded. "Lobbyist" would make a bogey of the Protection secured through Preference to the Colonies. I cannot see why "Lobbyist" should take it for granted that if Britain enters into business transactions with her Colonies she is bound to make a bad bargain. British diplomacy, as a rule, is generally a match for that to which it is opposed, and so it would be in treating with the Colonies. It is not the Colonial statesmen who are going to settle the matter; they will get what they can, but they will get only what we give. As a matter of fact, it is we who have the strong hand, because it is they who are anxious to come in.

What if the statecraft of the Dominion say they can supply the whole of the food necessities of the British people. If it can it can. It has not yet, and perhaps it will not. Probably before it can do this it will have a huge population of its own to support, and the United States population will require much of it. As years go on there will be proportionately less virgin soil to attack, and in course of a few years the virgin fertility of that now in cultivation will have been cleared out so far that the simple and inexpensive methods of cultivation of to-day will have to give way to far more expensive methods, and then probably Canada may not seem so attractive to the wheat grower as it now does. The long cold winter will always be a big handicap when more intensive cultivation is desired. But the world can supply us now, however undesirable it may be to let it do it altogether; and why not give Canada and other other Colonies which "illustrated the temper of the Colonies" in the South African War, a leg up in preference to those who oppose us not merely in peaceful industries, but keep us at heavy expense to resist them in times of peace and war. "The temper of the Colonies" as illustrated by the Australian Commonwealth, strikes me as not being antagonistic, but as a very serviceable means of showing that they have something to give in return. Some people have the idea that we are bound to have the colonial trade. The Australians adopted the best means of showing that those who thought so were wrong. If all the Colonies did the same, we should learn the lesson we have to learn more quickly. We want a weapon to make them reduce the wall they have set up, and we want the same weapon to make other countries knock the coping off the wall that they have set up, so that we can fire into them more easily. At present they are behind the wall pelting at us, while we are in the open to be shot at.

But "Lobbyist" urges that the farmer will have to pay the expense of all this. First of all, he cannot. Secondly, he would not have to. Contrary to what was for many years expressed, the people now recognise that the land of England is of value to the nation. No one gets up now and says it does not matter whether an acre of British land is productive or not; yet this used to be a common argument. Townspeople have recognised lately what those on the land foresaw for many years was inevitable, the breaking down of farming and the hurrying of the people from the land. The cry of the townsman is now back to the land. The occupation of the land in small lots is not going to make the remedy that theorists preach. There is no virtue in a small holding which is not possessed by the larger. What the larger farmer cannot do the smaller one will not. Some large farmers get a good living off the land—some do not. Some small holders exist on the land—some do not. Farming, ruined wholesale by Free Trade, will not be rescued retail by small holdings. When this seam of theory pervading small holdings has passed away, and the matter has been tested it will not be found that small holdings have solved the problem of the land, unless there is security given to the small holder that he has not to combat the foreigner on the terms at present existing.

Then the townsman who wishes to see the land—the many million acres which comprise British soil—prosperous will have to leave present theories to see his desires carried out. With a small amount of help this can be done, either by Preference or Protection. So far as the farmer in his business is concerned it does not matter "tuppence" which of the two it comes from. "Lobbyist" says it does. Lobbyist says "let it be Protection all round." What is there in it that there should not be Protection all round under Preference? It is what I urge: but do not put the Canadian on the same footing as the British farmer, he has not to pay the British taxes. If Canada is going to supply us with everything we want, as "Lobbyist" expects, then there is no need to have anything whatever from any country but Canada and the Colonies; therefore put up a big tax against the others.

"Lobbyist" suggests, in discussing the relative merits of Preference or Protection, that I confused the point he was arguing, and took it that he was arguing the point between Protection and Free Trade. I by no means lost sight of his point, but they are so closely related—it is the alternative between these two and Free Trade—that it is illogical to deal with them without regarding the cause for the need for change. After all, Preference is Protection. though Protection does not imply, necessarily, Preference. Supposing Canada and other Colonies are preferentially placed, then they become more active; but by hindering other countries an equivalent is supplied, and they are less active opponents to the British farmer. Canada, &c., are going to develop, whether Preference is given or not. As things are, we are to meet Canada &c., with no check. These Colonies could afford to send us wheat 10s. per quarter less than they have to just now, and they can afford to do it again.

To get advantage for the industries more money is to be raised at the ports, so that the British markets shall be more confined to British products. This, of course, means some rise all round, in which the workman will benefit in his wages, and be able to give more for his food: therefore if his food rises proportionately, he will be no worse off in respec to his food. Consequently Mr. Balfour's statement that "they shall not augment the proportion paid by the working man" means exactly what it says; but it does not mean that it will not be raised at all. "That they shall not touch raw material," which, without "dancing on the point of a needle," would reasonably mean those materials which affect the greater industries. Consequently, the working man is not likely to be cramped for want of work, and his output will be able to compete with the rest of the world, as it already does, and he will be benefited because the foreigner will be forced to make terms to allow English produce easier access to his market. At present the foreigner is the only one who has anything to do with making the bargain. "Lobbyist" says that in the bargain the British farmer is to be sacrificed, but Mr. Balfour says not; but, by analogy, that his produce shall be protected proportionately, and Mr. Balfour says this in what "Lobbyist" describes as distinct, clear, and emphatic declarations."

Now "Lobbyist" asks the quiescent farmer to lie more quiet for fear he may be hurt if he moves. I say if he lies still he is bound to be hurt, and there is a chance if he moves enough that he will get some benefit. With the farmer I include the labourer, and the many directly influenced by the produce of the land. The old chestnut of the big

loaf and the little loaf stuck on poles is not going to last for ever, for neither the farmer nor the labourer is such a stupid ass as *Punch* would have the world believe according to the quotation you gave from that paper in your "Notes of the Week" on December 2. If *Punch* has not moved from the ideas which it set forth forty years ago the British farmer has, if he was like that forty years ago, which I doubt. *Punch* will go to the Cattle Show this year and see nothing but fat farmers, and, according to that up-to-date paper, stupid ones. Whilst they do not fight for their own they are stupid, I will admit; but it is not the stupidity of fear, and at any rate their produce shown there could not be shown by any other country. Let them buck up, and not take other things lying down.—Yours, &c.,

W. S. MALDEN.

LINCOLNSHIRE FARMERS' UNION.

DONINGTON BRANCH.

The annual meeting of the Donington Branch of the Lincolnshire Farmers' Union was held on the 6th inst. Mr. T. Harrison, who was elected chairman for the ensuing year, presided over a good attendance, and was supported by Mr. H. W. Palmer, the secretary of the Union, and Mr. C. Featherstone, a member of the Central Committee. The other officers elected for the year were:—Vice-chairman, Mr. F. Lumby; secretary, Mr. S. Hansard; the committee we re-elected *en bloc*, with the addition of Mr. Richman.

Mr. Featherstone spoke upon "Motor Traffic," which the Central Committee wished them to discuss. He said the motor traffic, they were all agreed, was a very serious question to the whole farming community. The farmers had to maintain the roads in good condition at their own expense, and in addition there was the damage done to crops, trees, &c., by the dust nuisance, and the danger to public life. Motorists liked a tar macadam road, but it was very dangerous for farmers' horses. Roads should not be kept up entirely for motorists, and they did not mean to take things lying down. Of course, they fully understood that motors had come to stay, but it was only fair that they should receive some redress in the way of compensation from the National Exchequer, or that the roads should be taken over. In conclusion, the speaker, referring to the high speed attained by motors, said farmers did not want to make a speed limit of ten miles an hour, as had been suggested.

Mr. J. Ouzman considered that it was only natural to expect that a motor travelling at its forty or fifty miles should do more damage to the roads than one going at a less speed. All motorists ought to pay a certain amount of tax, which should be divided between each local rate.

Mr. S. Hansard said he endorsed Mr. Featherstone's remarks. The high rate of speed endangered the lives of the public and those who were paying the rates.

The meeting unanimously decided, on the proposition of Mr. S. Hansard, seconded by Mr. J. Richman, to support the resolution of the Central Committee.

A resolution in support of the Insurance Company and Pure Beer Bill was passed.

The annual dinner of the branch was held subsequently, Captain Gleed presiding, and between fifty and sixty sat down. In the course of the toast list the Chairman gave "The Lincolnshire Farmers' Union," and Mr. Dean, who responded, urged upon those present who had not yet joined to lose no time in becoming members. Agriculture was the most important industry in the country, and yet they were practically unrepresented in Parliament.

RETFORD BRANCH.

A meeting of the Retford branch of the Lincolnshire Farmers' Union was held on the 7th inst. Mr. Sam White, of South Leverton, who presided, said the Union had taken up the question of motor traffic. As far as he understood, the Motor Union were rather overridiug themselves, and were going so far as to prevent farmers from grazing their cattle on the road side. A great number of motor people were all right, but others considered that the road belonged to them, though they did not pay their fair share to the maintenance of the roads. It would be necessary to combat that notion, as the farmers were paying above their share, and it was not right for them to be imposed upon, either by motor people or anybody else. If people in the country were prevented from grazing their cattle on the road side it would certainly rob a good many of them of a livelihood. They ought to take action as soon as possible to prevent such an occurrence.

Mr. Parker (West Drayton) said motors made a great deal more work with the roads than anything else in the country.

Mr Skinner (Lound) said in the county of Notts, the motor traffic during the last two years had necessitated the expenditure of something like £3,000 on the county roads. Who was going to pay that money? The only answer he could give was that it would mainly come out of the farmers' pockets. A few weeks ago, during the removal of some cattle from one field to another, a motor car driven by a lady rushed into them with the result that three were badly lamed and were practically no use at all, but he understood no compensation had been given to the owner. The car nearly went into a ditch and someone had to help to push it on to the road again. When about a mile further up the road the car again stopped and the lady remarked, "The idea of a farmer keeping cattle on the road, when they are meant for motors and not farmers." It was about time they made a stir in the matter. (Hear, hear.) If the motorists required the roads they ought to get an Act of Parliament passed, and let the farmers have the roads they paid for. In Lound there were six miles of roads, three and a-half of which the farmers used every day, and had to maintain entirely, but the other portion, which they seldom used, they had to pay enormously for just the benefit of motorists.

Mr. Smalley (secretary) said in one case where a motor car ran into some sheep at night, the occupants said they wanted an Act of Parliament passed to prevent farmers having cattle or sheep on the roads after dusk.

After further discussion, a resolution was passed to the effect that in further legislation pressure should be brought on members of Parliament to represent the views of the Farmers' Union.

The meeting next discussed the advisability of registration of corn samples, and a resolution was passed in favour of the general principle of corn registration, so that either buyer or seller could register if they wished.

SLEAFORD BRANCH.

The annual meeting of the Sleaford branch of the Lincolnshire Farmers' Union was held on Monday, Mr. S. E. Dean presiding, and he was supported by, amongst others, Mr. H. W. Palmer, secretary of the Union.

In acknowledging the honour of re-election to the presidency of the Sleaford branch, Mr. Dean said he thanked them for that renewed expression of their confidence, but he was sorry to see such a small gathering, though, generally speaking, when people were satisfied, they showed that satisfaction by staying away. They must take the small number present to mean there was no fault to be found with the work done during the past year, and he hoped they would have their continued support, for there never was a time when the need for organisation was greater than now.

On all sides of them they saw combinations of every trade and profession, and if farmers did not organise and keep themselves abreast of the movements they would be left far behind to their great detriment. They saw what had happened recently, and how the ex-Prime Minister had thrown in his lot with those who favoured Fiscal Reform. He did not offer an opinion on its feasibility, but he would remark that the working classes were Protectionists as far as their own interests were concerned, and they would like to put it on one side if it meant the slightest addition to the cost of their food. If they were to have a change in the fiscal policy of the country they must take care that agriculture was not excluded from the benefits which might be derived from it.

Such an organisation as theirs would be most useful if any attempt was made to do this, for it would be their policy to see the reform was carried out *in extenso*. They had been told over and over again that their only remedy was organisation, and they could not afford to ignore the views of men—leaders in the agricultural world—who gave them such advice, and who knew how much their organisation was needed.

They would all have noticed the proposal to form an independent Agricultural Party in the House of Commons, but he felt they wanted no fresh party, only more support for existing organisations. The Lincolnshire Farmers' Union was a non-political body, and was ready to support any one who would forward their interests. If the Union could only be extended throughout England, as it was extending in those counties, they would want nothing else to secure them what was just and right, and they would be able to form the party which the Chambers of Agriculture were seeking to form among themselves. As to representatives they needed, there were only two bodies of men from whom suitable candidates could be drawn for agricultural constituencies. He said nothing disrespectful of anyone when he said he did not think either brewers or lawyers were fit and proper persons to represent them.

He thought they ought to form a very strong agricultural party in England, and one of the duties of the privileged classes was to find suitable men to represent their interests as well as their own, for the interests of the landlord and the tenant were identical. They ought to impress on the landlords that they should become their representatives in the House, but if they failed, then it should be the duty of their own body to supply the deficiency. This would mean greater cohesion among them and a call for some slight financial assistance which, he thought, could be obtained.

In an agricultural district those connected with the land should represent it, and that would be one of the means by which they could restore agriculture to the position it held years ago.

It used to be supported by friends in both Houses, but such was not now the case, and they must try and secure the assistance of those who were interested in its welfare and held views more in accordance with their past traditions.

Mr. Powell proposed the election of Mr. E. J. Grummitt as vice-president, and Mr. Wilson seconded.

Mr. H. W. Palmer said he had to express the regret of their hon. secretary, Mr. Widdowson, at his inability to be present, and to state that he wished to resign the office.

The Chairman proposed a vote of thanks to Mr. Widdowson for his past services, and nominated Mr. F. W. Sneath for the vacant office.

This was heartily carried.

Mr. Palmer stated that the Sleaford branch had an additional forty members, and was the second strongest branch in the Union.

Mr. Percy Brown was elected assistant hon. secretary, and Mr. E. J. Grummitt chosen to represent the branch on the Central Committee.

The whole of the committee were re elected.

The chairman stated that the Central Committee had requested their branch to give an expression of opinion on motor traffic and its effect on the roads.

Mr. Powell said they considered they wanted regulations to limit the speed to 20 miles an hour, and at the same time they thought the owners did not pay their share for the maintenance of the roads now there was this excessive wear and tear. He believed the great North road was kept on a ten years' basis, but now it only lasted four years, and they paid nothing more to its upkeep. So long as the motorists did not want all the road, and passing traffic could be safeguarded, and they helped to defray the increased cost of maintenance, farmers had no objections to offer.

Mr. Leedale observed that it was the outside motor which did the damage and travelled at an excessive speed.

In reply to a question, Mr. E. J. Grummitt said the licences taken out in a division helped that division's expenditure, but he suggested that all main roads in England should be kept by the Government.

Mr. Gibson said he knew the great North road as well as anyone present, and he was able to say from his own knowledge that the motor cars which did the most damage did not belong to Kesteven, and the local tax did not help them in regard to the maintenance of their roads. He would like to see the money for all these licences go to the Exchequer, and then the Government to maintain the roads.

The chairman said they did not approach this matter in a spirit of hostility to the owners of motor cars, and this new means of locomotion had come to stay, but it demanded new legislation from the Government, for no party had ever dreamt that motor-cars would be used in the manner they were. As a result, the old laws governing the highways had become obsolete. Their county surveyor told them that the through cars did most of the damage by their weight and pace, and roads which were supposed to last ten or twelve years were broken up long before the time, the damage done being enormous, and this called for special taxes to be placed on the owners of cars. He had always doubted whether any better plan had ever been devised for the maintenance of roads than the old turnpike system, or whether there had been a fairer one.

After further discussion it was decided that a resolution be forwarded to the Central Committee that the new form of locomotion on the roads demanded new legislation, and in view of the great amount of damage done, the Exchequer should make a larger grant for their maintenance.

Mr. Palmer afterwards reported that new branches had been established at Peterborough, Melton Mowbray, Doncaster, and Spalding.

NORTH SCARLE.

A meeting in connection with the Lincolnshire Farmers' Union was held at North Scarle on Wednesday evening, Mr. W. Slingsby presiding. There was only a moderate attendance, owing, no doubt, to the fact that the night was very wet and dark, making it impossible for anyone to attend from a distance.

The chairman, in opening the meeting, said he was rather disappointed to see so few farmers

present, as he thought the Union was taking a step in the right direction. It was obvious that they should be banded together, and do something to assist the farmers.

Mr. Colin Campbell, C.C., addressed the meeting, and pointed out the work the Union had done since its inception, and said there was a lot of work to be done when they were more fully developed. The strength of the Union at the present time was a membership of a little over 3,000, with twenty-six branches, comprising the area of Lincolnshire, Nottinghamshire, Leicestershire, and part of Yorkshire, and as there are 11,000 farmers in Lincolnshire alone, he hoped they would soon increase their numbers. Mr. Campbell also referred to foreign meat, insurance, and railway rates, and gave instances showing that in some parts of England the rates were 25 per cent. lower than those in his own distict.

Mr. Sheldon, Mr. Rawding, and Mr. Brown also addressed the meeting, and urged upon those present to join the Union. A vote of thanks was accorded to the chairman for presiding, and at the close several members were enrolled.

Lincolnshire Notes.

THE question of the proposed agricultural party has now been pretty thoroughly ventilated, so far as this district is concerned. The ideal is generally approved. But there is no strong disposition to spend money on it. And, after all, it is quite soon enough to talk about a group of members specially elected by agriculturists' votes and money to specially influence the House of Commons in the interests of agriculture. A lot of water will have to flow down the rivers before that excellent ideal, if it is an excellent ideal, can be realised. The Lincoln Chamber of Commerce, like the Farmers' Union, wisely decided to proceed by steps. They will endeavour to secure their ends by such means as are immediately open to them, urging, in the meanwhile, the formation of a joint agricultural committee in the House of Commons to work in the constituencies, and the adoption of Conservative or Liberal candidates who will stand up for Agriculture in the House.

THE Chamber's action is discounted in some quarters. Very little, it is urged, is likely to be accomplished by the carrying out of these recommendations. But I am not at all sure. I am not convinced that Agriculture will be better able to achieve its ends by a group in the House of Commons than it would by a strong, well-instructed party in the country influencing the choice of candidates on both sides of politics and educating the constituencies. I should back the latter plan. Some day, when the central fund has assumed due proportions, and Agriculture has learned to be true to itself, we shall gladly welcome an Agrarian Party forming a strong wing in the House of Commons. But in the meantime Agriculture can make itself all-powerful by strong and thorough organisation. Let every agriculturist enrol in his Union, and he will not need to wait any longer than the next General Election to assert himself. He will find the whole House of Commons at his feet if he will only make himself necessary enough.

SO far the idea has met with every sympathy from politicians; but it meets with criticism with a vengeance from Mr. C. Royds, the Conservative candidate for the seat lost by Mr. Chaplin at Sleaford. Mr. Royds does not believe in members independent of party representing agricultural constituencies. They would be neither fish, flesh, fowl, nor good red herring. He is even suspicious of the motives of those who make the proposal. He thinks the cause of agriculture would be best served by persons allying themselves to one party or the other.

MR. KEYDS works the argument round very ingeniously into a word for his own party. What, he asked, was the cause of this suggestion? It was because they said the interests of agriculture had of late suffered; Parliament had not given sufficient attention to the real needs of agriculture. What was the cause of that? Let them look at the state of the country—who represented our agricultural constituencies. In former days, when they did not hear so much about agriculture being neglected, the counties and rural districts were practically all represented by gentlemen of the county, who thoroughly understood the needs of the county and of all classes engaged in agriculture. The remedy seemed to be that, instead of making a new departure and seeking for persons independent of either party to represent agricultural constituencies, they should revert to the old state of affairs and return for their counties Conservative members who understood their needs.

THIS is clever, but I fancy Agriculture will go its own way all the same. It has had enough of politics.

IN the death of Mr. William Hornsby, not only Lincolnshire, but the whole agricultural world has suffered a loss. Mr. Hornsby, who died at Burwell Park, a few miles from Louth at the age of sixty-one, was best known as a member of the well-known Grantham firm of agricultural implement makers. In 1878 he was High Sheriff of Lincolnshire, and he was also Deputy-Lieutenant of the county. Mr. Hornsby, in addition to a country seat at Burwell, also had a residence at Grantham. He lived a quiet life, and gave a goodly portion of his wealth to charitable objects, including a donation of 1,000 guineas to the Dr. Stephenson's Orphanage two years back.

A NEW labour-saving machine is on the market. Messrs. Marshall and Sons, of Gainsborough, the well-known engineering firm, have produced an agricultural motor. It has already successfully emerged from the rather severe experimental test of drawing a six-furrow plough continuously for twenty-four hours, in which time it ploughed twenty-two acres, and consumed forty-four gallons of paraffin for its motive power.

LINCOLN sheep had a successful time at Smithfield. The principal honours were secured by Mr. W. B. Swallow, Wootton Lawn, Ulceby, Messrs. S. E. Dean and Sons, Dowsby Hall, Folkingham, and Mr. H. Dudding, Riby Grove, Stallingborough. In the class for pens of three fat wether lambs, under 12 months old, Mr. Swallow took the first prize of £15, Messrs. Dean and Sons the second of £10, and Mr. Dudding the third of £5. Messsrs. Dean and Sons won the first prize of £10 for the best pen of three fat wether sheep above 15 and under 24 months old, Mr. Dudding taking the second of £5, Mr. Swallow the third of £3, and Mr. F. Ward, of Quarrington, Sleaford, the reserve card. The £15 silver cup for the best pen of Lincolns was awarded to Messrs. Dean and Sons, Mr. W. B. Swallow taking the reserve number. Mr. Swallow's lambs were also reserved in the competition for the £50 champion plate for the best pen of three Longwoolled sheep or lambs, which went to Mr. E. F. Jordan's Leicester wethers.

THE King has enjoyed the royal sport of Lincolnshire this week. The Blankney preserves have found excellent occupation for his gun. Lady Londesborough has long been the favourite hostess of Royalty, and she is a keen sportswoman. Blankney Hall is in the midst of an ideal sporting country.

THE Earl of Ancaster, a big Lincolnshire landlord, and father of Lord Willoughby d'Eresby, M.P., gave his experience of small holdings on Saturday last. He expressed himself quite agreeable to the ambitions of the labourer who may require an allotment. He had always done his best to meet them. But, on the whole, he found about one-third of the allotments given up. He found also that except on the best land the expenses of building took away all the rent. He had no doubt that they would succeed where land was good, and where allotment holders could get employment other than cultivating their allotments. But what about hard times when they came? Well, hard times always come, and we have to meet them somehow. We must see if the benefits of keener cultivation of cheap land and cheap buildings combined with the strength of co-operation will not overcome all his lordship's objections.

THE Christmas fat-stock shows have begun. It is too soon to judge of the state of the market. There have been no fancy prices, but generally speaking the stock has sold well. The best market averages are being well maintained; and from the butchers' point of view the sales promise some of the best stuff for a good number of years.

HOPS.

The Course of Business.

London.

In the days of my youth (I hardly care to say how many years ago) we sang with great vigour Charles Mackay's stirring chorus, "There's a good time coming, boys; there's a good time coming; wait a little longer." This should be the song for the Borough to-day if we could be sufficiently optimistic to work up some enthusiasm. But unhappily we are just now so much under the influence of the "doldrums" that we cannot enthuse, and have only the questionable comfort imparted by the closing words of my quotation. We must "wait a little longer." There is, however, a ray of light penetrating the clouds, as I am told on good authority that an increased demand is being felt, not only for selected healthy hops, but also for medium qualities of East and Mid-Kents. The very low prices at which these can be bought are apparently attracting attention, and I am pleased to know that my impressions of last week are being realised even to this limited extent. We must, of course, be prepared for the quietude of our trade which generally prevails during the heliday period now so near, but I have strong confidence that we shall experience a better demand as soon as we see the opening of the new year, and earnestly trust that my anticipations may be substantiated at an early date.

Nuremberg.

My latest intelligence from this centre shows that the market is firm for choice and coloury qualities, and somewhat weak for the inferior grades. The total sales for the week ending December 4 exactly equalled the arrivals. The business has been supported by the demand from America, with some moderate shipments to England. It is generally notable that trans-Atlantic buyers insist upon better qualities than those that are taken for our own brewers. The former are content to pay from 40s. to 55s. for good green samples, while the latter principally handle the ordinary market and Hallerdau hops ranging from 30s. to 40s. In contrast to these prices we find that the home brewers look for the choicer sorts, for which they are willing to pay at present 60s. to 75s., and will even go as high as 90s. to 95s. for selected lots.

America.

Recent cables from the other side inform me that business in hops is improving. The reduced quotations, resulting from the financial pressure, are evidently arousing some speculation, and important transactions have taken place within the last week. I do not hear anything more of the scheme for shipment on consignment to England of the large quantities recently proposed, and conclude that, although the growers might be willing to relieve their congested market in this manner, they now realise that the ultimate profit of such speculative proceedings is too questionable, and are wisely waiting further developments. In the meantime the shipments to our ports are only limited.

Our Foreign Trade.

The official returns for last month, just published, show that the influx of foreign hops increases in volume, in spite of the slow demand existing on our markets. During November we have received from the United States of America 9,931 cwt., and from other countries 19,104 cwt., making a total of 29,065 cwt., which is an advance upon the preceding month of nearly 5,000 cwt. There is, however, some satisfaction in the figures representing our export trade, as this has considerably improved. We shipped in November 3,126 cwt. of English and 2,213 cwt. of foreign hops, the total, 5,339 cwts., being much in excess of our monthly exports for a long time past. The balance against our market on the month is therefore reduced to 23,727 cwt.

Looking at the returns for the season, we find that we have received since September 1, 62,958 cwt., of which 19,126 cwt. have arrived from America, and 43,832 cwt. from the European Continent. For the moment it appears that Germany and Belgium are our chief competitors, and that the threatened American invasion has been checked. The total of our exports for the past three months—7,603 cwt.—surpasses the usual average. Of English growths we have shipped, principally to our colonies, 4,963 cwt., and of foreign produce 2,640 cwt.. Our net imports for the season consequently amount to 55,355 cwt. Judging by the available supplies of our own growths and the limited requirements thus far of British consumers, we could easily dispense with any assistance from abroad, unless the comparatively low average quality of our last crop is compelling our brewers to seek for richer hops elsewhere. It is, however, clear that our market is overburdened with hops of all kinds at present, and I trust as soon as the new year opens we shall see such a revival in demand as will give a stronger tone to our special business.

LIST OF
FARMING, LIVE STOCK REARING, POULTRY & GARDENING BOOKS

Obtainable by post only from 3, Wellington Street, Strand, London.

Postage on Books where not stated, 3d. to 5d., balance returned.

NOTE.—All Orders must be accompanied by Remittance sufficient to cover Carriage or Postage. For easy Reference, please quote the Number of Book when Ordering.

UTILITY BOOKS.

Price 6d. each net; post free 7d.

Each book of the series is written by a practical man. In almost every case the writer makes the whole or a material part of his living from the subject of which he treats. Therefore the directions are plain and are based on accurate knowledge.

No. 1.—Out-Door Carpentry. By S. Walter Newcomb.—Deals with useful, as well as decorative structures—with plans, sketches, and details for doors, gates, stiles, fences, seats, summer-houses, dog-kennels, chicken coops, window-boxes, greenhouses, &c. Designs of some fifty subjects. D.

No. 2.—Gardens and Grounds: How to Lay Out and Arrange. By T. W. Sanders, F.L.S., F.R.H.S., &c.—Suggestions for laying out, planting, and improving the small plot, or the country grounds of several acres. The best aspects and positions, considering appearance with economy of space, labour and expense. With plans and sketches.

No. 3.—Heating and Ventilation of Houses. By C. F. Townsend, F.C.S.—Intended to enable anyone, in any house, to secure full supply of fresh air without chilling draughts. Economy and existing conditions are first considerations.

No. 4.—Utility Fowl Houses and Appliances. By H. Francklin.—With about forty measured drawings and plans, and with concise instructions, not only for home construction, but for guidance in purchasing for the fowl-yard. Treats of ventilation, site, aspect, &c., of houses; the laying out of large and small runs, construction of nest boxes, coops, &c.

No. 5.—Utility Fowl Feeding and Management. By H. Francklin.—The requirements of fowls from birth to maturity, feeding stuffs, and how to use them for feeding of chickens, hens for summer and winter laying, and for the fattening of surplus stock. The management of fowls in large or small numbers, the selection of breeding stock, the management of the sitting hen, the keeping of accounts, and many other factors in successful poultry farming.

No. 6.—Utility Fowls: Their Selection, Improvement and Diseases. By H. Francklin.—The breeds most suitable for confinement or a free range; crossing, and the improvement of mongrel stock. Turkeys, guinea fowl and water fowl are spoken of.

No. 7.—Incubating and Rearing Utility Fowls. By H. Francklin.—Water-tank and non-moisture incubators; brooders and brooder-houses, with hints, instructions, and precautions for the hatching and rearing of fowls for profit.

Utility Fowls. Nos. 4, 5, 6, and 7 together, bound in handsome cloth, price 2s. 6d. net; postage 3d. The best guide for the poultry keeper; and an excellent present for a beginner.

No. 8.—Propagating Plants: By Seeds, Cuttings, Layers, Grafts, Buds, &c. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Propagation of all classes of plants, by many methods, with lists of those suitable for the various treatments, hints on the preparation of seed beds, &c. Many illustrations.

No. 9.—Hardy Perennials. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh. Illustrations and plans from the Author's Sketches. All information necessary for selecting hardy perennials and for arranging borders, wild gardens, water gardens, &c.

No. 10.—Utility Rabbits. By a practical Rabbit Farmer.—Simple enough for the boy who keeps but one or two rabbits, yet sufficiently thorough for the man who wishes to make a living from a trade which is almost entirely in foreign hands.

No. 11.—Cold Greenhouses and Frames. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—How to secure foliage and bloom through the whole year. Lists of most useful plants, with brief description and cultural directions.

No. 12.—Carnations, Pinks and Picotees. By E. Hasler Potter, F.R.H.S.—Simple and sufficient directions for raising pinks, selfs, bizarres, flakes, fancies, picotees, winter flowering, malmaison, and marguerite carnations from seeds, cuttings, or layers, and for their culture for exhibition flowers, cut blooms, &c.

No. 13.—Spring Gardening. By H. Francklin.—Deals with the aspects of out-door Spring gardening; wild woodland, border walks, edgings, bulbs in grass and under trees, flowers in orchards, bog gardens, rooteries, walls, arches, bedding, house decoration, &c.

No. 14.—Hardy Fruits. By E. Hasler Potter, F.R.H.S.—Full instructions for growing all British fruits.—Propagation, culture, manuring, watering, training, pruning, gathering the fruit, and storing. With diagrams of garden arrangements, forms of trees, &c.; also recipes for cures for pests and diseases.

No. 15.—Keeping a Dog. By A. Nicol Simpson, F.Z.S.—Written clearly and concisely, for the keeper of one or two dogs as pets, companions, or guardians of the yard.

No. 16.—Rose-Growing. By D. Grant McIver, A.R.H.S.—The whole elementary art and practice of rose-growing, for garden glory, for cut blooms, or for perfect exhibition specimens. Preparation of ground, site and aspect, when and how to plant, propagation, roses in the greenhouse, roses for exhibition, lists of varieties, and a complete, concise rosarian's calendar.

No. 17.—Chrysanthemums. By E. Hasler Potter, F.R.H.S.—Directions for treating the principal varieties of chrysanthemums, annual or perennial, indoors or out-of-doors, for pleasure, profit, or show. With special suggestions for the town man who can only give attention at night and morning.

No. 18.—Bulb Culture. By D. Grant McIver, A.R.H.S.—Directions for growing all kinds of bulbs under glass and out-of-doors. Also for many tuberous (&c.) rooted plants which are familiarly called "bulbs." Lists and illustrations.

No. 19.—The Vegetable Garden Calendar. By D. S. Fish, of the Royal Botanic Gardens, Edinburgh.—Gives, in twelve openings, graphic charts of the vegetable garden for each month. Each chart shows at a glance what crops should be in the ground, what should be yielding produce, what proportion of space should be occupied by each, and what operations should be in hand. Many illustrations.

No. 20.—Goats for Profit. By a practical Goat and Rabbit Farmer. Selection and purchase, housing (with working plans), breeding and the treatment of young kids, feeding, grooming, milking, uses of the milk, making of butter and cheese, killing and dressing kids, training goats to harness, treatment of their diseases, etc.

No. 21.—Garden Operations. By Wm. F. Rowles.—Digging, trenching, preparing for seed, sowing, thinning, planting, ridging, earthing, hoeing, weed-killing, staking, protecting, harvesting, tools and make-shifts, water-supply, watering, lawn-making, mowing, rolling, making paths and beds, and many other operations. The how, the when, and the why clearly explained.

No. 22.—Pruning, Training and Trimming Trees and Shrubs. By D. Grant McIver, A.R.H.S.—Explains and illustrates the whole art of using knife and shears in a garden. D.

Price 6d. each net; post free, 7d.

Nos. 16 to 21 also in cloth, price 1s. each, net: post free, 1/2

No. 23.—To Manure at a Profit.

Every Farmer his own Experimenter. By H. B. M. Buchanan, B.A. (Cantab), Author of the "Country Readers," and joint Author of "Lessons on Country Life," and J. J. Willis, Superintendent of the Rothamsted Field Experiments. L.

Seasonable Topics.

Christmas Customs Then and Now. THERE is little fear of the memory of old-time Christmases passing entirely away, though this might have happened if Charles Dickens had never lived, for the great writer has left us records of Christmas customs, not only in the London which he knew and loved so well, but also in the country in his day when every village was a world in itself and celebrated Christmas in its own way. Railways, motors, and bicycles are amongst the modern improvements that have brought about changes in Christmas customs, and though we have no wish to return to the old order of things, still there is something about the memories of them that appeals to us. As we write thoughts wander back to Christmases spent in an old-fashioned farm house amongst farming folks who were proud to be called old-fashioned. They had traditions to keep up, and did it with open-handed generosity, which, by the way, is characteristic of the fraternity. For the time the old farm-house kitchen was liberty hall, and in turn they came—the carol singers, the morris dancers, bell-ringers, band, and groups of local youths who dressed themselves in grotesque costumes, and went through some peculiar theatrical performance which no one knew the meaning of, or the origin. But one and all were entertained, and now the scene has changed. The old-fashioned farmer has gone, another reigns in his stead, and more modern customs have taken the place of the ancient ones. The same kind of thing may be observed in most rural districts, and the one unchanging item is the spirit of Christmas, which prompts feelings of good-will and hospitality now as it did in the old days, and time has no effect in altering this.

A CAMBRIDGESHIRE FLOCK OF SHEEP.

Christmas Holidays. FOR some time past townspeople have been making arrangements for a long holiday this year, and many tradesmen and their employees will enjoy quite a good vacation, but country people are not so much concerned about these things. On the farm there is the necessary routine of work to be done Christmas or no Christmas, but after the stock is fed and cared for one may notice an easiness about other operations, which suggests that the farming fraternity is affected by the holiday spirit. For one thing there is no need for rush, as this is a slack season, and in some parts, notably dairying districts in the Midlands, it is customary for farm servants to change their places at Christmas. From Christmas morning to New Year's Day is their vacation, and what with the various pleasure and hiring fairs that are held in the meantime, to say nothing of other seasonable amusements, they manage to enjoy themselves. As a rule, however, the farmer's holiday at Christmas consists of entertaining, for many of the fraternity have friends and relatives in towns to whom Christmas in the country is a welcome change, and included amongst them are the sons and daughters of farmers who have left the family circle for the sake of other occupations in the busy haunts of men.

Charities. CHRISTMAS is a great time for the dispensation of charities, and the proceeds of property left by generous-minded persons in the past is distributed according to the wishes of the individual who adopted this means of keeping his memory green. Bread, clothes, coal, meat, and money are distributed by various local charities amongst persons who are supposed to be entitled to them, and though in some cases benefit is certainly derived, the dispensation of charities is often responsible for jealousies and heart-burnings. The conditions of many local charities are quaint and peculiar, and some are of very little real benefit to the people for whom they were intended. As a matter of fact, times and conditions have changed so much since many local charities were founded that they are of little or no benefit, but a trouble to the trustees who have to dispense them, and it seems a pity that the money cannot be devoted to public institutions which are beneficial to the whole community.

The Storage of Swedes. THE lifting and storing of swedes is one of the seasonable operations that has been much retarded by recent heavy rains and the soddened state of the ground. In many instances roots that were pulled several weeks ago have had to remain in heaps on the ground, for the simple reason that it was impossible to cart them off owing to the quagmire of mud. Speaking of swedes, is it best to trim the root, by topping and tailing, or should they be merely pulled up, put in heaps and be covered with soil just as they are? It is a point that affords food for argument, and while the last-named method is looked on by those who favour trimming as slovenly farming, there are many who favour it, and contend that the roots keep better. At any rate, it is a saving of time and labour, which counts for something in these days. Speaking as a whole, swedes are a much better crop than was at one time anticipated, but conditions for feeding sheep on the ground are as yet unfavourable, and where this is done the animals are in a sad plight.

Not a Bad Year. THE season of 1907 is now drawing to a close, and in a short time it will be packed away with the records of the past. The year 1907 will be remembered by farmers as one of the most extraordinary years they have passed through, and yet, to quote one of the fraternity, it has not been a bad one, for more than once, when the outlook was undoubtedly gloomy, and things seemed to be at their worst, the desired change came, and all was well. But not a bad year, this is the general expression, and when farmers admit so much, one

may take it that they have not done amiss. Some disappointment came at the end, for the prices that fat cattle fetched at Christmas markets were below the expectations of graziers; but in milk-producing districts cows and calves have been dear all through the autumn, with a keen demand for good animals. This is not altogether surprising, considering the milk that has to be provided now in the winter, and if the farmer has not the cows coming in to do it, he has to buy. A good many have been in this position of late.

Christmas Bills.

FARMERS need no reminding that all the envelopes which the postman brings at this time of the year do not contain cards of seasonable greetings, for some of them have an official cut about them, and on being opened are found to contain the inevitable bills which come with unfailing regularity at the close of the year. But what is there in Christmas bills to worry about? Nothing, of course, when one is expecting them and has got the means to pay; but otherwise the story reads quite differently, and bills without the money to settle them are naturally a source of worry. Pay cash and avoid the trouble of bills, suggests some one Just so, but farmers are not always in the happy position of being able to do this, because they have their produce to sell and often have to wait for a favourable market, not always getting cash down even then. There is bound to be some credit in the dealings of farmers, both in buying and selling; but the thing is to keep proper accounts, so that when the Christmas bills come in they are not unexpected, and there is the needful at hand to pay them. It is the forgotten and unrecorded accounts that give the trouble and worry.

Agricultural Politics.

BY A LOBBYIST.

Where Farmers Study their Own Weal.

There is one feature of the Mid-Devon bye-election which should be gratifying to those who desire to see farmers taking a more intensive interest in their own weal. Both candidates and constituents reflect this interest. Whilst the rivals disregard the flamboyant and turgid rhetoric loved alike by the Free Trader and Tariff Reformer and devote themselves to a clear, cogent and direct consideration of how the new economy would affect the farmer, the constituents ply them with questions having the same purpose of elucidation—questions which are characterised by an intelligence and force which betray at least common sense, knowledge, and a sane anxiety that the agricultural interest should not be penalised or sacrificed. There is no attempt on the part of any to obscure or distort the issue. That is made as luminous as the British language can make it. Will Tariff Reform, under which but a small duty is to be placed on foreign imports, and which duty, when those imports are the necessities of the working man, is to have the most infinitesimal character, seriously benefit the farmer? Will that policy benefit the farmer when, too, it is to be allied to a system of preference for the agrarian produce of the colonial farmers—men to whom rent, as we know it in England, is practically unknown; who are unafflicted by the burden of rates which hangs like a mill-stone around the neck of the British farmer; who cultivate, in many instances, a virgin soil of unequalled fertility; who enjoy every possible facility of cheap transit, and who live under a Government alertly anxious to secure them the most advantageous and profitable of the British markets?

* * *

Strange Indifference to Other Issues.

Of course these questions evoke a variety of replies—partisanism is so human a sentiment that even in Mid-Devon it ever and anon rides roughshod over the wise anxiety for personal advantage; but those replies are, on the whole, permeated by wise self-interest and by an admirable patriotic appreciation. What, however, has impressed me in reading the admirable reports in the two Plymouth daily papers is the indifference of both candidates and audiences to other issues of moment to the agricultural interest. True, the burden of taxation is obliquely and occasionally referred to. True, too, the economic possibilities on the fortunes of the rural districts of small holdings has a tepid and desultory consideration. True, again, the contrast between the Scottish land policy and the English land policy is made the theme of piquant adjectives. Though, however, Mid-Devon may be said to be within the radius of the Callington platform—and the Land Tenure Act sponsored by young Mr. Agar-Robartes is really but a reflection of the purpose of that platform—the possibilities of that legislation have not that I can see been even referred to. Even the Liberal champion has been apparently indifferent to the effect which legislation passed by this Government, like the Butter Act and the Dogs Act—measures avowedly designed for the direct protection of the farmer—may have on the agricultural interest. What is more, he has not seemed to comprehend how the Foods Regulation Act of Mr. John Burns—which will yet be a direct menace to the unhealthy and unwholesome privileges which organisations like the Yankee beef trust enjoy—may prove a direct boon to the great food-producing interest of Great Britain.

* * *

Obsessed by Tariff Reform.

Even the promises of the Government to initiate a great scheme of housing, to grapple with the horse-breeding problem, to deal with the milk question on lines which must be of direct benefit to the British farmer, and to relieve agricultural land of its terrible burden of rates have been passed by with faint recognition, or else deliberately unheeded. What is the moral deducible from these significant facts? Most assuredly it is not one that the invincible Free Trader can regard with complacence. It means that in a constituency which reveals a singularly alert sense of what is economically due its own industry, one question, and one question alone obsesses the electoral mind. The fact that this question is Tariff Reform imposes an enhanced responsibility on those of us who fear that in its suggested guise—the guise given it by Mr. Balfour, and apparently accepted by the Chamberlainites, the guise of a slightly-rebuffed foreign competition and a greatly-encouraged colonial competition—it may mean a grave penalty for British agriculture. We must seek with all our might to have the economic situation made clear. If dangers confront us we must not have them obscured. The mists of oratory must not be allowed to conceal the boulders which may beset our path. Will Mr. Chaplin, our accepted leader, dispel those mists?

* * *

A Lesson from Irish Politics—and a Moral.

Are we to find in the member for Kidderminster, Mr. Barnard, a reinforcement of the small band of Parliamentary Pro-Agrarians? I ask this question because of the excellent and forceful speeches the hon. member delivered in connection with the annual celebrations of the Central Chambers. Most assuredly Mr. Barnard provided a new justification for the initiation of an independent agricultural party. Why is it (I paraphrase one of his contentions) that the English Board of Agriculture is, as compared with the Irish department, a weak, anæmic, and comparatively innocuous body? Why is it that whilst in the last three years considerably over a million of money has been given by a bounteous State to the Irish Board of Agriculture, less than half of this sum has been given to the English department in the same period? Why is it that, estimating area and population, England has received less than one tenth of what has been conceded to Ireland? Mr. Barnard perceives the cause in the fact that Ireland has had an organised and disciplined body of Parliamentarians indifferent to the convenience and anxieties of Ministers, and playing the Ishmaelitish game with such assiduity as to make statecraft anxious to conciliate them by bribes. Heaven forfend, it be deemed that I desire the Independent Agricultural Party to repeat the tactics of the Irish Nationalists. I neither want roysterers nor blusterous or irreverencing swashbuckling Alsatians in the House as our representatives. I want a disciplined party behaving with dignity, and, if pursuing its own ends, never subserving the true interests of the empire and the kingdom to mere gloating selfishness. And, verily, I believe this to be the anxiety of the protagonists of the new movement.

* * *

Should we Fine Ourselves to Find Labour for the Towns?

Has not Mr. Barnard provided us with a new reason for praticalising our rural education—for giving a vital character to Mr. Jesse Collings's admirable, but, unfortunately, ill-supported, agitation? It is a lamentable reflection that the last Unionist Government resolutely resisted Mr. Collings's pathetic importunities to give our system of rural education such a character that instead of, as now, inspiring in the youth the longing for the life of the towns and its tawdry pleasures, it should be a preparation for a life of use in the village of his forbears. In Hertfordshire (Mr. Barnard's county) they pay an education rate of 10d. in the £ in order—heed this deplorable fact and perceive in it an injunction to seek reform—to provide the towns with muscular workers. The villages under this system are actually compelled to heavily fine themselves in order that they may denude themselves of the labour they need. They have to pay that they may be bereft. In one particular district of Hertfordshire no less than 1,450 of the 1,800 children who passed through the schools in the last ten years had, when manhood came to them, shaken the native dust from off their feet and sought their fortunes elsewhere. A human machine fashioned at local expense became an advantage only to the community which had borne none of the cost of completing the structure. Would an Independent Agricultural Party put an end to this anomaly, this reckless prodigality? Well, it might not. Who, however, but must agree that even half-a-dozen Parliamentarians, working on detached lines in a spirit of mutuality and definiteness, would have ere this brought this question within the pale of practical politics? Why the future control of our training-colleges and the like—the mere academic fringes of the education problem—has to-day an infinitely greater importance in the eyes of the professional educationists than this vital question of how to so practicalise our rural education that the scholar shall not merely be fitted for a rural career, but be possessed by an anxiety to follow it.

Reply to a Chivalrous Critic.

I have, of course, to acknowledge the singularly courteous and wholesomely chivalrous reply of Mr. W. J. Malden to myself. Mr. Malden, as a controversialist, disdains the methods of your Dugald Dalgetys, and is honourably anxious to elucidate the point at issue. Certainly he has elevated the contention of the colonial preferenceites to a plane of logic I have never seen it before attain. I fear me, however, that Mr. Malden's Tariff Reform is not the Tariff Reform of Mr. Balfour and Lord Lansdowne, and, withal, that even then it regards the menace to the British farmer with too serene a mind. Why should we adopt the Kismet attitude of Mr. Malden? "If (says he in effect) Canada can supply all our necessities, nothing we can do can avoid the danger. Kismet—let us bow before our doom!" But should we? "However," proceeds Mr. Malden, "the British farmer is not to be sacrificed—Mr. Balfour says so; he is to be proportionately protected." When has Mr. Balfour said so? When has any reponsible leader of the new evangel said so? Mr. Balfour's contention—emphasised by Lord Lansdowne with a luminosity which prevents any possible misconception—is that the British farmer is not to be protected. "If," says Mr. Malden, "Canada is going to supply us with everything we want, as 'Lobbyist' expects, then there is no need to have anything whatever from any country but Canada and the colonies; therefore put up a big tax against the others." This, however, is what Mr. Balfour will not do—what Lord Lansdowne certainly will not do. They suggest not a big tax, but an infinitesimal tax on foreign imports. We come back then to the supreme fact. Colonial preference might possibly benefit the urban industrialists.

MIDLAND FARMERS AT HOME

No. II.

NOTTINGHAM CORPORATION'S BIG CONCERN.

How They Get Rid of the City's Sewage.

"Nothing but praise can be found for the appearance of everything on the farms."—Wilton Allsebrook, Official Valuer to the Nottingham Corporation.

The above extract is taken from the official valuer's report to the Nottingham Corporation relative to their sewage farms situate in the parishes of Stoke Bardolph, Burton Joyce, Bulcote, and Gunthorpe. It certainly speaks well for the ability of Mr. Arthur A. Avis, the farm manager, especially when it is remembered that he has under his charge no less than 1,894 acres 2 roods 4 poles, and is thus far and away the largest holding in the county of Notts. Of this about 1,400 acres have been prepared for the reception of sewage The soil for the most part is of a sandy character with a gravelly subsoil, and, being situate by the side of the Trent, there is a capital outlet for drainage.

The method adopted in the disposal of the sewage on the farms is that of broad irrigation, flowing from the city of Nottingham, five miles distant, by natural gravitation, although some portion of the effluent from the low-lying parts of the town have to be pumped into the main sewer at Sneinton through the agency of Gwynne's centrifugal pumps. No lime, chemicals, or mechanical devices are employed to extract the sludge and secure a proper effluent, the land providing ample means for filtration. This, of course, has demanded an elaborate system of underdraining. The main drains consist of 12 in. pipes, are two chains apart, and from 5 ft. 6 in. to 9 ft. below the surface. The smaller drains are of 4 in. pipes one chain apart, and from 4 ft. 6 in. to 5 ft. 6 in. deep. The underdraining has been carried out on the herring-bone principle, and acts admirably. From 10,000,000 to 12,000,000 gallons of sewage is dealt with every twenty-four hours, and the cost of preparing the land for its reception was between £50 and £60 an acre. The land—both arable and pasture—is treated for twelve hours a time, the effluent running into the fields from the sewers along grips, and allowed a round of the clock to drain away.

There are nearly 1,000 acres of arable land on the farms, and the principal crops grown are wheat, oats, rye, kohl rabi, and cabbage, some of the latter reaching enormous dimensions. Most of it can be ploughed with two horses, although a large area is cultivated up, the Corporation being owners of the necessary steam tackle. The land being so rich Mr. Avis does not allow much straw to be used in the crews, stables, and other buildings, preference being given to sawdust, as the production of manure is not studied—in fact, a good deal of the manure made by the stock is actually sold to go off the farm.

The wages bill is a very heavy item, amounting to something like £4,000 per annum. The number of men and boys employed on and about the farm total nearly 150, a large staff being constantly engaged in superintending the disposal of the sewage. A rather liberal scale of wages has been adopted by the Farm Committee, and provides for boys starting work as soon as the age limit allows being paid 6s. per week, with advances of 6d. as the lads become more useful. Farm labourers receive 17s. per week, their hours being from 6 a.m. to 5.30 p.m.—winter and summer. The milkmen receive slightly higher rates, rendered necessary consequent upon Sunday duty being an absolute necessity, amounting to 19s. weekly. Their hours are from 5 a.m. to 6 p.m., with half an hour for breakfast and one hour for the mid-day meal. Waggoners (in charge of four horses each) are paid at the rate of £1 per week, starting work at five o'clock and finishing at eight, after they have suppered up, though their actual day's toil concludes at six o'clock, the men returning for a few minutes shortly before eight to give the horses their final feed.

The men who drive the traction engines, of course, have to possess a certain amount of mechanical knowledge, which receives consideration in the wages sheet, their rate of pay being 25s. per week. The foremen over the labourers, milkmen, and waggoners receive remuneration at the rate of 26s. per week, and foremen engineers £2. These employees also possess the advantage of residing in houses belonging to the Corporation rent free, good gardens being attached. However, where it is impossible for the men to be accommodated in one of these municipal houses they are allowed 1s. per week extra.

Punctuality is strictly enforced in every department—labourer, mechanic, and clerk—all have to be at work promptly by 6 a.m. at the latest, and from what I was told Mr. Avis, the farm manager, is always in his office by that time, winter and summer. Despite the good wages paid to the men by the Corporation, there is great difficulty at times in securing an adequate supply of men for the work. This is attributed to the fact that the attractions of town life act as a magnet to many of the young men in the districts where the farms are situate, coupled with the high rate of pay that prevails at the collieries in the neighbourhood, and also the large locomotive sheds and coal sidings of the Great Northern Railway at Colwick, where the men enjoy the privilege of occasionally securing a half-day's relaxation from toil, which is highly appreciated, especially by those inclined towards football and cricket.

Mr. Arthur A. Avis was appointed manager of the Stoke Bardolph farm in October, 1897, on the death of his father, though he had been connected with its management for ten years previously. Mr. Avis, sen., was appointed the Corporation's first manager on September 17, 1878, and held the position until his decease. The feeding cakes are usually purchased in 100 to 200 ton lots, the prices then being at their lowest. At the last official valuation there were over 2,400 head of horses, cattle, sheep, and pigs on the farm, made up as follows:—Horses 132, cattle 862, sheep 933, and pigs 490. The value of the tenant right on the farms was then put down at £50,030 9s. 4d., being an increase in the twelve months of £3,212 6s. 4d.

An annual sale is held in March or April, and the amount realised at the last dispersal of fat and store stock was £4,495 5s. 6d. The amount spent last year on horse and cattle foods was £6,677 6s. 4d., and the total receipts from the sale of live stock £9,825 18s. 8d., and the sale of milk and butter

Mr. A. A. AVIS,
Manager of the Nottingham Corporation's Sewage Farms.

£4,473 9s. The rent paid for that portion of the farm which does not belong to the Corporation is about £800 a year. The annual turnover is about £23,000. All food, such as corn, cake, meal, &c., is weighed out so much for each animal, and a record kept.

In my next article relating to this great concern particulars will be given of the model farm buildings which the municipality have erected at Bulcote, and so far as I know are the finest in England, which is saying a great deal. R. K.

The annual December fair at Thirsk was held on Tuesday in fine weather, but there was only a moderate show of stock, and trade was dull. A fair trade was experienced for beasts well up in condition, which made up to £12 10s.; young beasts, £5 to £6; older, £6 10s. to £8 10s. Limited supply of dairy cows, which a met a good demand; for first-class animals £20 could be made; secondary £16 16s. to £17 17s.; ordinary to £14 15s. Sheep were only a small supply.

At a well-attended meeting of the East Sussex Farmers' Club, which took place at Lewes, the proposal that an Independent Agricultural Party should be established in the House of Commons was considered at some length. There was not that unanimity that has characterised discussions on the same subject in some other parts of the country, for while it was generally agreed that the objects of the proposal were good, it was felt that they were at present impracticable. However, a resolution in favour of the proposal was carried.

Lincolnshire Notes.

YET another critic of the Agricultural Party, and a downright one this time. Lord Willoughby d'Eresby, M.P., speaking to the farmers of Horncastle, described the idea as "all bosh." He did not believe it possible to formulate a programme on which landlords, farmers, and labourers would unite. The report says that his lordship found a considerable agreement amongst the assembled agriculturists. But I think the honourable member will prove himself wrong. There are many things upon which the three great units of the agricultural trinity are hopelessly divided. There are some on which they can unite, and the strength of their fighting force will depend on the extent of their unity.

THE excess of rainfall is causing no little delay on the farms. Much of the land in Lincolnshire is under water; the great majority of it is so sodden as to be unworkable. If, whilst they are about it, the powers might send us a white Christmas, we should get along all the better when the spring comes.

THERE are the best of reports from the fat stock shows. Prices have been well up, there has been the best of quality, and the supply has been up to the mark. It is going to be a prosperous Christmas so far as the dealers in stock are concerned.

I WAS quite sufficiently near the truth when I suggested that the Lincoln Royal Show had made a record. Thanks to its splendid success, the executive have been able to put £7,056 to the reserve fund. Only twice has this splendid result been beaten, at York in 1883, and at Manchester in 1869. These significant occasions can be quite taken out of account. Undoubtedly the best thing in the Royal Society's traditions to-day is the Lincoln Royal Show.

LINCOLNSHIRE will be well represented amongst the list of judges at the next Royal Show. Amongst those who have accepted the society's invitation are:—Hackneys, Mr. John Wreghitt, East Thorpe, Market Weighton; Leicester sheep, Mr. J. J. Stamper, Highfield House, Nunnington, York; Lincoln sheep, Mr. Charles Clarke, Brookside, Scopwick, Lincoln, and Mr. William Wright, Scamblesby House, Horncastle. Mr. F. Reynard, J.P., of Sunderlandwick, Driffield, is chairman of the Judges' Selection Committee.

A LARGE transaction in agricultural land is recorded. Mr. H. P. Carter, C.C., of Abbot's Manor, Holbeach, and Mr. A. H. Worth, of Holbeach Marsh, well-known farmers and potato growers, have recently purchased a very large estate known as the Eastville Estate, which lies on the north side of Boston. It comprises about 1,200 acres of agricultural land, and was the property of Messrs. Staniland, of Boston, and Langton Hall, near Spilsby, and is close to the Eastville station. It is rumoured that the purchase price was between £40,000 and £50,000. About a year ago Messrs. Carter and Worth purchased the Trustees Farm of about 500 acres, which adjoins their new acquisition, and they have introduced the go-ahead methods for which Holbeach Marsh farmers are noted. They are now the owners of about 1,700 acres of land in the north of Boston district, and it is understood, in course of time will occupy the whole of this large acreage.

SYMPATHY, but little else. The Lincolnshire deputation was not happy in its call upon the railway companies on the subject of railway rates. With curt politeness they were told that the railway companies cannot see their way to grant the concessions asked for. It was a keen disappointment. But, so far from killing the agitation, the decision will be the whip and spur which will renew its activity. Lincolnshire farmers will be very foolish indeed if they sit down under their real grievance. By their refusal to discuss the matter, the railway companies have admitted the weakness of their case. All that is now needed is a little doggedness and more light. Let the world know that if the companies' position is a weak, one the Lincolnshire agriculturists' is strong.

DOES Lincolnshire want small holdings? For instance, does South Lincolnshire? At the last meeting of the Small Holdings Committee of the Holland County Council the clerk reported that he had received applications for 598 acres of land as small holdings from the northern part of the division, and for 1,652 acres from the southern part. The districts in which there was the greatest demand were:—Crowland, 271 acres; Gedney, 239; Gedney Hill, 210; Whaplode Drove, 235; Quadring, 120; and Deeping, 111.

THE Board of Agriculture is hot on the track of the gooseberry mildew. A new order has

come into force which applies to this and several other counties conveying a number of necessary instructions. They are rather more than instructions, for failure to comply with them will involve a penalty of £10. It will be as well for gooseberry and current gardeners to make themselves acquainted with them.

THE late Mr. Coates Sharpley was not only a large occupier but the owner of several considerable estates. These have come under the hammer, and resulted in a considerable division of the property. The Brackenborough Hall estate, and over 500 acres of land, made £15,650, and was purchased by Mr. J. Bennett, J.P., of Louth. The Pye's Hall estate in Somercotes and Granthorpe, was withdrawn at £14,000; but a farm of 181 acres in Alvingham made £4,600, and went to Mr. H. W. Mason, of Louth. A small holding of 78 acres at Brackenborough realised £2,000, being knocked down to Mr. G. Langdale, of Market Stainton.

MR. JOHN EVENS, of Burton, near Lincoln, has just issued his annual statement of milk records of the cows in his famous herd of Lincolnshire Red Shorthorns that calved during the year 1906. The statement comprises the records of forty-eight cows, which gave a total yield of 385,261 lb. of milk, or an average of 802 gallons per animal. The average is thus slightly below that for the previous year, when it was 816 gallons, while in 1894 it reached 842 gallons. It is, however, well up to the average, as in the four years previous to 1894 it varied from 758 gallons to 785 gallons. The highest record was 889 gallons for forty-three head in 1896, and in the following year thirty-six averaged 881 gallons. On the whole, there is an appreciable improvement since the first return was made in 1890, when the average for thirty-one cows was 740 gallons. By a gradual process of selection, therefore, the herd has been graded up to a high standard, and the increase more than justifies the labour and expenditure entailed in effecting it.

December 20, 1907.

LINCOLNSHIRE FARMERS' UNION.

THE CENTRAL COMMITTEE.

A meeting of the Central Committee of the Lincolnshire Farmers' Union was held on Friday, Mr. T. Colin Campbell presiding, when the question of indemnity for the destruction of tuberculous cattle was considered, the matter arising out of a circular inviting the Union to send a representative to the meetings of the Royal Agricultural Society's Committee appointed to discuss the question.

The chairman characterised the matter as a very important one, and thought it should be ventilated and got to the bottom of. The first meeting was to be held on Friday, January 3.

The members first decided upon their delegate, and it was agreed that the chairman be appointed.

Mr. Harrison had given notice of a resolution to the effect that whereas the Butchers' Association had demanded indemnity for the loss of any carcase of beef bought by them in the Lincoln Cattle Market, and condemned as tuberculous, they (the Union) desired it to be known that they saw no reason why they should depart from the old custom of every owner being responsible for his own stock, and that any indemnity must be provided amongst themselves or by the authority who condemned them.

Mr. Mountain thought the matter was a national one, and as such the nation should pay the cost. It should be impressed upon the Government that the matter be taken up as a national one.

Mr. Blanshard agreed, and Mr. Searly asked, if they kept helping the butchers, whether the butchers would help themselves? Would the butchers put a strong memorial before the Government, the same as the Union?

Mr. Harrison thought if the farmer paid his sixpence to the indemnity fund it was an acknowledgment of their liability after the sale of their cattle, which was very bad business indeed. They were only debarring and injuring their object in delaying legislation in the matter.

Mr. Robinson thought the butchers' indemnity fund did not meet half the expenses, and said if the present Act was amended to include tuberculous cattle, it would cover the case.

In the end Mr. Harrison, at the suggestion of Mr. Bellwood, withdrew his motion, and it was decided that the delegate to the committee be asked to approach the matter from a national basis.

The Annual Dinner.

The annual dinner of the Union was fixed to take place in the County Assembly Rooms at Lincoln, on Friday, January 31, and the chairman announced that Lord Carrington and Lord Onslow had promised to attend.

The Corrupt Practices Act.

Mr. E. W. Howard referred to the Corrupt Practices Act, and said no people were more generous than the English, and they had been in the habit of sending out a great number of turkeys, geese, &c. This new Act had to a great extent stopped that, and he thought farmers were entitled to say the measure was entirely unnecessary, and was putting another burden on agriculture which it ought not to bear. He did not mean that farmers were in the habit of receiving these things, but those who sent them generally bought them from the farmers, who were affected a good deal.

The matter was not discussed.

Eligibility of Landlords.

Mr. Robinson inquired whether landlords were prohibited from membership of the Union, and the chairman replied that they could only be admitted as honorary members.

Mr. Robinson added that Lord Monson had told him that he understood that such as he were not wanted in the Union.

The chairman said the Union was not in any way against landlords, and the secretary intimated that the question had been raised at Brigg, and he gave them to understand that anyone was eligible who was carrying on the business of a farmer. If a man had the misfortune to own so many acres, he was not going to be prohibited simply on that ground.

NEWARK BRANCH.

There was a good attendance at the annual meeting of the Newark Branch of the Lincolnshire Farmers' Union. Mr. E. J. Storm, who presided, was unanimously re-elected chairman of the branch, and in returning thanks, said the branch had not done a great deal of business, because none of their members brought any questions before them. He wished it to be understood that if they had any grievances the Union was willing to consider them and have them rectified without expense to the one who brought the grievance.

Mr. J. Pennington was also re-elected vice-chairman, and on responding he pointed out what good work the central body at Lincoln was doing for farmers in regard to disputes.

Mr. J. C. Fisher said he had been asked to propose a name as secretary for the ensuing year, and he had pleasure in doing so. They would all agree with him that unless they had confidence in their officers they would not do much good as a Union. They were pleased to say they had confidence in their officers, and that remark applied to Mr. Hopkinson, who had done the work of secretary for the last twelve months very well, and he therefore proposed his re-election.

Mr. A. Stretton, as the first chairman of this branch, spoke of Mr. Hopkinson's valuable service, and said he had much pleasure in seconding the resolution.

Mr. Hopkinson, in thanking them for his re-election, urged all farmers to join the Union, for without being united they could do nothing to improve their conditions.

The balance-sheet showed receipts £16 14s. 7d., expenditure £2 11s. 11d., balance £14 2s. 8d., which was considered highly satisfactory.

The next item on the agenda was "An Agricultural Party in Parliament."

Mr. E. J. Bullen said he thought it was very desirable that agriculturists as such should receive a very great deal more attention than they did, and it was a question as to the best way of bringing this about. He had seen the proposal to form an Agricultural Party, but he had his doubts as to whether it was possible. Parliament had not attended to the business of agriculture for the last twenty years like it ought to have done, and he was rather in favour of sending practical men to Parliament, men who really understood the practical side of agriculture. Other organisations, such as miners, schoolmasters, railway men, had their representatives in Parliament, and he considered the farmers of England ought to send eight or ten practical men to represent them. How were they going to be sent? Other Unions made a levy, and when they paid a man for his services, they valued those services more than if they obtained them on the cheap, and it was only in that way could they really have the practical element of agriculture represented in the House of Commons. Until they made the self-sacrifice required, they would not have the attention they ought to have and deserved to have.

The chairman said the time was not ripe yet, and it would be impossible to raise enough money to send eight or ten men to Parliament.

Mr. Stretton said the time was ripe, and it ought to be done, and the farmers should put their hands in their pockets to do it. He also complained of some members not paying their subscriptions to the Union when they were due, and appealed to everyone to put their shoulders to the wheel and send their own men to Parliament.

Mr. J. C. Fisher said he had been interested in this subject for the past fifteen or twenty years, and it was no new theory as far as he was concerned, and he had been steadily advocating a Parliamentary Party to represent the agricultural interests. He put forward that view as clearly as he possibly could some ten years ago in St. James's Hall in London, when there were something like two or three thousand people present, and he laid it down then that he believed agriculture would never rise to the position it ought to occupy unless they had true men who were not seeking office in the Cabinet, to represent the agricultural interest in the House of Commons. He was not going into the question whether it was possible or not; what they wanted to do was to establish a principle, and upon the principle itself he thought the Chairman would agree. The crux of the whole matter was that they wanted their grievances redressed. But the great difficulty was in finding men, who when they got into this position would stand true to their principles. What they wanted were men who would go to the House of Commons and support any Government and any party who would do something for agriculture. With regard to the finding of means, surely when they looked round and saw the vast interests that were at stake in the country, would it not be a shame for them to go away from that meeting and let it go out through the Press that the agriculturalists of England were so blinded to their own interests that they would not subscribe some small amount to send eight or ten men to the House of Commons? He believed if it was put in the right way they could easily send eight or ten men, and he hoped the day was not far distant when they would have a strong Agricultural Party in the House of Commons to look after their interests and remove the burden of local taxation under which they groaned to-day.

Mr. Bullen thereupon proposed that they recommend to the Central Committee that they should consider the desirability of selecting a suitable tenant farmer to represent them in Parliament and the making of a levy to support him.

Mr. Fisher seconded and the proposition was carried.

Mr. Hopkinson proposed, and Mr. Stretton seconded, the following resolution: — "The Newark Branch of the Lincolnshire Farmers' Union, whose members are large ratepayers, viewed with alarm the great increase in the cost of county roads, and do not agree with the use of Tar Mac, which is detrimental to the highest interests, and excessively expensive."

Mr. J. C. Fisher said when they had the surveyor's report placed in their hands and read that no less than £400 per mile had been spent on a road between Grantham and Nottingham it was enough to make their blood boil, because they, as farmers, had to pay a very large proportion of the cost, and they meant to get that state of things altered. He strongly supported the resolution, which was carried.

WADDINGTON.

In spite of very unfavourably weather, a fair number attended a meeting of the local branch of the Lincolnshire Farmers' Union held at Waddington. Mr. William Pate, Coleby, occupied the chair, and, in opening the meeting, said he felt sure that the audience, many of whom were members, would be satisfied with the good work the Union had done during the past year.

Mr. George Black spoke on the subject of the excessive railway rates charged on agricultural produce in this country, and urged that pressure should be brought to bear for the relief of the burden.

Mr. Ablewhite said that though not a farmer, he had probably had as much experience as any farmer there, and was sure that meetings of that sort to promote so great a cause as that of the Union should receive the support of all interested in agriculture.

The secretary of the Union (Mr. H. W. Palmer) reviewed the work of the Union, and spoke of the great increase in the number of branches and members. He also gave an account of the meetings in London during the week. Mr. Frank Norton likewise spoke in support of the objects of the Union.

At the close of the meeting a successful smoking concert was held.

At a meeting of the Small Holdings Committee of the Holland (Lincolnshire) County Council, held at Spalding on Wednesday, the committee resolved to recommend the County Council to accept an offer made by the Guy's Hospital trustees, to let the committee fifty-three acres of land at Sutton Bridge, with two cottages to be split up into small holdings. The clerk reported that he had received applications for 593 acres of land as small holdings from the northern part of the division, and for 1,652 acres from the southern part.

CORRESPONDENCE.

Agricultural Politics.

SIR,—I think it would be better if "Lobbyist" would be a little less one-sided, as I am in favour of absolute free trade, not the one-sided thing we have now, and I defy either him or any of your staff to say truthfully that agriculture has been prosperous for the last twenty-six years. Therefore agriculture has nothing to be afraid of in tariff reform and Colonial preferences.—Yours, &c.,

December 19, 1907. EDWARD BELCHER.

SIR,—Where does Lobbyist live; and how does he spend his nights? Is he on the staff of "Mr. Punch," or engaged in staging Parliamentary pantomimes? To his "open sesame" how readily the door of the latter opens, behind which Earl Carrington and Mr. John Burns are represented as designing marvellous acts for future representation. And having opened the door, he is appalled by the bill of fare which is being prepared for digestion—or indigestion.

Old age pensions to redeem the lot of the agricultural labourer—after he has left the country possibly. A Housing Bill, believed to be ready for representation. And, in addition, Mr. Burns not satisfied until he has 1,000,000 acres under a "disciplined" scheme of afforestation. If not too late, how would it be to plant with "bread-fruit" trees? And Earl Carrington, not a whit less ambitious! But, in conjunction with Mr. Burns, to deal with the British milk-pail and its contents. And then the horse-breeding problem to be grappled with—by somebody. A registration fee of a few shillings, and the horse when he is wanted. Is this the idea? And, as a final curtain-dropper, agricultural land to be relieved of the terrible burden of rates as a sequel to the Valuation Bill. A gorgeous representation admittedly, but has not "Lobbyist" given Earl Carrington, with Mr. John Burns, all the leading parts; and how will the rest of the company take it? And will it all work through before legitimate drama claims the Parliamentary boards again? A Gargantuan scale of transformation vividly drawn up, and so graphically brought to notice, that it might be anticipating too much to ask where the cave of gold is by which these reformations are to be gilded and made to pass to everyone's advantage. Will "Lobbyist," with his "open sesame," once more divulge further to to our edification?—Yours, &c, WAMBA.

December 19, 1907.

The Situation.

SIR,—With regard to the Agricultural Party, if they care for my advice, it is to chum with the Government, and get as much legislation as possible useful to the farmer. The Tariff Reformers are too busy arranging that no French boilers should be used for cooking potatoes for the pigs to give much attention to field operations.

Prices of grain are now higher than they have been for several years, and will increase if the policy of the growers is transparent instead of opaque.—Yours, &c., HOMESTEAD.

December 19, 1907.

Profits from Wheat Growing.

SIR,—I am sorry that I misunderstood some parts of your correspondent's letter. I can assure him that I had no wish to misconstrue any of his words intentionally. Of course, he will understand that the reason why wheat straw has so high a value here is that there is so very small a proportion of arable land that there is very little straw of any sort grown, so that instead of high-priced straw being an excuse for "raising my rent," as "Gloucestershire" (no doubt jokingly) suggests, the fact should have an opposite effect, because at the present time I am buying wheat straw at a big price to bed my horses with.

I still contend that farmers in the localities with which I am acquainted have acquired the habit of saying that their farming is carried on at a loss —*e.g.*, the balance sheet that initiated this correspondence states that wheat-growing at 35s. per qr. shows a loss of 8s. per acre, and if that is a fact, why do farmers continue to grow wheat at all?—for the straw, would be the answer of a farmer in this district. And so far as my command of the English language enabled me, I tried to explain that 4 qr. of corn and 30 cwt. of straw is reckoned an average crop of wheat in Derbyshire, though a good deal more has been grown on favourable years and conditions, and attempts to force these conditions often results in a laid crop more trouble than it is worth.

"Gloucestershire" may be sure that if for one reason farming is better in one locality than another, there will be some corresponding drawback to balance it.—Yours, &c., A. J. R.

December 18, 1907.

Does Lucerne blow Sheep?

SIR,—I was interested in your report of the East Sussex Farmers' Club meeting, as I have had considerable experience with lucerne. Mr. J. Kenward's remarks were worth all the others. Whenever sheep, especially lambs, are put on a fresh pasture, put them there when the forage is dry, and in the forenoon, then, if they get a full belly, they will not lie all night overgorged. The shepherd should without fail go round before evening to put them on their legs.

Of all food for lambs I have found nothing to equal lucerne, and I never remember losing a lamb on it.

One dry summer I grazed a lot of bullocks on lucerne. It is not lucerne that kills stock, unfortunately stock kill lucerne. I have found it safest for the plant to mow it twice and graze the last crop, but not to eat it down too closely.

Lucerne hay well got is the primest fodder for sheep in the winter. To get prime lucerne hay it must be cut when the first flower is seen, then with fair weather the leaf is kept on.—Yours, &c.,

December 19, 1907. SHEEP BREEDER.

The American Beef Trust.

SIR,—For some weeks a number of articles have appeared in the daily and other Press on the subject of the American Beef Trust, and it is particularly interesting to note that two of the London Free Trade dailies have given up considerable space in their columns to the *exposé* of what now appears to be a carefully-planned plot on the part of the American Beef Trust to monopolise not only the import and distribution of live and slaughtered bullocks imported from America, the Argentine, and even Australasia, but to render it impossible for the British farmer and feeder to grow beef and mutton at a profit in this country. The carefully thought-out scheme of this alien trust comprises a monopoly of the means of transport from the different countries mentioned for cattle, thereby rendering competition from outside shippers in these countries abortive; and by securing extraordinary privileges from such corporations as London, Liverpool, and Manchester, they have practically closed these markets to all but themselves.

Not content with this, they have by some means, creditable or otherwise, secured the co-operation of our British railways—railways, be it remembered, that have been built and are maintained by the capital of English people. By this co-operation they have succeeded already in securing preferential rates for the transit of their beef to all parts of the United Kingdom. One instance will be sufficient to demonstrate the foregoing.

At Glasgow, the centre of the American cattle trade in the North, the carcases are dispatched mostly to London, a distance of 444 miles, the freight upon which is 45s. per ton, whereas Scotch feeders and killers, shipping from Aberdeen, the great market for Scotch beef, have to pay 72s. per ton in freight to London, the latter being only seventy-nine miles further from Aberdeen than is Glasgow. The railway companies have not only given this enormous preference to the Americans, but they allow them to use their sidings all over the country, where the Beef Trust may, and does, send refrigerator cars containing American beef for distribution to the retailers in small towns, and these cars are allowed to remain in the sidings free of rent, rates, and taxes until their local agent has disposed of the beef, even should it take him a week or a fortnight to do so. The great hardship entailed upon local killers must be evident to all. The greater hardship being endured by our feeders and agriculturists is one that demands immediate remedy; it must be evident to all thinking men that the American Beef Trust are striking at the very roots of the prosperity of agriculture in this country, for I think it is admitted by those best able to judge that the climate of the United Kingdom is much more suitable to the growing of beef and mutton than to the growing of wheat and other cereals. The great hardship produced by the restrictive laws passed some years ago, whereby Canadian and other cattle are slaughtered immediately on arrival, has had a very detrimental effect upon the beef-growing industry in this country, for large numbers of the cattle, coming from Canada in poor condition, were formerly bought by feeders and taken home to their farms, where they enjoyed for three or four months the advantages of the superior class of English feeding, and thereby grew into bullocks of heavy weight and good quality, yielding to the farmer a generous return for his outlay. The same restrictions have made it impossible for the feeder to get his usual supply of store cattle outside of Ireland, with the result that the price of these has risen to such an extent that feeding has gradually become an unprofitable business; hence the very greatly reduced figures shown in the returns of the Board of Agriculture since the year 1902.

Surely the time has come when more attention should be paid by the Government, not only to the prosperity of the British feeder, but to the protection of those killers, manufacturers, and distributors who are dependent upon this trade for their daily bread; and the few extra thousands a year which might be necessary in order to secure a safe and sufficient examination of all animals shipped to this country at port of loading would be nothing as compared with the enormous loss which is at present going on owing to the want of proper and efficient arrangement, whereby the immunity of disease from our own herds can be readily secured.

The whole question is one that would appear to deserve the prompt and very serious consideration of our Legislature, and while private efforts are being made at the present time to secure the interest and influence of leading men all over the country to do away with this extraordinary state of matters, I think the Press of the country, be it Free Trade or Tariff Reform, should unite in bringing such pressure to bear upon the Board of Agriculture, and, through it, upon the present Government, as will, if necessary, force them out of their condition of *laissez faire*, requiring them to take immediate steps to render it impossible for this alien Beef Trust to succeed in their efforts to rob the taxpayers and ratepayers of this country of their legitimate rights, and so encourage our breeders and feeders to again adopt measures for largely increasing production of English beef and mutton. The imposition of a substantial import duty upon all the trust's beef, whether brought alive or dead to this country, for a period of, say, five years, would give a stimulus to our Canadian and Australasian colonies, as well as to our home feeders, and might be adopted as an experiment in Tariff Reform, which, at the worst, would increase our home and colonial supplies to the injury of the American Beef Trust and their repugnant methods.

That the old game of freezing out all competition is the object of the American Beef Trust must be evident to all, and, having once secured the remaining large distributing shops throughout the kingdom, a large number of which are already in their hands, the public will be required to pay the heavy premiums already given for these shops in the shape of a largely increased price for their meat.—Yours, &c., J. W. HOPE,

Director of Messrs. John Knight, Ltd.

An Agricultural Party: Lord Onslow's Suggestion.

An interesting letter on the Agricultural Party question, written by Lord Onslow, who it will be remembered was the last president of the Board of Agriculture, appeared in Tuesday's *Standard*. It was as follows:—

SIR,—At the recent meeting of the Central Chamber of Agriculture, the recommendation of the Organisation Committee, "that an independent Agricultural Party should be formed," was adopted, but with the addition of the words moved by Mr. Courthorpe, M.P., "and other steps taken to strengthen the representation of agriculture in Parliament."

I confess I see far more hope for the future of agriculture in Mr. Courthorpe's addition than in the original proposition.

It is unnecessary for me to take up your space with arguments against the group system of Parliamentary government; suffice it to say that it seems to me not to be a practical manner of dealing with the undoubted apathy of the rank and file of the House of Commons when agricultural subjects are, or ought to be, discussed in Parliament.

I prefer to strive for something which I believe to be attainable, and to follow—with some modifications—the lines of the proposals circulated to members of Parliament by Mr. Trustram Eve, the secretary of the Farmers' Club.

His proposals differ but slightly from those set forth by the Central Land Association, formed under the chairmanship of Mr. Walter Long, at 20, Arlington Street, in July last.

Briefly, the programme of that association is to strengthen existing agricultural associations, especially chambers of agriculture, by inviting its members, each in his own locality, to devote special attention to this work, and to endeavour to impress on Members of Parliament the wishes of the agricultural community, as focussed by the Central and Associated Chambers.

At election times to urge the adoption of the policy of the Central Chamber and the Central Land Association (which will doubtless be identical) on the candidates on both sides.

To educate the representatives of agricultural constituencies in all that concerns agriculture, and specially to instruct them as to all measures affecting agriculture as they come before Parliament.

The committee of the Central Land Association

embraces well-known men both on the Liberal and on the Unionist side in politics.

Even if, as I believe, the present proposals for a Parliamentary group independent of the party whips is impracticable, it is at least a healthy sign that the Central Chamber and agriculturists generally have awakened to the need for arousing greater interest in their affairs on the part of members of Parliament.

Everyone acquainted with the inner working of the parliamentary machine knows how great an influence is brought to bear by such associations as the Teachers' Union or the Shipping Federation on the legislation of Governments of either party, just as everyone knows that it was not to the Unionist opposition alone that we owe the material modification of the Land Tenure Bill, as it passed through the House of Commons.

It appears to me that, with impending legislation so deeply affecting agricultural interests as that of which we now hear, the moment is specially opportune for a combination of agriculturists.

One thing at least agricultural constituencies should demand: the discussion of the agricultural vote every year, and a black mark should be put against those members representing agricultural constituencies who, without good excuse, absent themselves from the divisions upon it.

I shall be glad to hear from any gentlemen who are willing to join the Central Land Association, with a view to carrying out its objects. The office address is 42, Palace Chambers, Westminster, S.W.—I am, Sir, your obedient servant,

ONSLOW.

7, Richmond Terrace, Whitehall, S.W.,
December 16.

General Notes.

The Borough.

I think we are all in better spirits this week, as during the past few days a more active demand has been manifested. Consumers have made their appearance, and others are expected, consequently merchants have bought to some extent, and as many growers, mindful, no doubt, of their early requirements, are not unwilling to sell, a fair amount of business has resulted. I wish I could say that values had proportionately advanced, but unfortunately this is not the case. It is the low prices that are tempting buyers, and our produce is changing hands at figures that must spell heavy losses to planters. But we may take heart, and look for an improved tone as soon as the holidays are over. I have great confidence that with the new year we shall be able to welcome the commencement of an upward movement. May this expectation add zest to the coming Christmas feast, and dispel the gloom that has too long obscured our industry.

Criticisms.

My editor has recently received a note from one of our esteemed subscribers, who writes:—"I very much appreciate your journal, with the exception of the hop reports, which in my estimation, during the month of August, were most detrimental to the growers' interests. I had suggested that some brewing firm must have unduly influenced your reporter." Being entirely responsible for the contents of this column, the complaint has been referred to me. Having carefully reviewed my reports for August, I must confess that I do not find any part of them that I should desire to correct in the light of subsequent experience. Possibly our friend may consider that I was too optimistic with respect to the then growing crop. Perhaps this may have been open to question at the beginning of the month, but I was guided therein by the information I gathered from many reliable sources. As time passed on, it will be seen that my views were modified, and on August 19 I ventured to predict that the crop would average from 8½ to 9 cwt., giving a total for the estimated area of 45,000 acres, of 380,000 to 400,000 cwt.

The official returns certainly do not come quite up to my lowest estimate, but the average per acre is declared to be 8·33 cwt., and methinks this is sufficiently near to absolve me from any charge of wilful exaggeration or interested motive. The suggestion that my reports are influenced by the interested opinions of brewers is too absurd to be worthy of notice, and I dismiss it without another word. But I desire to add, for the satisfaction of our friend, that it is my constant desire to speak the truth, as nearly as my inquiries from impartial informants will enable me to do so. "Malice will with joy the lie receive, report, and what it wishes true, believe." Whatever bias I have in this matter is in favour of growers with whose trials I have always had the deepest sympathy.

As far as possible I would support and assist our English industry, but I must deal with facts as they arise, and cannot believe that I shall be true to my readers or to myself, if I ignore facts for the sake of a pleasing story. When we come to consider I cannot pretend to be infallible, as I am as liable to error in this respect as any other man. But I trust that my present critic will now give me credit for good intentions, and if he will favour me with any definite objection to my reports I shall be only too glad to hear from him, and to reply to him to the best of my ability.

Hops at Ashford Show.

The hop competition at this show was an especially interesting feature, inasmuch as it included the challenge cup offered by Messrs. Le May to the whole of the hop-growing parishes of England for the best sample, irrespective of district or variety, and also a cup given by gentlemen connected with the hop trade in the Borough for the best-managed sample. For the former there were six, and for the latter ten competitors, including some of the most noted of the Kentish growers. Mr. E. G. Shew, of Bosbury, Hereford, the patentee of the economic hop-drying plant, previously noted in these columns, also entered the field, and, probably to the surprise of the experts, was awarded the honours in both competitions. I understand the rivalry was very keen, Mr. Rogers, who held Messrs. Le May's cup on two previous occasions, running up close. The judges were, however, compelled to give Mr. Shew the preference, not only on account of the excellence of the growth, but also for the splendid management in the kiln. This triumph speaks volumes in favour of the system by which the hops were cured, and I am informed that Mr. Shew's successes aroused much inquiry, and resulted in many orders for the new plant being given in readiness for next season.

The Continent.

There is no need to go into details concerning the recent hop trade in the European centres, as very little change has taken place since my last reports. Pending the near approach of the holidays, the business has been limited, and the general tendency of prices is downward, except for the choice selections, which appear to maintain their previous values.

America.

By a cable message to hand to-day, I am informed that growers are pressing their hops for sale, and are willing to accept very low prices to secure business. Buyers are taking advantage of the depression, which is accentuated by the prevailing scarcity of money, and have bought freely. But my correspondents do not anticipate any improvement in values as the result of these transactions, but, on the contrary, are inclined to predict still further lower prices in the early future. They also refer to large speculative consignments going forward to England without advances—that is, they will be necessarily "dumped" into this market to be sold at any price without reserve. All traders hope that the demand in the new year will be sufficient to grapple with the supplies and prevent the depressing effect they will otherwise produce.

DAIRY.

The Dairy Students' Union.

The first report of the Dairy Students' Union shows that the union has made most satisfactory progress during the nine months of its existence, which is the period covered by the report, it having been decided that owing to the annual general meeting being fixed at the time of the dairy show, in October of each year, the report, statement of finances, &c., should be drawn up to September 30 of each year. When the idea of this institution was first mooted, in December of last year, it was simply thought to form a past Students' Association, in connection with the British Dairy Institute; the promoters, however, after a good deal of consideration, wisely decided that, although originating from the British Dairy Institute, the membership should be thrown open to past dairy students of all dairy schools and dairy departments of colleges in the United Kingdom.

The latter policy was chiefly decided upon, as the dairy industry had no official representation, from the students' standpoint, and it was felt that to form a local body would cramp operations, and limit the result, more or less, to purely social intercourse; whereas sufficient scope presented itself for a society of greater dimensions to undertake work of a useful and educational character.

Subsequent events have fully justified both the formation of the Union and the lines upon which it was framed. The membership list, when first published, consisted of twenty-seven names all told; during the nine months ending September 30, 1907, the number of members increased steadily, and on the date named the total was 155. A most gratifying feature is that the membership includes representatives from all parts of the world, and from almost every dairy college in the British Isles.

A perusal of the statement of accounts shows the total income from all sources to be £30 7s. 6d. This, on the face of it, is quite satisfactory, but when the expenditure is considered, it will be seen that if, on the first year's working at any rate, the income from members' annual subscriptions was alone to be relied upon, the money question would present a real difficulty.

A pleasant feature, however, is that many members have come voluntarily to the rescue, and in view of this the committee is satisfied that the wisest course to pursue for the present is to keep the ordinary subscription at the nominal sum of 2s. 6d., and thus offer no financial obstacle to the enrolment of as large a number of members as possible.

On the whole, the financial position is satisfactory; for, after an expenditure of £28 8s. 2½d., there is a balance in hand of £1 19s. 3½d., in addition to the assets: the estimated value of which amounts to £3 11s. 6d.

It may be mentioned that the objects of the Union are:

(1) To promote social intercourse among dairy students by keeping them in touch with one another, and thus strengthening their interests in the dairying industry generally.

(2) To provide facilities for the discussion of subjects relating to dairying, and to furnish accounts of the doings of old students.

(3) To create and stimulate interest in scientific research and new inventions in the dairy world.

(4) To assist members by bringing under their notice vacancies occurring in different branches of dairying. For this purpose the secretary keeps an employment register, and any member is entitled to place his or her name upon it.

The aims have been fully carried out during the past year, thus making the union of great benefit to all dairy students. The President is Professor F. J. Lloyd, F.I.C.; the Chairman, Mr. C. W. Walker Tisdale; and the Hon. Secretary, Mr. Wilfrid Sadler, Old Basing, Basingstoke, Hants.

Cornwall Dairy Show.

The committee of Cornwall County Dairy Show met at Truro on Wednesday, the Hon. John Boscawen presiding, and revised the proposed prize list. They decided to have classes for Jersey, Guernsey, Shorthorn, and South Devon cows, to be milked and tested in the show; men and women milkers' contests; butter-making for students who have passed through the dairy school, for dairymaids employed in the county, for farmers' wives and daughters, for those not competing in the previous classes, and a champion class for first and second prize winners at the show. Butter-making competitions are also included for girls and boys not above sixteen years of age.

Other classes are for butter, cream, cream cheeses, cheese, bacon, and ham, as well as for goats to be milked and tested in the show and for female kids. It was suggested that there should be classes for poultry trussing and eggs, but it was stated that the accommodation was somewhat limited. However, the Finance Committee are to deal with the suggestion.

It was reported that about £200 had been promised in subscriptions.

Chester Cheese Fair.

Sixteen tons of good average quality cheese were pitched at Chester Cheese Fair, held on Wednesday, when demand was fairly brisk, and a complete clearance was made at the following quotations:—Fine Cheshire, 60s. to 70. per cwt.; medium, 62s. to 65s.; and lower grades, from 60s. upwards per cwt.

At the Poulton-le-Fylde Agricultural Society's annual meeting it was stated that though the entries and the merit of the stock at last year's show was the best recorded, owing to unfavourable weather the gate receipts were £170 less than in the preceding year, when the show was held at Blackpool. Since then members and friends had, however, assisted in giving the society a credit balance of over £41. Next year's show is to be held on August 12. A proposition from the revived Blackpool Society that the two shows should amalgamate was discussed, but no decision was reached.

POULTRY.

Poultry on the Farm.

Following the remarkable impetus given to popular interest in poultry keeping by the rise and extraordinary growth of what is termed "The Fancy," there has been a considerable movement in favour of utility poultry production. It is, however, noteworthy that both these influences have developed to extreme lengths, and that whilst fanciers have invented and perpetrated many curiosities in feathering and contour, appealing more or less to the æsthetical taste, utilitarians have in some directions (as for instance in record laying) allowed their primarily useful enthusiasm to carry them beyond the bounds of practical and profitable production.

There are, however, increasing evidences of a considerable revulsive tendency, and extravagant hopes and statements regarding the all-sufficient profitableness of poultry keeping are now generally giving place to saner ideas and counsels based upon practical experience. Such permanent increase in production for market as has resulted from awakened interest has been chiefly owing to an extension of operations on the part of those to whom these notes are addressed, and to the taking up of poultry keeping by those who have been already engaged in other rural and kindred pursuits. There is also another direction in which production has made a considerable advance, and one which often escapes serious consideration because the produce passes through no market, and its volume can scarcely be estimated even approximately. I refer to the production of poultry and eggs, particularly the latter, for the table of the producer. All such producers have made a very considerable advance, and although the extension of more exact scientific knowledge cannot leave one blind to the fact that their methods are capable of improvement in many particulars, yet one's faith in the general soundness of many of the broad principles of the farm rearer's system remains unshaken. The points of difference and the suggestions for improvement will be thrashed out as they arise.

A FIRST CLASS TURKEY.

Adaptability of Fowls.

Despite this general advance in production, there are many particular instances in which poultry production has been either abandoned altogether, or the fowls have been allowed to remain upon the unremunerative basis of the past. In most cases of this order a little common sense questioning usually elicits the fact that the farmer has not given that attention to the selection of a stock suitable for the situation, soil, and purpose that would naturally influence his selection regarding more important stocking and cropping. He may say that a hen is a hen, but he would not say, with the same inflection of voice and subtlety of meaning, that a cow is a cow; and yet there are differences as great in the one case as in the other, and perhaps greater if we carry analysis far enough.

The keeping of a breed or variety of fowl—not to mention strain—that may be profitable to me might quite conceivably result in a loss in the hands and upon the holding of a neighbour; but apart entirely from the important factor of management in relation to profit, it is very often insufficiently recognised that soil, climate, altitude, aspect, general surroundings, and such influences as unlimited range or confinement to a run or yard are among the conditions which make a particular description suitable or otherwise for the requirements of the individual. It is very well to generalise about breeds, but the breeder of any description of stock knows that it is insufficient for particular purposes, and if through inexperience or bad advice he has stocked (or cropped) ill advisedly, he seeks that which is better suited to his individual circumstances. And in the same way, if he make an unfortunate initial choice of poultry stock, he has learnt a lesson, but has by no means exhausted the resources of domestication in this matter.

Broadly speaking, the nature of fowls is of such a character that they are adaptable to many circumstances and surroundings, as is sufficiently shown in the wide variations observable in the different breeds which have emanated from the common primitive stock, and which has rendered possible their profitable keeping in vastly different climates and situations. Although there may be ideal conditions for poultry keeping, it would be easy to show how experience in selection and common sense in management may largely overcome apparent difficulties.

Limitation of Stock.

Before touching upon more directly seasonable topics, as is the partial intention regarding subsequent notes, something must be said about the custom of indiscriminate and miscellaneous stocking of all kinds of poultry, which is common on so many farms. There are, of course, many circumstances in which most feathered stock may be successfully bred, and if the proceedings are methodically conducted, the continuity of seasonable production materially assists the average profit; but there are many more circumstances in which the endeavour to keep "something of everything" entirely defeats the object by the general reduction (if not entire disappearance) of profit.

In the first place, and following upon the lines of the previous paragraph, it will be obvious on reflection that unless the farm affords the various more or less essential conditions it cannot profitably carry all descriptions of poultry, whose requirements are in many particulars almost diametrically opposed. Although they may adapt themselves to some extent, inequality of profit must accompany equality of conditions. A conglomeration of fowls, ducks, geese, and turkeys will never produce good average returns, although the conditions may be excellent for one description, and probably productive of much more than average results if others were excluded. If, therefore, the situation is found to be favourable for turkey breeding, turkeys should be the chief production, and ducks should be left alone or relegated to a more suitable site—if it exists. Where ducks will thrive, it is probable that fowls will not be kept so successfully, and geese will almost keep themselves where other sorts would starve or necessitate a disproportionate consumption of corn, and so on.

Moreover, apart from the impossibility of one piece of ground being equally suitable for the profitable keeping of birds of all descriptions, there are many evils attending the running together of a mixed stock which militate against the probability of good results from any or all. Watch such a mixed flock at feeding time, and the exhibition will furnish a concrete illustration of the elimination of the weak, if not of the survival of the fit—and the fit in such circumstances will never attain to their fittest condition. As regards breeding in such a crowd, the imperfect maturity is inevitably intensified in the progeny; eggs are not properly or vigorously fertilised, and each succeeding generation shows an increasing lack of vitality, and degeneracy proceeds apace. The habits of the various descriptions are so dissimilar in many ways that interference naturally follows their herding together; and in the above connection it is worthy of note that I have frequently watched a gander systematically prevent fertilisation in the case of fowls, to mention but one instance illustrative of the incompatibility of the mixed system.

Further than this, and apart from the limitations of the situation, there might in many cases be a stricter limit set upon the actual numbers run together in a flock, more particularly as regards the breeding and laying stock. There are very few farmers who might not advantageously eliminate a considerable number of their hens, and thus widen the margin of profit upon the remainder; but to do this successfully there must be an individual knowledge of the birds, such as should be acquired by the observation of the regular attendant upon the poultry. And in respect of fertility, it is not the best plan to run all the hens in one large flock, together with a more or less liberal admixture of cocks and cockerels. Even if the proportion of the sexes be approximately correct as regards the possibilities of fertilisation, the practical results will never square with the theory under such a system. If the flock cannot be easily divided, subdivided, and kept separate, there will be proportionately more profit by a much stricter limitation of the total number, the object of the farmer not being to unduly add to the labour and expense of the poultry department, but to secure the greatest possible profit with such fowls as can be easily managed in conjunction with the ordinary routine.

J. W. Hurst.

Government Aid for the Poultry Industry.

The Earl Carrington as President of the Board of Agriculture and Fisheries received at 4, Whitehall Place, on the 10th inst., a deputation from the Second National Poultry Conference, appointed for the purpose of submitting to his lordship five resolutions passed by that conference and which concerned his Department.

Col. Williams, M.P., in introducing the deputation, spoke as to the great importance of the National Poultry Conference, as in addition to the large numbers attending, was representative of all the leading societies connected with agriculture and poultry-keeping, and included a considerable number of Colonial and foreign delegates. This conference was the most important ever held in connection with the subject. As it was representative of every section, it could voice the claims and feelings of those concerned with what was becoming a great national industry. Col. Williams stated that the value of the eggs and poultry produced in the United Kingdom amounted to more than £11,000,000 sterling.

Professor Percival, M.A., of University College, Reading, seconded the resolution, and urged especially the value of experimental work in connection with poultry-keeping.

Mr. R. Orlebar, Mr. W. Reynolds (secretary of

the Street Depot), and Mr. B. W. Horne (vice-president of the Utility Poultry Club) also urged the necessity for Government assistance to the poultry industry.

Mr. Edward Brown, F.L.S., hon. secretary to the conference, brought forward a resolution asking that steps be taken for the granting of a national diploma in aviculture similar to those given for dairying, and a further resolution asking that the Board of Agriculture should include poultry in their annual returns as was already done in other countries.

Lord Carrington in his reply thanked the deputation for the clear way in which the various points had been brought forward, and spoke as to the very valuable work which had already been done in the development of the poultry industry by the National Poultry Organisation Society and the Utility Poultry Club, as well as other bodies. He called attention to the fact that there was sitting at the present time a Departmental Committee under the president, Lord Reay, which committee would deal with some of the points which had been submitted by the deputation, and he said that as soon as this committee had reported, he would then be in a better position to consider the matter more fully. He expressed his feeling that any development of poultry-keeping as suggested must necessarily be largely in conjunction with small holdings, and he felt that co operation, so far as the marketing of produce was concerned, was necessary to make such small holdings successful. A grant had been made of £100,000 to the Board of Agriculture and Fisheries for the development of small holdings, and he thought that, subject to the approval of the Treasury, some portion of this sum might be utilised to accomplish the objects the deputation had brought before him. He could not make any promise in this direction, but he assured the deputation that the matter should receive full consideration.

Northern Notes.

DOES it not behove the farming community to treat their labourers well at this critical time in the history of the English land question? Allotments and small holdings are going to be at the disposal of the people, apart from the caprice of landowners or the acquiescence of the large farmers.

THE latter are very often dependent—very greatly dependent—upon their skilled workers—foremen and shepherds and herdsmen—who have their heads screwed on the right way. In other words, these men are almost indispensable.

IN some instances they are absolutely indispensable to the farmer; and how will the latter fare, therefore, if, for want of tact and the display of a good tempered interest in his men, the pick of the lot should leave him and begin a small farm on their own behalf? It will be a sorry day for the so-called gentleman farmer should he lose his right-hand man. Married labourers and those serving in the capacity of hinds have in many instances a piece of land—say, an acre—and it is a piece of wisdom on the part of the master to encourage that man to cultivate it at a profit by lending him a horse and a plough for a few hours at a convenient time when work is not pressing on the farm.

THE help is appreciated, and the out-of-pocket cost to the farm is practically nil. Such a small service, ungrudgingly rendered, goes a long way to make a man contented with his lot, and is an inducement to him to remain on the land. A good labourer, shepherd, or foreman who will make his master's affairs of paramount importance is worth shillings a week more than one who simply does a certain amount of work for a certain wage. Such men would be more plentiful if masters were more considerate, and did not treat their labourers much in the same fashion as they would treat a dog.

NO doubt instances of long periods of tenure of one farm are to be met with all over the country. A notable one was referred to in these notes a fortnight since; another might be mentioned, that of Mr. H. Moore and his ancestors, who have lived on the Burn Butts farm for over 300 years. This is on the Londesborough estate. Mr. Moore owned Rufus and other notable Hackneys.

PERHAPS one of the most remarkable tenancies is that of Mr. John Jowett, senr., who died a short time since at Long Marston, Yorkshire, where his family had farmed for six generations, and the holding has now passed to the sons. The farm is situate within the area of Cromwell's and King Charles' operations when the Royalists suffered a signal defeat at Marston Moor. The farm is on the Ingmanthorpe estate. The deceased was a regular follower of hounds, and one of his most deeply-impressed recollections was the hunting accident at Newby Ferry in 1869, when Sir Charles Slingsby and other gentlemen were drowned in attempting to cross the river Ure in a ferry boat. Sir Charles' hunter became restive in mid-stream, and the boat, crowded with men and horses, was overturned.

THE police in the North are very punctilious in carrying out the Swine Fever Orders, and at one petty sessional court a batch of seven persons were fined for having failed to detain and isolate swine for a period of twenty-eight days. One of the defendants is an auctioneer. There is no doubt the Orders are evaded, and that only a minority of those who break the law are "brought to book."

MR. MANSTEAD, of the Brandsby Farmers' Association, successfully discussed the advisability of establishing a farmers' club at Redcar before a meeting of representative agriculturists. Steps were taken after his address to form a club. The Loftus Farmers' Association sent a deputation to the meeting, and it is highly probable that the new club will agree to a scheme of affiliation Thus the work of organisation is going on slowly but with ever-increasing impetus in the North of Yorkshire where the small thrifty farmers are realising the advantages that must accrue.

NATURALLY a good deal of pride is bounding in the hearts of the Leicester men in the North over the championship success at Smithfield, and Mr. E. F. Jordan, of Eastburn, has received many congratulatory epistles on his achievement. The flock has won premier honours there for Longwoolled sheep five times previously—in 1858 and 1859; then again in 1892, 1894, and 1896. Mr. Jordan's is one of the biggest of any pure-bred flock in the North, between 400 and 500 ewes and gimmer shearlings being put to the ram each season.

MR. JORDAN has just lost one of his landlords in Lord Hotham, of South Dalton Hall. We say "one of his landlords," for Eastburn has a dual ownership, the Hothams and the Bosvilles.

THE Leicester Sheep Society has lost one of its founders and original members by the death of Mr. Joseph Thompson, of Wauldby, whose annual sales on his 900-acre farm in the East Riding of Yorkshire always attracted goodly numbers of his neighbours and many friends and customers from distant parts. Mr. Thompson had an excellent flock, and he was also a breeder of high-class Shorthorns. He was the embodiment of geniality—a fine old English gentleman.

THE Driffield district, noted for its many Hackney breeders, provided the champion beast at Smithfield, as well as the champion Longwoolled sheep.

SOME parts of Yorkshire are in a much worse plight than the more northern counties as a result of the excessive rainfall. Streams are in flood, and large tracts of land were temporarily under water. Sheepfolds were transformed into lakes, and sheep had to be led off and put on grass. Shepherding is carried on with the maximum of discomfort. Swedes are backward, but are still growing. Store sheep are coming to market freely, and make as high as 50s. each. Pigs are a shockingly disappointing trade. Feeders are despondent, and stores are practically unsaleable. Pig feed is dear, and no margin of profit is left.

December 20, 1907.

Mr. James Flower has recently shipped for Chili eight exceptionally grand stud rams just under a year old—one of the best lots of the breed that have left this country for a long time, and they should make their mark in their new home and be a credit to the breed.

Poultry fanciers and gamekeepers will be interested in learning that mustard given to the hens in their morning food is productive of an increased quantity of eggs. The discovery was made nearly two years ago by a well-known gamekeeper, who published the results of his experiments, since which hundreds have tried the same plan with similar results. The mustard appears to warm and stimulate the ovary cells. It is, of course, important that good mustard should be used, and naturally Colman's D.S.F. Mustard is the best for this purpose.

West Country Notes

CHEDDAR is famous now for something besides cheese, and the railway returns just issued show how important the strawberry crop has become. From Cheddar itself nearly 300 tons of fruit were despatched during the year; whilst from the neighbouring station of Draycott, a village centre, sixty-five tons were sent off; and from the tiny township of Axbridge, on the other side of Cheddar, 147 tons were despatched by rail.

THIS is in addition to the great quantities which go by road to neighbouring towns, and those taken away by excursionists who make a day or half-day trip by the excursion trains in the hope of getting the fruit fresh from the gardens.

THERE is a prospect, and a good one, of another industry close akin to strawberry growing being developed. An old friend of mine, who succeeded in producing violets all the year round, said that if he could only get an acre or two of the slopes facing south there, he would not need to work very hard to secure a competency with violet growing for the London, Bath, and Bristol markets.

A HUNTING incident in Dorset was a curious one lately—the unearthing of three foxes and about a dozen rabbits from one hole.

QUITE a large crop of cases against farmers for apparently unwitting breaches of the sheep dipping order have been before the courts in the West within the past week or two; and the magistrates are beginning to impose heavier penalties in consequence, arguing that the orders have now been in force long enough to be well known.

A GREAT deal of interest is taken in the West generally in Lord Tredegar's annual show, and many of the best known horses that travel the district shows were to be found competing there.

WHILST little fault is to be found with the condition of the broccoli crops in the far west of the district, the prices ruling are so low, owing apparently to the general abundance of green food for the table, that the returns from the markets are not so profitable as had been hoped for.

OVERHAULING of the potato stocks, and setting out the early sorts of seed for planting with the coming of February, reveals a shortage of the best sorts, and a consequent enhancement of the prices for early seed potatoes.

THE result of the Christmas fat stock sales in the West has not been particularly promising in all cases, though in a few the prices secured have been fairly satisfactory. The weather has been rather against trade, being close and damp, so that things have not looked their best. The mutton trade has been better than that for beef. The next day or two will doubtless see some improvement, and it is earnestly hoped by the farmers who cater for the trade at Christmas time specially, that some fine, bright, cold weather will encourage buyers to purchase. Trade for stores is very dull.

THE chairman of the Berkeley Hunt Society, one of the most progressive in the West of England, had a proud boast to make at their annual meeting a fortnight ago. It was that the whole of the subscriptions, donations, and entrance fees had been returned in prizes. This he believed to be a record for any society in the kingdom, so far as he knew.

THE past season of the Berkeley Hunt has been a very successful one, and the society are not outdone by any in generosity. The forthcoming visit of the Royal to Gloucester in 1909 gave an opportunity for the display of this quality, and not only did the society vote £25 from their own funds, but numerous subscriptions were promised at the meeting by individual members towards the local fund.

ON the same day that the Berkeley Hunt meets, another of the bigger societies of the West—the Mid-Somerset—were meeting for their annual review of the business of the year, and the officials had a nice little surprise in store for the members in a considerably augmented reserve fund and balance in hand. It was anticipated that the year had been a good one, but as heavy expenditure had been undertaken with a view to future benefits accruing, it was not thought the balance would be very great on the year's work. It proved to be over £80, after meeting all charges.

ONE of the features of the meeting was the judging of the class of cheese kept over from

the show at the beginning of September in charge of the society. The report of the judge, Mr. F. Meade, of Langport, who had nothing to do with the original awards, showed that he placed the champions of September again first, though with a different lot of cheese to that which gained them the honour at the earlier show.

MR. MEADE stated:—"Considering the difficulties of the past season, and the cold stormy weather, which have made dairy work more than ordinarily difficult, I consider the cheese that have been before me a great tribute to the skill and technical ability of the various makers. The best Cheddar was never more appreciated than to-day, and it behoves all dairy people to see that more of the best is produced to meet the increasing demand."

HE had also a good word for a Scotch maker, Mr. R. Stevenson, of Boghead, Galston, Ayrshire, whom he congratulated on his success against some of the best English makers.

BY a curious coincidence the Yeovil Chamber of Agriculture were meeting on the same day as the two others, and at both the Somerset gatherings the formation of a strong Agricultural Party in the House of Commons was warmly advocated.

A RUNAWAY cow at Dorchester was the indirect cause of the fatal accident which has removed one of the best-known carriers of the district—Mr. Charles Tanswell, who was employed by Mr. Hammond, of Blandford. The accident will be much regretted by Tanswell's many friends, who are warm in their sympathy with his relatives.

NOTES AND NEWS OF AGRICULTURAL SOCIETIES.

The report presented at the annual meeting of the Doncaster Agricultural Society showed that the finances were £28 less than last year, though the receipts had been 19s. 7d. more than in the previous year. The president, Mr. G. D. C. Yarborough, said the society got poorer and poorer. They still had a balance of £133, and that, he imagined, would justify them in holding the show for another year. Of course, if the time arrived when they had not sufficient in the bank to guarantee them against loss, it would not be safe or fair to anybody connected with the society to attempt to have a show.

At a recent meeting of the Staffordshire Chamber of Agriculture, Stafford, the following resolution was carried unanimously:—"That the Staffordshire Chamber of Agriculture have received with the greatest satisfaction the report of the Organising Committee of the Central Chamber, and respectfully submit the urgent necessity that a committee should be formed without loss of time to create and maintain an Independent Agricultural Parliamentary Party; and, further, the Chamber ask the Central Chamber at their next meeting to proceed at once to appoint a committee (irrespective of any political party) on the broadest possible basis, so as to embrace landlords, tenant farmers, and labourers in one compact body, and that the committee do proceed without delay to organise and maintain such a body."

At the annual meeting of the Barnstaple Union Agricultural Association a letter was read from Mr. R. M. Rowe (clerk) on behalf of Ilfracombe Urban District Council inviting the association to hold their 1908 show at Ilfracombe, where the council would place Hillsboro Park, and possibly an adjoining field, at the disposal of the association, besides the Alexandra Hall in the evening, but the Park could not be closed on a public holiday. Mr. R. B. Sanders mentioned that a committee had visited Ilfracombe to see what site would be available. When the show was established at Braunton, it was understood it would be held also at Barnstaple and Ilfracombe, but they had broken faith with the latter place in not having held it there. The committee considered the ground at Ilfracombe suitable, and were unanimous in recommending that the show be held at Ilfracombe next year. He proposed that the show be held there, and the resolution was carried unanimously. The balance-sheet for the past year showed receipts £466 4s. 6d., and a balance in hand of £32 5s. 8d. The refreshments, last year in the hands of the committee, showed a profit of £5 10s. 2d. Mr. R. Lake, of Ilfracombe, was elected president for the ensuing year.

Essex Notes.

ALTHOUGH we have had a considerable amount of rain this week, no one could wish for better weather than that for three weeks or a month previously. It is not an unusual occurrence to be quite unable to use the Cambridge roll—a capital implement—at all in December, but this year it could be employed capitally, after the plough, upon the clover lays or old grass lays. These latter some occupiers know little about because of the prejudicial feeling they entertain against them, and, as a consequence, will not leave them for a second year. Perhaps a few notes on the advisability or otherwise of leaving grass mixture or clover lays for two years may be useful.

THE best way will be, in my opinion, to give my own experience. [I shall be glad of comments in the MARK LANE EXPRESS from those whose experience has taught them differently.]

THIS last haysel I had more stover on the twelve acres of old lay than the previous year; then it was new, of course. Some may say it was because of the nice rains we had, which were very helpful for our light land. The rains helped considerably, of course, and so did the good coat of manure given about Christmas or January. Always manure both years if possible.

THREE or four years ago the same thing happened then. I had a better mow the second year than the first. Then it was trefoil (a small quantity only), red clover, and Pacey grass; last year the seed was a two-year lay mixture.

SO that my experience of two-year lays is an encouraging one.

THE difficulty of getting a plant of wheat after it is the question, some say. With wet weather there is a difficulty; unless the roll is kept going very often in the spring the plant goes off somewhat, or a good deal perhaps. After old layers are ploughed for wheat—some break them up first, while others leave them for spring oats—roll them well, and, after the drill, rib roll them both ways of the field.

A DRESSING of salt—preferably fish salt—is very helpful in destroying that nasty little fellow, the wireworm, who likes the undisturbed home he has thus had for two years.

A FARMER near me says he has left his fallow land entirely to get on with his sowing, and a very advisable way of going on in a late year, in my opinion.

"HIGHER prices, bigger rents!" I will not be a grumbler, but 36s. for the wheat and 30s. for the barley is not a gold mine by a long way. Oh! how I wish lots of those who talk so loudly about farmers' profits could be made to start in that business at once. If I had my way they should be compelled to give orders to their men the very next Monday that comes; before many months some hotel proprietor on the South Coast or elsewhere would be the better off for their sojourn there in search of health after undergoing the difficulties they knew not of. These folks are good fellows in their way no doubt, but I guarantee it will be a long while before they are anxious to come "back to the land" that did not answer them properly because they did not know how to talk to it. J. B. M.

Questions and Answers.

FARM.

How to Dress Grass Land.—I have two fields of 15 acres of land (heavy), and for the last five years have given it good dressings of horse manure. I mow every year, and allow some horses to run out during the autumn and winter. I do not consider the yields give a sufficient return, considering the amount of manure I put on the land. I cleaned out this autumn a large pool, which yielded six good loads of mud, &c.; I carted it by the side of the horse manure, and mixed it up with 2 tons of lime. Would you advise me to turn and mix all together—that is, the mud, lime, and stable manure; or put the mud and lime in one part of a field and rotten stable manure in another? Would the lime interfere with the stable manure? I may say I have one field of 7 acres left to manure Could you suggest an artificial manure that I could put on to advantage before the new grass begins to grow?—READER.

ANSWER: The manuring afforded by grazing horses in the autumn and winter will not be great. What becomes of the aftermath? Is it grazed by horses? As to the compost formed by mixing pond mud and lime in the proportion of three to one, this will form a valuable dressing, but will be insufficient for more than one, or one and a half, acres. It is never advisable to mix lime with dung, and I advise you not to mix the compost with dung, although there can be little doubt the lime is perfectly dead and has lost all its causticity. You may safely apply the compost and the dung on the same ground if desired, but I think I should apply separately and note the results. As to artificials, it seems to me that your land will probably be much benefited by an application of basic slag, and I should advise you to dress the whole of it with from 6 to 7 cwt. of basic slag to the acre. If any part receives neither dung nor compost, give that part, in addition to the slag, about 1 cwt. of nitrate of soda per acre in the beginning of April. Apply the slag as early as you can before Christmas if possible.

VETERINARY.

Heifer with Warts.—I have a yearling heifer which has got four growths under her belly about 1¾ in. diameter. I think they are what we call warts. They are only growing from the skin, and are not painful when you press them. If you could advise me how to remove them, and with as little suffering to the animal as possible, I should feel much obliged, as it spoils the look of her. And I think now would be a very good time to attend to her, as there are no flies to torment her at this season of the year.—C. H.

ANSWER: Thanks for your lucid description and sketch. We are able to confirm your suggestion that the excrescences are what are called "warts" sometimes "nanberries," "anberries" or "angleberries." Also that they are warts of the pedunculate variety—that is, growths having a narrow neck or attachment. This form of wart is the least difficult of any to deal with, because it lends itself so readily to removal by ligature. This acts by strangulating the growth, or cutting off the supply of blood by which it is nourished, causing it to atrophy, or die and drop off. The ligature material may consist of stout suture silk, button-hole twist, "flourishing" thread, wax-end, or whip cord. The best form of knot is the double-hitch or scaffolder's knot, with the ends left just long enough to take a pull at, as the ligature cuts into the neck of the excrescence. You are right as to the present being the best time to remove such growths, and you would do well to set about it at once.—M.R.C.V.S.

A Splint Question.—Happening to read something about splints in your paper, I thought I would mention a case which has come to my notice. A particular friend had a four-year-old cob which developed a splint at the age of three years. After it had been on about twelve months he got into conversation with a man who had formerly been in a trotting stable in America, and latterly was in the employ of an English trainer of trotters. He said he could take the splint off with a bottle he had. I was very sceptical, and advise I my friend not to let him tamper with it, for fear of causing permanent injury, especially as the cob was not lame; and was greatly surprised on meeting my friend some few weeks after to find the splint had entirely disappeared. I do not think it much improvement, as there is a blemish the size of a walnut, without hairs. The cob, however, is sound and working well.

ANSWER: Many thanks for your interesting note. There is really nothing in it contradictory of the remarks quoted from Fitzwygram's work, which, after stating that "a splint when once fully formed into bone cannot be removed," goes on to say: "The absorption of a portion of the deposit, especially when newly formed, may, however, be resisted and hastened by the use of artificial stimulants." It is not in the least likely that the whole of the deposit was absorbed in the case you describe, and the remains could probably have been detected by careful examination—certainly post-mortem. The sequel, however, is significant, and more than justifies Fitzwygram's caution that "blemishes more serious than the splint are often produced in attempts to remove it." You say: "I do not think it much improvement, as there is a blemish the size of a walnut, without hair." This would attract the attention of many whose notice the existence of a splint would escape.—M.R.C.V.S.

LEGAL.

Ditch Blocked.—I own my farm. I have a field with a 9-in. socket pipe right across this field, then goes under the road through a square culvert, which is full of mud and water, then into an open ditch down a wood, full same as culvert. This ditch has not been emptied for several years. It is filling my 9 in. pipe full of sand, and backing other drains that come into this pipe, and backing the whole lot up. Is it the surveyor of the road or the owner of the wood that I must complain to?—ANXIOUS.

ANSWER: Both the road authorities and the owner of the wood are bound to keep the ditch open, so that the effluent from your pipe can flow. It does not seem to me to make any difference to whom you complain. For preference, I should complain to the surveyor, as he is the more likely to move quickly.—BARRISTER-AT-LAW.

Roof Leaking.—I bought some cottages two years ago, and the roof of one of them is very feeble, and the tenant has complained. Should the roof fall in and do any damage, could the tenant claim any compensation Will you give me a copy of a notice? The agreement is give or take a quarter's notice on any quarter day; must the notice be given before quarter day, or would it be law on quarter day?—G. H.

ANSWER: Unless there was an agreement to keep the roof and outside walls in repair the tenant cannot claim for compensation. Notice should be given before quarter day as follows:—To Mr. ——, I hereby give you notice to quit and deliver up on the —— day of —— 190—, all that cottage and premises [describe the premises] situate at —— in the county of ——, which you now hold of me as tenant. Dated this —— day of ——, 190—, [Signature.]—BARRISTER-AT-LAW.

POULTRY.

Three Fattening Questions.—Would you please tell me (1) if you agree with cockerels being shut up to fatten? (2) How long should they be shut up? (3) What ought they to be fed on?—A. E.

ANSWER: (1) It depends entirely on the age of the birds and whether they have been run on too long to make confinement in the coops of but little use. When cockerels have reached the age of from seven months upwards it is but very little use trying to fatten them, but if placed in fattening coops with a run attached a half to six months old, most excellent results are obtained. (2) They should be hand fed for about a fortnight, and after that crammed for from seven to ten days, but if they go off their food before the end of the fortnight—say at from seven to nine days—then they require a fortnight's cramming. (3) The birds should be fed on ground oats mixed with milk and prepared fat, made into a rather soft state then no water is required for drinking.

SHOWS.

Ashford Fat Stock Show.

With a history extending over half a century, there is much that might be written in connection with the Ashford fat stock show that would be full of interest to our present-day breeders. Many reminders of this unique record of the society were seen at the exhibition—its fiftieth annual show—held on Monday and Tuesday last. Amongst the more striking was the very handsome Jubilee Challenge Cup offered by the Association for the best bullock in the show, this cup being of the value of fifty guineas, and having to be won three times before becoming the absolute property of the winner. Naturally, there was a very keen desire on the part of not only the regular supporters of this show, but others also, to enter into competition for this and the other valuable prizes offered in celebration of its Jubilee.

Cattle.

We have not before us the history of this association in full detail, but it may pretty well be taken for granted that the breed of the champion bullock at this year's show, Mr. T. Wotton's grand Aberdeen-Angus steer, first in its class, &c , at the present show, was a breed not known in the district when the society was first inaugurated. The rn for this honour was, however, well known at that period, for it was a Sussex owned by the president of the association for the current year, Mr. Lawrence Hardy, M.P. The keenness and closeness of the competition for this honour was quite noticeable by reason of the time and care occupied by the judges in arriving at their decision.

Taking the classification in order of catalogue, the Sussex breed comes first, its entry and the number of competitors present was highly satisfactory, its breed cup winner referred to above was a specially good steer, as also were its herd mates that won the rn in the older steer class, and fourth honours in the younger steer class.

Another fine specimen of the breed, Mr. G. Ward's steer, was second in the older steer class. The Earl of Derby, with a very choice specimen, took third honours in this class, and following up this success his lordship's entries won first and breed cup in the older heifer class, first in the younger heifer class, first and second in the younger steer class, and rn in the calf class, a well deserved series of success. Second honours in the two heifer classes went to Mr. W. Cattley for animals bred respectively by the late Earl Winterton and Mr. J. Godman. Third honours in the younger steer class went to Mr. W. S. Horne, and first and second honours in the calf class to two very superior and choice steers owned by Messrs. D. Swaffer and A. J. Hickman.

In the Aberdeen-Angus and Galloway section Mr. T. Wotton's champion steer led in its class, followed by two of its herd mates as rn and hc, and Messrs. W. J. May and Sons' very choice and well-fed heifer as second. Mr. W. W. Berry took first and second honours in the younger class.

Amongst the entries in the four classes for any other pure breed or cross-bred not included in the other section, we found some particularly good Devons, a breed that won first honours in the older male and female class for Messrs. W. J. May and Sons, and second honours in the older male class for Mr. G. B. Cooper.

In the older heifer class the Shorthorns claimed second place with an excellent specimen owned by Mr. J. P. Barnes, and two other very fine animals of the same breed, owned by Sir H E Dering and Mr. R. W. Wood, won the leading position in the younger heifer class.

The calf class was an excellent one, three cross-breds of great promise, owned by Sir H. E. Dering, Messrs. W. W. Berry, and H. Hubble, occupying the three leading positions.

Sheep.

The Kent or Romney Marsh sheep came out in great force, the quality and merit of the entries being remarkably good. Mr. T. Wotton was first and second for wethers, and first and reserve for wether lambs, champion honour and its reserve going to the two leading pens. Mr. C. Gordon Neame was third and reserve for wethers, the Exors. of W. Elvy and the Hon. S. P. Tufton second and third for wether lambs.

In the ewe lamb class Sir H. E. Dering, Mr. C. Gordon Neame, and Lord Hothfield were placed in the order named.

An excellent class of wether lambs, in which the winners were the resultant produce of the Kent and Southdown breeds, afforded excellent examples of the value of the Romney Marsh sheep for cross-breeding purposes. Sir H. E. Dering was first and rn, followed by Messrs. R. Kenward and Rickards and Finn.

Mr. W. M. Cazalet was first and cup winner in the Southdown section for very choice sheep, his lamb entries taking first and second also. Second prize for wethers and rn for lambs went to the Wye Agricultural College.

Pigs.

The pig entry was not a large one, but its merit was good; Mr. E. Ascherson, Capt. S. Webb, Sir H. E. Dering, and Mr. S. Neame were amongst the leading winners.

Wool.

The exhibit of wool was one of the best we have seen for a very long time. Twenty-eight entries were to the fore, and champion honours in this strong contest, together with two first prizes, went to Messrs. L. H. and G. W. Finn. A first prize and r champion went to Mr. E. B. Dunster, two seconds to Mr. R. S. Strouts, and one to Mr. J. E. Quested. The other sections of the show secured full and good support.

Royal Dublin.

In common with shows on this side of the Channel, the entries at the Royal Dublin Society's winter show of cattle, sheep, butter, cheese, honey, grain, roots, and poultry, held at Balls Bridge recently, showed a falling off, for whereas last year's total was 2,030, last week the number was 1,848. Happily, however, there was a substantial increase in the most important of the sections. Fat cattle showed an increase of forty-five and sheep an increase of five, the falling away in entries being largest in the poultry section, which numbered 725 against 808. There was a reduction of eighty-one in the dairy-produce class, the number being 219 this year, as against 300 in 1906, whilst in field produce, including grain and roots, there was a decrease of sixty, the total this year being 549, as against 617 last year.

As to the cattle, the general tone of the animals was better, their being fewer weeds and more useful looking beef animals, but the style and finish of the champions and principal prize winners were hardly so choice or of such a high character as those which appeared for the leading winners during the last three years. If there was anything remarkable to be noted in the progress of fat cattle at this show, it was the ever-increasing influence for the improvement of beef by the Aberdeen-Angus breed.

Mr. M. Frank's in-fed aged Tulloch, which won the first place in its class, carried off the special Paul Vincent prize, as well as the Lord Lieutenant's gold medal, and the *Farmers' Gazette* Cup, the premium championships of the show. It was a fine, plump, deeply-fleshed Aberdeen-Angus, not so well finished in the quarters as winners of previous years, but with plenty of the best quality of meat. Another prominent animal among the in-feds was Mr. Nash's first prize-winner in the younger oxen class. A blue-grey cross-bred Angus. He was very thick and fully fleshed all over, but not so ripe, being younger in years than the champion, which beat him in the Paul Vincent prize, and thus prevented him appearing in the championship. In the younger heifer class for in-feds there was a strong tussle between Mr. Nash's Aberdeen-Angus and the same owner's Shorthorn. The latter ultimately won with his better figure, although the Aberdeen-Angus was by far the riper and plumper beast, and carried a better quality of flesh, if his lines were not so good. Mr. Nash's Shorthorn then appeared as reserve for the championship, and the *Farmers' Gazette* prizes to Mr. Frank's champion.

The Padiham Agricultural Society's next show will be held at Padiham on Thursday, August 13th, 1908.

Trade Notice.—Breeders who have been unfortunate enough to have had an outbreak of abortion in their herds will read with interest pamphlet on the Kynazon Treatment for the Prevention and Cure of Abortion in Cattle. The Kynazon treatment was the discovery of a well-known Scottish veterinary surgeon, who devoted the greater part of his life to the study of abortion. Impressed with the disastrous results to farmers through this dreaded scourge, and favoured with special opportunities for the pursuit of his researches, he made thorough and painstaking investigations in order that he might find out a cure that would be simple and economical, and at the same time certain in its results. The outcome of his labours have been tested in hundreds of cases in the most careful and complete manner, with unqualified success. The Kynazon treatment consists of the internal application of certain powders, thorough disinfecting by means of a liquid, which destroys the germs locally, and of a process of fumigation by means of which the animal inhales the germ-killing air into its lungs continuously, from whence it is taken into the blood, thus insuring complete eradication of the bacillus after a few weeks. This is an entire reversal of the old-fashioned method, the fundamental idea of which was at fault without a doubt. Complete extermination of the microbe is absolutely essential, and this is what the Kynazon treatment effects. The cost of treatment, which is by no means expensive, is given in the pamphlet mentioned, a copy of which can be had on application to Mr. J. J. Forbes, manufacturing veterinary chemist, Denny, N.B.

Judges for the Bath and West at Dorchester.

The following have accepted as judges for the society's meeting at Dorchester on May 27, 28, 29, 30, and June 1, 1908:—

HORSES.—Agricultural—J. T. C. Eadie, The Rock, Newton Solney, near Burton-on-Trent. Hunters—W. A. Harford, Petty France, Badminton. Hackneys—A. Rowell, West Rudham Hall, King's Lynn, Norfolk. Ponies—Rev. E. A. Milne, M.F.H., Chilfroome, Dorchester. Harness and Jumping—R. A. Sanders, Barwick House, Yeovil.

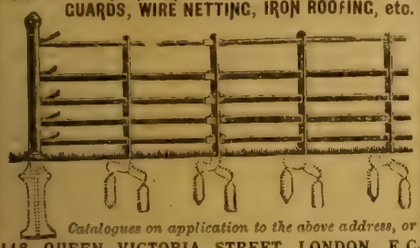
SHOW GOSSIP.

At the last meeting of the Royal Ulster Agricultural Society a draft prize list for the spring show of 1908 was submitted and adopted. The principal alterations and additions are as follow:—Classes for both Clydesdale and Shire geldings and fillies, three years old, to include animals four years old; class for three year old colts, geldings, or fillies, suitable for draught purposes and the property of Ulster farmers, to be open to animals two or three years old; and the class for two years old deleted, a class to be provided in the draught horses in gear section for Irish-bred clean-legged cart horses and lorries (Clydesdale and Shire horses not eligible to compete). It was resolved to delete the rule in this section requiring that all horses shall have been in the possession of the exhibitor at least two months previous to the show. It was also agreed to delete the rule prohibiting first prize-winners in single harness at the 1907 horse show competing at this show. It was decided to provide a new jumping competition for horses that had never won a first prize in any jumping competition.

In the cattle section it was agreed to give two classes for yearling Shorthorn heifers—one for those calved on or before March 31, 1907, and one for those calved on or after April 1, 1907. The milking trial class, for cows of any breed or cross-bred exceeding 900 lb. live weight, to be deleted, and a class for cows of any pure breed, entered in or eligible for entry in their respective herd-books, substituted. The Dudley Challenge Cup, value 100 guineas, to be offered for the best group of Aberdeen-Angus cattle, and the Queen Victoria Challenge Cup, value 50 guineas, for the best yearling Shorthorn bull bred in Ireland and the property of an Irish exhibitor. It was agreed to offer with these cups silver medals commemorative of the wins. It was resolved to delete the rule requiring all animals in milk, except those entered in the milking trials, to be clean milked out after six o'clock on the evening previous to the show, and also to cancel the rule that two-year-old Ayrshire heifers must not calve before January 1 succeeding the date of the show.



In the pig section, two classes to be allocated for Large White Ulster pigs—viz., boar, any age, and sow, any age, with prizes of £5, £4, and £1 in each. Animals entered in these classes must be entered previous to the date of the show in the society's register of the breed.

Fertilisers and Feeding Stuffs.

The Calculation of Equivalent Manurial Values.

There was a good attendance at the ordinary general meeting, held on the 9th inst., at the Surveyors' Institution in London, to hear Mr. George Cawkwell Phillips read his paper on this important subject.

Following the paper a discussion—all too short—took place, in which Mr. Langridge, Mr. Somerville, Mr. Ingram, Mr. Hughes, and others took part.

For tenant farmers it is important that the decisions of professional valuers should be framed on a uniform basis, which should be fair both to the outgoing and incoming tenants, whereas at present differences of method are prevalent.

The paper of Mr. Phillips is a valuable contribution to a subject bristling with difficulties, and will have served a good purpose if it helps to the formation of more uniform ideas.

After some preliminary remarks, Mr. Phillips said:—

The previous discussions on the subject have centred round two different methods of arriving at the value required:—(1) By taking a proportion of the cost price of the feeding stuffs purchased and used on the holding, and (2) by calculating the commercial value of three of the principal manurial elements contained in such food, and taking a proportion of their total value.

Both these methods are equally open to the allegation that they are in some respects haphazard and arbitrary in the way in which the proportions are arrived at. In taking a third, or a sixth, or a twelfth of the cost of the food, no one can assign a reason why, instead of these proportions, eleven-eighteenths or nineteen-thirtysixths or five-twelfths should not be allowed, except that, to the old-fashioned unscientific valuer, it is easier to divide by three or six or twelve.

If the figures be taken in Lawes and Gilbert's tables as revised by Voelcker and Hall, the same arbitrary element is introduced by only allowing half the value of the nitrogen and three-quarters of the phosphoric acid in the food used during the last year, and deducting half the total value for each previous year, in which a crop has been taken.

The merit of both methods is that each system affords a uniform basis for the valuer to work upon, and at least supplies a fixed starting point. But it seems to me that there is a strong and unavoidable element of approximation to the true value in both methods of calculation, which by the very nature of the subject can never be ascertained with the precision to which we are accustomed in dealing with mathematical certainties. Until the general body of valuers become better accustomed to the methods of science, I think it will be advisable to recognise a transition stage, and accord to opposing valuers the right to adopt which basis they deem best in the interest of their respective clients; and where the differences between them cannot be agreed upon, to leave the decision to an arbitrator, who would be free to adopt either basis, or having heard and checked the results obtained by each valuer, could at his own discretion award the amount of compensation on one or the other of the two bases, or on the generally recognised alternative basis of splitting the difference.

It is not like weighing up tea or sugar, gold or diamonds, in each of which operations some allowance has to be made for the turn of the scale; but in this matter, as Mr. Trustram Eve very truly says at the commencement of his paper, "We are dealing with an item of valuation which cannot be viewed, measured, or weighed," and in settling the amount of such valuation the judgment of an experienced valuer of good standing will always have to be relied upon as the final court of appeal—tables, chemists, analyses, and experiments notwithstanding. All these are no doubt valuable in their several places, and calculated to assist the valuer in arriving at his conclusions, but after all it is the well-balanced brain of an individual man that has to ascertain all the facts and in the end to decide the point at issue.

In order to illustrate the mental chaos which prevails at present with regard to the whole question of compensation for feeding stuffs purchased and consumed on the holding, I have tabulated the customary allowances adopted in twenty-eight counties, leaving my hearers to calculate out the money values in each case as compared with those obtained by adopting the basis of manurial value instead of cost of food.

I think the result will clearly prove the need of an act of compulsory uniformity and the establishment of a universal standard of value such as we have in the currency of the realm.

The exact sum to be paid to the outgoer in respect of the feeding stuffs which he has used on his holding is not, under the new Act, to be the cost, or any part of the cost, *qua* cost of what he bought, but it is to be the full value of "something" which he cannot take away with him; "something" which the law recognises to be his property, but which he is compelled to leave behind on quitting his holding.

It is assumed that the outgoer, if he remained on his holding, would be able to get the full benefit of this "something" himself in the growth of successive crops for which this "something" is useful; but because he has to leave the holding and some one else will farm the land, he is prevented from realising the value of his property himself, and the Act provides that the succeeding tenant or ingoer shall pay such a sum as this kind of improvement will be worth to him.

In other words, the outgoer is to be put into the same position, so far as regards this "something" which he leaves behind, as he would have been in had he remained on the holding long enough to exhaust the total value of the improvement himself.

The two questions to be answered are these:—

1. What is the nature of the "something" we are dealing with?

2. How is its money value to be ascertained?

The answer to the first question is that the "something" is a combination of certain chemical elements essential to the growth of plants, such as are usually produced on an agricultural holding.

These elements, combined with other matter, formerly existed in the food purchased by the outgoer and eaten by his live stock; part of the food went to increase the weight of the bullocks, sheep, or pigs which consumed it, and the outgoer had the benefit of this in the prices realised.

The Act does not touch this part of the purchased food. It only deals with that portion which has been transformed from a food form into farmyard manure, and is equivalent to so much artificial manure.

The cost of the food, whether cheap or dear, only affects the profit or loss on the live stock fed and sold by the outgoer. The value of the residue is alone contemplated by the Act as the subject of compensation for which the outgoer has a right to claim, and the ingoer is required to pay.

(To be continued.)

Norwegian Saltpetre.

(Nitrate of Lime.)

We are glad to hear that farmers in this country will have an opportunity of testing the value of the new fertiliser, nitrate of lime.

During the coming season it will be on offer only in small trial lots, but, according to information supplied to us, there will be regular supplies on a large scale in a few years.

For some time a fully-equipped factory has been at work in Norway manufacturing this new fertiliser. It is made by the direct process of burning the atmosphere in a special electric furnace and absorbing the nitrous fumes in water as nitric acid and combining the acid with lime to furnish a commercial product.

It contains about 13 per cent. of nitrogen, equal to about 16 per cent. of ammonia, and the manufacturers claim for it that it fully equals nitrate of soda as a nitrogenous manure, and in cases where the ground is deficient in lime has given even better results.

We may point out that this Norwegian saltpetre (nitrate of lime) is a different material to calcium cyanamide (lime nitrogen), which was introduced a couple of seasons ago on this market in small trial lots, and with regard to which we have several times reported the results of experiments made by different agricultural institutions. No doubt some time will elapse before these new nitrogenous commodities are regularly at the disposal of farmers, but we would recommend our readers who use nitrogenous fertilisers to give them a small trial if they have the opportunity, and to encourage their introduction in the market.

They will in time afford a healthy competition to nitrate of soda and sulphate of ammonia, and tend to keep down the prices of these articles.

Salmon as Fertiliser.

At the United States fishery on Battle Creek 23,000,000 salmon eggs have been taken, and at the Mill Creek fishery, near Tehama, the total take is 16,000,000. After the salmon have been stripped of their spawn the fish are given away, and great numbers are used by farmers as fertiliser for fruit trees.

We are willing to publish replies in these columns to inquiries relating to the quality and use of fertilisers and feeding stuffs.

Cod Liver Oil Condiment.

To the Editor of the MARK LANE EXPRESS.

SIR,—I should feel obliged if you would kindly analyse enclosed sample of Cod Liver Oil Condiment.

I had some packets at first for trial, but the present lot seems to me too dry, with a mouldy sort of smell. The other had a nice fresh smell. Any information as to the same, &c., will oblige—

FAIR.

* Result of analysis:—

Fat	15·03
Nitrogen	2·03
(Equal to albuminoids)	12·69
*Mineral matter	7·80
*Containing sand	0·70

The sample is rich in fat and contains a fair quantity of albuminoids, and the sand is not too high.

Pig Food.

To the Editor of the MARK LANE EXPRESS.

SIR,—I have an offer of some "Pig Food" at £3 7s. 6d. per ton, said to contain

7 per cent. albuminoids.
3 ,, fat.

Carbohydrates not stated.

May I ask whether the whole of the

(*a*) Albuminoids is digestible?

(*b*) If not, what percentage is digestible?

(*c*) What percentage of carbohydrate it contains?

(*d*) The value of the food?

(*e*) Is it suitable for cow feeding?

WATCHFUL.

* Results of analysis:—

Moisture	10·70	per cent.
Oil (fat)	5·17	,,
Albuminoids	7·31	,,
Carbohydrates	39·44	,,
Indigestible fibre	34·53	,,
*Mineral matter	2·85	,,
	100·00	,,
*Containing sand	0·25	,,

The sample is up to the guarantee, but contains a large quantity of indigestible matter, and would need to be fed with care. The other questions put by "Watchful" can scarcely be answered except by very special analysis.

Variation in Quality of Linseed Cake.

When buying linseed cake it is desirable to note carefully the percentage of oil and albuminoid guaranteed by the seller, because the proportions of these valuable ingredients are subject to considerable variation, and affect the relative feeding value of different linseed cakes, even although both may be "pure." As Mr. Kirkham points out in his report, there has been a considerable falling off in the quality of linseed cakes during the past year, and to illusrrate this fact he gives the following analyses of average composition for three years:—

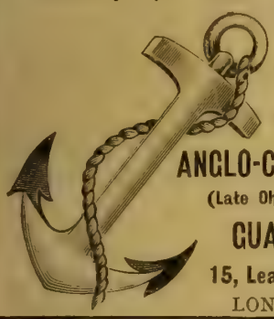
	1903-4.	1904-5.	1905-6.
Number of samples	20	17	23
Moisture	11·15	11·07	10·65
Oil	10·27	10·57	9·52
Albuminoids	32·56	31·90	28·89
Soluble carbohydrates	30·94	31·63	36·75
Fibre	8·81	8·85	7·59
Ash	6·27	5·98	6·60
	100·0	100·0	100·0
Food units	138·0	137·9	132·8

The average quality of the first two years is practically the same, but the supplies of the last year show a very serious diminution in both oil and albuminoids, and a consequent increase in the amount of carbohydrates, the result being that the cakes of the last year are worth about 6s. less money, calculated on their feeding value.

The cause of this deterioration is probably to be found in the increased value of the linseed oil, owing to the great demand for it, and consequent enhanced value.

The increase in the soluble carbohydrates points to the presence of starchy impurities, which the microscope has revealed to be the case in a large number of samples, and this fault is usually an indication of foreign manufacture.

Rice Meal.



At its present market price rice meal is a cheap food. According to the report of the analyst of the County Technical Laboratories, Essex, rice meal (Burmese) of good quality is a very economical food, and suitably fed, is one which is worth the farmer's attention, but the quality should be guaranteed and buyers should have samples tested.

WILLIAM COOPER & NEPHEWS, Berkhamsted, Herts.

THREE RELIABLE CALF MEALS WHICH NEVER DISAPPOINT.

"This 'Cream Equivalent' do smell beautiful, I a'most wish I were a Calf."

1. THE "LANCASTER" CALF FOOD.

13/- PER CWT.; OR, IN FOUR CWT. LOTS, 12/6 PER CWT.
Carriage paid to nearest Railway Station.

This Meal does not swell out so far as the "Milk Equivalent," but is much easier to prepare, and is recommended to those who do not personally see to proper preparation.

2. BIBBY'S "MILK EQUIVALENT."

12/6 PER CWT.; OR, IN FOUR CWT. LOTS, 12/- PER CWT.
Carriage paid to nearest Railway Station.

This Meal swells out splendidly, but needs careful preparation. It is, however, a first-class Meal, and probably the most economic in use of all the Calf Meals in the Market.

3. BIBBY'S "CREAM EQUIVALENT."

15/- PER CWT.
Carriage paid to nearest Railway Station.

Is the latest and most popular of our foods; we believe it is the nearest approach to the ideal that has yet been reached in preparations of this kind.

Our new Circular, "How to Rear Calves for the Dairy," will be sent free of cost to any applicant.

Advertisements, Subscriptions, and business communications should be addressed to THE PUBLISHER, "Mark Lane Express," 3, Wellington Street, Strand, London, W.C.

CHRISTMAS.

A merry Christmas! Once again it is our privilege to express the old, old wish to readers one and all, and we do it in a spirit of goodwill and sincerity. Men come and men go, changes take place in the world around us, but the true spirit of Christmas remains unchanged and unchangeable as years and centuries roll along.

We have Scrooges amongst us, of course, just as they had at the time when Dickens immortalised the character, who deride the spirit of Christmas, and loving to be miserable themselves, they would like everybody else to share their feelings of discontent. Fortunately, however, their whinings fail to upset the spirit of Christmas, when old folks grow young again in the memory of the festive season in the years of long ago. There is little enough time in this age of commercial strife to give way to sentiment, but at Christmas the opportunity comes, and after a big rush in preparation for the Yuletide feast, busy men can afford to let themselves go for a bit and enjoy Christmas in that homely way which is characteristically British.

Some of us have friends and relatives abroad, helping, maybe, to build up agricultural colonies across the sea, and at Christmas they are with us in spirit, and in return our thoughts go out to them, thus keeping up a bond of union which will remain unbroken while the true spirit of Christmas exists.

In accordance with ancient traditions Christmas is a time of feasting, and for a long time beforehand people in different parts of the world are busy preparing for the event. Roast beef is inseparable with Christmas, and during the past few weeks shows and sales have been the order of the day. This is the British farmer's contribution, and though he is complaining a bit because in some cases prices have not been quite up to expectation, still they might have been worse, and he has the satisfaction of knowing that of all the beef in the world there is none equal to that of old England.

The turkey population is considerably less now than it was a few weeks ago, and the same may be said of all classes of poultry, both at home and abroad, for British farmers and poultry keepers do not supply the whole of these commodities for the Christmas fare. In the way of flesh foods we, being producers, receive foreign imports under protest, but stand with open hands to receive the fruits from tropical climates which play such an important part in Yuletide feastings. There is no question of competition where the fruits for the plum pudding, the oranges, bananas, &c., are concerned. So there are no heart burnings, and t may be said truthfully in summing up that the whole world contributes to the menu of a British Christmas dinner.

Notes of the Week.

"The Farmers' Week," as Smithfield Show week is not inappropriately called, is now an event of the past, but pleasant memories will linger round it for some months.

The show, the meetings of the different societies, the congratulations, the many friendly greetings, will remain in our thoughts for a long time.

What are the salient points that stand out?

First: That farmers in general are in a more hopeful frame of mind than has been the case for many years; The prospects are even described as being of a roseate hue.

Second: There is a pronounced feeling in favour of the formation of an Independent Party to represent agricultural interests in Parliament.

Third: That Unions of tenant farmers, on the lines of the successful and energetic Lincolnshire Union, are to be strongly advocated.

Every farmer should be a "unionist" in his district Farmers' Union.

If a sample of the air in the Agricultural Hall had been taken and analysed the chemist would have reported "this sample is adulterated with impurities and is injurious to health."

Questions connected with land tenure have caused difficulties from the beginning of civilisation.

Some Greek inscriptions have been found which, it is said, will throw light on the subject of land tenure in the year 1333 B.C.

It is reported that "the Squire" has taken a small house in the wilds of Dartmoor. Probably he is trying to get "protection" from visitors who dump themselves down at his door.

Or, is it simply a matter of preferential district.

War on the rat tribe has been declared, and the newspapers are clamouring for energetic action.

The difficulty of the campaign arises from the rapid multiplication of the enemy. Rats do not hold by the Malthusian doctrine; a single pair will increase and multiply to 650,000 in three years.

The stage pig in the new play "O'Gruntles" is in trouble, as the Board of Agriculture objects to its having board and lodging within forty yards of a dwelling house.

The Conservative van campaign created considerable interest in the suburbs of London as the numerous vans wended their devious ways to rural districts.

People who are willing to lead the simple life in vans travelling under the greenwood tree at this period of the year must have a keen sense of duty. They are the vanguard of the new enterprise.

More eggs are being exported from this country to America and Canada.

There is talk about an egg-trust. He would be a brave man who would put trust in "shop-uns."

A bullock, whose leg was broken in a railway accident, has been fitted up with a wooden substitute, and seems to be quite comfortable.

The medical students swear that the famous brown dog of Battersea shall not have any legs at all.

Shop Assistant to Old-time Farmer—"Do you prefer a shirt that opens in front or at the back?"
Farmer Giles—"I usually wear them as has one opening at the top and one at the bottom."

Considering the wet summer and the recent heavy rains, who would have thought that the year's rainfall had been below the average?

Yet so it is; the total rainfall this year is 19·04 in., which is 4·39 in. below the average.

The weather during the last few weeks has been trying hard to make up the deficiency.

By the time these lines appear in print, St. Thomas's Day, December 21, the shortest day of the year, will be over.

It's a day associated with curious customs in many parts of the country.

The old bellmen used to go round singing the following old-fashioned rhyme:—

"My masters, this is St. Thomas's Day,
And Christmas now can't be far off, you'll say.
And when you to the ward-motes do repair
I hope such good men will be chose there
As constables for the coming year,
As will not grudge the watchmen good strong beer."

The announcement of the death of the National Potato Society came as no surprise to us—our only wonder is that it lived the time it did.

Formed when the potato boom was at its height, it secured a fairly good number of members, but with the slump the society began to dwindle, and with no very strong aims to call forth support it has somewhat late come to an end.

Lord Durham and Agricultural Legislation.

In the course of a speech at the luncheon held in connection with his annual fat stock sale at Bowes House, Fencehouses (reported elsewhere), on Monday, Lord Durham said he had never posed as an expert on agricultural matters, but he had been studying what he supposed would be considered the best authority upon these matters. In order to be able to try to give them some opinion upon agricultural matters he had studied the words and utterances of Cabinet Ministers, and had noticed that the Minister for Ireland suggested that cattle-driving was not a very terrible performance, because it did no harm to the land, and that the Minister for Agriculture—a fortunate man who had been able to sell some of his land at a very high price to a syndicate who sublet the land for holdings—maintained that small holdings must be used and had all over the empire.

Then again the Minister for Scotland appeared to see no difference between a fat and fertile farm in the South Lowlands and a barren mountain in the Highlands. At the same time, he appeared to think that it required entirely different agricultural legislation for a farm on the north side of the Tweed and that required by one in North Northumberland.

Therefore these various authorities caused him some difficulty in arriving at a proper conclusion as to what ought to be and what ought not to be done for farmers. For his part, he thought he would get on very well without too much legislation. Because if they really were to accept all the statements of their eminent politicians, they could arrive at one conclusion and a very short one, that was not very complimentary to them nor to him. That conclusion was that all landlords and land agents were more or less cruel tyrants and that all farmers were damned fools.

On former occasions he had foolishly boasted that he had very good, intelligent, and friendly tenants, but he would have to withdraw these remarks, and if he was there next year would have to address them in a totally different style. Up to now they had got on very well together. He hoped they might all meet again next year, and during the intervening twelve months he would wish them two things—an absence of bad weather and of legislation; and two other things of a more practical kind—a merry Christmas and a happy deliverance from all their enemies.

Royal Agricultural College, Cirencester.

The winter term of this college closed on Wednesday, when the Principal, the Rev. J. B. McClellan, M.A., conferred the honours on the successful students. In the course of his report on the work of the term, the Principal detailed a list of successes gained by old students, especially mentioning the appointment of Mr. E. J. Cheney, a former diploma student and gold medallist, as one of the Commissioners under the Small Holdings Act of last session, this appointment having been made by the President of the Board of Agriculture. The Principal also made an important announcement as to the future of the college. He said it had for some time past become evident to the governing body and to himself that for the continued and increased usefulness to the college, in accordance with modern requirements, it must extend its system of operations, and that for that purpose it must have the financial assistance of one or more county councils and of the Board of Agriculture, and work in co-operation with those bodies. This would involve a thorough reorganisation of the work of the college and of its management, and though he in the main sympathised with the changes, he could not reasonably be asked to undertake them or expect to control them. He had, therefore, tendered his resignation of the office of Principal, which he had held for more than a quarter of a century, but at the request of the governing body he should continue to hold office to the end of next summer term. Following are the chief awards of the term's class list.

HONOUR DIPLOMA OF MEMBERSHIP.—Alfred Casey, Argentine Republic, 1,573.

SCHOLARSHIPS.—First scholarship, £25: Randle William Carr, Stancombe, Dursley, Glos, 3,516. Second and third scholarships, £10 each: William Girvan Wright, Dunard, Row, N.B, 3,471, Harnam Singh, B.A., Amritsar, Punjab, India, 3,445, equal. Honourable mention for scholarships (in order of merit): Margesson—Lal, H. R.—Peek—Gopal—Khan. Honourable mention for the term's work other than for scholarships (in order of merit): Casey, H.—Corbett—Gilbert—Holmes—Levenfeld—Maddocks—Sowerby—Stewart.

Presentation to Viscount Tredegar.

Viscount Tredegar, Lord Lieutenant of Monmouthshire, was entertained at luncheon at Newport on Tuesday, and presented with an oil painting of himself (a replica of which will be given to the Monmouthshire County Council), a handsome gold cup, an illuminated address, and an album containing the names of six thousand subscribers, whose donations totalled over £3,000. By Lord Tredegar's personal request the bulk of the money subscribed was handed over to Monmouthshire hospitals as permanent endowments.

Sir Henry Mather Jackson, who presided, supported by a distinguished company, said, in presenting the portrait, there was hardly a parish in Monmouthshire that had not provided subscribers to the fund. Lord Tredegar had not only taken part in the Charge of the Light Brigade, but for thirty years he had devoted his ability, time, and wealth to his countrymen.

The gold cup was presented by Mr. C. D. Phillips, and the address and album by Alderman Henry Bowen, of the Monmouthshire County Council.

Lord Tredegar, having briefly responded, presented the chairmen of all the Monmouthshire hospitals with cheques representing in all over £2,000. The presentation of Glamorgan and Breconshire testimonials to Lord Tredegar will take place later.

THE FARMERS' DIARY.

TUESDAY, DECEMBER 24.—Wednesday Corn Markets (except London, which will be altogether omitted) will be held this day and not on the Thursday—Bacon and Sons' Special Sale of Live Stock at Lynn—Sale of Live Stock and Horses at Maidstone

WEDNESDAY, DECEMBER 25.—Christmas Day.

THURSDAY, DECEMBER 26.—Bank Holiday in England—Shrewsbury, Colne, Longton, and Ilkeston Horse Fairs.

FRIDAY, DECEMBER 27.—Mark Lane Corn Exchange Closed—The Baltic Club Closed—Term Market Closed—Rugby Cattle Fair—Nantwich Cattle Fair.

SATURDAY, DECEMBER 28.—The Baltic Club Closed—Term Market Closed—Norwich Great Agricultural Fair, Fat Stock and Stores Market—Ulverston Horse Fair—Leek Cattle Fair—Carlisle Annual Fair for Milch Kine and Stores.

MONDAY, DECEMBER 30.—Newtown Sheep and Pig Fair—Agricultural Fairs at Skipton, Rugeley, and Bridgnorth.

OBITUARY.

Mr. J. Braby.

The death is announced of Mr. James Braby, J.P., D.L., at his residence, Eaton Lodge, Cromwell Road, Hove, in his eighty-second year. The deceased gentleman was formerly a very prominent figure in the agricultural world, his large herd of Sussex cattle at Drungewick Manor, Rudgwick, near Horsham, supplying many prize winners at the Royal Agricultural, the Bath and West of England, the Royal Counties, and several other of the big shows. Mr. Braby was also the inventor of many improvements to agricultural machines, and for one of his inventions—a light traction engine for conveying corn to market and, to be used as a stationary engine for threshing, grinding, and doing the work of a traction and stationary engine combined—he was awarded a medal at the Inventions Exhibition in London in 1885. Mr. Braby, who was a Justice of the Peace for London and Surrey, and Deputy-Lieutenant for Surrey, also a Fellow of the Royal Statistical Society, had been living in retirement at Hove for some years.

CATTLE.

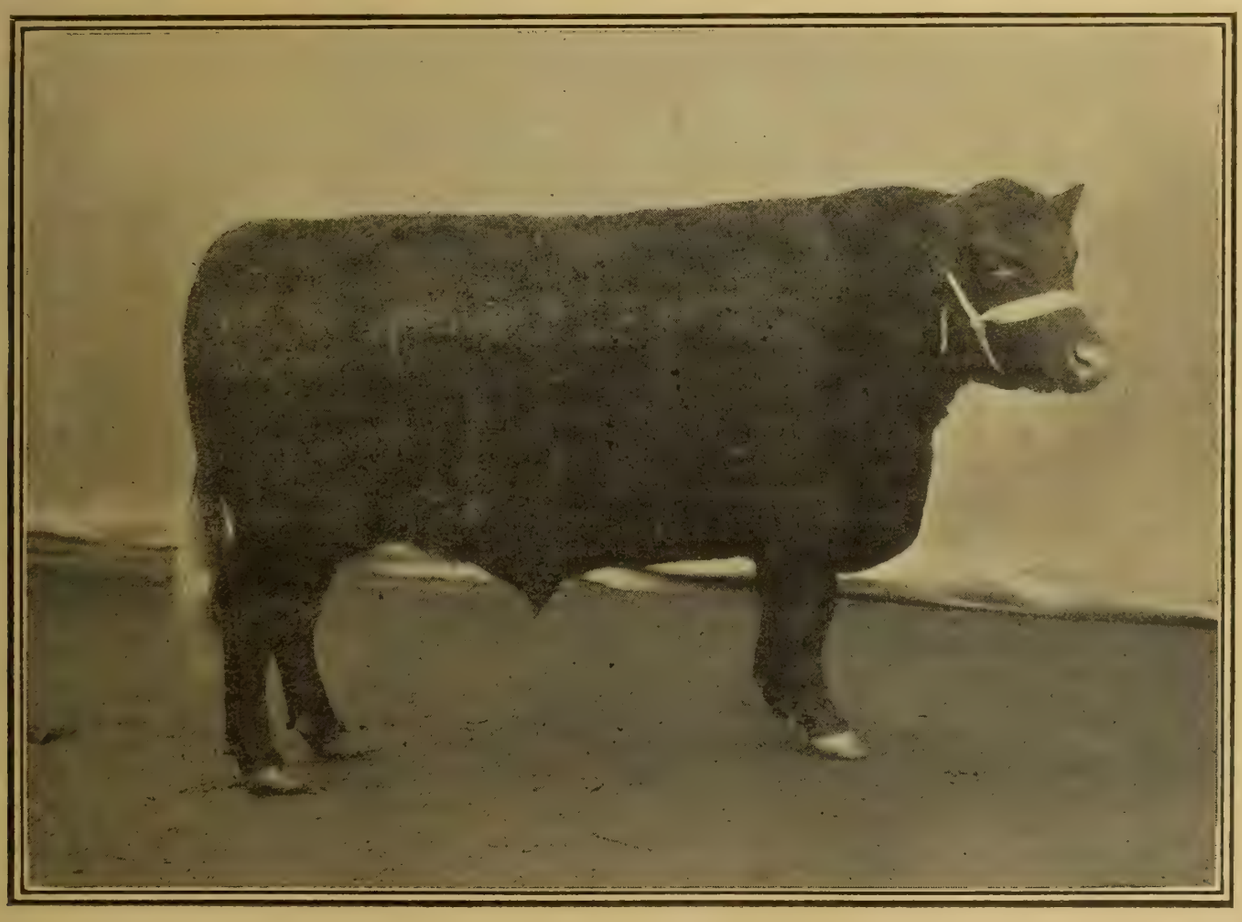
THE VITALITY OF LIVE STOCK.

Whatever may be the ultimate benefits accruing from agricultural associations, there is one feature of their work which is developing towards a state of matters which may defeat the ideal end of their origin. Competition and prize-taking has done a great deal towards improving and developing the breeds at the farm, but of late years the prize-taking craze is likely to make inroads on utility by the overfeeding of breeding stock trained for exhibition. Even around the show ring at fat shows we see specimens being out-prized for being overfed, but seldom do we see a similar decision affect the allocation of prizes at our summer shows, where such are offered for breeding stock, and where many overfed animals are seen. There are many overfed specimens in the breeding classes, especially those of immature years, of all kinds of live stock at agricultural exhibitions, but exhibitors know full well how little chance they would have in gaining the coveted place if they did not have the animals clothed with unnecessary flesh.

There appears to be very little difference between the management of the farmer who has his aim to produce baby beef, and the breeder who wishes to obtain prizes with his breeding flock. It is not surely necessary to exhibit the beefing type of a strain by feeding the young male or female set aside for reproduction to such a degree that endangers their vitality and lessens the chance of that reproduction. The breeding may be from the best strains, but so long as breeders of these animals had from their birth striven to put just as much weight into them at a tender age as possible, so long will degeneracy take place, even in the best and hardiest breeds in the land.

The precaution necessary to keep breeding stock in vigour need not deflect the energy spent in quickly feeding those set apart for the rapid production of beef and use the means which each climate, soil, or breed require. The breeding animal must be allowed, as near as possible, the natural conditions which have perpetuated the race, as domestication will admit. Animals removed from their natural conditions are greatly changed, and even though the change has been gradual it affects their whole stamina and their reproductive systems are more sensitive to change than any other. Scientists who have studied this matter tell us that though domestication induces sterility, it is independent of general health, and is often accompanied by excess of size and great luxuriance. Therefore it is not possible that undue inference may be drawn from general appearance, and the difficulties in stock breeding which some farmers have experienced may be an illustration of this truth. The breeders of young stock for spring sales of bulls and females have in many instances their chief aim in securing a good market; and, therefore, in harmony with the demand, rear and feed them for sale. Judgment of type and a knowledge of the points that give indication of an animal suitable for crossing or line breeding ought to be the buyer's guide, and an overfed animal should be left to the fat stock salesman.

This feeding of breeding stock without attention being paid to constitutional vigour is the tendency of the times, and one upon which a check in some way needs to be put; and no more useful work could be undertaken by our agricultural associations. These impotent males and females are found in every species of animal about the farm. An over supply of fat at an immature age means that the generative organs have been prevented from making full and perfect development. This catering to the demand of fat breeding prizes and the giving of prizes on the same lines will ultimately bear fruit, as loss of vitality, whatever may be the general appearance, gives decided chances to the inroads of disease, and may be one of the reasons which the bovine species are showing, meantime, in this tendency towards inherent disease.



Abundant evidence can be gathered of the truth of this law in nature in the vegetable as well as the animal kingdom. Plants as well as animals are rendered impotent by the same unnatural conditions. A forced plant, like a forced animal, is weak in constitutional vigour, and Nature, though apparently cruel in her actions towards weaklings, gives many lessons to the farmer, and the necessity of maintaining vitality and robustness of health in the products of the farm is not the least. Horticulturists find that many species of plants, when highly cultivated in unnatural conditions, fail to flower, and therefore fail to reproduce themselves. They have to subject them to a treatment akin to the "survival of the fittest," as found in Nature, which has carried them down to us for our use.

Thus farmers and breeders in their desire to produce animals or plants for a special purpose, but more especially to meet public fancy and persist on the same lines, will one day be awakened by Nature interfering with the work in wiping out the weaklings.

It is obvious, then, that if undue attention is paid in regard to what might be termed the minor points in live stock—such as colour, style, or particular type, even to excessive milk production in cows—that the abounding vitality which Nature demands will be overlooked. Perhaps it may be necessary to breed to a certain extent in these lines in order that the farmer may take the needful revenue from the land, but when such extreme measures are extended to animals set apart for breeding, then Nature will lodge her protest. The overfed sire is, no doubt, one of the chief causes of unfertility among mares, and great loss is occasioned by the number who annually fail to become productive.

The poultry yard is not exempt from influences at work through the domestication of the species there. Hens bred up to producing record-laying strains are often of very low vitality. This is seen in striking contrast to the fertility of wild birds that rarely have an unfertile egg. Even a barnyard fowl, whose natural instinct leads her to seek a nest away from the noisy farmyard, will hatch her full complement of chicks, and they will be more robust in constitution than the well-nurtured in the artificial nest. Thus Nature's abundant storehouse will always yield up its riches to man if he adopts Nature's plan and studies the laws which have prolonged their existence to his benefit.

JAS. HENRY.

The Crossbred Steer Tochineal Charlie, winner of First Prize at the recent Smithfield and Birmingham Fat Stock Shows. It was exhibited by Mr. W. Dunn, Catfoss House, Sigglesthorne, Hull, but was bred by Mr. J. Robb, Cairnandrew, Banff, its sire being Loyalist and its dam Gammock. Its age on December 1st was 2 years 11 months 2 weeks 4 days, and it weighed at Birmingham 17 cwt. 1 qr. 12 lb., or 16 lb. less than at the Smithfield Show.

The Shorthorn Society's Prizes in 1908.

The chief item of interest at the last council meeting of the Shorthorn Society was the adoption of the General Purposes Committee's recommendation of offering the following prizes in 1908, the total value of which amounts to £1,010:—

Champion Prizes.

Royal Agricultural Society of England.—Two

champion prizes of £30 each for the best male and best female Shorthorn.

Highland and Agricultural Society.—Two champion prizes of £25 each for the best male and best female Shorthorn.

Royal Dublin Society.—A champion prize of £20 for the best yearling Shorthorn bull, bred in Ireland.

Bath and West of England and Southern Counties Society.—A champion prize of £10 for the best Shorthorn bull.

Welsh National Agricultural Society.—A champion prize of £10 for the best Shorthorn bull.

District Prizes.

For the best Shorthorn bull calved in 1907, located in the following districts:—

ENGLAND AND WALES.—Twenty-eight district prizes of £10 each. The names of the shows at which the prizes will be awarded are given in parentheses:—Beds., Herts, and Middlesex (Bedfordshire). Berks, Wilts, and Hants (Royal Counties), Cambridgeshire and Essex (Essex), Cheshire (Cheshire), Cornwall and Devon (Royal Cornwall), Cumberland (Cumberland), Derbyshire (Derbyshire), Durham (Durham), Gloucestershire and Monmouthshire (Gloucestershire), Herefordshire and Worcestershire (Herefordshire and Worcestershire), Isle of Man (Isle of Man), Lancashire (Royal Lancashire), Leicestershire and Rutland (Leicestershire), Lincolnshire (Lincolnshire), Norfolk and Suffolk (Suffolk), Northamptonshire and Hunts (Northamptonshire), Northumberland (Northumberland), Nottinghamshire (Nottinghamshire), Oxfordshire and Bucks (Oxfordshire), Shropshire (Shropshire and West Midland), Somerset and Dorset (Somersetshire), Staffordshire (Staffordshire), Surrey, Kent, and Sussex (Tunbridge Wells), North Wales (Denbighshire), South Wales (United Counties), Warwickshire (Warwickshire), Westmorland (Westmorland and Kendal), Yorkshire (Yorkshire).

SCOTLAND.—Four district prizes of £10 each:—Argyll, Perth, Fife, Kinross, Clackmannan, Stirling, Linlithgow, Dumbarton, and Renfrew (Stirlingshire Agricultural Society's Show) Ayr, Wigtown, Lanark, Dumfries, Kirkcudbright, Edinburgh. Haddington, Peebles, Berwick, Selkirk, and Roxburghshire (Border Union Agricultural Society's Show). Elgin, Banff, Aberdeen, Kincardine, and Forfarshire (Royal Northern Agricultural Society's Show). Inverness, Nairn, Ross, Sutherland, Caithness, and Orkney (Northern Counties Agricultural Society's Show).

IRELAND.—Four district prizes of £10 each:—Connaught (Hollymount Society's Show). Leinster (Royal Dublin Society's Show). Munster (County Cork Agricultural Society's Show). Ulster (Royal Ulster Agricultural Society's Show).

The regulations applying to bulls competing for the Shorthorn Society's district prizes are as follows:—

(1) All bulls competing for these prizes must be the *bona-fide* property of the exhibitor, residing in the district for which the prize is offered, and such bulls must be there located from the time of entry until the show, and entered in the special classes provided for these prizes, and in the ordinary classes for which they are eligible at the shows where the society's prize is awarded, and have been calved in the year 1907.

(2) All bulls must be eligible for and entered in Coates' Herd Book, with a registered number, or their pedigrees sent for such entry previous to the show. Note.—The entry as "produce under dam" will not be sufficient.

(3) No bull to be allowed to take more than one district prize offered by the Shorthorn Society.

Prizes for Pedigree Shorthorn Dairy Cows in milk.

At the shows of the undermentioned societies for the year 1908 a prize of £10 will be offered as a first prize in a special extra class for pedigree Shorthorn dairy cows in milk, four years old and upwards, the societies named to offer in such class a second prize of £5.

ENGLAND AND WALES.—Bath and West of England Agricultural Society, British Dairy Farmers' Association (in this case for best animal exhibited in pure-bred Shorthorn class gaining most points on inspection and milking), Cheshire Agricultural Society, Derbyshire Agricultural Society, Durham Agricultural Society, Royal Counties' Agricultural Society, Gloucestershire Agricultural Society, Hereford and Worcestershire Agricultural Society, Leicestershire Agricultural Society, Northumberland Agricultural Society, Penrith Agricultural Society, Royal and Central Bucks Agricultural Society, Royal Lancashire Agricultural Society, Shropshire and West Midland Agricultural Society, Somersetshire Agricultural Society, Staffordshire Agricultural Society, Norfolk Agricultural Society, Tunbridge Wells and Southern Counties' Agricultural Society, United Counties' Agricultural Society, Warwickshire Agricultural Society, Westmorland and Kendal Agricultural Society, Yorkshire Agricultural Society.

SCOTLAND.—Border Union Agricultural Society, Royal Northern Agricultural Society, Strathearn Agricultural Society.

IRELAND.—Royal Dublin Society (£15) (this society to offer a second prize of £10, and a third prize of £5), County Cork Agricultural Society, Hollymount Agricultural Society, North-West of Ireland Agricultural Society, Royal Ulster Agricultural Society.

The above prizes to be offered in a special extra class for pedigree Shorthorn dairy cows in milk, four years old and upwards on the date to which the ages are calculated for the show at which the prize is offered, eligible for, and entered in Coates's Herd Book, or pedigree sent for such entry previous to the show. Such cows to be clean milked to the satisfaction of the stewards at six o'clock on the previous evening, and to be milked in the ring on the first morning of the show in the presence of the judge, who shall see the milk weighed, and any cow that does not yield up to the following standard shall not be awarded a prize:—

Cows having calved within three calendar months of the first day of the show, 25 lb. of milk. If calved more than three calendar months from the first day of the show, 20 lb. of milk. No animal having once taken one of these prizes is eligible to compete again the same year.

The Royal Show.

The prizes for Shorthorn cattle offered by the Royal Agricultural Society in 1908 will be increased by the addition of the following prizes offered by the Shorthorn Society. Two extra classes for bulls with prizes £10, £6, £4 in each class. A class for Shorthorn heifers in milk, calved in 1905, with prizes £10, £6, and £4. Also two classes for pedigree Shorthorn dairy cows in milk, viz.: Cows in milk, four years old and upwards, &c., £10, £6, £4, and cow in milk, four years old, £10, £6, £4, such cows to be entered or eligible for entry in Coates's Herd Book; also £5 to the breeders of the first-prize animals in eleven Shorthorn classes. These prizes being in addition to the two champion prizes of £30 each, offered by the Shorthorn Society for the best male and best female Shorthorn exhibited.

At the same meeting a letter was read from the Royal Agricultural Society with reference to the Shorthorn group prizes, the conditions for which were settled at the last meeting of the council. The Royal Agricultural Society suggested that there should be two group classes, and if the Shorthorn Society agreed they would contribute £10 if the Shorthorn Society would contribute the other £10 for the extra class, and after considerable discussion it was resolved to have two group classes with the following conditions:—

(1) "Group class for a bull of any age (the property of, but not necessarily bred by, exhibitor) and three of his offspring, the property of the exhibitor, not less than six months old on the day of entry.

(2) "Cow (not necessarily bred by exhibitor) of any age, and three of her produce in direct line of descent on the female side, the property of the exhibitor."

Copies of these conditions were ordered to be sent to the Royal Agricultural Society.

Mr. Peter Dunn Gives up Exhibiting.

Mr. Peter Dunn, of Pasture House, Sigglesthorne, Hull, the veteran feeder and exhibitor of Christmas fat cattle, who, it will be remembered achieved the proud distinction of winning the championship at the London Smithfield Show with his Shorthorn steer Gentleman John, has informed a representative of the *Yorkshire Herald* that he does not intend to show again.

"I have reached the height of my ambition," said Mr. Dunn, "in winning the championship at London, and I don't intend to show again." This decision, as our contemporary remarks, will be learned with regret in the agricultural world, in which Mr. Dunn deservedly holds a high place, but it is to be hoped that, if he adheres to his intention, he will continue to take as keen an interest in the leading Christmas shows as hitherto, and figure in the ring, if not as an exhibitor, as a judge.

Sale of Christmas Cattle and Sheep at Penrith.

The annual Christmas two days' prize shows and sales of fat sheep and fat cattle held by the Farmers' Auction Co., Ltd., took place in the Agricultural Hall, Penrith, with the sale of sheep, and proved most successful. This is the first year prizes have been offered since the combination of auction mart proprietors in the county of Cumberland to discontinue prizes for fat stock at Christmas was entered into three years ago. This agreement expired at Martinmas last, and as it was not renewed prizes have been again offered. There was a record entry of prime sheep totalling nearly 7,000, which comprised the lots for the first day, and it is believed that this is also a record for a fat stock sale in Great Britain. All the available accommodation of the mart was taxed to the uttermost, and temporary pens were erected on any spare premises, and there was a magnificent display in all sections of the very choicest sheep suitable for Christmas requirements from some of the most noted feeders in the North of England. The work of judging was commenced at ten o'clock, and the awards were expeditiously made by the appointed judges. Though there was strong competition in all the classes the judging of the champion prize for the best pen of ten or more sheep in the show produced a keen struggle. Mr. John Gill showed a pen of tup hoggs, Mr. William Robinson, Moorhouses, a pen of Cheviot shearlings, and Messrs. T. Graham, Kirkby Thore Hall, T. Wilson, Old Hall, Plumpton, and Mr. Cowin, Brown Howe, each showed Greyfaced shearlings. Eventually the coveted ticket was awarded to Mr. Wilson, Plumpton, with Mr. Graham, Kirkby Thore, reserve. The champion pen was purchased by Mr. George Baxter, of Leeds, for 72s., and the reserve pen by Mr. A. Graham, Abbott Lodge, for 66s. 6d.

The market opened with the sale of ewes, but these, in accordance with anticipations, met a dragging trade. A change was experienced when the shearling sheep were on offer, trade for these being extremely good and the demand keen.

The Blackfaced and Herdwick wethers were rather hard to sell, and tup hoggs appeared good weight for the money, but half and threequarter-bred and Greyfaced hoggs were in great request, many local farmers being strongly in evidence buying for further keep on turnips, which have much improved during the last few weeks.

The sale concluded with the Blackfaced hoggs, which were, generally speaking, short of finish, but met with a fair demand.

The business was brought to a successful finish at six o'clock, thus concluding one of the most successful sales ever held at the Mart, and with only a very small proportion of unsold lots.

The awards and prices were as follows:—

Twenty Cheviot Ewes: 1, T. Heskett, 36s. 9d.; 2, S. Turner, 37s.; other entries sold at from 29s. to 31s. Twenty Blackfaced Ewes: 1 and 2, G. Lowis, 34s. 6d.; others 21s. 3d. to 27s. Twenty Herdwick Ewes: 1, J. Stephenson, 22s.; 2, T. Dixon, 23s. 9d.; others down to 17s. 3d. Twenty Ewes, any breed: 1, W. Robinson, 48s. 6d.; 2, H. Atkinson; others 21s. to 41s. 6d. Twenty Sheep, suitable for butchers' purposes: 1, Messrs. Elliott, 45s. 6d.; 2, W. Harrington, 44s. 6d.; others 37s to 45s. 6d. Twenty Cheviot Shearlings: 1, W. Robinson, 55s.; 2, C. Armstrong, 49s. 9d.; others 29s. 3d. to 44s. 9d. Ten Cross (Wensleydale or Leicestor) Shearlings from Blackfaced or Herdwick Ewes: 1 and champion, T. Wilson, 72s. and 60s.; 2, Mrs. Cowin, 51s. 6d.; others 32s. to 63s. Ten Shearlings, any breed: 1, T. Graham, 66s. 6d.; 2, T. Wilson, 60s. 6d.; others from 25s. 6d. to 32s. 6d. Thirty Herdwick Wethers: 1, H. Atkinson, 29s.; 2, the Earl of Lonsdale, 34s. Thirty Highland Blackfaced Wethers: 1, Colonel Markham, 36s. 6d.; 2, T. Hodgson, 35s.; others down to 29s. 6d. Thirty Cheviot Wethers: 1, T. Heskett, 42s.; 2, C. Tallentere, 37s. 3d. Thirty Wethers, any breed: 1, Messrs. Elliott, 49s.; J. Blackett, 48s. Twenty Tup Lambs: 1, J. Gill, 51s. 6d.; 2, Mrs. Bellas; others from 26s 6d. to 43s. 6d. Twenty Lambs, any breed (Wether or Gimmer): 1, T. Graham, 44s. 3d.; 2, W. Teasdale, 40s. 9d.; others from 26s. to 43s. Twenty Cross (Wensleydale or Leicester) Wether Lambs from Blackfaced or Herdwick Ewes: 1, J. Telford, 39s. 3d. Twenty Blackfaced Wether Lambs: 1, J. Slee, 26s.; 2, J. Blaylock, 22s. 3d.

The second day's sale was confined to fat cattle, 460 head being forward. The wet weather was against trade, and though bidding was brisk, prices were about £1 per head down from last year. There was a large attendance of buyers, and very few animals failed to find purchasers. The awards and chief prices were:—

Fat bull—1, W. Nicholson, Highgate, £29; 2, T, Lowthian, Winder Hall, £30; 3, T. Preston, Edenhall Grange, £24 10s.; others to £26 15s. Shorthorn cow—1, J. Kitchen, Temple Sowerby, £21 15s.; 2, W. Armstrong, Monk's House, £20 5s.; 3, P. W. Parkin, Sharrow Bay, £18 10s.; others to £23 12s. 6d. Cow or heifer of any breed other than Shorthorn—1, Messrs. Rawes, Stainton, £25; 2, the Earl of Lonsdale, Whale Farm, £23 5s.; 3, J. Millican, Johnby, £20 17s. 6d.; others to £20 7s. 6d. Shorthorn heifer—1 and 3, J. Nelson, Thornbarrow; 2, G. Bainbridge, How Hill. Shorthorn steer—1, Messrs. Lazonby, Plumpton; 2, R. H. Thompson, Nunwick Hall; 3, H. Turner, Tirril. Steer of any breed other than Shorthorn—1, J. Atkinson, Little Salkeld; 2, the Earl of Lonsdale, Lowther Castle; 3, J. Atkinson, Little Salkeld. Four heifers—1, W. Harrington, Kelbarrow; 2 and 3, J. Howe, Lingstubbs. Four steers of any age—1, J. Woof, Great Strickland; 2, Messrs. Elliott, Sewborwens; 3, A. Graham, Abbott Lodge. Four Irish cattle—1, W. R. Siddle, Honeypot.

The York Christmas Horse Fair was held last week, and a fair number of animals were disposed of, but the bulk of the trade is now passing into the auction sales, and few buyers are relying on the fair. Several strings of useful Irish Hunters were brought over by well-known breeders, and there was a fair demand for good Hunters, saddle horses, and half-bred hacks, which made up to 70 guineas, and in a few cases 80 guineas was reached. There was a good supply of town horses, and good, useful draught horses met with a fair demand at 30 to 60 guineas.

HORSES.

The Shire Horse Trade—Some Figures—Some Averages—A Reason for the Good Trade—The Foreign Trade—The Hunt Class at the International Show.

The Shire Horse Trade.

ONE of the facts which stands out as remarkable in the history of horses during the year which is fast drawing to a close is the development of the Shire horse trade. Last year's average for sales of high class horses was indeed a good one, but it almost sinks to insignificance when compared to that of the season which came to a close on the 7th of last month at Mr. Oakley's at Dewstow. At the eleven most important sales in 1906, 546 horses were sold at an average of £65 1s. 6d., the aggregate reached being £35,537 3s. At ten sales similar in character this year the aggregate was £51,945 17s. for 527 horses, or an average of £98 11s. 6d. An increase of £33 10s. in the average of high class sales is all the more noteworthy, following as it does on a year in which trade was good. For it must be remembered that though the average for 1906 fell short of that of 1905 by £7 2s. 6d., this was due to the exceptional number of foals which were sold that year at the autumn sales.

Some Figures.

THE highest price realised in 1906 was 510 guineas, which was given for Mr. Forshaw's Sussex Bluegown, the champion mare at the Shire Horse Show. Next to her in the price list was

The Shire Stallion Lymm Grey, winner of the First Prize for Yearling Stallions and the Cup for the Best Young Stallion at the Shire Horse Society's Show this year. Lymm Grey, whose sire was Severn Bradford, dam Darling, was bred by, and is the property of, Mr. J. Gould, Crouchley, Lymm, Cheshire.

Mr. R. W. Hudson's Danesfield Feathers, for which Mr. F. E. Muntz gave 450 guineas. Third place was occupied by Mr. Simpson Jay's Johnson Fairy Queen which realised 400 guineas, and then came Sir Alexander Henderson's Twilight, and the late Mr. P. Stubs' Blarsdon Barrier, which made 310 guineas each. The five highest priced Shires of 1906 made a total of 1,980 guineas, or an average of £415 16s. The highest price this year was made by his Majesty's Ravenspur, who, it will be remembered, was a London winner and who realised the handsome price of 825 guineas, the buyer being Lord Winterstoke. Second on the list is Mr. J. Measures' two-year-old colt by Tatton Friar, who was sold at the London sales for 660 guineas. Another colt, Mr. Hubbard's, by Lockinge Forest King brought 610 guineas, and Mr Holford's colt by Calwich Blend made 600 guineas, whilst Sir P. A. Muntz's well-known Dunsmore Fuchsia, who was the London Junior Champion in 1905 and 1906, brought 520 guineas, which is 10 guineas more than the top price of last year. Altogether the five made 3,215 guineas, or an average of £675 3s. It is noticeable that whilst only one stallion was in the list last year only one mare was in it this year, and she, good as she undoubtedly is, at the bottom of the list. There can be no surer sign of improving trade than the big prices made for stallions, and especially for young stallions, and this demand was especially noticeable in the sale season of the present year.

Some Averages.

PERHAPS the first sale one looks to for a comparison of averages is that held in the Agricultural Hall during the last two days of the Shire Horse Show. It is especially reliable as a guide, for a large number of stallions and mares are sent and those which are passed through the ring may be looked upon as fairly representative. And here we find a great improvement on last year, when the 110 lots sold realised an average of £93 6s., with the top price 510 guineas. This year ten more horses were sold, and the average increased to £106 11s., whilst the top price was 660 guineas. The highest average at a private sale in 1906 was made by Mr. Simpson Jay's stud, which was sold at Peterborough early in the year; the average was £116 8s. for ten lots, a handsome average enough, but far short of Sir P. A. Muntz's average in February last, which heads the list with £149. Other three private studs beat the three figures, viz., Mr. Everard's, which made an average of £141 5s. for thirty; His Majesty's, which made an average of £124 for forty-five; and Mr. R. W. Hudson's, which averaged £111 for twenty-seven lots. The same proportion is kept up if we look at the lowest averages in the most important sales of the year. That for 1906 was £35, which was made for Mr. E. N. Gooch's stud, which numbered thirty; the lowest average this year is Messrs. R. and F. Whitehead's—£54 for thirty-nine lots.

A Reason for the Good Trade.

SUCH a rise of prices in a time which may fairly be described as a period of prosperity naturally makes one look for a cause; and this time I think we have not far to seek before we find one. There can be little doubt but that the spirited action of His Majesty and Lord Rothschild in sending over to the great American shows some of their best horses has given a great fillip to the Shire horse trade in America. American breeders were given a chance of seeing a class of horse such as very seldom came in their way. Some few might see such horses on their visits to England, but to the great body of American breeders there can be but little doubt that the King's and Lord Rothschild's horses came as a revelation. The spirit of rivalry was stirred up; men were anxious to breed such horses, and the consequence has been that they have bought freely of the best that came in their way, provided that the best reached a high standard of merit. There is another element to be taken into consideration which may undoubtedly have an effect on the fluctuations which take place at the great auction sales from year to year. In one year there may be two or three exceptionally fashionable studs sold, studs of which some of the horses have recently taken the highest showyard honours; and, of course, at sales of this kind the competition is keener than at an ordinary weeding-out or dispersal sale. It may, perhaps, be argued that with such studs as His Majesty's Sir P. A. Muntz's, Mr. Everard's, and perhaps one or two others in the list, there was sure to be an increase in the average all round. But even if this be allowed it is not sufficient to account for the sharp rise in the price of Shire horses which has taken place during the present year. There is evidently a greater demand and a better market for high-class Shire horses, whatever may be the case with third and fourth rate heavy horses.

The Foreign Trade.

IT is the foreign demand, and more especially the American demand, which has had such an effect on the Shire Horse market, and should anything take place to reduce that demand we should soon have a shrinkage in prices, for it seems scarcely likely that any other country will take our Shire Horses to the extent that America has been doing during the present year. That there is any likelihood of a serious falling off in the trade with America in the immediate future I do not think. At any rate, if there is a falling off it will not be from the same cause as when the last boom came to such a sudden stop. Then, it will be remembered, indifferent horses were sold at not very reasonable prices, and when buyers were disappointed with the results of their purchases, the natural reaction took place. Both English breeders and American buyers have learnt a good deal since the eighties, and such a mistake is not likely to occur again. Of course, the brisk American trade makes English buyers keen, and keeps home prices up. At the same time it must not be forgotten that there is a certain amount of speculation in making special provision for the foreign market when prices rule as high as they do at present.

The Hunt Class at the International Show.

ALREADY the International Horse Show, which will be held during nine days in June, is exciting notice, and comment, and criticism, and there has been some hopes expressed that the leading English hunts will be represented in the class for the best three horses from one hunt establishment, to be ridden by the hunt servants. Everyone has a right to express his opinion, and I unhesitatingly hope that no English master of hounds will send his horses on such an errand. Masters of hounds have sufficient for their horses to do without sending them up to a show, which after all has a good deal of the circus element about it, and hunt servants ought to have plenty to do at home in June. In my opinion the class can well be done without—it does no good to breeding, and I am thankful that no English hunts were represented in it last year. We do not want to see our historic English hunts competing in such classes, and forming a spectacle for a gaping London crowd.

THE LOOKER-ON.

Horse Poisoning.

A very interesting article on "Horse Poisoning" recently appeared in the *Doncaster Gazette* over the *nom de plume* of "Free Lance," the writer advocating the view that horsemen should be educated out of, rather than punished for, the offence after it has been committed in ignorance. His remarks are worthy the attention of all horsekeepers, and we therefore append the salient points of the article.

The writer first mentions two recent instances of fatal horse poisoning in Lincolnshire, in which one man was sent to prison and the other was only saved from a similar fate by the intervention of his master, Mr. J. H. Dean, a member of the Lincolnshire Horse Poison Prevention Association. Mr. Dean has during the past two years lost six horses on his farm through poisoning, so that the ignorance of the men in his employ has had very serious consequences for Mr. Dean.

"Free Lance" then expresses the hope that Mr. Dean will be induced by his bitter experiences to turn his attention to the methods by which the Lincolnshire Horse Poison Prevention Association seeks to attain its objects, and he remarks:—

The fact must be perfectly clear to him by now that these methods are not of the right kind. Its aim is to prevent horse-poisoning; but its method is not one of prevention. Instead of removing the ignorance which underlies these disastrous cases of horse-poisoning, the Association contents

itself with securing the punishment of this ignorance.

The fact cannot be too clearly or too frequently stated, that the men who commit these serious acts are, in a sense, the most deserving men of their class. They are the men who are most ambitious to enhance the fame of their masters' stables. They are the men whose hearts are most completely in their work. Horsemen who take no interest in their work, and who are indifferent in regard to the appearance of their charges, never commit this crime of horse poisoning.

It cannot, of course, be said that the men who do commit this crime have no knowledge of the danger of their acts. But it can be said that they are entirely innocent of any intention to do harm. Those who, like the writer, have peered behind the scenes, know that the belief prevails amongst horsemen that dangerous poisons may be administered with beneficial effects to horses; and few farmers have any idea of the extent of the practice.

There is a very widespread secret traffic in recipes for the administration of these poisons; and the fewness of the fatal consequences of the practice is due almost entirely to the fact that the chemists who are asked to supply the poisons prescribed in these recipes deliberately deceive their patrons by supplying something very different to what is demanded. There cannot be very many chemists in agricultural districts who have not received orders from horsemen to make up doses of the most deadly description. It is, of course, a matter on which they cannot be expected to be very communicative. But the writer has fully ascertained the truth of what is here stated.

Horsemen are in the habit of asking chemists to make up deadly prescriptions. The chemists, instead of supplying what is asked for, make up mixtures that are harmless or even beneficial, and these mixtures are administered to horses with beneficial, or, at any rate, without harmful results. It is when horsemen secure possession of the poisons that they actually ask for, that mischief results. Believing that they have administered these poisons before with beneficial results, they administer the actual poisons with disastrous results. In one of the cases referred to above—that in which Mr. Dean was the victim—the offence was rather one of stealing and administering corn rather than poisons. The offender was possibly unaware of the fact that the seed wheat had been saturated with sulphate of copper. The practice of administering illicitly acquired corn is more general than that of administering poisons. The two forms of crime have, however, a common origin, in the ignorance of the perpetrators.

A very grave feature of these dangerous practices is this: the lives of the most valuable horses are the most seriously menaced. The most ambitious horsemen naturally gravitate to the best stables, and the least ambitious to the inferior stables. Obviously, the wisest course to pursue in the effort to prevent these poisoning occurrences would be to convince horsemen of the fallacy of their belief in the efficacy of deadly drugs in the art of horse-feeding. The various societies for the prevention of this form of crime go to work in the wrong way. What they do is to secure the punishment of the offenders; what they ought to do is to educate horsemen into a better understanding of their task. Let them convince this class that the administration of poisons has injurious effects upon the horse, and nothing but injurious effects, and the practice will speedily cease.

"Free Lance" concludes:—I have on various occasions urged county councils to make the education of horsemen in this matter their special care; but thus far the plea has not met with any response. The councils appear to consider it of greater importance to teach the rustics something which they do not need to know than the something which they do need to know. If the councils would pay veterinary surgeons to lecture in the rural districts on the art of horse feeding, it is certain that farmers would gladly co-operate, and ensure the lecturers audiences of the right character. Will the farmers who chance to read these lines call the attention of their representatives on the various county councils to the necessity of such instruction as is here advocated?

Hunters' Improvement Society.

Mr. Romer Williams (president) occupied the chair at a meeting of the council of the Hunters' Improvement Society held on the 12th inst., when six new members were elected.

Colonel G. C. Ricardo, chairman of the Finance Committee, presented the report of this committee, indicating a balance on the current account at the bank of £320 12s. 10d. Receipts since the last meeting, £68 11s. 11d.; arrears of subscriptions, £32 11s.; accounts for payment, £273 11s. 4d. The chairman, in presenting this report, commented upon the improved financial condition of the society, as owing to the increased membership and co-ordination of the society's work in London and at the country shows the council had been able this year to convert the debit balance of £200 at the commencement of 1907 into a satisfactory credit balance, while the greater part of the cost of publishing Volume III. had been met out of the current year's receipts. This report was adopted.

Mr. J. B. Kingscote, chairman of the Editing Committee, reported that the whole of the Stud Book was now in print and that the larger portion of it was already in pages, so that it was hoped to be able to put the book into the hands of members well in advance of the date of the closing of entries of the London Show. The committee recommended that a portion of the cost of publication be paid off by the Finance Committee. Other details connected with the Stud Book having also been dealt with, the report of the committee was then adopted.

Mr. Owen C. Wallis, chairman of the Horse Show Committee, reported that they had received replies from the Royal Agricultural Society of England, the Highland and Agricultural Society of Scotland, and the Royal Dublin Society accepting with thanks the offer of the gold medals authorised by the council at the October meeting. A letter was read from the Royal Commission on Horse Breeding intimating that they unanimously accepted the invitation of the council to hold their 1908 show at the Royal Agricultural Hall in March next, and they were agreeable to the vetting yard and the ring being available for the purposes of the society's show on the Tuesday afternoon.

The revised schedule of prices, after slight amendments by the committee, was authorised for issue.

The committee considered the proposals of the Shire Horse Society to cover the front of the stud-boxes with canvas, and it was resolved to fall in with the proposal, provided certain details were introduced, and the matter was referred to the stewards. It was resolved to again offer the Winnipeg Industrial Fair a silver medal for the best Thoroughbred or registered Hunter stallion at their 1908 show.

This report having been adopted, it was decided, upon the motion of Mr. J. L. Nickisson, to give in the judges' books the months in which the yearlings exhibited at the 1908 show were foaled.

The dates of the council meetings in 1908 were then arranged:—Thursday, February 6; Tuesday, March 10 (at show); Thursday, April 9; Monday, June 1; Thursday, October 15; Thursday, December 10.

Suffolk Horse Society.

At a meeting of the council of the Suffolk Horse Society held at the Town Hall, Ipswich, on Tuesday, Sir Cuthbert Quilter, Bart., president, occupying the chair, the secretary reported that the entries had closed for Volume XVI. of the Stud Book, and that they were favourable in comparison with former volumes. Volume XV. contained 153 horses and 403 mares, making a total of 556, whereas there had been received for Volume XVI. 194 horses and 523 mares, a total of 717. With regard to the illustrations in the forthcoming volume, the president, Sir Cuthbert Quilter, kindly promised to supply photos of his champion horse, Harvester.

The secretary stated that a letter had been received from Mr. A. J. Morton, Sydney, Australia, in which he acknowledged the receipt of Volume XV. of the Suffolk Stud Book, adding: "The people of this Colony seem to take to the Suffolks to a large extent, as they consider them ideal farming horses, and very suitable for the get of gunners for the Indian Army."

The question of the support to be given to shows in 1908 was considered, and the secretary reported that owing to the assistance given to the Suffolk Horse Society, for in the classes for Suffolks at the Royal Show, to be held at Newcastle on June 30, the prizes would be substantially increased, and in all the classes they would be—first £20, second £10, and third £5, there would be an additional class for teams of Suffolks, in lorry or wagon, the prizes offered being—first £20 and second £10. It was also decided that those shows which had received support from the Suffolk Horse Society should again be recognised, and a hope was expressed that prizes would be offered in classes for other shows at which Suffolks had not hitherto competed.

Polo and Riding Pony Society.

Rev. D. B. Montefiore, chairman of the Editing Committee, reported at the meeting of the council of the Polo and Riding Pony Society on the 13th inst. that the committee had the previous day revised the proof sheets of the 1907 Supplement, which it was hoped to put into the hands of members early in the New Year. He added that the Editing Committee had compiled a private stud book which would meet the requirements of breeders, not only of Polo ponies but of every kind of horse. The register had been very carefully thought out, and would cover many details for which provision had not been previously made in other publications. They proposed to put this private stud register in the hands of members at cost price, and to charge non-members an enhanced fee to indemnify the society against the expenses of advertising and publishing.

The chairman hoped that breeders generally would write to the secretary for full particulars. The private stud book embodied many novel features, and he felt sure it would be found of great utility.

Mr. Tresham Gilbey, vice chairman of the Horse Show Committee, reported that the committee had received several letters from the conveners approving the allocation of the grants for Mountain and Moorland Ponies, and expressing their appreciation of the society's interest evinced by the increased prizes.

The special sub-committee appointed to re-draft the competitions had met, and their suggestions, introducing several novel competitions, such as "riding off," "figure of eight," &c., had been adopted by the Horse Show Committee. With a view to improving the bending competitions, of which they proposed there should be two, they suggested the following new conditions:—Competitors to gallop to the furthest post and return bending between the posts (8 yards apart), using one or both hands at option, and carrying a stick. A competitor would not be disqualified by knocking down a post, but two points would be given for each post successfully negotiated, and three points to the first competitor past the winning-post. The highest number of points to win the heat. The bending competition on the Saturday would be ridden barebacked.

The schedule of prizes had also been carefully considered, and a class for Eastern sires, for which the prizes (£20) had been contributed by sympathisers, added to the schedule, to be judged by a specially-selected judge. The entries in the young stock classes would require a pedigree qualification—viz., they would have to be by a registered or entered sire, or out of a registered or entered dam, similar wording applying to the Polo-bred riding classes. The produce class would be open to the best two animals from the same dam. Representations had been made to the committee with regard to the height of the stallions and mares not exceeding 14 hands. The committee did not see their way to frame the wording of these classes as in previous years—viz., 13 hands 2 in.; but they recommended that in the stallion classes the lower height applying to stallions three years old should be inserted. In deference to the representations from exhibitors, the condition of the 1907 show as to preference being given in the Shetland classes to ponies of the riding type would not be enforced in 1908. Mr. G. Norris Midwood had reported to the committee that he had engaged the Whitehall Rooms at the Hotel Metropole for the members' annual dinner, to take place on Friday, March 13.

This report was adopted.

The dates of the council meetings in 1908 were arranged as follows:—Friday, February 7; Friday, April 10; Thursday, June 4; Thursday, November 5; Friday, December 11.

Good Prices for Hunters.

A most successful sale of Hunters took place at the Leicester Repository on the 14th inst., high prices being paid for several really good lots. The highest average of the afternoon was £199 10s., paid for the stud of Mr. G. Cornwallis West, 300 guineas being paid for the bay gelding Exchange, 250 for Stag's Eye, and 150 for the weight-carrier King John. Mr. G. Sheppard's draft averaged £115, Moygaddy bringing in 160 guineas, Rosada 120, and Egypt 100; while Countess Wrangel's Robin Hood, well known with the V. W. H., Pytchley, and Mr. Fernie's hounds, realised 110 guineas. Mr. Broadley accepted 130 guineas for Golden Eagle, and Sir Nevill Gunter, who is not hunting this season, sold Lockwood for 75 guineas and Brilliant for 65 guineas.

It is reported that an Essex farmer has just received a gift of harness under somewhat unusual circumstances. He was driving near Chelmsford, when his horse shied at a passing motor car and broke its breeching and traces. It was no fault of the motorist, and the farmer did not even take the number of the car when it stopped and the occupants rendered him assistance. On arriving at Chelmsford, however, the owner pulled up at a harness maker's, and said the farmer had taken the incident in such a sportsmanlike manner that he should like to present him with a new set of harness, which he paid for there and then.

In view of the partial failure of the potato crop and the damage done to the oat crop by the prolonged wet, the Chief Secretary has decided to authorise boards of guardians to obtain supplies of seed potatoes and seed oats for sale to occupiers of holdings valued at and under £15. Money will be lent to the guardians for this purpose, and the price of the seed will be recoverable in two instalments, the first collectable with the rate for 1909, and the second with the rate for the following year. Notification to this effect was transmitted on Tuesday by the Local Government Board to the guardians of all unions where a possible shortage of seed has been reported.

SHEEP.

Notes and Jottings.

IT has been urged time after time that one of the most profitable sources of income for the occupiers of land in this country is the flock. Many have contended that sooner or later the profit derivable from the keeping of sheep will be very seriously diminished if not entirely taken away owing to the fact of the huge importations of mutton from abroad.

WE are told that statistics are dry and uninteresting matter, and do not appeal to the general reader. It is a pity that such is the case, for there is much information that would be of value and utility to the feeders and breeders of live stock if greater attention were given to the information that could be gathered from the statistics issued in connection with our live stock import trade.

OCCASION required the writer to refer to the importation of mutton, and on looking back through the records of previous years, he found that the quantity of mutton imported during the month of November, 1907, was 242,688 cwt., and thirteen years previously in the same month the quantity imported was 279,615 cwt. This shows that, despite all the increase in the area from whence our mutton supplies are derived during the past thirteen years, that the actual quantities received during the past month were some 37,000 cwt. less than thirteen years previously.

FACTS of this description should give confidence to the flockmaster. It may be that there will be an increase in the quantity supplied, but given that this does happen, the increased consumption of mutton that one knows takes place at the present time, coupled also with the fact of the increase of the population, there is certainly every indication that the flockmaster may look forward for some long time, at least, to fully remunerative prices for his mutton, particularly if he does that which he should do, properly finishes the same before sending it to the market.

BEFORE leaving the trade and navigation returns it will be of interest to note that during the past month, November, 1907, there were shipped from this country 1,822 sheep, the larger proportion of which breeders know full well were exported for stud purposes, but the whole of which the governmental authorities of this country persist in stating were sent abroad for food, realising the excellent average of £11 1s. per head, taking the declared value as the basis of calculation, the numbers exported being 4·65 per cent. in excess of those for the same period of the previous year.

THE Christmas fat stock shows have been dealt with very fully, and, taken as a whole, one cannot question but that the exhibition of sheep has been of advantage to many, if not all the breeds.

TAKING a retrospect of this year's fat stock shows enables one to offer some suggestions as to how such shows might be still further improved and made more valuable. In one respect this could be done by attracting by some means or the other, greater attention to the classes for cross-bred sheep. The breeders of pure-bred sheep at home have the greatest possible interest in seeing these classes made more prominent features at all the fat stock shows.

IT is possible that some may not agree with the suggestion, but in the writer's opinion no greater benefit could accrue to any particular breed than that which should be proved by actual results with that particular breed, by being used as one of the parents of the cross-bred sheep it was able to transmit to its progeny in a greater degree than any other its principal characteristics.

FOR instance, we have seen for years the result of the Oxford-Hampshire Down cross. That such a cross gives good sheep and satisfactory results no one will gainsay. Then we have that very fine cross exhibited this year, of the Dorset ram and Southdown ewe. Another cross, the Kent ram and the Southdown ewe, has been very prominently to the fore at some of the local shows, but so far as our reference to the showyard reports enables us, we have found no distinct reference to the produce resulting from the cross breeding of the Oxford Down on the Scotch ewes, the Lincoln on the Blackfaced ewes, and many other crosses that might be, with advantage, tested. One point that militates the popularity and increased competition in these classes is, that all kinds of cross-breeds have to compete together. Is it possible that some arrangements might be made whereby classes should be instituted for specially named crosses? If this were the case, there is no question but that many more competitors would be induced to take part in these competitions.

THE reason these Cross-bred classes are being advocated by the writer is that it is in such classes as these that are, in his opinion, of the greatest value to the pure breed sheep-breeders of this country, particularly so at the larger shows, such as Smithfield, the Birmingham, and the Norwich Christmas shows, because amongst the attendants at these shows one generally finds a considerable number of breeders and others who are interested in the production of mutton in other countries, and therefore no better opportunity could well be found to show these gentlemen the value of the pure-bred sire, in reference to the production of the cross-bred animal, than such classes as have been referred to above.

A REFERENCE to the Ashford Show report calls to mind the fact that flockmasters might be induced to give considerably more support to the Christmas fat-stock shows, if such fat-stock shows gave inducement and opportunity to exhibit their wool.

DOUBTLESS it would be stated that most of the wool, if not all of it, had been disposed of long before the Christmas fat stock shows come round, and therefore there is no likelihood that many competitors would keep over fleeces on purpose for exhibition at such shows.

THIS, however, was not the result found at Ashford this year; no less than twenty-eight entries were made in the three classes, and the result of that keen competition was most interesting to all who were connected with the great sheep industry of Kent.
